Section 8. This section eliminates the mandatory award of attorneys fees against a creditor who is unable to prove to the court's satisfaction that a debt was incurred by fraud, false pretenses, false representation, or false financial statement. Instead, this provision gives the court discretion to award attorneys fees if it finds the creditor acted in bad faith in raising an objection to discharge. This provision discourages frivolous objections without the "overkill" effect of discouraging legitimate objections. The section also creates a rebuttable presumption that debts created within 90 days of bankruptcy are fraudulent atempts to "load up". This provision discourages that practice by making such debts nondischargeable.

Section 9. Generally, security interests and liens remain enforceable after bankruptcy when the court has not taken some action to affect the creditor's interest. However, it is unclear whether the injunction specified in Section 524 (a)(2) prevents a creditor from taking post discharge action to enforce a lien without the necessity of obtaining a court order. This provision removes that ambiguity and allows creditors to enforce liens which have not been voided in bankruptcy. Subsection (b) permits reaffirmation of consumer debts subject to the debtor's right to rescind any such agreement within 60 days or until he receives his discharge, whichever is longer. This provision replaces the cumbersome and costly requirement of a court hearing with a procedure that allows the debtor flexibility to reaffirm or not, as he chooses, as well as ample time to reconsider the matter if he so desires. Subsection (c) makes the meeting of creditors the forum for advising the debtor of the nature and effect of a discharge. Rather than waiting until the end of the bankruptcy proceeding to advise the debtor of such matters (and then only in cases in which reaffirmation agreements are pending), this provision requires the judge to counsel the debtor about the nature of the bankruptcy proceeding at an early stage of the proceeding. As a result, the need for a discharge hearing is eliminated.

Section 10. This provision removes the trustee's power to avoid liens or recover payments made within 90 days of filing a petition in bankruptcy (within one year in the case of an insider) unless the creditor had reasonable cause to believe the debtor was insolvent. The trustee retains the power to avoid liens and recover payments where the basic purpose of the preference law is threatened i.e., when a creditor applies last minute pressure on an insolvent debtor in the hope of obtaining more favorable treatment than it would in bankruptcy. At the same time, it allows regular installment payments that are made voluntarily by the debtor up until the time he decides to file a bankruptcy petition, to be retained by the creditor.

Section 11. This is a technical amendment conforming Section 554 of the Code (abandonment of property of the estate) to the amendment made to Section 521 of the Code (debtor's duties) by Section 6, above.

Section 12. This section allows the debtor to redeem property in Chapter 7 by making payments to the creditor over a reasonable period of time, rather than in one lump sum. Such time payments are in lieu of the abolition of the creditor's security interest (see Section 7, above). Moreover, it is consistent with the expectation of the parties that the debt be paid out of future income.

Section 13. This is a technical amendment conforming Section 1106 of the Code (duties of trustee and examiner) to the amendment made to Section 521 of the Code (debtor's duties) by Section 6, above.

Section 14. A technical amendment conforming Section 1111 of the Code (claims and interest) to the amendment made to Section 521 of the Code (debtor's duties) by Section 6, above.

Section 15. This provision allows a creditor, upon 10 days notice to the debtor and co-debtor, to collect any portion of a debt from the co-debtor which is not being paid by the debtor through the Chapter 13 plan. The amendment eliminates the needless expense of the court hearing presently required to enforce an undisputed right. The litigation cost to a creditor of enforcing its right to seek payment from a co-debtor often equals or exceeds any benefit. At the same time, though no longer required, a court hearing may be requested by any party.

Section 16. In order to promote completion of Chapter 13 plans as quickly as possible, the payment schedule chosen by the debtor is required to begin upon filing of the plan, rather than waiting until confirmation. If the plan is ultimately denied confirmation by the court, payments would be returned. This period between the filing of the plan and confirmation of the plan provides a good test period for the debtor and the court to see if the plan can be carried out. On the other hand, if no payments are required during this period, the value of creditor's rights continues to diminish and the debtor may become accustomed to a level of living expenditures which is difficult to reduce when the plan is later confirmed.

Section 17. This amendment provides for the separate classification of co-debtor claims and non-dischargeable claims and authorizes payment of them in the Chapter 13 plan. Certain claims are non-dischargeable in Chapter 7 (the debtor has to pay them even after receiving a discharge) but dischargeable in Chapter 13. Such disparate treatment undermines the purposes of the non-dischargeability provision and encourages individuals to file Chapter 13 plans to avoid payment of such obligations that would be non-dischargeable in a Chapter 7 proceeding. The amendment cures these defects. It makes the treatment of non-dischargeable claims similar in both Chapter 7 and 13. This provision also allows a debtor to choose a repayment plan of up to five years. By allowing a debtor to stretch a repayment plan beyond the three year period, originally established in 1938 and allowed today in most cases, the debtor has an opportunity to repay more of his obligations, especially unsecured debt. The option to pay over 4- or 5-years comports with the recent trend toward longer installment credit obligations for automobiles and other consumer goods.

Section 18. This section establishes a repayment standard in Chapter 13 cases based on the debtor's ability to repay out of future income after taking into account the basic living necessities for the debtor and his dependents. Thus, to obtain the relief that Chapter 13 provides, the debtor is required to make a substantial effort to pay his creditors. The amendment allows shorter plans than 5 years and earlier discharge where a "reasonable portion" of unsecured claims are paid. This creates an incentive for the debtor to complete his plan in a shorter period of time.

Section 19. This section allows hardship discharge of otherwise non-dischargeable debts to the extent the debtor attempted to pay such debts out in a chapter 13 plan.●

By Mr. HATCH (for himself, Mr. THURMOND, and Mr. CRANSTON):

S. 2001. A bill to amend the Lanham Trademark Act to prohibit any State from requiring that a registered trademark be altered for use within such State and to encourage private enterprise with special emphasis on the preservation of small business; to the Committee on the Judiciary.

ALTERING OF REGISTERED TRADEMARKS

● Mr. HATCH. Mr. President, I am introducing legislation today which will amend the Lanham Trademark Act so as to clarify the intent of Congress and protect the owners of federally registered trademarks and service marks from interference by State or territorial legislation.

Trademarks and service marks are universally recognized and protected as indispensible elements in all free market economies:

> The protection of trademarks is the law's recognition of the psychological function of symbols. If it is true that we live by symbols it is no less true that we purchase goods by them. A trademark is a merchandising shortcut which induces a purchaser to select what he wants. . . . Whatever the means employed, the aim is the same—to convey through the mark, in the minds of potential customers, the desirability of the commodity upon which it appears. Once this is attained, the trademark owner has something of value. *Mishawaka Rubber & Woolen Mfg. Co.* v. *S. S. Kresge Co.*, 316 U.S. 203, 205 (1942).

In this country, trademark rights are acquired through use of the mark in connection with an established trade or business. To enhance and strengthen rights acquired through use, Congress enacted the Lanham Act (15 U.S.C. 1051 et seq.) which provides a system of registration administered by the Patent and Trademark Office.

Trademark owners qualifying for Federal registration are accorded numerous procedural advantages which enable them to protect their marks and goodwill. The purposes of the act are expressed in section 45. Among other things, Congress intended "to protect registered marks used in commerce from interference by State or territorial legislation."

Notwithstanding this provision in the law, several State real estate commissions have issued onerous and conflicting regulations which directly interfere with the established trademark rights of various real estate businesses and which present a potential threat to the rights of all trademark owners.

The real estate regulations are directed at companies which engaged in franchising. Customarily, real estate franchisees are licensed to use the federally registered marks owned by their franchisors. As a general rule, the trade names of the franchisors and franchisees are displayed together in a distinctive design which is used as a composite trademark or service mark on a variety of materials including yard signs, building signs, stationery, brochures, and other materials. These marks have been widely used in neighborhoods throughout the United States and have become familiar symbols to millions of Americans.

Franchising has played an increasingly important role in the U.S. economy. The Department of Commerce estimates that today one-third of all retail sales are made through franchise outlets. As in most businesses, the success of franchising is due, in large part, to the uniform use of trademarks to identify the source and quality of goods or services.

Franchising has become particularly important to persons engaged in the real estate business. By affiliating with a franchising organization, real estate brokers are allowed to retain their independent ownership of local busineses while at the same time availing themselves of innovative training programs, joint advertising campaigns and numerous other benefits which enable franchisees to improve their own businesses as well as the quality of services offered to the public. By using uniform signs and other identifying materials, franchisees can boost their efficiency by taking advantage of economies of scale which would ordinarily be available only to much larger businesses.

Real estate brokers and salesmen are licensed by real estate commissions in the various States. The commissions are often composed of nonfranchised brokers who are in direct competition with those they regulate. A few years ago, many real estate commissions began promulgating regulations which restricted the activities of many franchised brokers by prohibiting use of well-known federally registered trademarks. Most of these regulations include ratio requirements requiring reduction in the size of the franchisor's name relative to that of the franchisee. Different States have proposed different ratios, thereby making it impossible for trademark owners to use their marks in a uniform manner.

Litigation has been filed challenging the legality of these regulations and thus far they have become final in only two States. The commissions have attempted to justify their requirements by alleging that the ratios are necessary to inform the public that they are dealing with independently owned franchises. In fact, no evidence of deception has ever been introduced in these proceedings. On the other hand, evidence has been introduced demonstrating that the ratio requirements fail to serve the purported purpose of informing the public as to the legal relationship between the franchisor and franchisee.

At least one court has found that such regulations violate the 5th and 14th amendments of the Constitution, *Century 21 Real Estate of the South, Inc. et al.* v. *Mississippi Real Estate Comm'n et al.*, No. 113,139 (Miss. Dist. Ct. 1981).

In an earlier action involving a similar regulation promulgated in Nevada, a three-judge court granted summary judgment in favor of the real estate commission, Century 21 Real Estate Corp. against Nevada Real Estate Commission. The decision was affirmed without opinion by the Supreme Court. The plaintiff in that action had been issued a Federal service mark registration for a design mark in which the relative sizes of the Century 21 logo and the franchisee name are protected features.

Thus far, the real estate industry has borne the brunt of local regulations interfering with federally registered marks. However, it is clear that unless the in-

tent of the Lanham Act is clarified, the rights of all owners of federally registered trademarks will continue to be jeopardized by the present situation.

In today's economy, many companies rely on nationwide advertising to bring their products to the attention of consumers. If State and local interests are permitted to require alterations in federally registered marks, money invested in advertising will be lost and consumers will be confused as to the source of desired goods and services.

Trademark owners and other organizations outside the real estate field have expressed concern over the present situation. The U.S. Trademark Association, the world's largest association of trademark owners, has repeatedly expressed support for legislation of the type being introduced today.

State and Federal courts have concurrent jurisdiction of actions for infringement and unfair competition arising under the Lanham Act. The legislation which I am introducing would not affect the rights of the States to prohibit unfair competition and deceptive acts or practices. Similarly, the legislation would not affect a community's right to regulate signs and advertising for scenic or environmental reasons. The ratio regulations promulgated by various State commissions do not promote any of these interests:

The right to use a trademark is recognized as a kind of property, of which the owner is entitled to the exclusive enjoyment to the extent that it has been actually used. *Hamilton-Brown Shoe Co.* v. *Wolfe Bros. & Co.*, 240 U.S. 251 (1916). It is the essence of due process that a State cannot effect a person's personal and property rights except after a hearing before a fair and impartial tribunal. *Wall* v. *Optometric Ass'n Inc.*, 379 F.Supp. 175, 188 (N.D. Ga. (three judge court) *aff'd*, 419 U.S. 888 (1974).

Moreover, State regulation affecting fundamental rights can only be upheld under the 14th amendment if it seeks to promote legitimate State interests in a rational manner. *Shelton* v. *Tucker*, 364 U.S. 479 (1960).

The real estate ratio regulations not only conflict with the express purpose of the Lanham Act but also constitute a violation of the 14th amendment in that they result in a denial of property rights without due process of law.

There are thousands of franchised real estate brokers in this country who have invested millions in signs, advertising materials, and other items on which federally registered marks are displayed. Local regulations interfering with the lawful use of these marks will cause an unnecessary waste of resources.

The bill I am offering to amend the Lanham Trademark Act will prevent unwarranted interference with the uniform use of federally registered trademarks.

The bill will promote efficient business operation by enabling small businesses to take advantage of the economies of scale made possible through uniform trademark use by francise organizations.

The bill will also make it possible for consumers to identify and obtain desired goods and services by allowing trademark owners to use their marks in the same uniform manner throughout the United States.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2001

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act of July 5, 1946 (60 Stat. 427; 15 U.S.C. 1051–1127; commonly known as the Lanham Trademark Act) is amended by adding after section 39 the following new section 39a:

"SEC. 39a. No State or other jurisdiction of the United States or any political subdivision or any agency thereof may require alteration of a registered mark, or require that additional trademarks, servicemarks, trade names, or corporate names that may be associated with or incorporated into the registered mark be displayed in a manner differing from the display of such additional trademarks, servicemarks, trade names, or corporate names contemplated by the registered mark as exhibited in the certificate of registration issued by the United States Patent and Trademark Office.".●

By Mr. HUDDLESTON (for himself and Mr. ABDNOR):

S. 2002. A bill to assure that an intensive course of English instruction is an integral part of the bilingual education program and that participation in the bilingual education program will in most cases be limited to one year; to the Committee on Labor and Human Resources.

By Mr. HUDDLESTON (for himself, Mr. CHILES, Mr. HATFIELD, Mr. WARNER, Mr. BUMPERS, Mrs. HAWKINS, Mr. JOHNSTON, and Mr. GORTON):

S. 2003. A bill to amend the Immigration and Nationality Act with respect to procedures for the annual admission of refugees; to the Committee on the Judiciary.

IMMIGRATION AND REFUGEE POLICY

Mr. HUDDLESTON. Mr. President, at this time I would like to introduce two bills relating to this country's immigration and refugee policy. The first bill, Mr. President, has to do with the provision of consultation process with local and State governments from areas that are impacted by refugee settlement activities of the Federal Government.

The distinguished Senator from Florida (Mr. CHILES), the distinguished Senator from Virginia (Mr. WARNER), and the distinguished Senator from Oregon (Mr. HATFIELD) join me as original cosponsors of this particular legislation.

Mr. President, the Refugee Act of 1980 created one of the biggest loopholes in our immigration laws. It tripled the statutory yearly quota for refugees from 17,400 to 50,000 and gave the President the authority to admit an unlimited number above the 50,000 level. At the time the bill passed, some predicted that this authority to admit an unlimited number of refugees would be exploited and manipulated, and our worst fears in this regard have come true.

During the first year of the act, 235,000 refugees were admitted. In fiscal year 1981 the attempt to admit 217,000 fell short only because dedicated INS officials refused to circumvent the definition of "refugee," as the U.S. Attorney General and the Secretary of State wanted to do.

Under an agreement reached between the two, all people fleeing Vietnam, Cambodia, and Laos were to be presumed to be refugees. This automatically classified thousands of fishermen, farmers and others who have no fear of persecution as refugees and cleared the way for them to be resettled in the United States.

Fortunately, this attempt to circumvent the refugee law was made public and the Attorney General had to retreat from his position. Even though the INS officials were able to curb the flow, 154,000 refugees were admitted in fiscal year 1981.

Under the Refugee Act of 1980, the only power the Congress has to control this unlimited authority of the President is the consultation process. Under this system, the President is merely required to consult with both Judiciary Committees before the beginning of each fiscal year regarding the number of refugees he intends to admit. Once he has done this, there is no formally established method for Congress to express its disapproval of his plan.

This was clearly brought to light during the most recent consultations. The administration notified the Judiciary Committees at hearings that it intended to admit 140,000 refugees in fiscal year 1982. In response to this announcement, Senators THURMOND, SIMPSON, KENNEDY, and BIDEN sent a letter to the President recommending that no more than 125,000 be admitted. At the same time, the chairman of the House Subcommittee on Immigration sent a letter recommending no more than 120,000.

The administration made no attempt to compromise on the issue and still stands by its plans to admit 140,000 during this fiscal year. It should be noted that the difference in the two admission levels focused on the Indochinese program where it had already been established that a substantial number of the people are economic migrants and are not refugees fleeing persecution.

At the same time the administration was ignoring the recommendations of the Judiciary Committees, it was pursuing an interesting policy in regard to appropriations for refugee programs. Even though the number of admissions had been reduced a little less than 10 percent from the fiscal year 1981 level, the funding for the extensive assistance programs refugees qualify for was cut by over 20 percent in the Senate, and the House went $20 million below this figure. The result of this policy is that the Department of State has managed to keep the admission levels up while more of the expense of providing for the refugees with welfare assistance must fall upon the State and local governments.

State and local governments have seen this shift of responsibility coming for some time and have felt increasingly frustrated because they were unable to have any formal input into the decisionmaking process that is primarily centered in the Department of State. In July 1981 a National Association of Counties

task force issued its report on refugees, aliens and migrants.

One of its policy positions called for "greater coordination and consultation with local elected officials on the placement of refugees into communities." During the annual meeting of the National League of Cities last month, a resolution was passed calling for direct involvement of the cities in the refugee resettlement decisionmaking process.

The frustration and concern of the local governments is also being felt by State officials. Gov. Victor Atiyèh of Oregon wrote a letter to the President on August 10, 1981, in which he expressed these feelings very clearly. He stated in his letter:

I'd like to offer some comments about the refugee situation in Oregon and proposed federal policy and funding for next year. Oregon has three times its per capita share of refugees. Oregon's unemployment rate is nearly 10 percent. The refugee unemployment rate is about 50 percent. Seventy percent of the 300–400 monthly arrivals to Oregon are illiterate in their own language. Two-thirds of the refugees in Oregon are dependent on public assistance. Yet despite all this, we have been assured that next year's budget for improving refugee self-sufficiency will be reduced considerably while the refugee population in the state will increase by another 25 percent. The refugee population of Oregon is controlled entirely by the federal government.

Local officials are also saying similar things. A Wall Street Journal article entitled "Refugee Influx to Some Areas Straining Budgets, Good Will" said that:

Adding to the frustration is a feeling that a few local governments have been saddled with the wards of U.S. foreign policy, and that other cities and states lack sympathy. "We don't have any leverage," says Diane Ahrens, a Ramsey County, Minn., commissioner.

The bill I am introducing today would help restore balance to the refugee program. It would give State and local governments, which are being forced to shoulder the increasing social and economic burdens created by the rising numbers of refugees, a voice in the decisionmaking process. To date they have been virtually frozen out of this process by a Department of State which wants to preserve its dominance for vague foreign policy reasons. This can no longer be permitted in light of the new policy of shifting more responsibility back to the State and local governments.

Mr. President, when we look at the unfortunate situation that has now developed in Poland, and we recall that history will reflect that it has been the U.S. policy in similar situations in the past to expect that we will have another flow of refugees, it makes it more important than ever that we now have the Federal Government, before they make a policy decision, before they decide upon how many this country may take and where they might be located, consult with the local and State officials in those areas that will have to bear the burden of an influx of new citizens who will need special attention and special help, at least in the early years of their residence in this country.

This guarantee of input would be accomplished by requiring that the President consult with the State and local governments which represent primary areas of refugee resettlement in the same way that he does so with the Judiciary Committees. This would give the State and local governments advance information regarding the impact of resettlement and allow them time to respond before the final decision is made. It would also assure that they would be allowed to participate in the public hearings which are required so that they can fully express their concern and make appropriate recommendations to the Congress.

Mr. President, the U.S. refugee assistance programs are costing American taxpayers over $2 billion a year. There is clear and convincing evidence that the refugee resettlement program has expanded significantly beyond the intent of Congress and that for various reasons neither this administration nor the previous one has been able to get it under control. I believe that Congress can do this job if we establish the appropriate procedure.

I ask unanimous consent that the article from the Wall Street Journal and another from the Washington Post entitled "Cutback in Refugee Aid Angers Westerners" be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, Nov. 3, 1981]

REFUGEE INFLUX TO SOME AREAS STRAINING BUDGETS, GOOD WILL

(By Eugene Carlson)

On a soft, summer weekend last July, Sue Long Vue, a 62-year-old member of the large Indochinese refugee community in Portland, Ore., hanged himself in his front yard. The apparent reason: despair over a decision by Oregon to end welfare payments to refugees because, according to the state, it wasn't being compensated fast enough by the federal government for its refugee expenses.

The following Monday, Oregon said federal money was on the way again and refugee welfare would continue. Now, state officials are worried that Sue Long Vue's fellow Hmong tribesmen, whose Laotian culture is ruled by superstition and myth, may draw an ominous conclusion: Sacrifice keeps the money rolling. "We're giving suicide prevention training to our staff in expectation of federal policy cuts," says Jerry Burns, Oregon's refugee coordinator.

The threat of ritual suicide is one of the stranger problems facing communities where refugee have clustered in large numbers. In St. Paul, Minn., one out of 10 pupils in the public schools is Indochinese. Refugees from Southeast Asia are pouring into Orange County, Calif., at the rate of about 1,000 a month.

In Dade County, Fla., which includes Miami, the nursery in Jackson Memorial Medical Center is brimming with newborn Haitians. "Maybe Haitian parents consider their chances of staying much greater if they have a baby born here," says Woody Davis, vice president for patient services. "If they're not aware of that when they land, they're aware of it soon after."

The nation's newest refugees—mostly Cubans, Haitians, Laotians, Cambodians and Vietnamese—tend to be less educated, less skilled, and in some cases less law-abiding than the Cubans who fled Fidel Castro's regime and the Indochinese who arrived immediately after the Vietnam war. Because refugees tend to settle where others have gone (60 percent of the nation's refugees live in 40 counties in 10 states, according to the National Association of Counties), schools, hospitals, police and welfare agencies in a few localities have shouldered an added burden at a time when spending everywhere is under pressure.

Counties with the biggest refugee populations: Dade; Los Angeles; Orange; San Francisco; San Diego; Harris (Houston), Texas, King (Seattle), Wash.; New York; Cook (Chicago), Ill.; Santa Clara, Calif.; Philadelphia; Multnomah (Portland), Ore., and Ramsey (St. Paul), Minn.

Typically, local governments pay the refugee bills. Later, Washington sends compensation, "up to 100 percent," for welfare and other resettlement costs during a refugee's first three years in the U.S. But in view of the Reagan administration's budget-cutting stance, this ambiguous language makes some folks nervous. "States are at risk in spending funds for which there is no guarantee of reimbursement," says Jane Kretzmann, Minnesota's refugee coordinator.

Local officials complain that, as in Oregon, reimbursements lag badly, squeezing their budgets. While the U.S. refugee population is going up, the $641.7 million appropriated by Congress for refugee assistance in the fiscal year that began October 1 is down 29 percent from a year ago. It's also assumed the three-year federal ride for refugees will be cut to 18 months, meaning refugees without jobs will be drawing state welfare sooner.

Adding to the frustration is a feeling that a few local governments have been saddled with the wards of U.S. foreign policy, and that other cities and states lack sympathy. "We don't have any leverage," says Diane Ahrens, a Ramsey County, Minn., commissioner.

Ramsey County, which includes St. Paul, has about 40 percent of Minnesota's 25,000 refugees. Nearly all are Hmong, the tough Laotian hill-tribesmen who fought with the U.S. in the Indochina war. Few doubt the Hmong's native intelligence or willingness to work, but the cultural leap is staggering.

Communication is a special problem. Few Hmong can write their own language, let alone English. Interpreters are always in demand. So the planned termination next month of the county's "English as a Second Language" classes, due to federal budget tightening, hurts. "If they can't be verbal in our language, they can't get jobs," says Commissioner Ahrens. About 70 percent of the county's Hmong are on welfare.

A positive note: Crime, always in underlying worry when an alien group moves in, hasn't increased in Minneapolis-St. Paul due to the Asian influx. "We simply don't see those people in the criminal courts," says William E. Falvey, Ramsey County chief public defender. "To my knowledge, our office has never represented a Hmong."

It's a different story in South Florida. The arrival of 200,000 Cubans and Haitians in the past 18 months coincided with a huge jump in violent crime in greater Miami. Much of it is traced to Cuban criminals who joined the 125,000-person boatlift from the port of Mariel between April and September 1980. Jails are bulging, and when a court ruled that cells were overcrowded, about 400 "Marielitos" were transferred to federal prisons to ease the crush.

"There's tremendous animosity from this locally," says Harvey Ruven, a Dade County commissioner. "There's a backlash building that threatens the very openness of the American dream." As evidence, a grass-roots referendum last year repealed Dade County's official English-Spanish bilingual policy.

An irony in the growing anti-Cuban sentiment is that much of Miami's present prosperity flows from the vitality of "Little Havana" the community built by the first wave of Cuban refugees that arrived 20 years ago.

[From the Washington Post, Dec. 12, 1981]

CUTBACK IN REFUGEE AID ANGERS WESTERNERS

(By Phil Cogswell)

PORTLAND, ORE., December 11.—A proposed change in welfare policies for refugees has angered state officials in the West, where many southeast Asian refugees are concentrated.

The new regulations, published today in the Federal Register, would limit reimbursement to the states for expenditures on Aid to Families with Dependent Children, Supplemental Security Income and Medicaid for refugees.

The federal government currently reimburses states for 100 percent of such expenditures for 36 months, even if the refugees don't meet the same eligibility requirements as American citizens.

The new rules would halve that time to 18 months, effective Feb. 1. The proposed regulation is subject to 30 days of public comment.

But state officials here say that the change, which U.S. officials say could save as much as $50 million this fiscal year, will cost the states plenty.

State officials in Oregon and California, two of the states with heavy refugee populations, said the cutoff would cause the abrupt termination of federal welfare assistance to 4,500 southeast Asian refugees in Oregon and 25,000 in California, with additional numbers leaving the welfare rolls each succeeding month. In Washington state, 8,600 would be dropped, according to officials there.

As of June 1, 1981, 350,200 refugees were eligible for the special federally supported welfare program throughout the United States, according to Oliver Cromwell, a spokesman for the office of refugee resettlement in the Health and Human Services Department.

Cromwell said refugees dropped from the federal program still could receive general assistance grants funded by the states, but Oregon officials said most are not eligible for any state program.

"All of the refugees that will be cut off literally do not qualify for our assistance program," said Mike Kane, assistant administrator at the Oregon Adult and Family Services division. He said about 70 percent of the Southeast Asian refugees in the state are on public assistance. Kane said volunteer agencies would be asked to boost their help but housing, in particular, would be a major problem.

California officials said those dropped from the federal rolls will go on county general welfare.

The federal government said the change was intended to "reduce the likelihood of unnecessary welfare dependency" and to "reduce the degree of special treatment afforded to refugees." Its notice in the Federal Register also noted that the change will help keep HHS within its anticipated fiscal '82 budget.

State officials say the assistance period was intended to help refugees learn English and gain other skills to become self-sufficient, and Kane said the cutback will make it more difficult for refugees to find jobs, especially since more recent arrivals have had fewer skills than earlier ones.

"At the time we needed more resources to help them, the federal government cut back on the program," Kane said. He added that Oregon, Washington and California have been "imploring the State Department and federal government to curtail the flow of refugees to western states" because of the high unemployment in the region. In addition to the three western states others with high refugee populations are Florida, Illinois, Minnesota, Pennsylvania, Rhode Island and Texas, Cromwell said.

The states have argued that refugee aid is a federal responsibility, since federal policies allow refugees in. Cromwell said 132,000 southeast Asians arrived in fiscal 1981, and the administration plans to allow 100,000 to enter in fiscal 1982.

Mr. HUDDLESTON. Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2002

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Bilingual Education Amendments of 1981".

SEC. 2. Section 702 of the Elementary and Secondary Education Act of 1965 (hereafter in this Act referred to as the "Act"), is amended by striking out ", while using their native language,".

SEC. 3. Section 703(a)(1) of the Act is amended by striking out "have sufficient difficulty speaking, reading, writing, or understanding the English language to deny such individuals the opportunity to learn successfully in classrooms where the language of instruction is English" and inserting in lieu thereof "have difficulty speaking and understanding instruction in the English language".

SEC. 4. Section 703(a)(4)(A) of the Act is amended—

(1) by redesignating clauses (i) and (ii) as clauses (ii) and (iii), respectively, and

(2) by inserting immediately after the matter preceding clause (i) prior to its redesignation the following new clause:

"(i) there is an intensive course of study in English;".

SEC. 5. (a) Section 721(b)(3)(B) of the Act is amended to read as follows:

"(B) the program of bilingual education for which assistance is sought will (i) serve those children most in need of assistance under this title, (ii) serve children enrolled in the bilingual education program assisted under this title for one year only except that continued participation in the bilingual education program assisted under this title may be permitted for an additional year but only after the child has an individual evaluation, conducted in accordance with the provisions of paragraph (6) of this subsection, which establishes the need for continued services and is approved by the appropriate official of the local education agency administering the bilingual education program, and (iii) in no event permit a child to be enrolled in the bilingual education program assisted under this Act in excess of three years, except that the limitation of this clause (iii) shall not apply to handicapped students;".

(b) Section 721(b)(3)(F) of the Act is amended to read as follows:

"(F) in the case of applications from local educational agencies to carry out programs of bilingual education under subsection (a)(1), the Commissioner determines that the applicant shall expend adequate funds for purposes of such programs for auxiliary and supplementary training programs in accordance with the provisions of subsection (a)(3)(B) and section 723;". (c) Section 721(b) of the Act is amended by adding at the end thereof the following new paragraph:

"(6) The evaluation required by clause (B) of paragraph (3) of this subsection shall include (A) a statement of measurable goals establishing the need for continued participation in the bilingual education program, (B) the reasons why the child enrolled in the program has not met the goals, and (C) a plan for making the child proficient in English as soon as possible. The evaluation required by clause (B) of paragraph (3) of this subsection shall be retained by the local educational agency and made available for review by the Secretary.".

SEC. 6. Section 721 of the Act is amended by adding at the end thereof the following new subsection:

"(g) Whenever the Secretary determines that an applicant for assistance under this title is unable or unwilling to carry out the requirements of paragraphs (3)(B) and (6) of subsection (b) the Secretary shall withhold approval of the applicable application, or withhold payments under an approved application, or both, until the Secretary is satisfied that there is no longer any inability or unwillingness to comply with such provisions.".

Mr. WARNER. Mr. President, I rise today as an original cosponsor of the bill Senator HUDDLESTON has just introduced.

This bill will assist in correcting the inconsistencies currently being experienced in our refugee policies. As you are aware, the Refugee Act of 1980 tripled the statutory yearly quota of refugees being admitted into the United States to 50,000. In addition, the bill gave the President the authority to admit an unlimited number over and above the 50,000. As a result, 154,000 refugees were admitted to the United States during fiscal year 1981.

The irony of this situation is that while the statutory limit of refugees was dramatically increased, the funding levels for refugee resettlement programs continues to be decreased. This leaves the funding responsibility with the State and local governments who have refugees resettled within their jurisdictions, yet they have no control or influence over how many refugees are to be admitted.

Mr. President, the bill introduced today by Senator HUDDLESTON addresses these inconsistencies by insuring that State and local governments will have the opportunity to comment upon refugee resettlement decisions before they are made. Senator HUDDLESTON'S bill guarantees that the State and local governments which represent primary areas of refugee resettlement will be included in the consultation process between the administration and Congress, thereby giving all those directly affected the opportunity to influence refugee policy.

Mr. President, I am pleased to have my name added as an original cosponsor to this legislation. In my judgment, this is an issue which needs redress—an issue which affects not only new Americans, but all Americans.

Thank you, Mr. President.

Mr. CHILES. Mr. President, I am pleased to join with Senator HUDDLESTON in sponsoring this legislation to give State and local governments a stronger voice in decisions concerning U.S. refugee policy. I believe this proposal will be a constructive step in helping resolve one aspect of our serious refugee problem.

This Nation is currently experiencing a refugee crisis. My State of Florida is on the cutting edge of that crisis. The State and particularly the communities of south Florida have borne the brunt of unworkable immigration statutes and an unenforced refugee policy. Thousands of refugees have streamed into

south Florida, placing intolerable burdens on citizens, local government, and service and health agencies. To a large extent, local and State government have been forced to carry the burden for education, for health care, and for welfare assistance. The responsibility for these costs are clearly Federal but the Federal Government often has failed to live up to that responsibility. There have been continuing efforts to reduce or limit Federal reimbursement and it has only been through the insistence of Congress that such efforts have not been successful.

Mr. President, there are several essential elements to what should be the foundation of our new immigration policy. Previously, Senator HUDDLESTON and I have introduced legislation to set that foundation in place. First, we must enforce our immigration laws and make sure that our enforcement officials have the resources to carry out their responsibilities.

Second, there should be a cap on the total number of people we allow to immigrate to the United States. And that cap should not be exceeded.

Third, we should be able to decide, in advance, who should be admitted to the United States. No one should get any special rights simply because he enters the United States illegally. That, unfortunately, is the situation today, and that situation must be turned around.

Fourth, we must do something about the magnet that attracts people to the United States, and that is jobs. We must have a system to verify whether a person who applies for a job is entitled, under the immigration laws, to hold that job. We know that people come here to get jobs. We have to let people know if they apply for a job, they will be caught and deported.

The bill we are introducing today is intended to bring State and local governments, which are so vitally affected by refugee policy, into the decisionmaking process. These governments are being forced to assume a larger responsibility for refugee assistance and often have little say in terms of refugee resettlement decisions. I believe that there is a clear need for more involvement of these affected parties.

It is neither correct nor equitable to exclude these governments by the claim that refugee resettlement is essentially a foreign policy matter. There is a great deal more than foreign policy involved. What is involved is a great many questions and concerns relative to the ability of a community to absorb a significant number of refugees. Are there job opportunities for these people? Is there available housing? Is the educational system equipped to meet the special needs of a refugee population? What level of financial assistance from the local tax base will be required?

These are major concerns to be addressed in determining the most appropriate location for refugees. And yet they are not being sufficiently addressed because those who are in a position to speak to these concerns are not being consulted. This bill will help to rectify that situation.

In order to provide for greater involvement of State and local governments, the bill would provide that those governments which are the primary areas of refugee resettlement be consulted in regard to projected refugee admission. Second, it will guarantee that State and local governments will be provided an opportunity to participate in the public hearings which are required to be held.

Mr. President, I sincerely hope that Congress will make the development of a new immigration policy a top priority in the next session of this Congress. As we move in this direction, I believe a very necessary step will be inclusive of State and local government in the decisionmaking process for refugee policy.

BILINGUAL EDUCATION ACT

Mr. HUDDLESTON. Mr. President, on behalf of myself and Mr. ABDNOR, I am introducing legislation to correct some of the problems with the Bilingual Education Act. This act was passed by Congress to provide transitional instruction for limited English-speaking children to get them to learn English as quickly as possible so that they could be placed in the regular classroom environment.

Unfortunately, bilingual education has now become a $143 million program that is out of control. Instead of children being encouraged to learn English, bilingual education has become a cultural maintenance program in some areas.

An article by Gregg Easterbrook in the Sacramento Union on July 5, 1981 noted that there were several thousand Hispanic parents who asked to have their children taken out of bilingual education programs as they felt the programs were not teaching English.

There also was a group of Long Island parents who sued the local school system because it would not test their children to see if they could be removed from the bilingual education program and placed in the regular classroom. These examples clearly show that the program has gone beyond the original intent of Congress.

A recent report by the Department of Education, which has yet to be officially released, conclusively shows that the bilingual education program is not working. This report examined over 300 documents concerning bilingual education which makes it the most comprehensive review that has been done on the program to date.

The report concluded that the case for the effectiveness of transitional bilingual education is so weak that exclusive reliance on this instruction method is clearly not justified. Too little is known about the problems of educating language minority students for the Federal Government to prescribe a specific remedy for helping them.

The report found that there is no justification for assuming that it is necessary to teach limited-English speaking students in the child's native language in order for the child to progress in school. It also pointed out that immersion programs, which involve structured curriculums in English for both language and nonlanguage subject areas show promising results and should be given more attention in program development.

The results of this report support similar findings that came from a national evaluation of bilingual education that was completed in 1977 by the American Institutes for Research (AIR).

In this study, it was found that students in bilingual education programs were doing no better at learning English or any other subject than non-English speaking students who had been placed in regular classes.

A large number of the project directors who were interviewed for this study indicated that even after students were able to function in English, they remained in bilingual programs. This certainly is not what Congress intended and the bill I am introducing today will help get the bilingual education program back to its original goal of promoting English proficiency as soon as possible.

To accomplish this goal, the bill would place a 1-year time limit on participation by children in a bilingual education program funded under title VII of the Elementary and Secondary Education Act. This time limit is similar to a 2-year limit in the present Bilingual Education Act after which time an individual evaluation of each child is required.

However, even officials of the Department of Education admit that there is nothing to enforce this requirement and nothing to assure that these children are moved out of the bilingual program. My bill would require a strict adherence to the 1-year limit.

Realizing that all children do not learn at the same rate, the bill would permit an extension of the 1-year limit for a maximum of 2 years but only after an extensive evaluation for each child has been completed. This evaluation would have to provide a statement of measurable goals establishing the need for continued participation; the reasons why the child has not met the goals and a comprehensive plan for making the child proficient in English as soon as possible. Under no circumstances would participation be permitted beyond 3 years.

The required evaluation must be approved by the local director of the bilingual education program and must be kept on file as a condition for getting further grants under the act. Any grantee who does not have this information available for review by officials of the Department of Education will be unable to get further grants under the act or could have present payments withheld until there is compliance with these provisions.

Most importantly, children who participate in a bilingual education program funded under title VII would be required to participate in an intensive English course. I believe it is imperative that we give intensive English courses additional emphasis since the bilingual education method of teaching has not been proven successful.

Nothing would help accomplish the goal of promoting English proficiency more than having students participate in an intensive English course. This requirement would not abolish bilingual education programs. It would only insure that children also take a course which promotes the goals of the program.

There is little dispute that there are large numbers of students who do not know English and are being given the opportunity to learn it. Our Federal resources are limited and consequently, it makes no sense to keep some children in bilingual education programs for several years when the benefit they receive from these programs is questionable and when there are others who are not being served. We need to redirect our efforts toward promoting English proficiency in students as quickly as possible which is what I believe this bill will help accomplish.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2003

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 207 of the Immigration and Nationality Act is amended—

(1) by inserting in paragraph (1) of subsection (d) "the appropriate State and local government officials and," after "the President shall report to";

(2) by adding at the end of subsection (d) (3) the following:

"(C) Any hearing held pursuant to this paragraph shall provide an opportunity to be heard to appropriate State and local government officials.";

(3) in subsection (e)—

(A) by inserting in the text preceding paragraph (1) "appropriate State and local government officials, and," after "the President with";

(B) by inserting in the text preceding paragraph (1) "and officials" after "provide such members";

(C) by inserting "and officials" after "by such members" in paragraph (7);

(D) by inserting in the text following paragraph (7) "and appropriate State and local government officials" after "with such members";

(E) by striking in the text following paragraph (7) "two" and inserting "four"; and

(4) by adding at the end thereof the following:

"(f) For purposes of this section, the phrase 'appropriate State and local goverment officials' means State and local government officials of States and localities which are likely to be primary places of resettlement of refugees admitted as a result of a determination made by the President under subsection (a) or (b)".

Mr. SIMPSON. Mr. President, I would like to comment on the expertise of the background of the Senator from Kentucky who has just concluded his remarks. He has been speaking clearly on this issue for many, many months. It is always a privilege to happen to be here in the Chamber to listen to him relate some of the grievous problems that confront us.

I can only assure him that the measure he has introduced today will receive the full consideration of the Subcommittee on Immigration and Refugee Policy. We will give it our clear attention as we pursue, soon after the beginning of the next session, the complete rewrite of the Immigration and Nationality Act, with the various procedures and bills which have been presented to the committee.

I do commend him because he has been extraordinarily persistent in commanding our attention on this matter.

Mr. HUDDLESTON. Let me say, Mr. President, that the Senator from Wyoming is much too modest of himself and much too generous in his references to me. I appreciate his remarks, nevertheless.

As we all know, the Senator from Wyoming (Mr. SIMPSON) is chairman of the subcommittee dealing with our immigration policy.

I think probably more so than at any time in history the whole question of our policy is being thoroughly reviewed and studied by the distinguished Senator from Wyoming and his subcommittee.

Many proposals are being presented. The administration has presented some proposals. Some of us in this body have presented other proposals. A special commission on refugee and immigration policy has completed its work and submitted its recommendations.

All of this vast amount of material is being carefully considered by Senator SIMPSON and his subcommittee. I am very confident that before many more weeks pass we will be considering here on the floor of the Senate some very profound, far-reaching, and much needed proposals to deal with the problem that we are confronted with now and what we might expect in the future.

By Mr. MATSUNAGA (for himself and Mr. INOUYE):

S. 2005. A bill to enable the Native Hawaiians Study Commission to accept gifts and voluntary services; to the Committee on Energy and Natural Resources.

NATIVE HAWAIIANS STUDY COMMISSION

Mr. MATSUNAGA. Mr. President, I am introducing today, with Senator INOUYE, a bill which would authorize the Native Hawaiians Study Commission to accept assistance from volunteers and to accept gifts in cash or in kind.

The Native Hawaiians Study Commission was established by Congress under the provisions of Public Law 96–565, enacted on December 20, 1980. The law provides for the appointment of a nine-member study Commission, mandated by Congress to examine the culture, needs and concerns of Native Hawaiians. The Commission would then report on its findings to the Congress and would make recommendations to the Congress with respect to any new legislation or amendments to existing law which might be required to meet the needs of Native Hawaiians.

In January of this year, a nine-member study Commission was appointed by President Carter, but the Commissioners were dismissed by President Reagan in March. A new Commission was appointed in September, but, unfortunately, these appointments were not made until after the fiscal year 1982 appropriations bill for the Interior Department was well on its way to final passage. To date, the administration has not requested funds for the Commission's operations although the Commission is legally required to publish a draft report 1 year after its first meeting, which was held on September 23, 1981.

The enactment of the Native Hawaiians Study Commission Act was eagerly awaited by the people of Hawaii for many years. This is the first time that the Federal Government has agreed to examine the needs and concerns of Native Hawaiians since the overthrow of the Hawaiian monarchy in 1893. There is great interest in the Commission's activities and, needless to say, the prospect of further delays in this long overdue study is most disappointing to all the people of Hawaii.

Although my bill would not provide any money for the Commission, it would enable the Commission to accept offers of rent-free office space in Hawaii, or in Washington, D.C., and to accept the services of volunteers, pending the appointment of a paid staff. It is the fervent hope of the Hawaii congressional delegation, the members of the Native Hawaiians Study Commission, and the people of Hawaii that an adequate appropriation will be provided for the Commission in the near future.

Mr. President, I ask unanimous consent to have the text of my bill printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2005

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subsection (i) of section 302 of the Native Hawaiians Study Commission Act (94 Stat. 3325) is amended—

(1) by striking out "and" at the end of paragraph (1),

(2) by striking out the period at the end of paragraph (2) and inserting in lieu thereof a semicolon, and

(3) by adding at the end thereof the following new paragraphs:

"(3) accept and utilize the services of voluntary and noncompensated personnel; and

"(4) to solicit, accept, and dispose of gifts, bequests, or devises of money, securities, or other properties for the benefit of the Commission.".

By Mr. HELMS:

S.J. Res. 137. Joint resolution to amend the Constitution to preserve the right to life; to the Committee on the Judiciary.

RIGHT TO LIFE

● Mr. HELMS. Mr. President, the Senate this year has witnessed a breakthrough in congressional discussion of human life legislation. A series of thoughtful and informative hearings conducted by the Separation of Powers Subcommittee resulted in the favorable report of a human life statute to the full Senate Judiciary Committee. In a somewhat related action, the Subcommittee on the Constitution has engaged in debate of constitutional amendments dealing with the question of human life.

Mr. President, the opportunity to debate human life legislation should necessarily extend to the one approach which has received unanimous support by leading pro-life advocates across the country.

In its quarterly meeting on October 4 of this year, the board of directors of the National Right to Life Committee unanimously approved a new human life amendment. The unity demonstrated at

that Milwaukee meeting is reaffirmation of a common goal to protect unborn human life.

Mr. President, we are approaching the ninth anniversary of the Supreme Court's contrivance of a "right" to abortion. The tragedies which followed that action must not be allowed to continue. Each day that we delay enactment of significant pro-life legislation, we permit the ongoing slaughter of thousands of innocent unborn children.

Mr. President, I offer this amendment tonight as one more effort to insure our most basic human right. If the right to life is diminished, every other right is open to attack. If we are to preserve our fundamental freedoms, then the right to life must be inviolable.●

ADDITIONAL COSPONSORS

S. 649

At the request of Mr. BAUCUS, the Senator from Idaho (Mr. SYMMS) was added as a cosponsor of S. 649, a bill to amend the Internal Revenue Code of 1954 to provide that the executor may elect, for estate tax purposes, to value certain items at an amount equal to the adjusted basis of the decedent in such items and to remove certain limitations on charitable contributions of certain items.

S. 671

At the request of Mr. PELL, the Senator from Maryland (Mr. SARBANES) was added as a cosponsor of S. 671, a bill to amend section 402 of title 23, United States Code, relating to establishment by each State of comprehensive alcohol-traffic safety programs as part of its highway safety program.

S. 1272

At the request of Mr. CANNON, the Senator from North Dakota (Mr. BURDICK) was added as a cosponsor of S. 1272, a bill to modify certain airport and airway user taxes to provide appropriate funding for the airport and airway trust fund, and for other purposes.

S. 1422

At the request of Mr. GRASSLEY, the Senator from Ohio (Mr. GLENN) was added as a cosponsor of S. 1422, a bill to authorize the donation of surplus property to any State for the construction and modernization of criminal justice facilities.

S. 1450

At the request of Mr. CANNON, the Senator from Montana (Mr. BAUCUS) was added as a cosponsor of S. 1450, a bill to provide for the continued deregulation of the Nation's airlines, and for other purposes.

S. 1648

At the request of Mr. HATFIELD, the Senator from Oregon (Mr. PACKWOOD) was added as a cosponsor of S. 1648, a bill entitled the "Military Spouse Retirement Equity Act."

S. 1780

At the request of Mr. ROTH, the Senator from Pennsylvania (Mr. HEINZ) was added as a cosponsor of S. 1780, a bill to provide civil penalties for false claims and statements made to the United States, to recipients of property, services, or money from the United States, or to parties to contracts with the United States, and for other purposes.

S. 1797

At the request of Mr. DOLE, the Senator from Pennsylvania (Mr. SPECTER) was added as a cosponsor of S. 1797, a bill to provide the private sector training and placement opportunities for residents of enterprise zones, emphasizing the use of community-based organizations and the involvement of small business concerns, and for other purposes.

S. 1825

At the request of Mr. ARMSTRONG, the Senator from Idaho (Mr. MCCLURE) was added as a cosponsor of S. 1825, a bill to prohibit price support for crops produced on certain lands in the Western part of the United States which have not been used in the past 10 years for agricultural purposes, and for other purposes.

S. 1896

At the request of Mr. PELL, the Senator from Kentucky (Mr. FORD), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Kentucky (Mr. HUDDLESTON), and the Senator from Wisconsin (Mr. PROXMIRE) were added as cosponsors of S. 1896, a bill to amend the International Revenue Code of 1954 to repeal the special leasing provisions enacted by the Economic Recovery Tax Act of 1981.

S. 1922

At the request of Mr. PERCY, his name was added as a cosponsor of S. 1922, a bill to amend the Black Lung Benefits Revenue Act of 1977, and for other purposes.

SENATE JOINT RESOLUTION 127

At the request of Mr. COCHRAN, the Senator from Oregon (Mr. HATFIELD) was added as a cosponsor of Senate Joint Resolution 127, a joint resolution to grant official recognition to the international ballet competition.

SENATE JOINT RESOLUTION 129

At the request of Mr. CRANSTON, the Senator from Kentucky (Mr. FORD) was added as a cosponsor of Senate Joint Resolution 129, a joint resolution directing the Depository Institutions Deregulation Committee to pursue policies to promote the safety and soundness of financial institutions.

SENATE JOINT RESOLUTION 134

At the request of Mr. RIEGLE, the Senator from Arkansas (Mr. PRYOR), and the Senator from Ohio (Mr. METZENBAUM) were added as cosponsors of Senate Joint Resolution 134, a joint resolution to designate 1982 as the "Year of Disabled Persons."

SENATE CONCURRENT RESOLUTION 46

At the request of Mr. LEVIN, the Senator from Washington (Mr. JACKSON), the Senator from Georgia (Mr. NUNN), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Virginia (Mr. WARNER), the Senator from Maine (Mr. COHEN), the Senator from Nevada (Mr. CANNON), the Senator from Virgina (Mr. HARRY F. BYRD, Jr.), the Senator from Indiana (Mr. QUAYLE), the Senator from Minnesota (Mr. BOSCHWITZ), the Senator from South Dakota (Mr. PRESSLER), the Senator from Delaware (Mr. ROTH), the Senator from Texas (Mr. BENTSEN), the Senator from Washington (Mr. GORTON), the Senator from Iowa (Mr. GRASSLEY), the Senator from Wyoming (Mr. WALLOP), the Senator from North Dakota (Mr. BURDICK), the Senator from Wisconsin (Mr. PROXMIRE), the Senator from Missouri (Mr. EAGLETON), the Senator from New Jersey (Mr. WILLIAMS), the Senator from Montana (Mr. BAUCUS), the Senator from Michigan (Mr. RIEGLE), the Senator from Alabama (Mr. DENTON), the Senator from Illinois (Mr. DIXON), the Senator from Arkansas (Mr. BUMPERS), and the Senator from South Carolina (Mr. THURMOND) were added as cosponsors of Senate Concurrent Resolution 46, a concurrent resolution expressing the sense of the Congress with regard to the mutual security efforts of the United States and Japan.

SENATE RESOLUTION 261

At the request of Mr. CHAFEE, the Senator from Vermont (Mr. LEAHY) was added as a cosponsor of Senate Resolution 261, a resolution expressing the sense of the Senate that the President should not impose import fees on crude oil and refined petroleum products.

SENATE RESOLUTION 270—RELATING TO THE GREAT FRIENDSHIP RUN

Mr. HUDDLESTON submitted the following resolution; which was referred to the Committee on the Judiciary:

S. RES. 270

Whereas Stan Cottrell, a native Kentuckian, present resident of Georgia and internationally recognized ultramarathon runner has, in cooperation with and with the help of the People's Republic of China's Central Committee, proposed to run the length of the Great Wall of China;

Whereas two Chinese runners will simultaneously run the length of the United States;

Whereas this event has been proclaimed the "Great Friendship Run";

Whereas the "Great Friendship Run" has generated overwhelming positive reactions from a great many Americans and Chinese alike as a recognition of the continuing growth of international cooperation between the United States and the People's Republic of China;

Whereas the "Great Friendship Run" will do much to foster and enhance the growing friendship between the United States and the People's Republic of China and constitutes a unique gesture of good will; Now, therefore, be it

Resolved, that the Senate recognizes the "Great Friendship Run" as an event that will do much to promote international good will and commends the participants for their commitment to human achievement;

Resolved, that the Senate urges officials involved with the event to coordinate and finalize all its details in an expeditious fashion.

SENATE RESOLUTION 272—RELATING TO RIGHTS OF RESIDENTS IN CERTAIN HEALTH CARE FACILITIES

Mr. COHEN (for himself, Mr. HEINZ, Mr. CHILES, Mr. PRYOR, Mr. DURENBERGER, Mr. BRADLEY, Mr. GRASSLEY, Mr. BURDICK, Mr. MELCHER, Mrs. KASSEBAUM,

and Mr. GLENN) submitted the following resolution; which was referred to the Committee on Labor and Human Resources:

S. RES. 272

Whereas Congress intended that recognition of the rights of residents be included in the responsibility it conferred upon the Secretary of Health and Human Services to assure that Federal funds are used to purchase quality nursing-home care;

Whereas Federal regulations currently prescribe standards to protect the rights of residents in nursing homes and have led to the establishment of guidelines with respect to such rights by accrediting bodies and national nursing-home associations; and

Whereas the Department of Health and Human Services is currently reviewing existing Federal regulations with respect to such rights;

Resolved, That it is the sense of the Senate that—

(1) Federal standards and regulations with respect to the rights of residents in nursing homes be maintained;

(2) the responsibility of the Secretary of Health and Human Services to insure the rights of such residents be reaffirmed; and

(3) the Secretary continue to insure that each skilled nursing facility (as defined in Section 1861(j) of the Social Security Act) and each intermediate care facility (as defined in section 1905(c)) of such Act—

(A) establish policies which are consistent with standards established by the Secretary regarding the rights of residents in such facilities,

(B) develop procedures and train personnel to implement such policies, and

(C) provide a written explanation of such policies and procedures to each resident and one or more of the following: the resident's legal guardian, next of kin, sponsoring agency, or representative payee selected pursuant to section 205(j) of such Act.

Mr. COHEN. Mr. President, I am pleased to submit today with Senator HEINZ, a resolution to express the sense of the Senate that the Secretary of Health and Human Services continue to promulgate regulations to insure the rights of individuals in long-term care facilities. I am especially pleased that Senators DURENBERGER, GRASSLEY, CHILES, PRYOR, BURDICK, MELCHER, GLENN, and KASSEBAUM have joined me in this initiative to preserve existing regulatory requirements to protect the rights of patients.

Recognizing the need to develop a national standard of residents' rights, the then Department of Health, Education and Welfare included in its 1974 revision of the medicare and medicaid standards for nursing homes provisions covering a variety of resident rights in institutions. The Department, now Health and Human Services is currently reviewing and updating its nursing home regulations. My resolution very simply would assure the Department and the public, including residents, their families and friends, that this body recognizes the necessity of preserving the individual rights of persons in institutions participating in medicare or medicaid.

The resolution we are offering today neither adds additional protections for residents nor additional authority for the Secretary, nor does it call for additional expenditures. It would merely preserve the current status quo. Though current regulations afford only minimal protection for residents, they have had a sensitizing effect on the delivery of long-term care. They have brought change and they have helped promote humane and decent care.

The resolution would establish three things. First, it would require that Federal standards and regulations with respect to the rights of residents in nursing homes be maintained. Second, it would reaffirm the responsibility of the Secretary of Health and Human Services to insure the rights of residents in long-term-care facilities. Third, it would stipulate that the Secretary continue to insure that each skilled nursing facility establish policies which are consistent with the standards for the rights of patients.

As has been pointed out by groups involved with health care and the elderly, establishing the rights of patients benefits not only the residents but also the institution. A resident who is confident in the care he or she is receiving, understands his or her medical condition, and participates in the planning of his or her treatment is generally far more cooperative and more responsive medically to the care he or she receives.

For the predominantly elderly population in most nursing homes, the guarantees can help forestall the confusion and lack of orientation often initially experienced by the resident, and counteract the atmosphere of apathy and despair of residents who believe themselves consigned to nursing homes only to await death.

Such an atmosphere can defeat the efforts of the most understanding and hard-working staffs and frustrate the entire purpose of the nursing home, which is to maintain and improve the physical and mental well-being of residents to the greatest possible extent.

We should not forget that despite the many problems associated with nursing homes, there are thousands of such facilities whose administration and staff are truly dedicated to and concerned about providing quality care for their residents. Such providers, I might add, consider patients' rights to be "just good sense" and do not feel it would work any hardship for good nursing homes.

At the same time, however, patients' rights can be helpful for residents in danger of substandard medical treatment or personal care. The resolution makes it clear to both the individuals and the staff that residents retain the rights of other citizens of this country and should be treated with dignity and respect.

Earlier this month, the Long Term Care Committee of the White House Conference on Aging approved a resolution reaffirming the strong role of the Federal Government in assuring the rights of residents in homes for the aging. The Federal policy endorsed by the committee must continue to provide a minimal standard of care in institutions. The committee, and later the entire conference, also endorsed comprehensive rights for older persons.

As our demographics change and the older segment of our population continues to grow, it is our responsibility to help meet the needs of those in institutions who risk a diminution of their rights and a degradation of their dignity as active members of society.

For many residents of long-term care facilities, confinement in institutions robs them of their strengths and their links to and roles within their communities. It is not enough to decry the problems experienced in the past by institutionalized persons. We must respond with strong resolutions to ameliorate the problems and to insure a continually improved quality of care for these persons.

While obviously not a panacea for all the problems of the institutionalized, the resolution does set forth the responsibility of the facility to the patient. I believe the consideration of the resolution will do much to improve the quality of life of residents in institutions.

Mr. HEINZ. Mr. President, I am pleased today to submit a resolution, along with my distinguished colleagues Mr. COHEN, Mr. CHILES, Mr. PRYOR, Mr. DURENBERGER, Mr. BRADLEY, Mr. GRASSLEY, Mr. BURDICK, Mr. MELCHER, Mr. GLENN, and Mrs. KASSEBAUM reaffirming the intent of Congress that the rights of patients in nursing homes must be protected.

Mr. President, the Federal standard protecting nursing home patients' rights are currently under review by the Department of Health and Human Services. The cosponsors of this resolution simply want to clarify that it is the intent of Congress that that standard for residents' rights remains intact.

There are few groups of people in our population who are more vulnerable to abuse and mistreatment than individuals living in nursing homes. In the past decade, we have made great progress in eliminating nursing home abuses. We must not now risk stepping backward into an era when abuse and mistreatment were commonplace.

During the late 1960's and early 1970's, the Special Committee on Aging and other congressional committees learned of serious and widespread abuse of elderly and disabled people in such facilities. I do not have to repeat those horror stories today, because I am sure that most of my colleagues well remember them.

As the result of the investigations and hearings held more than a decade ago, Congress required the Secretary of Health, Education, and Welfare to issue regulations that would assure quality of care in nursing homes. Patients' rights have been included as a standard in Federal nursing home regulations since 1974 for skilled nursing facilities, and since 1976 for intermediate care facilities.

Now, however, the Department of Health and Human Services is in the process of reviewing these regulations. It is my understanding that only regulations with a legislative mandate will be retained. The Department has expressed doubt that the patient's rights standard has such a legislative mandate. They have also questioned whether such rights relate directly to quality health and personal care.

In my judgment, it was the intent of Congress, in 1967 when it required the Secretary to issue regulations governing

the quality of care, that the protection of patient's rights be included. Today, in this resolution, we are simply reiterating that Congress has not abandoned that commitment.

Mr. President, I further submit that there is probably nothing more related to quality health and personal care than the protection of freedoms of individual liberty and dignity.

The loss of physical freedom because of illness which requires institutional care should not be compounded by the loss of dignity suffered when a person is deprived of the simple rights we all take for granted. The right of privacy, to have visitors, to have as much control over one's life as is possible should not be too much to ask when we are talking about quality health and personal care.

The resolution we are submitting today will once again make it clear that Congress is concerned about the quality of life and the well-being of those people who reside in nursing homes.

We have made tremendous strides in improving nursing home care during the past decade. We must not allow any diminution of the protections now afforded this vulnerable population. We must not slip back into an age when our institutionalized Americans were among the forgotten and neglected.

By agreeing to this resolution, we can confirm our commitment and make it clear that it is congressional intent that Federal standards for patient's rights must be maintained.

AMENDMENTS SUBMITTED FOR PRINTING

HOME VIDEO RECORDING DEVICES

AMENDMENT NO. 1242

(Ordered to be printed and referred to the Committee on the Judiciary.)

Mr. MATHIAS (for himself, Mr. BAKER, Mr. ROBERT C. BYRD, and Mr. CRANSTON) submitted an amendment intended to be proposed by him to the bill (S. 1758) to amend title 17 of the United States Code with respect to home video recording and video recording devices and media, and for other purposes.

BALANCE BETWEEN HOME VIEWERS AND CREATIVE ARTISTS

● Mr. MATHIAS. Mr. President, the Judiciary Committee held hearings last week on the bill introduced by Senator DECONCINI and Senator D'AMATO that would make sure that people who tape television programs at home can keep doing so without worrying about copyright liability. Representative PARRIS has introduced the companion bill in the other body.

I am in basic sympathy with their effort, and I think we should move as quickly as possible to dispel the cloud that is hanging over the home video recording industry. Television enthusiasts should know that Congress will do nothing to interfere with their ability to tape at home for private use or to condemn them for infringement of copyright. The DeConcini and D'Amato bill gives them that reassurance.

But to be certain that our solution to the problem is fair to all parties, Senator BAKER, Senator ROBERT C. BYRD, Senator CRANSTON, and I want to propose an amendment to the DeConcini-D'Amato bill that will make sure that it strikes a proper balance between the viewers who tape at home and the creative artists who own the copyrights and whose genius and effort have produced a form of intellectual property.

As all of my colleagues know, article 1, section 8 of the Constitution of the United States empowers the Congress to pass laws to preserve ownership rights in intellectual property. The Congress has enacted over the years copyright statutes in response to this constitutional mandate. A basic principle embodied within our copyright laws is that the owners of intellectual property are entitled to be compensated by those who are permitted to use their property.

My amendment to the so-called Betamax bill directs the Copyright Royalty Tribunal to devise the best way of compensating the copyright owners for the use of the copyrighted material. The Copyright Royalty Tribunal, created by the Congress in 1976, is the appropriate body to carry out this task, and I know they would do so in a manner consistent with the spirit of the findings and declarations of my amendment.

The level of this royalty payment will be determined by this expert agency based upon evidence produced in a formal hearing where all parties will be given an opportunity to be heard. The tribunal will have broad latitude to determine both fair and reasonable royalties and the basis upon which royalties will be calculated.

I believe that the tribunal is capable of developing an equitable system of copyright compensation which balances the rights of copyright owners with the rights of those who may use video cassette recorders solely for noninfringing uses. In other words, those who create entertainment programs for the American public are just as deserving of protection as the high school football coach who tapes his Saturday football game for the Monday morning skull session and the golf pro who wants to help the club duffer improve his swing.

Specialized users may buy one tape and use it over and over again for noninfringing purposes. But the people who build video cassette libraries of old movies buy tapes in quantity, and I think they should be willing to absorb a small fee for the privilege.

To make sure that everyone understands my amendment, I want to make two points. First, while it establishes the right of the copyright owner to compensation, it does not get the people taping at home directly involved in the collection of fees. The importers and manufacturers who benefit financially from home recording will pay the royalty, which should keep down administrative costs.

Second, the Copyright Royalty Tribunal will have wide authority to consider all relevant factors in setting the royalty. One of these factors is the number of tapes not used for recording copyrighted works. For instance, should the tribunal find that some percentage of the blank tapes sold in this country are never used to record copyrighted material, it could adjust the royalty fee accordingly. Similarly, the tribunal will be able to take into account the nature of video recording practices, such as time-shifting.

Finally, I want to point out section 4 of my amendment, which adds language to the copyright law to make clear that the copyright protection in title 17 covers rentals of audiovisual works and sound recordings. This provision would close a gap in current law, under which stores can rent video cassettes or tapes or phonograph records for commercial advantage without authorization from the copyright holder.

Under this newly created right, the copyright owners would retain control over their work and could require stores that rent video cassettes, records, or tapes to get permission to do so. This section raises the whole issue of the rights of creators of sound recordings—recording artists and record companies—which my amendment does not now address.

But they, too, have major problems that threaten their industry, and I am pleased to learn that the chairman of the Judiciary Committee has asked the industry to testify at the hearings scheduled for January. I expect that the witnesses at that hearing will comment on my proposed amendment, and that we could then refine it as appropriate based on the testimony.

I am convinced that Congress must uphold the principle of copyright by providing a compensation mechanism for home video recording. The level of compensation would be determined by an expert body in the crucible of an evidentiary hearing, and periodically reviewed to assure it remains just and reasonable.

The tribunal may find, based on the evidence presented, that the level of compensation should be meaningful, or little more than a peppercorn. Whatever the result, the Congress will have fulfilled its constitutional duty to preserve the principle of intellectual property and to protect rights that are as important to the general public as they are to those who own them.

Many years ago Dr. Samuel Johnson, a moralist and philosopher as well as an author, said:

> No man but a blockhead ever wrote except for money.

If as thoughtful and experienced a man as Dr. Johnson recognized the importance to creative writers and scholars of the prospect of accumulating a kind of property right in their works as an incentive to work and ambition, it should underscore the interest of society which benefits from such creative work.

Much has changed since Samuel Johnson's day. New technologies for capturing and storing and communicating the works of intellectual and artistic effort have developed. But these are only new ways of doing old things, and the basic rules of human conduct spelled out by Dr. Johnson are still in force. So, if patents and copyrights serve the great interest of society, failing to protect the rights created by such instruments is

not excused by the fact that new technologies have made the protection of those rights more difficult. The very ingenuity of our age that has produced these remarkable technologies should be able to devise the laws to accommodate them.

This amendment may, therefore, be a pioneering legal effort. It copes with new technologies about which the law has been silent, except for the rather rudimentary attempt made through the "Juke Box" amendment to the copyright law. It is time that the law be developed in parallel with the miracles of space age communication, and this matter gives us the opportunity to begin that exciting and innovative, if belated, effort.●

NOTICES OF HEARINGS

SUBCOMMITTEE ON ARMS CONTROL, OCEANS, INTERNATIONAL OPERATIONS AND ENVIRONMENT

Mr. PRESSLER. Mr. President, I would like to announce for the information of the Senate and the public the scheduling of a series of three public hearings before the Committee on Foreign Relations Subcommittee on Arms Control, Oceans, International Operations and Environment. All three hearings are on the future of arms control with testimony to be received from public witnesses. They will be held at 10 a.m. on January 20, 1982, at Nourse Auditorium Civic Center Complex 275 Hayes Street, San Francisco, Calif.; at 10 a.m. on January 21, 1982, at the Department of Water and Power Building Auditorium, 111 South Hope Street, Los Angeles, Calif., and at 1 p.m. on January 25, 1982, at Morrison Commons Lounge, Augustana College, Sioux Falls, S. Dak.

For further information regarding these hearings, you may wish to contact Ronald Nelson of the committee staff who may be reached at 224–4651. Those wishing to testify or who wish to submit a written statement for the hearing record should write to the Senate Foreign Relations Committee, Subcommittee on Arms Control, Oceans, International Operations and Environment, 4229 Dirksen Senate Office Building, Washington, D.C. 20510.

SUBCOMMITTEE ON SECURITIES

Mr. D'AMATO. Mr. President, I would like to announce that the Subcommittee on Securities will conduct hearings on February 4, 9, and 10, 1982, to examine certain issues raised by proposals to amend the Glass-Steagall Act. The hearings will begin at 9:30 a.m. in room 5320 of the Dirksen Senate Office Building.

The hearings will focus on Treasury Secretary Regan's proposal that bank holding companies be authorized to establish securities affiliates which could underwrite municipal revenue bonds and operate, advise, and sell shares in mutual funds. Among the specific issues which the subcommittee is expected to address are the following:

The need to require that expanded securities activities be conducted through a separate affiliate in a holding company structure;

The adequacy of the investor protections and safeguards against conflicts of interest in the Treasury proposal;

The necessity of additional amendments to the securities laws to fully implement the Treasury proposal;

The nature and extent of any exemption for small banks from the proposed requirement of bank holding company affiliates; and

The competitive balance which the proposal would achieve.

For additional information, interested persons should contact Diane Sanger of my staff at (202) 224–6542 or John Daniels of the Banking Committee staff at (202) 224–7391.

AUTHORITY FOR COMMITTEES TO MEET

SUBCOMMITTEE ON THE CONSTITUTION

Mr. BAKER. Mr. President, I ask unanimous consent that the Subcommittee on the Constitution of the Committee on the Judiciary be authorized to meet during the session of the Senate on Wednesday, December 16, at 2 p.m., to mark up Senate Joint Resolutions 17, 18, 19, and 110, resolutions dealing with abortion.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON THE BUDGET

Mr. BAKER. Mr. President, I ask unanimous consent that the Subcommittee on the Budget of the Select Committee on Intelligence be authorized to meet during the session of the Senate on Wednesday, December 16, at 2 p.m., to receive testimony from the intelligence community regarding budget matters.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON FOREIGN AGRICULTURE POLICY

Mr. BAKER. Mr. President, I ask unanimous consent that the Subcommittee on Foreign Agriculture Policy of the Committee on Agriculture, Nutrition, and Forestry, be authorized to meet during the session of the Senate on Wednesday, December 16, at 10 a.m., to hold a hearing on European Community trade issues.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL STATEMENTS

ADMINISTRATION FIGHTS STEEL IMPORTS

● Mr. HEINZ. Mr. President, last month the Commerce Department initiated antidumping and countervailing cases against five steel-importing countries. Although I continue to believe more needs to be done, I welcomed that step toward the effective enforcement of our laws against unfair trade practices and subsidies.

The International Trade Commission will shortly be voting on the question of whether the domestic industry has been injured by the imports in question. Recently the Commission conducted an open conference on this question, and among those appearing was Lionel Olmer, the Under Secretary of Commerce. As he points out in his prepared statement, an appearance by an executive branch official at an ITC proceeding is unprecedented and is clear evidence of the importance the administration attaches to these cases.

I share Mr. Olmer's view of their importance, and I have written the Commission directly to express that view. In my judgment, the cases of subsidy and dumping are clear, as is the dramatic injury they have done to the U.S. steel industry. I hope that these cases will be successfully concluded and that the message they send the European Community is clear—the entry of dumped or subsidized merchandise into this country violates our laws and is not going to be tolerated. Thousands of steelworkers in this country have lost their job because European producers are unwilling to overhaul their industry and instead rely on government subsidies to keep them afloat. This must be stopped immediately, and I look forward to further action by the Commerce Department in that direction.

Mr. President, I ask that Under Secretary Olmer's statement and the text of my letter to the Commission be printed in the RECORD.

The material follows:

STATEMENT OF UNDER SECRETARY LIONEL OLMER

I appreciate the opportunity to appear before the Commission to supplement the written information that the Commerce Department has already supplied to Commission staff. I understand that today is the first time a representative of Commerce, or Treasury before it, has testified in an ITC antidumping or countervailing duty injury investigation. I am taking this unprecedented step because of the extreme importance of these cases to the Commerce Department's effort to enforce U.S. trade laws as they apply to imports of basic steel mill products, and to demonstrate that this Administration will uphold its commitment to maintain the integrity of the trigger price mechanism. The successful enforcement of U.S. trade laws is particularly important in light of the ambitious modernization program that the U.S. steel industry has embarked upon, and because of the special efforts that the Reagan Administration has taken to facilitate industrial modernization through the President's Economic Recovery Program.

The TPM was originally adopted in 1978, and was reinstated in October 1980 after a five-month suspension. It was created as an alternative to the usual company-petition method of enforcing U.S. antidumping and countervailing duty laws, in the hope that such vigilance would deter injurious dumping or subsidization. Both foreign steel producers and the domestic steel industry agreed at that time that the TPM was preferable to the excessive uncertainty created by the repeated rounds of steel trade litigation that have occurred over the past five years. The efficacy of the TPM stems from our monitoring of steel imports and initiation of investigations when we identify possible injurious dumping or subsidization.

We would have preferred never having had to initiate an antidumping or countervailing duty investigation. Unfortunately, several foreign producers have chosen to ignore TPM monitoring and flout U.S. trade laws, despite their having every reason to know that, by doing so, they would force the Department to initiate cases under the terms of the TPM—and impose duties if the foreign producers are found to have violated applicable U.S. law. Earlier this year, many foreign producers began selling steel here well below applicable trigger prices. In addition, foreign government subsidization of several major steel producers exporting to the United States seems to be worsening.

rather than abating. This turn of events is all the more disturbing because many of these same producers had actively sought the reinstatement of the TPM as an escape from the previous antidumping investigations.

The four cases now before you are the result of evidence that imports of apparently subsidized or less than fair value steel have reached a magnitude where initiation of investigations is necessary. In deciding to initiate these cases, and in order to avoid initiating frivolous ones, we have had to judge that there is some evidence of injury to the U.S. industry, including rising imports, possible price suppression, lost sales, layoffs, and declining capacity utilization. Of course, we leave it to you to determine whether the investigated imports are materially injuring, or threatening to materially injure, a U.S. industry.

The Department monitors imports of steel against trigger prices, which are based on the average cost of production in Japan, whose producers are thought to be on average the world's most efficient. Sales of steel below Japanese cost landed in the United States "trigger" an examination by the Department of the steel imports in question, to discover whether there is evidence of unfair trade practices.

In the case of Romania, our monitoring found that an estimated 100 percent of U.S. imports of Romanian plate was sold below applicable trigger prices, with an average margin below trigger of nearly 45 percent. This information, together with other information gathered by the Department, indicates that carbon steel plate from Romania is likely being sold below fair value.

Information on foreign government subsidization of the manufacture or exportation of steel products has been gathered by Commerce Department staff from many sources. For Brazil, there is much publicly available information about government programs designed to subsidize exports. We will investigate participation by Brazilian steel producers in three export incentive programs: the Industrial Products Tax export credit premium, preferential working capital financing, and an income tax exemption based on export profits. Other programs providing benefits that may constitute subsidies will also be investigated. We estimate that the net subsidy could be as much as $50 per ton.

Two of the cases before you concern countries in the European Community. Before I discuss the specific subsidies alleged in these cases, I would like to commend the EC on its efforts to reduce in the future, and then phase out, subsidies to its steel producers. The EC faces a difficult problem in restructuring its steel industry, and, although we understand the difficulties involved in eliminating subsidies there, I must say I am disappointed that more rapid movement on this problem has not been accomplished. In the interim, we cannot allow our industries to be damaged by government support of industries abroad.

The major subsidies alleged in both the Belgian and the French case are not export subsidies, but domestic subsidies—primarily financial subventions of various sorts.

In the Belgian case, we will investigate a wide range of capital grants/interest rebates, loan guarantees, exemptions from income tax on capital grants, exemptions from real property taxes, accelerated depreciation, and forgiveness and assumption of steel company debt by government-owned financial institutions. We estimate that the value of just two of these programs (assumption of debt and capital grants/interest rebates) could be nearly $40 per ton in some cases. The total value of subsidization under all programs, to be determined after thorough investigation, could be much higher.

In the French case, we will investigate preferential government financing, the recapitalization of the carbon steel sector under the 1978 Rescue Plan, interest subsidies or rebates, and regional development benefits. Our estimate of the value of the subsidy solely from "loans of special characteristics"—loans at low interest rates—is $38 per ton. Other programs may add significantly to that figure.

The cases before you are not the last TPM-initiated antidumping and countervailing duty investigations you will be seeing. One additional investigation—sheet piling from Canada—has already been referred to you. We are committed under the terms of the TPM to initiate investigations whenever we have evidence of dumping or injurious subsidization, and we will continue to meet that commitment.

COMMITTEE ON FINANCE,
Washington, D.C., December 14, 1981.

Mr. BILL ALBERGER,
Chairman, U.S. International Trade Commission, Washington, D.C.

DEAR MR. CHAIRMAN: I am writing to express my support for the pending antidumping and countervailing duty cases initiated by the Commerce Department against hot-rolled steel plate from Romania, Belgium, and Brazil, hot-rolled sheet from France, and sheet piling from Canada. Other initiated cases are not before the Commission for an injury determination.

In my judgment, both the allegations of unfair practices and the case for injury are compelling. Import data for steel plate, for example, reveals a nearly 40 percent increase in imports from the countries that are the subject of the complaints, comparing the first eight months of 1981 to the comparable period in the preceding year. Similarly, imports of hot-rolled sheet from France increased 10.7 percent, comparing the same periods.

Overall, the situation has grown even worse in the past several months, as imports continue to climb sharply. Although September and October figures were somewhat less than the unprecedented surge that occurred in August, they are still sharply higher over preceding years. Total imports in October, for example, were nearly 64 percent higher than those for October, 1980, while year-to-date figures show a 28.1 percent increase in imports over 1980. Significantly, most projections for the immediate future suggest further deterioration.

This data alone, of course, proves neither unfair practices nor injury, but it does illustrate the dramatic upsurge in imports in the second half of this year, much of which has come from European Community producers. At the same time, conditions in the domestic industry have deteriorated sharply. Layoffs have been hovering in the 60,000 range, with an additional 20,000 on a shortened work week. These numbers will increase sharply over the Christmas holidays as more facilities shut down. Not all of these will reopen in January. In addition, production and capacity utilization are falling. While some of these indicators remain marginally higher than for certain periods in 1980, it is likely that will not be the case for long; and a more intensive examination of industry data over the past several years will reveal the extent of the injury that is occurring and the difficult circumstances in which the industry finds itself.

Should the Commission schedule a public hearing on these cases after its preliminary determination, I would seek an opportunity to discuss these developments in greater detail. At the present time, however, this letter will serve as an expression of my strong support for affirmative findings in the cases the Commerce Department has initiated, and I ask that it be made a part of the record of your proceedings in these cases.

Sincerely,

JOHN HEINZ,
Chairman, U.S. Senate Steel Caucus.●

LIVING ON THE FAULT LINE

● Mr. INOUYE. Mr. President, the recent notoriety of the Atlantic Monthly has unfortunately tended to obscure the fact that this fine magazine produces excellent writing month after month. Recently, the October issue featured an article about a subject that is of more than passing interest to me. It is entitled "Living on the Fault Line" by James Fallows, author of the book "National Defense" and former speechwriter for President Jimmy Carter.

In his article, Mr. Fallows explores the possibilities for a major catastrophe from a large earthquake in California. As my colleagues know, some experts have suggested that an earthquake is long overdue and that the danger signs in southern California are increasing.

If a major earthquake should take place in California, the cost in human lives and property could very well be the greatest ever suffered in this country although obviously all we have are estimates. Nevertheless, these estimates are shocking. According to the article, the death toll alone in three areas with an earthquake taking place at 4:30 p.m. would be 48,000 and property damage would amount to some $124 billion.

It is important to note two lessons from this article and another on which Mr. Fallows does not dwell.

First. California is not the only seismically active area in the United States. My own State of Hawaii has earthquakes periodically, and other active regions include Alaska, Greater Boston, Utah, Idaho, Missouri, coastal South Carolina, parts of the Great Lakes, and the St. Lawrence Valley. In short, the earthquake danger is a national danger and not a regional one.

Second. The large number of human deaths and property damage may be inevitable, but intelligent planning can reduce them. There are ways but there is no political will.

Finally, I should like to point out to my colleagues that there is a fact often overlooked in discussing any California earthquake, and that fact is that an earthquake could deal our national security a crippling blow. Although our communications network would remain in place, the industrial infrastructure in California would be devastated. The many integrated circuit manufacturers, telecommunications suppliers, computer software developers, computer manufacturers, aircraft manufacturers, and other companies crucial to the industrial infrastructure of the country would be deeply affected by the disaster.

I ask that the article be printed in the RECORD.

The article follows:

LIVING ON THE FAULT LINE

(By James Fallows)

Standing in the wash of the Santa Ana River, you can see mountains all around you. The San Gabriel, the San Bernardino, and the San Jacinto mountains form a long, semicircular arc to the north and east, pierced by the passes that lead variously to such outposts on the California desert as Barstow, Indio, and Palm Springs. To the south and west are the lower hills that separate the San Bernardino Valley from the booming conurbations of Orange County and from Los Angeles itself, which lies seventy miles due west.

On those days, infrequent during summer, when opaque brown smog has not blown inland to fill the valley and lap over the rim of the mountains, the contours of the ranges are clearly visible from the valley floor. There is no natural obstruction to the view more substantial than the waist-high scrub. The sharp edges and escarpments of the mountains suggest their dramatic origin, as products of the pushes and pulls on the earth's surface that are even now creating mountain ranges in the West. The white gravel in the dry riverbed has been washed down from the mountains during the flash floods that from time to time strike this bone-dry region. The "river" runs with water for only a few days out of every year.

It can seem the bleakest of settings, especially when the Santa Ana winds blow down from the high deserts at temperatures well above 100 degrees. Yet, like many other harsh regions of the Southwest, this has been a scene of phenomenal growth. As people continue to move to southern California, as Los Angeles has filled up, as real estate prices in Orange County have shot to the sky, many people have taken the next step in from the coast and have brought a population explosion to the "Inland Empire." The orange trees that line Interstate Highway 10 are the remnants of groves that were until the past two decades an economic mainstay of the region. They succumbed first to the smog and then to the subdividers. Some 400,000 people lived in the San Bernardino Valley in 1960. More than 700,000 live there now. There are plans for an "instant city" of 200,000 more people, to be built in the hills outside Chino, where the corners of San Bernardino, Orange, and Los Angeles counties touch.

People have moved to this valley seeking cheaper real estate, the good life in the sun, and the opportunities that economic growth creates. They are an hour's drive from the mountains, an hour from the ocean, and far, far away from such northern, urban cares as frost and economic decline. And their search has led them to the area that, according to many scientists, will be the site of the next catastrophic earthquake to strike the continental United States.

Those who live in the vicinity, as I did when I was growing up, are accustomed to earthquakes. Many pride themselves on surviving them, as those on the Gulf Coast might on surviving a hurricane. But the prospect that scientists now suggest is different from anything within living memory in southern California.

"We have known for years that major earthquakes in California are inevitable," says Clarence Allen, a geophysicist at the California Institute of Technology. "The scientific attitudes have not changed as much as the public perception that this is a real problem." But both scientific and public attitudes have been heavily shaped by two scientific developments of the past decade.

The first, which has been widely publicized since the early 1970s, is the evolution of the theory of plate tectonics. This theory postulates that the earth's crust consists of a number of large "plates," floating on a molten mass within the earth. There are seven of the larger plates—one bearing most of Africa and half of the Atlantic and Indian oceans, another holding virtually all of the European and Asian land mass—and a number of small ones. As the plates have drifted apart from, and into, each other, their motions have changed the world's geography. They opened the basin that became the North Atlantic Ocean, when the North American plate slid away from the Eurasian. They created the Himalayas, which mark the region where Indian was driven northward and collided with southern Asia. They stimulate volcanic action, including the recent eruptions at Mt. St. Helens. (As the small Juan de Fuca plate is pushed beneath the North American plate off the Washington and Oregon coasts, it melts at the tremendous temperatures and pressures of the earth's depths and then flows upward, in molten form, as lava.) The motion of the plates can also cleave regions from one another, as is now taking place in California.

The most famous of the "faults" that are responsible for California's earthquakes is the San Adreas—which, from the perspective of plate tectonics, is not just any fault but the boundary between two great plates. To the east of the fault lies the North American plate, which contains more than 99 percent of the land area of the nation, along with Canada, Mexico, and roughly half of the Atlantic Ocean. To the west of the fault is the Pacific plate, which runs beneath the ocean to the Mariana trench—where it disappears beneath the Philippine plate. The city of San Francisco is on the North American plate. Santa Cruz and Monterey, immediately to the south, are on the Pacific plate. So are Los Angeles, San Diego, and the other population centers of southern California.

Through the millennia, the two plates have been moving past each other along the San Andreas Fault, the Pacific regions slipping north, the North American south. The Baja California peninsula resembles in length and width an indentation on the western coast of Mexico. That is exactly where it came from, geologists say, before it moved north with the rest of the Pacific plate. The motion of these two plates goes on at rates as high as 5 or 6 centimeters a year—very fast, by geologic standards. Rocks on the Pacific side of the fault near Point Arena match those on the North American side at Taft, 350 miles to the south. The two regions abutted one another until the fault motion started about 25 million years ago. Ten million years from now, Los Angeles and San Francisco should lie in the same latitude.

For California, the significance of the tectonic theory was to explain the basic mechanism of earthquakes, not only on the San Andreas Fault but also on the many others that parallel it and the few that run at right angles to it. Year by year, the plates creep past each other; from time to time, rocks must yield. The largest recent earthquake in California, the 1906 "fire" (as civic boosters chose to call it at the time) in San Francisco, could be seen from the perspective of plate motion as the event through which the northern section of the San Andreas Fault released the strain that had been accumulating over the years.

It took a second and more localized scientific development to add the note of certainty to forecasts that a catastrophic earthquake will strike southern California. The man most often identified with this development is Kerry Sieh, a geologist at Caltech. His contribution has been to estimate the schedule on which the rocks along the fault give way.

As the plates move past each other, the strain that accumulates at great depth can be accommodated in different ways. The plates can release some or all of the strain by "creeping" past each other with steady movement, or through numerous small earthquakes that human beings barely feel. Such creeping takes place along a section of the San Andreas Fault in central California, and it leads to novel effects, such as the fissure at a frequently photographed winery in Hollister that is gradually being split by the fault.

Much of the tension along a fault line can also be relieved through less frequent quakes of "moderate" power, in the range of 5 or 6 on the Richter scale. Many of the subsidiary faults in California behave this way. Finally, the rocks on a fault line can lock solid. When this happens, there is no gradual distortion of roads, fences, or wineries, nor are the earthquakes frequent. The two sides of the fault remain motionless until the shearing force of the plates' movement overwhelms the strength of the rock itself.

The result is a "great" earthquake, which releases enormous accumulated energy all at once and can result in one side of the fault moving as much as twenty feet past the other in the space of a few seconds or minutes. The San Francisco quake of 1906 was such a great earthquake, affecting the northern section of the San Andreas Fault. Another portion of the fault, which runs roughly 200 miles between a small town called Parkfield, in central California, and the San Bernardino Valley, and which is sometimes referred to as the southern section of the San Andreas Fault.

Andreas and sometimes as the south central section, has been locked solid for more than a century. In 1857, during its last great earthquake, the sides of the fault moved past each other by as much as thirty feet. The southernmost section of the fault, which starts near San Bernardino and runs to the Salton Sea, has had no major ruptures during "historic time"—geologists' term for the 200-plus years of written records for the region, as opposed to the eons of the rocks. Scientists' understanding of this portion of the fault is so incomplete that they are not sure whether it should be considered very likely or very unlikely to suffer a major earthquake in the foreseeable future.

Kerry Sieh's approach was to study the layers of earth at several places along the southern San Andreas Fault to see what they revealed about the timing of previous earthquakes. Through a variety of techniques, such as uncovering layers of peat moss that had been deformed by violent earth movement and then determining their age, he concluded that along the portion of the fault that ends north of San Bernardino, there was a pattern of dormant periods followed by strong earthquakes. Working from an early version of Sieh's findings, the Federal Emergency Management Agency issued the following warning last January as part of a report it prepared for the National Security Council on the consequences of a major earthquake in California:

"Geologists can demonstrate that at least eight major earthquakes have occurred [on the southern San Andreas] in the past 1200 years with an average spacing in time of 140 years, plus or minus 30 years. The last such event occurred in 1857 . . . geologists estimate that the probability for the recurrence of a similar earthquake is currently as large as 2 to 5 per cent per year and greater than 50 per cent in the next 30 years. . . . The aggregate probability for a catastrophic earthquake in the whole of California in the next three decades is well in excess of 50 per cent."

Kerry Sieh has recently reworked his estimates, allowing for greater uncertainty about the magnitude of previous quakes and for the imprecision of the carbon 14 dating process. "The best scientific guess would be that the average interval is somewhere between 125 and 225 years, with both of those being extremes," Sieh said recently. "My own intuitive best guess is that it's about 160 years, plus or minus 30. I'd say that there's a 50 percent chance of a great quake in the next four decades." Considering that the last great earthquake in southern California was 124 years ago, Sieh said at the end of one his papers, "We are almost certainly not 'overdue' for a repeat of the great 1857 earthquake, but we are clearly well along in the process. We are much too far along, in fact, to neglect serious preparations for the eventuality."

The repeated allusion to "great" earthquakes is important, for it refers to a difference in magnitude so enormous as to become a difference in kind. "Great" quakes are generally understood to be those of magnitude 8 or above on the Richter scale. (Sometimes those of 7.75 magnitude are so classified.) The last "great" quake in

the continental United States was the one in San Francisco in 1906. Since then, Alaska has experienced a great quake, in 1964, and there have been devastating earthquakes in Chile, China, Japan, Italy, and elsewhere. But in California, the strongest earthquakes in the past seventy-five years have been in the 6 and 7 range on the Richter scale—and most of them have been centered in unpopulated areas. The most damaging of the quakes, though not the strongest in Richter terms, were the 1933 earthquake in Long Beach, magnitude 6.3, and the 1971 San Fernando quake, also a magnitude of 6.3. Within a matter of years, there will be no one alive in California with personal memory of the effects of a "great" quake there.

Without the testimony of survivors, it may be hard to imagine the consequences of a "great" earthquake. The difference between 6.3 and 8.3 on the Richter scale does not sound fundamental, but it is. Each increase of 1 on the Richter scale signifies an increase of thirty times the energy and ten times the deflection on seismic measuring devices. If the San Andreas Fault should produce an earthquake of magnitude 8.3, as many geologists expect, it would release about 900 times as much energy as did the San Fernando earthquake of 1971. (The greatest quake of modern times, which struck Chile in 1960, had a magnitude of 9.5.)

The effects of major earthquakes are more readily comprehensible when expressed in terms of ground shaking, on the "Modified Mercalli Scale." This is a measure of the effects of ground movement as they are felt in specific regions. The scale runs from I to XII. Level I is "Not felt except by a very few under especially favorable circumstances," and II is "Felt only by a few persons at rest, especially on upper floors of buildings." In a "great" quake, large areas may be subjected to the highest intensities of shaking, levels IX through XII:

Level IX: Damage considerable in specially designed structures; well-designed frame structures thrown out of plumb; great in substantial buildings, with partial collapse. Buildings shifted off foundations. Ground cracked conspicuously. Underground pipes broken.

Level X: Some well-built wooden structures destroyed; most masonry and frame structures destroyed with foundations; ground badly cracked. Rails bent. Landslides considerable from river banks and steep slopes. Shifted sand and mud. Water splashed (slopped) over banks.

Level XI: Few, if any, (masonry) structures remain standing. Bridges destroyed. Broad fissures in ground. Underground pipelines completely out of service. Earth slumps and land slips in soft ground. Rails bent greatly.

Level XII: Damage total. Waves seen on ground surface. Lines of sight and level are destroyed. Objects thrown into the air.

In most versions of the Mercalli scale, levels IX to XII are grouped under the heading "Panic is general."

During the 1971 San Fernando earthquake, in which highway overpasses collapsed and forty-five people were killed when a Veterans Administration hospital fell down, there were shaking intensities of IX and perhaps even higher in some areas near the epicenter. The California Division of Mines and Geology has produced maps that display the predicting shaking intensities for a great quake on the southern San Andreas Fault. They show bands of IX intensity stretching for more than 100 miles, with levels of X to XII expected in sizable zones.

As the descriptions on the Mercalli scale may suggest, the main threat to human life during an earthquake comes not from the earth's movement itself but from things that fall. When severe quakes have occurred in out-of-the-way places, such as the 1872 earthquake in Owens Valley, they have rearranged the landscape but have taken comparatively few lives. That earthquake, centered in the stark region east of the Sierra Nevada Mountains, was the strongest in California's history—its force was so great that within seconds it added ten to fifteen feet to the height of an escarpment and moved the sides of the fault twenty feet past each other—but only sixty people were killed. Unless people are trapped in the path of a landslide, hit by falling trees, or drowned by the large ocean waves, called tsunamis, that earthquakes sometimes produce, they face little danger if they find themselves out in the open when an earthquake strikes.

The danger comes instead from buildings, especially those made of brick and other masonry, that are shaken to pieces during strong earthquakes and, in falling, cause most of the deaths. Some of the unreinforced brownstones of Manhattan, Federal townhouses in the Georgetown section of Washington, D.C., and mansions along Commonwealth Avenue in Boston, all so solidly built could be converted to rubble in an earthquake, for their style of construction is generally the first to fail during strong quakes. Wood-frame houses, by contrast, are the most stable structures, since they are able to sway and absorb the earth's motion. Only under the most severe shaking intensities do one-story frame houses collapse.

The ability of different buildings to withstand shock is also greatly influenced by the ground on which they stand. The best place to be during a strong earthquake is on solid rock; the worst is on soft ground, mud, landfills or areas with a high water table. Rock diminishes the intensity of the shaking; soft earth magnifies it. This principle is not limited to California. If a strong earthquake were to hit Boston (which is a less remote possibility than it may seem, since Boston has historically been one of the more seismically active areas in the East), the houses of the Back Bay would be most severely shaken, because they are built on landfill. In 1906, the regions of San Francisco built on reclaimed land near the bay were far more heavily damaged than buildings on top of the city's rocky hills. The ultimate danger in such areas is liquefaction, caused by violent shaking that drives groundwater upward through the soil and thereby transforms it to quicksand. Heavy buildings, especially multistory structures that are not anchored in bedrock, can tip over or sink into soil after it liquefies.

Through most of its southern section, the San Andreas Fault traverses dry plains and rocky canyons, where there are few buildings to destroy. But after it crosses through the San Bernardino Mountains at the Cajon Pass, it enters the inland valley that is now supporting such rapid growth, and it comes at its nearest point within about thirty-five miles of Los Angeles. It is the combination of the increasing probability of a quake, its expected magnitude, and its nearness to such a vast and wealthy human settlement that has created an atmosphere of concern about an earthquake on the southern San Andreas. Two other possible earthquakes are on the list of concerns: a major quake on the northern San Andreas, which is thought to be less likely, since only seventy-five years have passed since the San Francisco earthquake, but which would affect an even more densely populated area and therefore might be more devastating; and a moderate earthquake on the Newport-Inglewood Fault, which runs directly through Los Angeles and was responsible for the Long Beach earthquake of 1933. Statistically, the latter is thought to be a longer shot than either of the others, but because it would affect Los Angeles directly, it might be the most damaging of all.

Shortly after Jimmy Carter took a tour of the landscape of devastation around Mt. St. Helens, he grew concerned about the effects of a catastrophe in California and ordered a federal task force to prepare a report. Based on assumptions about how many people would be killed in different kinds of structures (for instance, 2 to 4 deaths per 10,000 population in wood-frame houses, 5,000 deaths per 10,000 in ordinary masonry buildings), the task force came up with the following estimates of deaths and of injuries serious enough to require hospitalization. Some of the situations it considered were these:

	Location					
	Southern San Andreas		Newport Inglewood		Northern San Andreas	
	Richter magnitude					
	8.3		7.5		8.3	
	Dead	Injured	Dead	Injured	Dead	Injured
Time 2:30 a.m.	3,000	12,000	4,000	18,000	3,000	12,000
2:00 p.m.	12,000	50,000	21,000	83,000	10,000	37,000
4:30 p.m.	14,000	55,000	23,000	91,000	11,000	44,000

In addition, there is, of course, the property damage. A consultant named Karl Steinbrugge, who was responsible for many of the most widely circulated damage estimates, predicted that the property damage could amount to some $17 billion for the southern San Andreas, $38 billion for the northern, and $69 billion for the Newport-Inglewood. Because of the enormous uncertainties about both the quakes and the resistance of structures, Steinbrugge stressed that any of the estimates might be off by a factor of two or three—either high or low.

In 1973, the National Oceanic and Atmospheric Administration, known as NOAA, prepared two thick volumes to enumerate the likely effects of a major earthquake in Los Angeles and of one in San Francisco. The books contain page after page of maps, each one plotting the two major faults in northern and southern California and showing their location in relation to major facilities: hospitals, blood banks, reservoirs, railroads, airports, highways, military bases, aqueducts, natural-gas lines, electric generating stations and transmission lines, oil pipelines, and other facilities. The southern California report says, for example, that a major quake on the San Andreas could kill between 400 and 800 people who are already in hospitals and put 50 percent or more of hospital beds out of commission, at precisely the time that the demand for emergency service would be most intense. It also says that "in the event of an 8.3 magnitude shock on the San Andreas Fault, the failures of Fairmont and Bouquet Canyon dams should be assumed," that such failures could kill more than 7,500 people and render 111,000 homeless; that all of the aqueducts that serve Los Angeles and San Bernardino cross the San Andreas Fault at least once and one of them crosses it four times, and that the region may be without its major water supplies for between two weeks and three months after a quake; that transportation, communications, finance, and

all other essential services would be interrupted.

After reviewing these and other predictions, the Federal Emergency Management Agency concluded in its report earlier this year that "the Nation is essentially unprepared for the catastrophic earthquake (with a probability greater than 50 percent) that must be expected in California in the next three decades. . . . Because of the large concentration of population and industry, the impacts of such an earthquake would surpass those of any natural disaster thus far experienced by the Nation. Indeed, the United States has not suffered any disaster of this magnitude on its own territory since the Civil War."

"What must be stressed is that this prospect presents us with an unprecedented problem in the history of the United States," Carl Ledbetter, a young mathematician who was briefly the director of the Southern Californina Earthquake Preparedness Project, said earlier this year in testimony before a congressional committee. "There has been no other time when the lives of as many as 69,000 people have been threatened at once; there has been no other time when losses on the order of magnitude of $135 billion have been a real consideration; there has been no other time when the productive capacity of a region which generates one dollar in twelve of the country's Gross National Product has been under such a real and unavoidable threat.

"We do not know how to think about threats of this magnitude; they are unreasonable by all our past standards."

Some scientists seem to feel that they do not know how to think about such threats. They are concentrating on finding ways to predict when and where earthquakes will occur. From experience in the U.S. and more advanced work in the Soviet Union, Japan, and China, geologists have focused on several signs that usually appear from several months to several hours before large earthquakes occur.

One such sign is a pattern of small "foreshocks" that leads to a major shock. ("The problem is distinguishing between those and other patterns that don't turn out to be foreshocks, because no large earthquake follows them," says Karen McNally, another of Caltech's geophysicists.) The Chinese have associated the period before large earthquakes with changes in the nature and behavior of groundwater. The water level in wells sometimes changes just before a quake, and the water may contain different concentrations of radon gas. Both of these changes are apparently signs of rearrangements in the underground rock layers, which affect the course through which the water must pass. Other scientists have constructed grids of geodetic markers on the earth's surface near a fault, on which they take repeated measurements to determine how much the earth's accumulating strain has distorted the grid.

There are even attempts under way to make scientific sense of the familiar folkwisdom reports that animals can tell when an earthquake is coming on. In central California, near the San Andreas Fault, one researcher has built a number of burrows for field mice and monitored them to record the animals' activities. He will attempt to establish the normal patterns and the variations from them for seasons and for feeding cycles—and then he will wait for the next big earthquake.

"We need more time—and we need more earthquakes," says Karen McNally. Few phrases are more frequently heard from the geologists and seismologists than "We'll learn a lot from the next big one." Such knowledge may be costly. Clarence Allen, in discussing events of the past year or two, says, "There's been a change in the seismic pattern [in southern California] that makes us more worried than we'd normally be. We know we're in an area and an era where a great earthquake would be no scientific surprise. We see a pattern of low activity for fifteen years or so—and now this change to higher activity, which makes us nervous." There are similar implications from the Palmdale Bulge, an area along the San Andreas Fault north of Los Angeles where the ground has apparently risen about a foot. "On the assumption that the bulge exists, as I would argue it does, it may be significant," Allen says. "Its shape is roughly coincident with the fault, and the very rapid rate of its rise—by geological standards—makes us think it might be trying to tell us something." But just what the bulge—or the changed seismic pattern, or the groundwater, or the animals—may be trying to say will be much clearer after the next big earthquake has confirmed or disproved the hypotheses.

In the meantime, of course, scientists are offering forecasts whose details of time and place may be imprecise but whose general point is hard to miss. But because the day of reckoning is so uncertain, and because the catastrophe is so strongly associated with divine judgment, against which the efforts of mortals are no defense, it has been hard for California and its public officials to decide what to do.

The things that could conceivably be done fall into two categories—mitigation and preparedness. Mitigation means taking steps before an earthquake to minimize the damage; preparedness means being ready to cope with the problems created by the earthquake.

Since earthquakes do most of their damage to buildings, the most obvious mitigating procedure is to strengthen buildings that might otherwise be destroyed. This California has tried to do, by passing new laws and tightening its building codes after each serious earthquake. When the 1933 Long Beach earthquake crushed masonry buildings throughout southern California, including a large number of schools, people realized that if the earthquake had occurred a few hours earlier, when school was in session, thousands of children might have been killed. The result was the Field Act which set more stringent standards for school construction and, despite some delays in application, has made schools the safest public buildings in the state.

During the 1971 San Fernando earthquake, the Van Norman Dam was so severely damaged that, according to most experts, it came within a few seconds' shaking of failing altogether. If it had done so, the death toll from that earthquake might have increased by a factor of 100. Soon afterward, the state undertook a dam inspection program that has—theoretically—made its dams much safer than before. The improvement must so far be considered only theoretical, because neither the dams nor the skyscrapers that have sprung up in Los Angeles since the thirteen-story limit on construction was removed in 1956 have yet been subjected to the test of a major quake. Engineers have often found themselves chagrined by the results of previous quakes. In 1979, a 6.6 magnitude quake struck the Imperial Valley, an earthquake-prone region east of San Diego. The most serious single casualty was the Imperial County Services Building, a new six-story structure that had been advertised as incorporating the latest standards in earthquake-resistance but which was so severely damaged that it had to be demolished.

The major structural peril is the large stock of old (pre-1934), unreinforced masonry buildings. There are about 8,000 of them in the city of Los Angeles alone, and their inevitable destruction is expected to be responsible for 80 percent of the deaths and 75 percent of the injuries in a great earthquake. The buildings are located mainly in the crowded downtown areas of Los Angeles and in the less fashionable sections of San Bernardino and other cities. The population that lives and works in them is largely poor and non-white, which is why earthquakes—though they threaten Porsche and pickup alike when freeway bridges collapse—will probably end up killing a disproportionate number of poor people. The economic forces that have kept the old buildings from being reinforced or renovated during the previous fifty years also make the owners of the buildings unlikely to invest voluntarily in such reconstruction. Early this year, the Los Angeles City Council passed an ordinance requiring that all the old buildings be either greatly strengthened or razed.

While earthquake experts generally praise this step, they point out two catches: the deadline for renovation is a dozen years away and could be stretched out even further through legal maneuvering, and no one has figured out who should pay the bill. One school of thought contends that any one who bought one of these buildings knew there was a hazard and has no right to complain because the gamble didn't work out. Others argue that strengthening the old buildings and reducing the potential disaster serves the public's interest and therefore deserves public financial support through either tax incentives or low-cost loans.

Still another group claims that trying to repair these structures before a quake will always be too costly to make sense. "You can't talk about a massive program of retrofitting old buildings," says Richard Andrews, the acting director of the Southern California Earthquakes Preparedness Project. "If you're talking about a building still under construction, making it seismically resistant might add 5 to 7 percent to the cost. For those that are already built, it can add 100 percent." Instead of worrying about avoiding property damage, some earthquake authorities conclude, it makes better sense to assume that the scientists will provide some warning, and then to get people away from the buildings and out of harm's way when an earthquake is due.

In a more fundamental sense, mitigation includes not only the buildings but also the places where they are built. From this perspective, the population boom in northern San Bernardino County can be seen as a move in the wrong direction. The northern outskirts of San Bernardino and the surrounding small communities—Del Rosa, Highland, Patton, Devore—are dotted with tract homes and new condominium developments. This very region is the southern limit of the 200-mile ground rupture that can be expected if the next great earthquake follows the pattern of the one in 1857. The geological map shows that the San Andreas and several associated faults pass directly through the new developments.

Since 1972, construction near fault zones has been controlled by California's Alquist-Priolo Act, which declares the areas near active faults to be "special study zones" and forbids construction intended for human occupancy within fifty feet of the trace (surface line) of an active fault. I visited one of the largest condominium developments north of San Bernardino, a place with several hundred units—adults-only apartments plus an adjoining mobile-home park. "You may have noticed some wide yards, some extra swaths of grass," Robert Rigney, the county administrative officer for San Bernardino County, later remarked. "Those represent the geologists' best guess about where the fault line runs." When I asked the saleswoman at the development whether there were any earthquake country. You ever look at a fault map? is southern California, honey. This is earthquake country. You ever look at a fault map? There's no place you can go that's very far away from them, so my advice is just to forget about it."

Indeed, Robert Rigney says that nearness to the fault, as in the case of this development, could be a source of false alarm. "The fifty-foot limit was designed to protect structures from damage caused by ground ruptures," he says. "Once you've passed that point, proximity doesn't mean much. As for the shaking—well, the whole valley will have that." As Clarence Allen puts it, "In a truly great quake, once you're a few feet away from the rupture it doesn't make much difference whether you're there or five miles away."

Robert Rigney also raises a larger question. Should people be prohibited from doing something—like buying new houses near the fault line—that may well cause them harm? "The zoning laws are designed to protect against injuries and deaths, especially in public buildings. They are not intended to protect property per se. If people choose to live here, that's their choice."

In a sense, he's right. The sociologists whose reports make up a larger and larger fraction of official publications about earthquakes have consistently pointed out that among all the possible responses to warnings of a quake, moving away from southern California is the public's last choice. "The Southern California public's lack of readiness is quite rational," a report from the Policy Research Center at the University of Redlands said early this year. "The threat is too uncertain in its impact and timing to command a high priority with people, especially since they face more pressing life demands which justify higher costs and yield higher immediate benefits. Just as people accept the risk of driving a car in order to gain the freedom it allows, many residents may also consider the earthquake threat an 'acceptable risk' in light of the benefits of living in Southern California."

The only thing wrong with the idea that people have knowlingly accepted a risk is that many of them don't have the slightest idea what the risk really is. The most widespread source of misinformation is the notion that since nearly everyone in California has lived through some earthquakes, they have a rough sense of what a big earthquake would be like. When I moved away from California in the late 1960s, I mocked the fears of my eastern friends about the effects of a quake. I'd been there; knew what they could do. My confidence was eroded recently, when I discovered that during the period I lived there the strongest earthquake to strike southern California was 4.5 on the Richter scale—about a millionth as strong as the big one that is predicted.

Giving people more of the basic information about faults, earthquakes, and hazards is a principal mission of one of the most hopeful new entries in the earthquake field, the Southern California Earthquake Preparedness Project. The project was launched as a cooperative effort of the federal government and the state. Its major purpose was to bring government officials, industrialists, and scientists together so that the could start figuring out who would do what to repair the damage done by the big earthquake. Who would fly in enough cash to keep the local economy running during the weeks it might take to reconstruct bank records lost when the computers go down? ("They tell us it will take ten days to get restarted for every one day the system is out." says Richard Andrews. of the project.) Who will run the morgues? Who will handle the insurance companies if there is a prediction of a quake nine months from now and they start refusing to renew earthquake coverage?

The project has been hampered in its early stages by messy disagreement between Robert Olson, who as director of California's Seismic Safety Commission has administrative jurisdiction over the project, and Carl Ledbetter, the mathematician and academic administrator who, at the age of thirty-one, was hired as the project's first director in January of this year. In July, Ledbetter submitted his resignation after Olson had asked him to do so. Olson claims that the disagreement was purely one of personal tastes and administrative styles. Although Ledbetter himself does not say so, others feel that he had made some officials nervous, even envious, because of his very success in getting the press and the public to begin thinking of earthquakes as a serious threat.

The disagreement about the southern California project may have been largely a clash of personalities, but it rises above that to the extent that it illustrates the internal friction that has characterized many efforts to "do something" about earthquakes. Most of the public bodies that have wrestled with the earthquake problem seem to have proven more successful so far in accommodating their own professional and bureaucratic habits than in doing things that would make a significant difference if a great earthquake should strike, say, next month. For politicians, those habits include making gestures of concern.

Thus, Governor Edmund Brown, Jr., has appointed a special task force to look into earthquakes; its findings are not notably different from the many reports that other task forces have written and filed over the years. For sociologists, earthquakes provide a reason for polls differentiating between "elite" and "mass" views on, for example, the credibility of earthquake warnings delivered through different news media. The "public policy" consultants have seen in earthquakes an opportunity for constructing elaborate flow charts and "decision trees" of phenomenal complexity, much as their professional brethren did fifteen years ago when laying plans for Model Cities and the Job Corps. Meanwhile, new houses spring up near the fault zone and old houses stand waiting to collapse.

There also seems to be a genial agreement among many of the participants that ignorance is bliss. If there is a constant in the political history of earthquakes in California, it is that responsible officials are often eager to promote the idea that it can't happen here. Arnold Meltsner, of the University of California, has pointed out that "the geological map of California published by the California State Mining Bureau in 1916 did not contain any indication of faults, not even the famous San Andreas"—and this ten years after the San Francisco earthquake. Representatives of Palmdale have done their best to have their bulge referred to instead as the "Southern California uplift."

When officials of a county in southern California discuss what their role after an earthquake should be, they tend to emphasize what they will be doing to help repair the devastation elsewhere, not what help they themselves will need.

Any non-Californian who is tempted to mock the desire to ignore earthquakes is invited to consider his own situation. While the government's seismic-risk maps show that most of California is in Zone 3, where "major destructive earthquakes may occur," that zone is not confined to California. It also includes parts of Utah and Idaho; the area along the Mississippi where Arkansas, Missouri, Tennessee, and Kentucky meet; the Charleston region in South Carolina; greater Boston; a strip along the Great Lakes; and the St. Lawrence Valley in upstate New York and northern Maine. For several months in the winter of 1811–1812, a powerful sequence of earthquakes occurred in New Madrid, Missouri. In 1886 there was another powerful earthquake in Charleston, South Carolina.

I asked Clarence Allen what caused those earthquakes. He said, "No one knows."

On a smoggy summer day when the temperature was 99 degrees, Carl Ledbetter rode with me through the foothills north of San Bernardino where the San Andreas Fault runs. "If I remember the maps correctly, the fault goes right past this intersection," he said as we stopped at a crossroads. On one corner of the intersection was a mobile-home park.

"Mobile homes are tremendously vulnerable during earthquakes," Ledbetter said. "They suffer about six times as much damage as regular homes. All of these will be thrown off their supports. They'll all be gone." We drove up a steep hillside, where several dozen new single-family homes were ready for occupancy. "You see the grading on the terraces here? That will never hold. There will be landslides all down this hill."

We drove back down the hill, to the floor of the Santa Ana wash. Farther to the east, where the San Andreas Fault began to divide into two roughly parallel zones, there was a narrow, sharply defined ridge, of the sort that is sometimes created by fault action. Several modern, obviously expensive houses sat on top of the ridge. "I've got to bring my camera up here and take 'before' pictures of all these places," Ledbetter remarked. "Then I'll come back for the 'after'."

"We could do something about it," he said, as we drove through the wash to Redlands. "Little things can make a big difference, like strapping down the water heater to ensure you'll have something to drink, or knowing how to turn off the gas lines and prevent a fire. Also big things, like thinking about land-use policies, and being prepared for a big earthquake's impact on the nation's economy and its military security. It's not impossible to protect ourselves. But we'd have to start doing it now."●

POLAND WILL BE FREE

● Mr. LUGAR. Mr. President, many Americans take for granted the many freedoms that they have enjoyed for over 200 years: Freedom of religion, freedom of emigration, and freedom to organize into voluntary associations such as trade unions. Events have transpired these past few days in Poland that powerfully demonstrate that not all people enjoy these same rights. The people of Poland are literally under military seige.

For over 3 months, the College Republican National Committee has mobilized its thousands of members in a campaign of support for the people of Poland. This "Poland Will Be Free" campaign has centered around "Marches for Freedom" in 27 cities across the country and the circulation of a petition in support of the Polish people.

Mr. President, over 200,000 Americans have signed the "Poland Will Be Free" petition and joined in this courageous campaign. I am proud to add my name to many Members of the U.S. Senate that have assisted the College Republican National Committee in this important effort. I ask permission to insert the text of the petition into the RECORD.

The text of the petition follows:

POLAND WILL BE FREE

Whereas, the men and women of Poland share the rights of all people to freedom of religion, freedom of emigration and freedom to organize in voluntary associations such as unions, student groups and churches.

And whereas, these rights have been denied to the people of Poland since 1939, first by National Socialist Germany and now the Soviet Union,

And whereas, the people of Poland have made steady gains in establishing these rights since August, 1980.

And whereas, these newly won rights are jeopardized by a threatened invasion by the Soviet Union and its client states in Eastern Europe.

Therefore, be it resolved, that we the undersigned wish to state before the world community our complete support for the people of Poland in their struggle to retain their inalienable rights.

Petition Gatherer's Name:

Address and Phone: _____

Please send this completed petition to the College Republican National Committee at 310 First Street, SE., Washington, D.C. 20003. More petitions are available from the Committee.

All completed petitions will be flown to Poland and delivered.●

NUCLEAR ENERGY EDITORIAL

● Mr. MITCHELL. Mr. President, Mrs. Mary Page of Skowhegan, Maine, sent me a copy of a Bangor Daily News editorial which voices a number of strong concerns about the administration's nuclear energy policy. They are concerns which have become more cogent since the editorial was first printed.

The paper's commentary discusses the administration's claim that the ills of the nuclear industry are due simply, and only, to Federal safety regulations, which President Reagan has said do not provide enhanced safety but only result in costly delays. All Federal regulations should be closely evaluated by comparing their current effectiveness with their original aims, and I think this is a point on which all Americans would agree. Nevertheless, for the industry to blame their present woes solely on Federal regulation is, as the editorial states, "a weak crutch."

The most recent NRC report on months of delay in the licensing schedule estimates a 2-month delay in one plant's license petition. The figure is dramatically different from the NRC's January report which predicted that, according to construction completion dates provided by the industry, 12 powerplants would face an aggregate 90 months of delay during 1981 and 1982. As these projected delays have become substantially fewer, so, too, has the administration's argument become significantly weaker. At the same time, the real ills of the industry, which are economic in nature, have persisted.

So, too, have the questions on nuclear safety inexorably continued and gained strength. On the day the NRC suspended the operating license of the Diablo Canyon plant, NRC Chairman Nunzio Palladino stated strong concerns about serious quality-assurance breakdowns at several plants across the country. He added that the discovery of numerous safety problems and engineering mishaps during his 5½ months as NRC Chairman sort of clouds the high degree of confidence he once had in the development of nuclear energy.

The editorial also reviews the administration's proposal to lift the ban on commercial reprocessing of spent reactor fuel. Former President Ford is quoted in the editorial making this succinct case against such a decision:

Avoidance of proliferation must take precedence over economic interest.

The editorial makes reference, as well, to the President's order for swift action to deal with nuclear wastes, stating:

He is apparently a believer in the nuclear industry's contention that the disposal of high-level waste is purely a "political problem."

As a member of the Senate Environment Committee, which recently reported its version of nuclear waste policy legislation, I know well that if the issue of nuclear waste is a political one, it is for good reason. The American public should and will be fervently involved in this critical issue. But I know, too, that the difficulties of dealing with nuclear wastes cannot be blamed solely on the politics which surround the issue. The enduring complexities of nuclear waste will not be resolved simply by swift solutions, or by allegations about the politics of the issue. They must instead be the result of a thoughtful evaluation of the available policy alternatives.

I ask, Mr. President, that the Bangor Daily News editorial be inserted in the RECORD.

The editorial follows:

REAGAN'S NUCLEAR POLICY

As many Americans feared he would, President Reagan has committed the federal government to a bail-out of the seriously ailing nuclear power industry—an expensive, potentially dangerous and questionably necessary policy for a nation that is referred to as the Saudi Arabia of coal.

Since the dawn of the nuclear age 35 years ago, the U.S. has pumped an estimated $45 billion taxpayer dollars into this enterprise, which judged in the most charitable and sympathetic light, has failed to live up to the promises made in its behalf.

Even if the president is successful in changing the rules governing plant licensing—reducing that period from 12 years to eight—it is unlikely that he can mend the flaws that make this source of power unattractive to the investment community, which must risk funds in plant development, or to the consumer, who is concerned for both his light bill and his health.

The word simplistic has been used, with debatable accuracy, to describe the president's foreign and domestic policies; but there is little question that in laying the blame for nuclear power's failure solely on red tape, he is crudely oversimplifying the issue.

"Nuclear power," said Reagan in justification of his policy, "has become entangled in a morass of regulations that do not enhance safety but do cause extensive licensing delays and economic uncertainty."

True enough.

But the same regulatory excesses are evident in the production of and ultimate cost of everything from automobiles and lawnmowers to tricycles and toys.

These regulations are often unnecessary, occasionally idiotic, and they certainly inflate prices, but they are a weak crutch for the nuclear industry.

All major industries, from paper mills to coal plants, are forced to live with regulations that benefit no one and only serve to drive up costs, but none are suffering to the extent the nuclear industry is.

There are other reasons for these unhappy circumstances, some of the most prominent of them summed up last February in a report published by New England Business magazine:

"The reason for this rush to sell (utility interests in a half-dozen regional nuclear plants), is no secret: The plants have proved to be a financial noose for the utilities. The effects of inflation have combined with delays in the project to carry them far beyond original cost estimates—and worse, for some, it doesn't appear that the demand for power that was assumed when they were planned will materialize."

Utilities have cancelled work on two more New England nuclear plants, in Montague, Mass., within the past month.

If Mr. Reagan wants to reduce the licensing period from 12 years to eight, the issue then becomes which regulations to eliminate.

The Kemeny Report, issued in the aftermath of the Three Mile Island incident, has been treated Delphically by the two sides in the nuclear debate—the nuclear industry, for its part, has embraced it almost lovingly, as if it vindicated the process by which electricity is produced through atomic fusion.

It didn't.

"I don't think the impact of our recommendations is fully appreciated," said the report's namesake, former Dartmouth President John D. Kemeny, about utility and industry reaction to the document. "We have recommended that no new licenses be issued unless certain things happen, unless licenses raise safety standards, get the approval of state and local emergency plans and conform to new siting requirements."

President Reagan is proposing that some requirements be eliminated. A simplistic approach would be downright dangerous.

Three Mile Island is overused as a symbol, by both sides in the nuclear debate, but even if the nuclear industry is granted its contention that Three Mile Island was a "non-accident," such a status raises two interesting points—one of concern to the ratepayer, the other to investors.

The estimate most commonly used for the cost of cleaning up the non-accident is $1.3 billion—enough to fund all government operations of the State of Maine for two years and four months. One wonders how the expense of a similar occurrence in the subscription area of a Maine utility would be covered by its ratepayers.

If the absence of new capital is any indication, investors have not missed the message to them in Three Mile Island.

The incident and subsequent studies may not have been the kiss of death to nuclear power, but investors heard heavy breating.

Nuclear technology is dangerous and fragile, safeguards are expensive, and a multi-million-dollar speculative investment can go down the drain in an instant, with the sticking of a valve or in the momentary lack of concentration of a single employee.

It is his right, but the president is also reversing the policies of previous administrations with his decision to allow commercial reprocessing of spent reactor fuel.

President Gerald Ford made one of the strongest statements against this policy, when he said that in the balance between modest, short-term economic gain and the added risk of nuclear terrorism that occurs with the proliferation of weapons-grade plutonium, "avoidance of proliferation must take precedence over economic interest."

The president is also naive when he orders swift action in developing a national atomic waste disposal repository. He is apparently a believer in the nuclear industry's contention that the disposal of high-level waste is purely a "political problem."

It is in fact a political problem, but it exists because there is no proven, safe, permanent way to dispose of the by-products of the nuclear fission process.

Not surprisingly, there has been no queue of states and towns in Washington, waiting to ask the federal government to bury radioactive waste, encased in ceramic balls, in their backyards.

Even if the program sounded appealing: This is the same federal government that the administration itself is quick to remind us

has traditionally handled its responsibilities with expensive, bumbling inefficiency.

Could the same government that spawned the Postal Service, food stamps, and affirmative action, really be trusted to safely dispose of huge quantities of the planet's most lethal material?

What is most unfortunate about the Reagan nuclear policy is that it is so unnecessary.

Even if the futurists and dreamers, the Lovins' and the Schumakers', are wrong, and we would be premature to take the soft path to renewable energy, the country still has an incredible wealth of coal, and despite today's high prices, the elasticity of demand could stretch further still, bringing gains through conservation.

Last year, wood provided a greater portion of the national energy budget than did nuclear power. It is tough to run a sump pump on beech, but it is incredibly costly, to everyone, to heat structures with electricity.

In many instances, this most costly form of energy is doing the wrong work.

If it can be proven that the construction of major new plants is essential to economic growth—there are good arguments on both sides of the energy-economic growth issue—there is always King Coal.

We would be following in the footsteps of other industrialized nations that are not abandoning nuclear plants already on line, but are shifting their emphasis to coal.

In 1979, the last year that complete figures are available, eight nuclear projects or contracts were cancelled worldwide for every three announcements of new plant construction.

Charles Komanoff, a New York energy and economic consultant, told the New York Times last March that any utility with a nuclear plant less than one-third complete, should abandon the project and switch to coal. In the long haul, it will be cheaper.

With the experts quibbling over the difference in cost of building coal and nuclear plants—today they are roughly equivalent—the layman can safely assume that this is a moot but expensive point.

He can also assume that, given the degree of difficulty and danger, our technologists can make a coal plant cleaner than they can make a nuclear plant safer.

If massive public subsidies must be pumped into the development of any capital-intensive energy scheme, let it be coal.

The additional billions that President Reagan would take from the taxpayers to underwrite technologically specious schemes to dispose of nuclear waste, should be used instead to stifle the choking smoke of the industrial heartland that is killing rivers and lakes throughout the Northeast and Canada.

Instead of public subsidies to build nuclear plants that are risky investments, increasingly shunned by the private sector, the same money should be spent to provide utilities and industries with the margin they need to build clean, coal-fired facilities. Industry is headed that way on its own. The economics dictate it. If public money is to be used, why not encourage it?

At a recent hearing in Augusta where the cost of closing Maine Yankee and disposing of high-level waste was discussed (a cost of up to $200 million), E. W. Thurlow, the president of Central Maine Power, owner of Yankee, remarked, "Nuclear power is dead, why stomp on the corpse?"

The taxpayers might ask Mr. Reagan why he insists that this dangerous corpse lie in state, indefinitely, at their expense.●

BUYING AMERICAN

● Mr. HEINZ. Mr. President, recently one of my constituents, Robert Shaffner, brought to my attention a policy his company, Flight Systems, has instituted which I think bears close examination.

As the following policy statement makes clear, Flight Systems has adopted a policy of buying American in as many circumstances as possible, though not regardless of price or quality. Mr. Shaffner is saying that as Americans we ought to prefer American products, and, if they are not of superior quality or offered at competitive prices, we ought to be challenging our producers to do better.

This approach takes a page from the Japanese book, though certainly not to the extent the Japanese have closed their markets to foreign products. Indeed, Mr. Shaffner is not proposing Government restraints or other legislated obstacles. Rather, he is calling for a new sensitivity on the part of consumers—wholesale and retail—to the importance of buying American to our economy without sacrificing price or quality. This is an attitude we need to encourage in this country, and I urge Senators to read Mr. Shaffner's policy statement. I ask that it be printed in the RECORD.

The statement of policy follows:

STATEMENT OF POLICY

Those of us who repair, supply parts for or sell forklift trucks are faced with an Asian challenge so severe that our very livelihoods are at stake.

In years past, many would say that American-made products "just didn't measure up" or that Japanese lift trucks (or Japanese cars, or Taiwanese shoes, or Korean coats) were better made and cheaper, so why not buy them? In many instances, they were right. Foreign products were cheaper and, in some cases, as good or better.

Recently, there has been a revolution in American-made products, due in part to the American worker's response to the competitive challenge of foreign-made products. American workers have improved their quality and increased productivity. This is doing what we're best at—responding to a challenge.

It's time for American business to act—to do our share by establishing a reasoned policy which alerts both suppliers and customers that we care about American products. A reasoned policy means not to overreact and refuse to buy or sell anything not made in America as "foreign or un-American". That is stupid and repressive. As a better approach, we invite you to join us in adopting a permanent policy which encourages pride in and a preference for American products:

MADE IN AMERICA—OUR FIRST CHOICE

When buying industrial products, ask your supplier, "Is it made in America? If not, why not?" If there is a good reason, buy it anyway. If not, consider the American-made product first. Include this question on your purchase orders—Label the American-made products you sell—Note in your advertising those products you sell which are made in America.

This certainly does not mean that you should buy or sell sub-standard products just because they are made in America. That's partially the reason Asian products gained such popularity. Insist on top quality products at competitive prices from your American suppliers; i.e., "Hold their feet to the fire". If they don't measure up buy the Asian product, and tell your supplier why. You'll help the sub-standard supplier and America far more by adopting this policy than by quietly taking your business elsewhere.

Flight Systems and SCR Parts are proud to have made in America—our first choice as our corporate policy for the products we buy and sell. Even though we are an international company, this policy makes good business sense for us and our customers. We hope you agree and will adopt the same policy. We have printed some self-adhering small labels to affix to products which say just that, and would be happy to send you a few sets of them, with our compliments. Please write either of us on your letterhead.

DENNIS M. DALEY,
FLIGHT SYSTEMS,
President.
R. D. SHAFFNER,
SCR PARTS,
President.●

ADDRESS BY SENATOR HART

● Mr. MITCHELL. Mr. President, Senator GARY HART recently spoke at George Washington University on the critical need for nuclear arms controls and a viable nonproliferation policy.

To briefly summarize, the speech addresses the spread of nuclear materials and the severe inadequacies of current safeguards to detect the transfer of these materials and to restrict their potentially tragic misuse. Senator HART also sheds valuable light on the administration's decision to place the United States in the role of "the reliable supplier" of nuclear technology to the world.

Three recent actions taken by the Reagan administration further reflect a weakened commitment to nonproliferation: the decision to allow the commercial reprocessing of spent fuel; a costly Federal commitment to the nuclear industry—at the expense of other energy sources; and the Department of Energy's plan to use plutonium from spent nuclear reactor fuel to produce nuclear weapons.

As Senator HART states, the nuclear policy advocated by the administration significantly lessens the near-term chances of reaching a nonnuclear energy-independent future, and creates a nonproliferation policy that will have virtually no credibility as an example to other nations. Senator HART outlines six points which would lead toward a more sane nuclear policy.

Senator HART's speech is an incisive review of the questions on nuclear technology, nuclear terrorism, and nuclear war which must be immediately addressed by our Nation.

Mr. President, I ask that Senator HART's speech be printed in the RECORD.

The speech follows:

ADDRESS BY SENATOR GARY HART

I am here tonight to discuss with you a most urgent issue—preventing the use of nuclear weapons. There is no more important issue before this nation or this world.

We may be in some danger of forgetting the awesome power of destruction nuclear weapons hold. But American leaders who knew war—who led men in battle and saw men die—saw nuclear weapons tested and used and were awed. They believed nuclear weapons had, in the words of General Douglas MacArthur, "destroyed the possibility of war's being a medium for the practical settlement of international differences." MacArthur said, "Global war has become a Frankenstein to destroy both sides. No longer is it a weapon of adventure—the short cut to international power."

Today, nuclear weapons have lost their power to awe our leaders. In fact, there are those who think a limited nuclear war can be fought and won.

Such thoughts are fantasies. Yet these fantasies have allowed the Soviet Union to

pose as a leader for peace, and to portray us as an obstacle to peace. And they have alarmed our NATO allies at a time when their full support is critical if negotiations on theater nuclear weapons are to succeed.

Two weeks ago, the President made a bold proposal on theater nuclear weapons. He offered to forego placing new intermediate range missiles in Europe if the Soviets would dismantle the SS-20s now aimed at the hearts of Europe's cities. All who care about the cause of peace in the world must hope the Soviets reconsider their initial rejection and agree to this proposal.

But all who care about the cause of peace in the world must also hope the president's vision soon encompasses strategic nuclear arms as well. Limiting theater nuclear forces—those based in Europe—is important, but limiting the strategic force—missiles based in the U.S. and Soviet Union—is also vital.

To prevent nuclear war, we must limit strategic nuclear weapons—their size, number, and capability. We cannot indulge in dreams of unilateral disarmament. Substantial imbalance in capability can encourage at least the political use of nuclear weapons which must be deterred. And we cannot pursue an unlimited nuclear arms race—because that race will end in the destruction of humanity.

Arms control agreements are the only realistic way to limit nuclear weapons. And it's time—now, not next spring—to resume negotiations. Whatever the difficulties of reaching agreement, the dangers of not trying are even greater.

As President John Kennedy said in 1962, "Every man, woman, and child lives under a nuclear sword of Damocles hanging by the slenderest of threads, capable of being cut at any moment by accident or miscalculation, or by madness. The weapons of war must be abolished before they abolish us."

Today, those words ring more true than ever. For today, the nuclear sword is double-edged. One edge is the unconstrained arms race between the superpowers. The other edge—the one most often overlooked—is the spread of nuclear weapons worldwide, a spread that continues virtually unchecked.

No longer are there only two nations in the world with the power of ultimate destruction. Now there are six—the United States, the Soviet Union, Great Britain, France, China, and India. In a decade, there may be ten or twenty or more. The countries likely to develop nuclear weapons include radical states like Libya and Iraq, and dictatorships like Argentina and South Korea. Who can say with confidence these nations would show restraint in the use of a nuclear weapon?

And today, a new nightmare haunts us—the possibility nuclear arms may "trickle down" not only to nations, but to terrorist groups.

We cannot ignore the dangers of nuclear terrorism. Not nation making war on nation, but an isolated terrorist group imposing its will on the world. Not armies of scientists working with ultra-secret technologies, but a few individuals building a nuclear bomb with some basic physics and a few pounds of plutonium. Not weapons hurled thousands of miles on complex rockets—but one container in an abandoned warehouse on the streets of an American or European or Israeli city.

For three decades, we have been both the world's strongest proponent of curbing nuclear proliferation—and the world's leading exporter of nuclear technology. We have insisted that peaceful and military uses of nuclear energy can be kept distinct. The fact is, there is no fundamental distinction. There is only a thin line of technology. And we and the world's other nuclear suppliers are edging closer and closer to that line.

For example, today's nuclear reactors have produced about 140 tons of plutonium—enough to build 28,000 Nagasaki-sized bombs. So far, most of that plutonium is locked in spent nuclear reactor fuel. But with a technology called spent fuel reprocessing, plutonium can be extracted from spent reactor fuel. And several nations including Libya and Pakistan, are trying to buy that technology. In fact, most plans for world use of nuclear energy call for extracting plutonium from spent reactor fuel and using it to fuel breeder reactors, which produce more plutonium than they use.

Once technology like spent fuel reprocessing is sold, we have absolutely no assurance separated plutonium would be used only in conventional nuclear power plants, and not in weapons.

And once the technology is sold, we have absolutely no assurance plutonium will not find its way to terrorists bent on nuclear blackmail.

The world's various non-proliferation agreements have somewhat slowed the spread of nuclear weapons, but they have not stopped it. Non-nuclear nations continue to seek the most sophisticated, least proliferation-resistant technology. Nuclear exporting nations—such as France, Great Britain, Germany and the U.S.—sometimes put their short-range foreign policy or commercial objectives ahead of our universal interest in non-proliferation. And the international safeguard system established under the Non-Proliferation Treaty is inadequate to detect, much less stop, theft, diversion, or misuse of nuclear materials.

Consider these four facts:

First, a nation can sign the Non-Proliferation Treaty, receive nuclear technology, and then withdraw from the Treaty and its safeguard system on 90 days' notice;

Second, inspections occur infrequently and are announced well in advance—leaving plenty of time for the undetected diversion of plutonium;

Third, when inspections do take place, inspectors are not only approved by the host country, they are restricted to facilities selected by the host country, and they are forbidden to look for or report clandestine nuclear activities;

And finally, in the unlikely event some misuse is detected, there is absolutely no guarantee of effective international sanctions.

An International Atomic Energy Agency inspector who visited Iraq's Osirak reactor shortly before it was destroyed described how inspectors were forced to use flashlights because there were no lights in the facility. He described how inspectors were not able to enter the room in which spent fuel was kept because they did not have the key. According to this inspector, "The difficult part of the job is that you must prepare yourself mentally to ignore the many signs that may indicate the presence of clandestine activities going on in the facilities adjacent to the reactor—facilities that you were not permitted to inspect."

The Non-Proliferation Treaty has more loopholes than safeguards. And if you doubt the importance of closing those loopholes—ask yourself what might have happened if Khomeini had come to power ten years later, after the Shah had received the nuclear material and equipment we agreed to sell him.

The spread of nuclear weapons poses the gravest possible threat to civilization. In the words of General Omar Bradley, "Ours is a world of nuclear giants and ethical infants. If we continue to develop our technology without wisdom or prudence, our servant may prove to be our executioner."

In the face of this challenge, the Administration has adopted a policy of being a "reliable supplier" of nuclear technology to the world. If other nations depend on us for nuclear technology, the Administration reasons, the commercial leverage we exercise will be sufficient to stop recipient nations from building nuclear weapons.

But this policy could also make us the "reliable suppliers" of our own destruction. For example, the Administration intends to sell nuclear fuel to Brazil—a nation that has not signed the Non-Proliferation Treaty or accepted the safeguards on its nuclear program required by U.S. law.

Other Administration actions also signal a weakened commitment to non-proliferation.

First, it has lifted the ban on commercial spent fuel reprocessing imposed in 1977. And it did so even though this process is so economically unattractive that the owners of the one commercial plant in the U.S. plan to write it off as a loss, rather than resume reprocessing.

Second, the Administration has allocated billions of dollars for domestic nuclear power programs—while neglecting other energy sources that might help us, and the other nations of the world, toward a non-nuclear, energy-independent future.

And, third, the Department of Energy is considering crossing the line between peaceful and military uses of nuclear energy. It is considering using plutonium from spent nuclear reactor fuel to produce nuclear weapons.

If we do this, we will set the worst possible example, at a time when a good example is the least the world should expect of us. If we are to exercise world leadership in preventing the use of nuclear weapons, we must act now to stop the spread of nuclear weapons.

A comprehensive non-proliferation policy is a lengthy and complicated matter. Tonight, I want to outline just six key points:

First, we should negotiate limits on the strategic arms race. It's in our national security interest to do so. Until the United States and the Soviet Union stop piling weapon on weapon beyond any rational limit, we cannot expect other nations to forego these weapons themselves. And each time a nation joins the nuclear club, efforts at worldwide arms control are seriously complicated, and the prospects for preventing nuclear war are dimmed.

Second, we should ban reprocessing of all U.S. nuclear materials—at home and abroad. This ban should be lifted only on a case-by-case basis, and only if the United States has complete assurance that theft or diversion of nuclear material could not occur.

Third, we should stop exporting the means of making atomic bombs—technologies such as reprocessing plants and breeder reactors, or materials such as highly enriched uranium. And we should exercise diplomatic and moral leadership to persuade the other nuclear exporters to exercise similar restraint.

Fourth, we should take the lead in helping the world move toward a more secure energy future. This means research and development for alternative energy sources. It means more attention to conservation technology. It means exporting coal—not nuclear materials—to developing nations. And it means supporting the use of non-nuclear energy technologies throughout the world. These actions would brighten our own energy future—and they would make the world a safer place.

Fifth, we should exercise diplomatic leadership toward establishing nuclear-free zones. All countries within these regions although they could obtain nuclear generating technology, would agree never to build nuclear weapons. A nuclear-free zone in the Middle East, for example, would greatly enhance the chance for peace in that troubled region.

Finally, and most important, we should provide an economic incentive to attain non-proliferation goals. We can use our commercial leverage in the international nuclear

marketplace to discourage nations from obtaining separated plutonium. Last summer, I introduced a bill to do just this. Under its terms, a nation could receive nuclear technology or material from the United States only if it first agreed not to seek separated plutonium or reprocessing technology. In return, the United States would agree to supply it with enriched uranium fuel at a substantial discount—to compensate it for the lost energy value of the unextracted plutonium.

A nation interested only in peaceful uses of nuclear energy would have strong incentives to enter into such an agreement. A nation interested only in building bombs would simply not receive technology or materials.

I wish I could stand before you and promise success in our effort to control nuclear proliferation. I wish I could guarantee our overwhelming interest in survival will be strong enough to overcome short-sighted political agendas.

But there is no magic formula. We are dealing with decades of mutual suspicion between the superpowers. We are dealing with the gruesome desire of many nations to assert their national pride with deadly weapons. And we are dealing with terrorist groups who may use any means—no matter how dangerous or irrational—to achieve their goals.

William James once wrote, "So far war has been the only force that can discipline a whole community, and until an equivalent discipline is organized, I believe that war must have its way."

Today, war can be brought on us by nations, by organizations, perhaps even by individuals. Today, war can be fought with weapons dangerous and deadly beyond our comprehension. Today, war must not have its way.

If we fail to stop the spread of nuclear weapons, we place the world's security—its very survival—at risk. Regional nuclear conflict nuclear terrorism and even worldwide nuclear holocaust—all become more likely as nuclear technology spreads. We take a fearful risk if we ignore this fact. And we will have no one but ourselves to blame for the consequences.●

ONE-YEAR DEFERRAL OF LIFO RECAPTURE

● Mr. WEICKER. Mr. President, I support the Finance Committee's action with regard to the deferral of the effective date of the LIFO recapture provision that was attached to the Crude Oil Windfall Profit Tax Act of 1980. I am an original cosponsor of S. 1839, which is the genesis of this provision.

The identification and valuation of inventories is a constant, complex problem for many small businesses. This area is also the basis for a very complex set of IRS regulations that small businesses must comply with.

The choice of the accounting method to be used for tax purposes is controlled by IRS regulations. Basically, the regulations state that when the production, purchase, or sale of merchandise is an income-producing factor, the business must use the accrual method of accounting and keep track of inventories.

Therefore, instead of deducting all amounts paid for goods during the year, the business must allocate those amounts paid partly to those goods sold during the year and partly to those goods making up the inventory on hand at the end of the year. The accrual method allows you to deduct the cost assigned to goods sold but the cost assigned to the ending inventory cannot be deducted and must be capitalized and carried on the balance sheet as an asset. These capitalized costs will be deducted in future tax years as the goods are sold.

Note that the choice of accounting method does not affect the physical flow of goods, just the flow of costs. This is why the accounting method chosen is such an important factor.

One accrual method, FIFO, or first in, first out, assumes that goods are sold in the same order that they are purchased. That is, the costs of the first goods purchased are assigned to the first goods sold. And, the costs of the last goods purchased are assumed to apply to those goods remaining in inventory. Here is the rub—if you use FIFO in inflationary times—times of rising prices, the goods you buy early in the year will cost you less than the goods you buy later in the year. And it is the higher, more recent prices, that are assigned to the ending inventory. Remember—ending inventory is capitalized and put on the balance sheet.

The lower, earlier prices are assigned to the cost of goods sold and deducted from income. This results in a smaller deduction for cost of goods sold, higher taxable income and a higher tax bill.

In times of rapidly rising prices, this can have a tremendous impact on a small company's cash flow. The company will show more profit for tax purposes than the economic profit it has actually earned. The company must pay tax based on inflated profits and less money is left to operate the business on.

Larger companies frequently protect themselves against these effects by adopting LIFO, or last in, first out. This accounting assumption, accepted for tax purposes but subject to extremely complex regulations, assigns the most recent, higher prices, to those goods sold during the tax year. This results in a larger deduction, lower taxable income, lower taxes, and a larger cash flow. It should be understood that LIFO is not some kind of tax shelter, it just allows a business to deduct an amount closer to the true cost of goods purchased.

The other side of LIFO is that lower, earlier costs, are assigned to the ending inventory. In fact, if a company's inventory expands year to year, which is normal for a growing business, the ending inventory can be valued at very old and very low prices. Therefore, a company on LIFO often times has inventory that has a fair market value substantially higher than the amount shown on the balance sheet. That difference, essentially, is called the LIFO reserve.

The Crude Oil Windfall Profit Tax Act of 1980 included a provision which required that a liquidating corporation must recapture the inventory's LIFO reserves as ordinary income. Also, a corporation that sells its LIFO inventory in the course of a 12-month liquidation must recognize the inventory's LIFO reserve as ordinary income. This provision, if it becomes effective, will work an undue hardship on small businesses. On the one hand, a small business will want to, and should in most cases, use LIFO because it more closely reflects true economic income and results in a lower tax bill.

On the other hand, however, if the small business man elects LIFO, then he must be prepared to part with a substantial portion of the value of his business in the form of higher taxes if he ever sells or disposes of his enterprise. And it truly is the small and medium-sized companies that are going to be hurt by this provision. In other words, Mr. President, the requirement to recapture the LIFO reserve is a major obstacle to small business being able to adopt LIFO accounting.

As chairman of the Small Business Committee, I try to maintain fairly close contacts with representatives of the small business community. The National Association of Wholesaler/Distributors, one of the larger associations, and others, maintain that this provision, if it becomes effective, will be extremely onerous for their members. In fact, I have heard that there are small firms liquidating right now so as not to be caught up in this provision once it becomes effective on December 31, 1981. If this is the case, I think it is very important to approve this 1-year deferral so that we can reevaluate this situation.

Mr. President, approval of this deferral is not the only LIFO related problem that must be addressed by this body. The application of LIFO is so complex that many small businesses are deterred from using it. In my view, this whole inventory accounting area needs to be simplified.

During the second session of the 97th Congress, I plan to introduce important legislation to address the LIFO problem, the capital raising problem and other tax-related problems of small business. In the meantime, however, I strongly urge my colleagues to vote to defer the LIFO recapture provision for 1 year.●

JEROME "JERRY" WURF

● Mr. MATHIAS. Mr. President, last Thursday America's working men and women lost one of their best friends and greatest allies when Jerry Wurf, international president of the American Federation of State, County and Municipal Employees (AFSCME) died of heart failure at George Washington University Hospital. I knew Jerry Wurf personally, and over the years got to know him better than many public officials, some of whom battled with him across the bargaining table.

One of the last memories I have of Jerry is from Solidarity Day last September when he helped mobilize more than 250,000 members of AFL–CIO unions to protest cuts in the social programs they worked hard to bring about. Like the other great American labor leaders, Jerry had the power to stir the public's conscience, and to motivate people to act. This was evident from the beginning of his career. In his very first job as a cashier in a Brooklyn cafeteria in the early 1940's, he organized his fellow workers to protest their working conditions. Jerry's combative and tenacious nature moved him inexorably from that Brooklyn cafeteria to build AFSCME, which for a time in the early 1970's, was the AFL–CIO's largest union.

I have had many opportunities to address labor organizations over the years, and one thought which I try to leave with Members is embodied in something

Jerry said about the need for participation in the political process:

More than ever before, the well-being of all Americans depends upon decisions made within the political system.

But there is a danger that the majority of Americans will not participate in the political process.

Labor must devise new ways to enlist the participation of our members in the political system—and to turn that participation into effective power.

There is a struggle going on for the future of America. Labor should not be—and will not be—a spectator.

AFSCME recently published an updated biography of Jerry Wurf, which details his contributions to the American labor movement. I request that it appear at this point in the RECORD.

The biography follows:

JEROME "JERRY" WURF

In his 41 years in the labor movement, Mr. Wurf built his life's record on the forceful and effective advocacy of dignity for working people.

That dedication was probably the key ingredient of his most significant accomplishment: The building of AFSCME into the nation's largest public employee union. When he became its president in 1964, AFSCME had 240,000 members. Today, with one million members, it is the third largest union in the AFL–CIO. Under Mr. Wurf's leadership it also won the reputation as a tough, well-organized democratic union with a record of innovation and effective advocacy of progressive causes.

Mr. Wurf was born in New York City in 1919. As a child, he contracted polio and he fought a resulting physical disability for the rest of his life. After graduating from New York University in 1940, he went to work in a cafeteria and promptly organized the staff as a local of the Food Checkers and Cashiers Union. He went on to become an effective organizer for that union.

In 1947, Wurf joined AFSCME, then a small and struggling organization, as an organizer in New York City. During the 1950s he won a series of representational and legal battles that earned him national labor recognition. From 1959 to 1964 he served as Executive Director of AFSCME's District Council 37 in New York City. Building the Council local by local, Wurf won collective bargaining rights for city and state employees in New York. His efforts lead directly to a executive order by President Kennedy securing parallel rights for federal employees.

Mr. Wurf was elected President of AFSCME in 1964 following a hotly contested election in which he led a reform slate. One of his first acts was to call a convention to draft a new union constitution, and this set the stage for AFSCME becoming, in the words of the Washington Post, "a model of vitality and democracy."

He also encouraged a tough stance in contract negotiations and as the union won bargaining victories, membership began its rapid growth.

As the union began to expand, Mr. Wurf helped pioneer landmark public sector collective bargaining laws in Pennsylvania, Wisconsin, Hawaii, Michigan and a number of other areas. He was also a leading advocate of effective dispute settlement machinery to settle public sector bargaining problems.

Recognizing the vital link between civil rights and union rights, Mr. Wurf's active involvement in the civil rights movement began in the early 1940s when he was one of the founders of the Congress of Racial Equality. In the 1960s, he and A. Philip Randolph helped develop the Strategy for the Cities followed by the Rev. Martin Luther King Jr. in his civil rights campaigns in the South.

In 1968, a small AFSCME local of black garbage collectors in Memphis, Tennessee, struck to protest racial discrimination. Mr. Wurf saw Memphis as a pivotal event in the civil rights movement and committed the entire union to the struggle. The strike ended in success but only after the assassination of one of its strongest supporters, Dr. King.

In Memphis as elsewhere, Mr. Wurf never hesitated to challenge laws and procedures which he considered to be unfair. Chief among these were state laws against strikes by public employee unions. Through open defiance, he made public employee strikes a fact of life in the nation's cities and states. In 1974 he went to jail in Baltimore while personally leading a strike of the city's garbage collectors for better wages and working conditions.

More recently, Mr. Wurf put AFSCME in the forefront of what may be the most significant issue in labor-management relations and the women's rights movement in the coming decade: pay equity and comparable worth. Under his direction, AFSCME has planned a massive offensive to win economic justice on the job for working women.

Mr. Wurf's last major public appearance was as a keynote speaker for Solidarity Day, the massive AFL–CIO protest rally in Washington, D.C. last September 19. As was characteristic of his beliefs, he assailed the policies of the Reagan Administration as being unfair to the poor, the old, and middle-income working people.

Mr. Wurf was elected to the AFL–CIO's Executive Council in 1969 and served in the post until his death. Within AFL–CIO councils, he was often considered a maverick as he championed stands more progressive than the AFL–CIO was prepared to take at the time.

He was a member of the Democratic National Committee, and his union was constantly involved in political campaigns at every level of government in support of liberal causes and candidates. He once told a reporter, "I think that as an institution, the American labor movement has paid a very high price for its lack of political involvement."

Mr. Wurf also served on the Executive Board of the Leadership Conference on Civil Rights. He was a member of the boards of the American Arbitration Association, the Twentieth Century Fund, and the Academy for Contemporary Problems, and was a member of the Visiting Committee on Economic Studies of the Brookings Institution, and of the Council on Foreign Relations. He was also a Board member of the National Symphony Orchestra.

While president, Mr. Wurf established the Public Service Advisory Board of outside experts to advise the union on public policy. He also developed the AFSCME Review Panel to insure union democracy.

Earlier this year, he was recipient of a special award from the Americans for Democratic Action for his contributions to the labor movement. He was to have received the annual Labor-Human Rights Award of the Jewish Labor Committee at a dinner in his honor on January 7 in New York City. The group was citing him for his outstanding leadership in the American labor movement's fight for civil rights and for his involvement in democratic trade unionism.

Mr. Wurf was frequently described in the press as "cantankerous," or "contentious," and he could be both of these as the occasion warranted. But he was also a scholarly reader of poetry, of history, and the writings of Eugene Debs and Norman Thomas. It is perhaps from these that he developed his abiding conviction that personal dignity is an innate human need, an individual's primary defense against the haunting fear of worthlessness. He believed that the labor movement could and should provide that dignity.

He once said, "The most important dynamic in our organization is the conferring of dignity on workers, whether they are engineers or trash collectors, whether they're conservative or radical. . . . The be-all and end-all is dignity.●

ANNOUNCEMENT OF POSITION ON CERTAIN VOTES

● Mr. SASSER. Mr. President, had I been present and voting on December 10, I would have voted yea on the following rollcall votes on the continuing appropriations resolution:

Amendment No. 776 which would have exempted the maternal and child health program from the 4 percent cut.

Amendment No. 777 which would have exempted from the 4 percent cut the program of grants to States for the administration of unemployment insurance.

Amendment No. 778 to exempt from the 4 percent cut program authorized by the Older Americans Act, the Head Start programs, and the community health centers program.

Amendment No. 779 to provide sense of the Senate language reaffirming the Federal role in housing.

Amendment No. 781 to provide increased funding for youth employment programs.

Amendment No. 782 to provide increased funding for the food-for-peace program for assistance to the people of Poland.

Amendment No. 783 to exempt from the 4 percent cut the State student incentive program and the Pell Grant program.

Had I been present and voting on December 10, I would be recorded as having voted:

Yea on rollcall vote No. 469 dealing with the presence of a quorum.

Yea on rollcall vote No. 470 on a motion to lay the motion of Senator WEICKER on the table to reconsider the vote on rollcall vote No. 469.

Yea on rollcall vote No. 471 on a motion upholding the judgment of the Chair that the Senator of Connecticut's Motion to reconsider the vote on rollcall vote No. 470 is dilatory.

Nay on rollcall vote No. 471 on Senator WEICKER's motion to table the Johnson-Helms amendment. ●

ADDRESS BY SENATOR KENNEDY BEFORE THE AMERICAN ASSOCIATES OF BEN-GURION UNIVERSITY OF THE NEGEV

Mr. MITCHELL. Mr. President, on October 29, the senior Senator from Massachusetts, Senator KENNEDY, addressed the American Associates of Ben-Gurion University of the Nagev in Boston.

I recently had the opportunity to review Senator KENNEDY's speech in its entirety, and I found it to be a thoughtful analysis of the current situation in the Middle East. I ask that it be printed in the RECORD.

The address follows:

ADDRESS OF SENATOR EDWARD M. KENNEDY

It is good to be home in Massachusetts—and good to be here at the New England Chapter of the American Associates of Ben-Gurion University.

I share your feeling for that University. Seven years ago, I stood in the Negev with Golda Meir and helped to dedicate Ben-Gurion's Medical School. I know of its unique seven year course of study that trains a new kind of physician—one who will work in the development towns, the agricultural communities, and the Bedouin encampments.

David Ben-Gurion, the man who as much as any person brought Israel into being, had high hopes for the Negev. "The future of Israel is there," he once said. "Development there will become a reality through our pioneering spirit and the application of science."

Today the institution of learning that is privileged to bear his name is making David Ben-Gurion's prophecy come true. The University has graduated a new generation of pioneers. Its campus near Beersheba is a living testament not only to Israel's triumph over the difficulties of the desert, but a deeper triumph over the most monstrous years of our century.

The very existence of Ben-Gurion University—and the existence of Israel itself—are reflections of the miracle that brought an entire people out of the darkest night that ever descended on this earth. The poet Nathan Altermann wrote:

"When our children under the gallows wept
The world its silence kept."

Yet those who have been through that nightmare, and their sons and daughters, have found a homeland and given the world a bright proof of human hope. The men and women of that homeland, in the Negev and at Ben-Gurion University, surely have earned our help; but even more, they have won our hearts.

We meet tonight at a moment of uncertainty and dismay about the great dream we share—our abiding dream of peace in the Middle East and a secure future for Israel, our closest friend and our strongest ally in that region of the world.

This week, the United States Senate, by the narrowest of margins and under the most intense pressure, approved the Administration's plan to sell the most sophisticated American weapons to Saudi Arabia. Months ago, I was the first Senator to oppose that plan. I regard it as the most dangerous and damaging arms sale ever sought by any Administration of either party. For me, this kind of deal can never be a question of fleeting calculation or political convenience. I stood against this AWACS sale—and I stood against the last Administration's sale of F-15s to Saudi Arabia—because both of these decisions were fundamentally wrong. They were wrong for our own national security, wrong for the cause of peace in the Middle East, and wrong for the brave people of Israel.

We have heard many things said in recent weeks that should never have been uttered during this debate. In the spirit of Harry Truman, the President who overruled the kind of advice the Reagan Administration has just taken, and who recognized the state of Israel on the first day of its existence, it is time for us to engage in some plan speaking.

We have heard it said that opposition to the AWACS sale was based solely on our concern for Israel. In fact, that sale will threaten the national security of both the United States and Israel—it was not just pro-Israel, but pro-American to stand against it. It makes no sense to jeopardize our highly sensitive military technology by injecting it into an unstable region, where it can too easily fall into the wrong hands.

In the past, and for the same reason, I oppose the sale of AWACS to Iran, despite the assurances of the past Administration that Iran was an island of stability. And today, we must be thankful that AWACS were never sold to Iran.

This sale to Saudi Arabia is also wrong, because it will fuel an escalating arms race in the Middle East. It will raise—not reduce—the risk of war.

Finally, I reject the implication made during the debate that the interests of Israel are at odds with the interests of the United States. In this case, and so often in the past, what is right for America is also right for Israel. It is a fundamental fact that Israel is our most faithful ally in the Middle East. It is a fundamental fact that Israel has protected American interests in the past, and that Israel will do so in the future. Support for Israel is not an act of charity; it is a matter of national security. Those who have forgotten the fundamental facts about Israel during the AWACS debate should be reminded again that the only way for America to have an ally is to be one.

We have heard something else during this debate that must be denounced. I reject absolutely the unworthy appeals which in effect question the patriotism of Jewish-Americans. What has been derided as lobbying is in reality the basic Constitutional right to petition. All Americans, regardless of their religion, have that right. We cannot condone tactics that raise the worst spectre of religious prejudice, blaming dissent over public policy on differences of religious faith. Americans of all faiths and both parties pursued their opposition to the Saudi arms sale honorably and in the best tradition of our country and our Constitution.

The Administration complained that Jewish-Americans were vigorously expressing their views. But where were the Administration's complaints about the corporations that lobbied hard for AWACS because of the business it would bring? And why were there no complaints about Saudi princes gliding through the halls of Congress?

I believe that no Americans are any less American because they care about Israel—or understand that the security of Israel is vital to the security of the United States.

For me, this is not a religious issue—for I had assumed that the religious issue was long since banished from our politics. My own support for Israel is deep and continuing. It is rooted in an abiding conviction that such support is both morally right and essential to American interests. I welcome the widest and most vigorous debate on the issues. But never during that debate should people be blamed for how they themselves or the generations before them worshipped God. This nation must not, even for a moment, become a breeding ground for bigotry. And now, after the AWACS defeat, is the moment when we must speak with renewed conviction.

We must unequivocally repudiate the incredible suggestion that the United States should recognize or deal with the terrorists of the PLO. It is bad enough to hear that suggestion at any time about a group sworn to destroy Israel. It was even worse to hear it in the very hours when the PLO brigades were dancing on the grave of Anwar Sadat.

Israel has no need of fair-weather friends. Neither Israel nor the United States will be served by politicians who profess one thing and do another. And none of us can rely on conservatives proclaiming a biblical allegiance to Israel who can then be turned around in a single White House meeting.

There is another message that we must deliver to the Reagan Administration. They have promised that this arms sale will persuade Saudi Arabia to join in the search for peace. Let us insist that this must not be a promise of words, broken in fact. Let us say that it is not enough for Saudi Arabia to privately whisper hints of peace, while lavishly funding the terrorists of the PLO. Let us challenge the Administration to tell Saudi Arabia that a true security relationship is a two-way street.

We are entitled to expect Saudi cooperation, not rejection, of the Camp David peace process.

We are entitled to expect the reality, not a charade, of oil price restraint and oil supply reliability in the Middle East.

We are entitled to expect Saudi repudiation, not support, of terrorists.

We are entitled to expect Saudi support, not opposition, to American efforts to strengthen our military capabilities in the Persian Gulf.

Instead of giving the Saudis more offensive weapons, let us work with them to meet the very real threat they face of internal decay and subversion. Let us respond to the external threat in that region posed by the Soviet Union, South Yemen, Ethiopia, Iran and Iraq.

I support now, as I have in the past, American supply of defensive arms such as anti-tank and anti-aircraft weapons, to Saudi Arabia. And I support American cooperation with that country to make it clear and certain that any military assault against Saudi Arabia will be deterred effectively.

But of this we must also be certain—that the defensive arms we send to Saudi Arabia or any other Middle Eastern state must always be pointed in the right direction—and never against Israel.

Now that the Congressional debate over this arms sale has ended, the Administration must also end the months of its own inaction on the peace process. The Administration must define and state its objectives, and advance them consistently, reliably and effectively.

First, now more than ever, we must assure the security and prosperity of Israel, which may confront new and deeper dangers because of what the Administration has just done. When Prime Minister Begin visited Washington, the President pledged a new era of "strategic cooperation" between the United States and Israel. In a few weeks, when Israel's Defense Minister Sharon visits this country the Administration will have the chance to prove that it is serious about the substance of this policy. We must not rush to arm the enemies of Israel and then refuse the means of self-defense to the people of Israel. We must realize that a close military relationship with Israel is indispensable in countering any Soviet aggression in the Middle East.

Second, we must hold a steady course on the Camp David path to peace. Israel and Egypt are strategic cornerstones of the broader settlement we must seek. The Camp David Accords are a historic achievement. We must not set them aside in a futile effort to appease those sworn to an unholy war in the Holy Land of Israel. Nor can we allow the Soviet Union or its surrogates to subvert that process.

So I call upon the Reagan Administration to appoint at long last a new negotiator to succeed Sol Linowitz and to press ahead with negotiations in the Middle East. Prime Minister Begin and President Mubarak have reaffirmed the commitment of Israel and Egypt to peace. We cannot afford to let this moment slip away.

In pursuing negotiations, the United States must now reaffirm one of our own central principles: The PLO must never play a part in the peace talks until it has abandoned terrorism and renounced absolutely and forever the oath to destroy Israel.

Third, the United States must now set an example for the world community by taking urgent action against the terrorist regime in Libya. We must no longer contribute our oil dollars to a regime committed to violence, assassination and the killing of innocent human beings.

A week ago, I offered an amendment with Senator Gary Hart to prohibit all purchases of oil from Libya by the United States or by American firms and citizens. That amendment was lost, after the intense lobbying of the Administration by a vote of 47 to 44. But we will offer it again and again—until the Administration stops relying on tough talk and starts taking strong action against Libya.

It is inexcusable for the United States to be the world's largest customer for Libyan oil. Colonel Qaddafi and his lieutenants are plotting ceaselessly to destroy the state of Israel. They are sponsoring political murder in the Middle East and Europe, and even in the United States. And they are spending American money to purchase Soviet weapons, to assault America's friends in the Middle East, and even to attack American pilots over the international waters of the Mediterranean.

We should not pay one cent in oil tribute to Libya until it halts, once and for all, its sponsorship of bombing, shooting and death around the world. American industry and American homes must no longer be fueled by oil tainted with the blood of Libyan terror.

This has been a hard week for all of us. But in the midst of defeat, our enduring values can give new life to all our hopes. And there are memories that give us heart for the journey ahead. We remember David Ben Gurion, whose own life proved that the impossible can come true. We remember his vision of an Israel no longer surrounded by hostile powers, but by friendly nations.

We remember Anwar Sadat and Moshe Dayan who helped to carry that vision closer to reality. The words of Shaw that my brother quoted and loved fit all of them so well: "They dreamed things that never were and said—why not?"

Where there was ancient emnity, Anwar Sadat sought healing. Where there was deadlock in negotiation, Moshe Dayan found a way to resolve conflict. They were soldiers who fought hard—and then sought to beat the swords into plowshares.

For their sake, and even more for the sake of their dream, let us renew our commitment to peace.

For peace is all that Israel asks.

Peace, as the prophet Micah wrote, so that "they shall sit, every man under his vine and his fig tree, and none shall make them afraid."

Peace, as the Torah teaches, so that "the desert shall rejoice and blossom as the rose, and they that wait upon the Lord shall renew their strength."

In all that we say and all that we do, as Americans, let us pursue that peace together. Let us rely upon the Lord to renew our strength. And let us resolve that this truly is a dream that shall never die.

THE HIGHWAY AUTHORIZATION MEASURE

● Mr. BAUCUS. Mr. President, I reiterate my support for this Nation's highway program and my concern about the level of resources dedicated to highway maintenance. I am certain many of my colleagues are pleasantly surprised with the compromise that has been reached on the highway authorization measure. Not that long ago, it was virtually certain that there was no chance the provisions of the measure could be agreed upon this year.

But, the conferees, in a spirit of give-and-take, hammered out a 1-year authorization that signals much greater flexibility for the States in the expenditure of highway moneys. That is an important step in the right direction.

I am pleased as well that the conferees arrived at a 90-to-10 matching ratio. That is an improvement on the bill as passed here and is beneficial to States that find themselves squeezed by rising costs outstripping their available resources. We must examine this revenue shortfall with considerable concern, because an improperly maintained highway system could quickly become a financial nightmare. You can not save money by deferring maintenance on the Nation's highways, for you will simply be forced to buy bigger problems in the future.

I have made no secret of my disappointment with this bill's allocation formula for interstate 4R moneys. Frankly, I was stunned to see that formula changed in the conference committee deliberations. That change only further biases this legislation against rural states that must maintain extensive interstate programs.

I am reassured to learn that my colleague, the junior Senator from Idaho, intends to redouble his efforts to restore the 60-to-40 allocation formula or an acceptable alternative in deliberations on highway legislation next year.

We will face many challenges in our efforts to hammer out a multiyear highway authorization bill. I look forward to working with my colleagues to meet those challenges.●

PROFESSOR KINGSON ON EARLY RETIREMENT

● Mr. TSONGAS. Mr. President, as we conclude our work for this year, our thoughts turn to the coming year and the fate of programs and problems that have not been addressed during the first session of the 97th Congress.

None of us have any doubts that social security will continue to be a priority issue in Congress. The questions of solvency, benefit levels, eligibility requirements for disability benefits, early retirement, and raising the retirement age are high on the list of issues to be covered by the President's bipartisan task force on social security. Hopefully, this task force will provide the data and direction that is needed to make viable and permanent changes in the social security system without causing hardship to any American.

In the zest for presenting a plan to the President and the American public, I hope the task force does not overlook some of the myths and realities of retirement in our society. Our Nation is undergoing a demographic revolution in our aging population and what we do in the coming months must be responsive, it must be fair and it must recognize that early retirement is all too often a necessity and not an option for older workers.

In the December 15 Washington Post, Prof. Eric Kingson of the University of Maryland cites some of the myths generally associated with early retirement. Professor Kingson clearly and concisely outlines the issues that confront us on the questions of early retirement and raising the retirement age. We would be well served to heed his message and think carefully on what we do in the months ahead.

Mr. President, I ask that this article be printed in the RECORD.

The article follows:

THE MYTHS OF EARLY RETIREMENT

(By Eric R. Kingson)

President Reagan has called for the establishment of a bipartisan task force to review Social Security financing. When the task force and other national policy-makers contemplate one matter in particular—the trend toward early retirement—they and the country will be well served if some myths are dispelled.

Myth No. 1: The widespread availability of early retirement benefits is the reason workers have been withdrawing from the labor force before age 65.

While there is some truth to that, particularly for workers covered by private pensions and in good health. It misses the mark. Chronic and high unemployment is the fundamental cause.

Historically, management, unions and workers have favored early retirement as a means of shifting the burden of unemployment at a particular firm from younger to older workers. Likewise, the 1961 Social Security amendments extending the early retirement option to men aged 62 to 64 were developed during a recession, in part to encourage older workers to retire. Early retirement provisions have served to absorb and hide much unemployment.

Myth No. 2: Most early retirees leave work voluntarily.

Researchers have generally concluded that there are two groups of early retirees—one that leaves work in good health and by choice, and a larger group that leaves work because of health problems. One Social Security Administration study shows that 54 percent of male workers retiring between ages 62 and 64 cite health as their main reason. When jobs are scarce, older workers with health problems are not competitive.

Myth No. 3: Most early retirees are financially comfortable.

Studies consistently suggest that most early retirees lack pension coverage other than Social Security. They accept reduced Social Security benefits or other income opportunities. SSA data show that only 15 percent of nonworking men accepting Social Security benefits at age 62 retired voluntarily and with second pensions, while 45 percent left work involuntarily without a second pension. Not only do most involuntary early retirees take a dramatic cut in income, but their health precludes supplemental work.

Myth No. 4: Reducing early retirement benefits or postponing the retirement age under Social Security will discourage early retirement.

To discourage early retirement, the president submitted proposals to Congress last May calling for (1) a decrease in benefits at age 62 from 80 percent to 55 percent of the full Social Security benefit, (2) a reduction in spouse benefits for future early retirees and (3) elimination of non-medical factors from the disability determination process. Similarly, led by its influential chairman, J. J. Pickle, the House subcommittee on Social Security has given serious consideration to gradually reducing early retirement benefits and postponing the retirement age for full benefits beginning in 1990. While political reaction has made passage of these proposals highly unlikely until after the 1982 congressional elections, this type of proposal is not dead. So the question remains, would these proposals discourage early retirement?

The answer is, "Not to any great extent." For most early retirees, it would be extremely discouraging, but would not prevent early retirement. Regardless of whether Social Security benefits are halved, quartered or eliminated, many workers will still be forced out of work before the age of 65 because they are in poor health or because jobs are not available.

Stripped of this mythology, the "quick fix" of raising the retirement age becomes less attractive. On the other hand, proposals of the 1979 Advisory Council on Social Security and the President's Commission on Pension Policy to liberalize eligibility criteria for the SSI and Social Security Disability programs and to develop a special unemployment program for older workers take on added importance. Plainly, these types of proposals must accompany any effort to raise retirement age if accepted standards of adequate and equitable treatment of citizens are to be maintained.

Further, rather than proposing cuts for involuntary early retirees, we should be seeking to provide full benefits to workers prematurely forced out of the labor force. In terms of dealing with the appropriate goal of encouraging later retirement for those capable of continued employment, preferable alternatives may include (1) tax incentives encouraging employers to provide flexible retirement and part-time employment, (2) increasing Social Security benefits for later retirees and (3) changes in the tax law to discourage private employers from offering pension plans that encourage early retirement for healthy workers.

In spite of considerable research and human hardship, the early retirement problem has been cast almost entirely as a pension cost problem. As national debate unfolds, it is essential that Congress move past the mythology. Otherwise, policies will emerge that reduce Social Security taxes without meeting the long-term interests of taxpayers.●

NARCOTICS INTERDICTION AND MILITARY ASSISTANCE

● Mr. ROTH. Mr. President, the Permanent Subcommittee on Investigations, which I chair, recently held 5 days of public hearings on international narcotics trafficking. These hearings convinced me that the United States is losing the fight against narcotics, as increasing volumes of marihuana, cocaine, and heroin are being imported, and our antinarcotics resources are woefully indaquate. Clearly, in these times of fiscal restraint, it is imperative that all possible resources be utilized to combat narcotics trafficking and all relevant agencies cooperate. Perhaps the greatest untapped resource is the Department of Defense.

Unfortunately, three of the four service branches have been constrained by the Posse Comitatus Act, enacted in 1876. The Navy, although not prohibited from assisting civilian law enforcement officials by this act, issued its own regulations to prohibit such activities. However, the Navy recently changed its position and the results have been encouraging. The U.S. Customs Service has been receiving information on the movement of narcotics traffickers in the Caribbean which has been gathered by Navy E2C Hawkeye radar planes. Previously, AWAC aircraft were utilized for drug interdiction efforts.

This sort of cooperation is essential. During PSI's hearings a pilot who flew marihuana shipments from Colombia to the United States testified that all narcotics flights would be detected with the help of modern technology and modern radar. The Department of Defense possesses this technology and fortunately all of its branches will be in a position to use it against narcotics traffickers as a result of the Posse Comitatus Amendment recently passed by Congress.

The Posse Comitatus Amendment, which is found in the Department of Defense Authorization Act of 1982, was signed by the President on Monday, November 30, 1981 (Public Law 97–87). This amendment will allow Army and Air Force participation with civilian law enforcement personnel for the first time since passage of the Posse Comitatus Act.

As signed by President Reagan, the amendment restricts the information which the military can supply to civilian law enforcement officials to that information which is collected during the normal course of military operations. The Secretary of Defense may make available to civilian law enforcement officials any equipment, base facility or research facility for law enforcement purposes.

Upon request from a proper party, the Secretary of Defense my assign members of the military to train law enforcement officials in the operation and maintenance of equipment, and further may provide personnel to operate or assist in operating any equipment used for monitoring and communicating the movement of air and sea traffic. This provision is particularly directed toward narcotics law enforcement activities.

The amendment specifically prohibits the direct participation by a member of the military in an intradiction of a vessel or an aircraft, a search and seizure, an arrest or other similar activity, unless otherwise authorized by law.

In addition, the assistance given must not adversely affect the military preparedness of the United States.

Finally, the amendment provides that reimbursement may be a condition of assistance to civilian law enforcement officials.

Several witnesses expressed concern over the reimbursement provision during PSI's hearings, and I share this concern. Robert Powis, Deputy Assistant Secretary for Enforcement at the Department of Treasury, testified that the continuation of reimbursement by the Customs Service to the Navy will "put some severe strains on the Customs budget situation." He added that discussions with the Department of Defense concerning the possible sharing of costs are ongoing.

Peter Bensinger, former DEA Administrator, was even more concerned about costs:

> Someone is going to have to pay for those military flights. The question I would hope the Congress would address is who is going to do it and is it in this year's budget. When the U.S. Coast Guard and U.S. Customs Service ask the military commander to send up an EC–2 or 3 or get additional planes in the air to provide needed reconnaissance, the issue of payment of that service is critical. It is great to have the program but if you do not have the tools to get it once I would be worried.

Mr. President, I would like to commend all of those who worked to gain passage of the Posse Comitatus Amendment as well as this administration for its support. It presents a significant opportunity to better combat narcotics trafficking. However, its success remains largely problematical and I intend to monitor its use and effectiveness during the upcoming year.●

FLAWS IN RED CHINA'S UNIFICATION CAMPAIGN

(At the request of Mr. HELMS, the following statement was ordered to be printed in the RECORD).

● Mr. GOLDWATER. Mr. President, a very important article regarding Peking's recent unification overture toward Taiwan has recently come to my attention. This careful analylsis exposes the flaws in Red China's campaign and is supportive of continued defensive arms sales, including the FX fighter, to Taiwan.

The article is written by a reputable scholar of Asian matters, Robert L. Downen, director of Pacific Basin Studies at the Georgetown Center for Strategic and International Studies.

It first appeared in United Monthly, a Taiwan magazine, and later appeared in the English language business newspaper in Taiwan, the Economic News.

Mr. President, I ask that the article may appear in the RECORD.

[From the Economic News (Taiwan) Nov. 9–15, 1981]

A PROPER ROLE FOR WASHINGTON IN THE MAINLAND-TAIWAN UNIFICATION PROPOSAL

(By Robert L. Downen)

The "conventional wisdom" now permeating some circles in Washington holds that Peking's recent unification overtures to Tapei present a persuasive case for deferring new U.S. weapons sales to Taiwan or other actions which would improve United States cooperation with Tapei. In truth, the current circumstances point precisely in the opposite direction. The *worst* policy that Congress and the Reagan Administration could propose at this moment—assuming they want to improve prospects for greater harmony across the Taiwan Straits—would be the postponing of needed defensive equipment for Taipei or the slackening of visible commitment to the Taiwan Relations Act. Nor should Washington try to push Taiwan into a reunification scheme. The justification for this reasoning should be obvious, and will be explored below.

THE 'PEACE OFFENSIVE' GAME

In recent weeks, Taipei has come under steady assault by a barrage of proposals from Peking for direct trade and cultural exchanges with the mainland, combined with fresh assurances regarding post-reunification conditions on the island. The Communist Chinese regime in Peking, having reaffirmed its "sacred mission" of gaining control over Taiwan, has launched a peace offensive against the Republic of China calling for people-to-people contacts as a prelude to reunifiaction negotiations. In anticipation of this year's Double Ten celebration and the U.S. policy decision on arms sales for Taiwan, Peking has intentionally expanded its public relations campaign for this purpose, and spares no effort to promise broad-scale continuity in Taiwan once it becomes a political province of the Communist central government.

This clever campaign designed by Peking's strategists has been carefully developed in phases ever since establishment of official U.S.-Peking relations three years ago. In the first phase, as secret negotiations between Washington and Peking began in May 1978 [Communist] China's leaders began dropping enticing hints that they were willing to let bygones be bygones, and that the "family" on Taiwan would be welcomed back into the fold with open arms. Many Americans

were easily charmed by the welcome change in the Communist regime's public attitude towards the Republic of China.

As normalization talks progressed over the next several months, the price of generosity became cheaper. By November of 1978, one month before President Carter's China surprise, Deng Hsiao-ping advised Western visitors that Taiwan could retain its economic and social systems following reunification with the "motherland." There is little doubt that these public relations gestures helped facilitate consummation of the U.S.-PRC diplomatic relations by the end of that year, without the explicit security guarantees for Taiwan's future safety which earlier American presidents had demanded from Peking.

With its initial diplomatic victory securely in hand, the Peking government began to wage in earnest a new phase of its public relations campaign against the ROC. A pleasant 1979 New Year's message from the Communist National People's Congress suggested immediate establishment of trade, mail, and tourist exchanges between Peking and Taipei. And the mainland's ritualistic shelling of Quemoy on odd-numbered days, a 20-year tradition, halted at the same time.

Nevertheless, there was no question that ultimate objectives remained unchanged. The priority and intensity with which both Hua Kuo-feng and Deng Hsiao-ping addressed the Taiwan issue was repeatedly demonstrated in the years ahead. Both affirmed the "inevitability" of reunification, coupled with an admonition that "ten years is too long a time" to wait for its accomplishment. Deng Hsiao-ping's remarks during his January 1979 visit to Washington were noteworthy as much for their refusal to rule out the use of force to achieve that objective, as for their promise of provincial autonomy and customary lifestyle for the people of Taiwan after reunification is accomplished. Although tactics of approach were different, the end strategy remained the same.

One of the most generously disarming offers now being made by the Chinese Communist leadership, particularly effective from a public relations standpoint, is to allow Taiwan to retain its own armed forces and to permit Taipei officials to share China's governing responsibilities with the Politburo once political unification is accomplished. This political carrot is seen by many observers in the United States and elsewhere as almost too good to be true.

In fact, it probably is.

BASIC FACTORS TO CONSIDER

The thrust of the matter is that every overture to date has been offered strictly on terms that are favorable to Peking. The most dramatic gestures are those involving retention of economic, social, and military privileges for the island—by their very nature assume Taiwan's preliminary submission to the Communist government's sovereign authority and control. The lesser offers—those suggesting immediate trade, mail, and tourist contacts—have been closely tied to the start of negotiations for unification. In both cases, then, the basic precondition of Peking's generosity has been Taipei's acceptance of the mainland's political dominance, a long-standing objective which the Chinese Communist government remains unable to accomplish militarily.

All this is not to say that prospects for some kind of contact between the China mainland government and the Republic of China [government in Taiwan] should be dismissed completely. Rather, it is to clarify the nature of Peking's congenial peace offerings. There are, furthermore, several practical problems which must be confronted in discussing either unification or simply socio-economic contacts.

In the first place, the people of the Republic of China are in no hurry to submit to the mainland's political control in exchange for vague assurances of status quo conditions, which thus far seem impractical of implementation under Peking's direction.

With respect to negotiations on unification, Taipei clearly and correctly sees itself placed in a subordinate position from the outset, as the "local province" accepting the "motherland's" offer to sit down to talks on repatriation. This situation would extract a severe psychological as well as political price from Taiwan.

In a sense, the arrangement would symbolize the renouncing of every principle which has sustained the Republic of China for the past three decades, and it would involve an automatic loss of national identity and status simply through the act of discussing reunification. In addition, the Nationalist government's experiences on the mainland with 30 years of civil conflict and abortive "united front" efforts with the Chinese Communist movement give ample reason for doubts and suspicions about the sincerity of Peking's peace overtures. In purely practical terms, it is extremely difficult to imagine how the political-economic coexistence of Communism and capitalist democracy could be achieved within the same nation, notwithstanding Peking's promises. Britain's Economist journal has commented aptly that "The power-sharing part of Peking's . . . new proposal is windowdressing," adding that "power in a one-party state is not divisible" and Taipei authorities could not hope to have "any noticeable impact on the politics of real power in Peking."

U.S. POLICY COMPLICATES THE ISSUE

Returning now to the issue of Washington's proper behavior in the current context: United States policy and practice of the past three years has done nothing to encourage favorable consideration of cooperation between Taiwan and the mainland. In fact, it has obstructed it. Through a series of actions that symbolically and substantively deny Taiwan's identity as a sovereign entity, the United States has undermined any basis for co-equal contacts between Peking and Taipei. The Carter Administration's prohibition on routine working contact between U.S. officials and those in Taipei, and its willingness to allow the ROC to be systematically excluded from the World Bank, International Monetary Fund, and International Olympics, only reinforced doubts in Taipei about the practicality of balanced accommodations with Peking, and about the likelihood that Peking's unification preconditions would be eased. Similarly, the Reagan Administration's surprise decision this year to provide weapons to Peking, along with the delay in announcing 1981 arms transfers to Taiwan, has injected new uncertainty into the situation. In effect, U.S. policy to date has denied Taipei virtually any leverage for attempting to deal with Peking in the sovereign status of a co-equal participant. The situation is ominously reminiscent of the gradual weakening of U.S. support for the Nationalist Chinese government after the Second World War, which encouraged Communist rejection of ceasefire proposals and facilitated Communist victories on the mainland.

There is little wonder, then, that Taipei now reacts cautiously and skeptically to overtures for negotiation and unification. It should come as no surprise to anyone that the Nationalist Chinese government should want to approach the issue of future contracts with the mainland with dignity and authority of an equal and sovereign power, or that it should reject unilateral terms for its own extinction. If the Reagan Administration further delays vital decisions on arms transfers and gradually softens its demonstration of support for Taiwan's political integrity, it can only weaken the confidence and bargaining leverage of authorities in Taipei which is so important to eventual resolution of the "civil conflict."

TAIPEI COUNTEROFFENSIVE COULD BE ADVISABLE

Two major changes in current conditions, however, could alter the scenario. If, in the first place, the Reagan Administration resolutely and visibly reaffirms its support for Taiwan (as with the sale of the FX fighter), and if Peking will set aside all prior conditions of political submission on Taipei's part, then a compelling case might be made for the ROC's launching of a counteroffensive of proposals for social-cultural contact to publicly test Peking's sincerity.

Certainly Taipei could attempt to gain for itself what practical and psychological benefits might accrue from such a challenge, if these two changes in conditions should develop. Providing that Peking's preconditions of political subordination and reunification negotiations were dropped, the prospects for bilateral trade, mail, and tourist exchanges could easily work to Taiwan's advantage, or at least to a mutually balanced advantage. While there could be and should be no practical hope for breaching the ideological gap between Peking and Taipei, a bold effort by Taipei to overcome deep-rooted animosities in order to open a simple dialogue between the two sides could win lavish praise for the Nationalist government from the international community. It would certainly attract favorable international attention to the Republic of China and, if rejected by Peking, would confirm skepticism about the motives and designs of the Communist government.

Neither side can realistically be expected to concede or compromise its basic principles, or its present political status, in order to initiate such contact. It certainly is realistic, though, to expect that direct socio-economic contact between the Taiwan and the backward Communist society would contribute to the gradual "Westernization" trends and socio-psychological influences which nurture demands for democracy and improved people's livelihood on the mainland. Taiwan's vigorous pursuit of trade and social contact with the mainland, without any related preconditions or assumptions by Peking, would give it the upper hand in the contest for global support and international credibility now sought by Peking. The Republic of China would enhance its public relations image by such an offer whether the Chinese Communists accept or reject Taipei's terms for contact. Without question, the initiative also would strengthen Taiwan's support in the United States Congress.

It is reasonable that a relatively free and open society such as that on Taiwan should be wary of the pitfalls of commingling with a closed and controlled society. The price is constant vigilance. But the system of life in Taiwan is strong enough to withstand the perils of contact and comparison, provided it is not shackled by unilateral preconditions or handicapped by weakened support from its friends.

For its part, the Chinese mainland stands to benefit a great deal from these simple initial contacts with Taiwan. But first Peking must be willing to drop its linkage demands with respect to reunification, and accept the new contacts simply for what they could offer by themselves. Economic, social, and cultural exchanges will have to be accepted on their own merits, with no political strings attached. Only in this manner can preliminary contacts between Taipei and Peking be explored on an equal footing, without risk or sacrifice of political identity to either.

Therefore, while limited contacts are presently practical, the resolution of more difficult issues relating to reunification or other forms of political accommodation clearly is not. Neither side can be expected to concede basic ideological principles of sovereign rights at the moment. Peaceful solutions to the essential issues will be arrived at only through

a gradual evolutionary process growing out of mutual contacts. Chinese on both sides of the Straits should demonstrate their well-known patience on this point.

Thus, there can be no deadlines, only open minds. The opposing ideologies themselves will never find common ground. But the Chinese as a people are capable of doing so given a relaxed and unhurried environment, and providing the United States fulfills all its commitments under the Taiwan Relations Act.●

RUN IN SUPPORT OF SOVIET JEWRY

● Mr. DECONCINI. Mr. President, I wish to bring to your attention the second annual Freedom Run which took place in Tucson, Ariz., on December 6. Over 1,000 Arizonans participated in the run to draw attention to the plight of thousands of Soviet Jews who have been refused permission to emigrate from their country. It is a well known fact that Soviet authorities have consistently violated the basic human rights of that nation's citizens. "Refuseniks" are restricted, deprived, and often imprisoned merely because of their religious or political beliefs. This sort of punishment without crime is a blatant abuse of human rights. It is intolerable.

At the Freedom Run, Arizonans symbolically joined one such refusenik, Vladimir Prestin, a man—and his family—who have been running for 10 years in Moscow. He has survived imprisonment, harassment, loss of job, and isolation in his quest for freedom, individuality and self-dignity. Such rights are fundamental and essential if peace is to be achieved throughout the world.

The best way that we can help the refuseniks is to publicize their stories and the atrocities they endure. I ask that an article by Ed Severson of the Arizona Daily Star be reprinted in the RECORD. It was written before the Freedom Run took place, and I would add that not hundreds, but thousands run on December 6 to protest the Soviet Union's refusal to grant exit visas to Russian Jews.

It is essential that we keep this cause alive and growing, and that we are relentless in pursuing our ultimate goals of preserving human dignity. It is my hope that we let those who are oppressed know that we care, and that they are not alone in their humanitarian beliefs.

The article follows:

HUNDREDS TO RUN HERE IN SUPPORT OF SOVIET JEWRY

(By Ed Severson)

In 1970, Vladimir Prestin applied for a visa to leave the Soviet Union.

His government responded by sending police to break down his door and drag him half-dressed into the Moscow snow.

Sunday, 2 million people around the world will show that they are looking through that broken door to make sure that Prestin—and thousands like him—do not disappear into the Soviet night.

Hundreds of Tucson runners will be part of those 2 million, as the Soviet Jewry Commission of the Jewish Community Council presents its Freedom Run for Soviet Jewry.

The run will be held at 9 a.m. in Reid Park, and will include a 10-kilometer race and a 2-mile non-competitive run.

Tucson Mayor Lew Murphy will lead the run to symbolize Tucson's sympathy with the plight of the men and women who are trying to leave Russia, simply because they want to live as Jews.

"I certainly hope they (the Russian Jews) will be made aware that Americans are in sympathy with their humanistic desire to leave Russia," Murphy said.

This year, the run focuses on Prestin, who lost his job at a geophysical institute when he requested a visa to emigrate from the Soviet Union.

Since then, he has been arrested several times, including once when he was tailed by a man and a woman—both KGB agents—in a Moscow subway.

The woman testified that he had annoyed her. He was thrown into jail for 15 days without a trial and without his family being notified. The same evening he was arrested, a "well-wisher" called Prestin's wife to tell her that he was spending the night with another woman.

And now, nearly 12 years after his first attempt to emigrate, the computer scientist is working the night shift as an elevator operator in an apartment building.

In Russia, Prestin's story is merely one of thousands like it.

Sen. Dennis DeConcini, D-Ariz., who will participate in the Freedom Run, was part of a Senate delegation to Russia in 1978. He visited a number of Jewish activists, including Prestin.

"First of all, when they applied for a visa, something immediately happened to them," DeConcini said. "Either they were brought in and reprimanded, or they lost their job."

And without a job, things went downhill fast.

"It was a very dangerous situation, because a couple of things could happen to you," DeConcini said. "If you were a male and not too old, you could be drafted back into the service. Or you could be prosecuted for not having a job."

Firing Jews who apply for visas, then turning around and prosecuting them for not having jobs, is just one of the many Catch 22s activists get caught up in when they try to emigrate.

"I'll never forget one young Jewish couple in Minsk, named Hess," DeConcini said. "This Hess worked for one of the computer companies, and because he was a veteran, they gave him a nice two-bedroom apartment. He had a little prestige and a few things going for him."

Hess' wife applied to go to Israel.

"That started it," DeConcini said. "But when he made application, it really came down on him."

He lost his job, then he got thrown into jail for nine months, because without a job he was considered a "parasite."

About two dozen Jewish activists in different cities told DeConcini the same story.

But the big problem in the Soviet Union comes when a Jew simply tries to be a Jew.

"In talking to them (the activists), they were Russians," DeConcini said. "They loved their mother country, and the only reason most of them wanted out was because of the government suppression of their religious freedoms."

In Russia, that suppression takes hundreds of forms.

For instance, the Soviet government doesn't want Jews to study Hebrew. Although it is taught in a few universities, and a couple of other institutions on a very restricted basis, and in Russian Orthodox Church seminaries, the catch is that Jews are not allowed to study their own language.

For the roughly 3 million Jews in Russia, there are fewer than 70 synagogues . . . and those 70 synagogues are served by perhaps a total of five rabbis.

DeConcini said activists showed him one synagogue.

"It was all pretty well barricaded off on the pretense that they were working on the sidewalk and laying some sewer lines," he said.

It had been that way for two years.

"I don't know for a fact that that's government policy, but it sure looked strange," he said. "And in a way, this may be even worse harassment, to see the building where you practice your religion, decay in front of your eyes."

Wherever DeConcini went in Russia, he asked the Jews if publicity of their plight was dangerous for them.

"It is very helpful to us, because they see all our letters," they told him. "If we disappear, it becomes an international problem. They know people are watching."

Sunday, freedom runners will have an opportunity to show that they are part of the 2 million who will be watching.

Those who want to can sign an international petition—for which organizers are hoping to collect 2 million signatures—which will be sent to Soviet President Leonid I. Brezhnev.

Also, post cards will be available to sign, which will be sent to Anatoly Dobrynin, the Soviet ambassador to the United States.

And when DeConcini was asked if the petition, the letters, the publicity or the Freedom Runs did the Russian Jews any good, he said, "I think it's embarrassing to Russia." He added, "I don't know what happened, but the Hesses were given a visa about two months ago."

Sunday, hundreds of Tusconans will symbolically run through Prestin's broken door to let him know that he is not alone.

More information on the Freedom Run is available by calling the Athlete's Foot, 326-7050.●

UNEMPLOYMENT IN THE AUTO INDUSTRY

● Mr. QUAYLE. Mr. President, I ask that the attached articles be printed in the RECORD in full at this point. In view of the hearings which I plan to hold in the Employment and Productivity Subcommittee in early January concerning unemployment among auto workers, I feel that certain articles which I shall have printed in the RECORD shed considerable light on this stubborn problem. They underline the seriousness of the current problems in the auto industry as well as the fact that many of the workers who have lost their jobs in that industry—as well as in many other basic manufacturing industries—have no realistic prospect of returning to their former jobs.

On the other side of the problem of unemployment is the difficulty many employers face in their search for skilled employees. These articles will show that reemployment prospects need not be poor where there are jobs demanding workers, and where we can match a person with a job.

I believe that we should look to what kinds of jobs are available and to what kinds of workers are able to take those jobs. To meet the competitive economic challenge that is now coming from abroad, we must look to solutions, and we must change our attitudes about the nature of the problem. While we are experiencing a serious rate of unemployment, we simultaneously are experiencing a serious shortage of skilled labor. I highly recommend these articles.

Mr. President, I ask that the articles previously mentioned be printed in the RECORD.

The articles follow:

[From the New York Times, May 3, 1981]

WANTED: MORE SKILLED WORKERS

(By Lester C. Thurow)

To meet the competitive economic challenge that is now coming from abroad, the United States is going to have to repair some of its major structural weaknesses. Nowhere are the repairs more urgent than in the institutions, or lack of institutions, for training skilled blue collar workers—the tool and die makers, machinists pipefitters and the like.

During recessions America's inability to train enough skilled blue collar workers is hidden, but shortages break out whenever unemployment falls. What do employers complain about in tight labor markets? Certainly not an inability to hire unskilled workers, or college-educated labor. Complaints almost always focus on shortages of skilled blue collar workers.

As the economy expands, it runs into bottlenecks created by shortages of skilled labor. Production cannot expand. Standards of living stagnate and Americans cannot build the products that would allow them to compete with the rest of the world.

As rising demand presses in on limited supply, prices rise and inflation breaks out. In an ultimately self-defeating effort to get the skilled blue collar workers they need. employers begin to raid one another for labor. As the birds fly, wages soar.

Our national defense suffers. Employers raid the military services for skilled technicians. The Armed Forces find that they cannot maintain their equipment because they have lost their skilled blue collar workers. Military equipment sits unrepaired because there is a shortage of people to use an abundance of parts and equipment. When the defense industries expand, as they are poised to do now, they raid civilian industries.

Paradoxically, the shortage of blue collar workers creates unemployment for the rest of the population. The policy makers regulating monetary and fiscal affairs attempt to hold unemployment at levels where inflation will not accelerate. But since skilled blue collar workers reach full employment while there are still millions of unemployed unskilled workers, the national unemployment rate must be held at very high levels.

Basically, the problem lies in an institutional structure where no one has an economic incentive to take responsibility for insuring that enough skilled blue collar workers are trained.

Government is involved in educating labor and runs (or did until the Reagan-Stockman cutbacks) manpower training programs to turn low-income individuals into unskilled or semi-skilled workers with higher earnings capabilities. But government has stayed out of the business of training middle- or high-income skilled blue collar workers. In 1979, the last year for which data are available, fully employed male skilled blue collar workers had median earnings for more than $17,000. Only professionals and managers had higher incomes ($21,000).

In West Germany, government solves the problem with elaborate apprenticeship training programs for those who do not go to college. These programs are jointly financed by government and industry and involve more formal education as well as substantial on-the-job experience.

American industry does not want to train skilled blue collar workers because they are both expensive to train and apt to quit for a better job before an employer can recoup the costs of training. Each employer finds it cheaper just to raid other employers.

In Japan, with its lifetime employment where workers cannot quit (who would hire them?), companies train their own skilled blue collar workers. They know if they don't, they won't have any. Raiding others is impossible. But they also know that they will get the lifetime use of any training that they give. No one is going to raid them.

In the United States, blue collar skills are almost always acquired in a haphazard process of on-the-job training where one worker informally learns from another. When labor markets are tight and output expands, employers promote half-trained people and count on learning-by-doing to apply the final polish to their skills. Apprenticeship programs exist, but they train very few of those that eventually acquire blue collar skills.

Acquiring skills by osmosis is not the best of training processes even in an expanding economy. It is a terrible process in an economy that is subject to repeated recessions or to a sustained period of high unemployment, such as we are undergoing at the moment. Since workers cannot advance into higher skilled jobs, informal learning stops. Young workers are laid off, their skills atrophy, or they find new jobs in areas where their old skills are irrelevant. As the recession continues, the supply of skilled workers stagnates or even declines. The proportion of the labor force that is unskilled rises.

It is tempting to recommend the adoption of the German system of apprenticeship training and education, but that has been recommended so often, and ignored so often, that it hardly seems worth the effort.

Perhaps the problems should be dealt with in the context of the present military build-up. Industry now uses the military as a training system. Perhaps this should be recognized, made formal, expanded, and extended to military contractors.

Since the nation is about to embark on a major military buildup, it is almost imperative that we do so. Between fiscal 1981 and 1986, the Reagan Administration is planning to increase military spending to $343 billion a year from $162 billion. This buildup, adjusted for inflation, is more than three times the buildup during the Vietnam War.

During Vietnam there was a severe shortage of skilled blue collar workers. It is not clear how a military buildup of the current magnitude can occur without draining skilled workers from civilian industries. But if this happens, civilian industries will not be able to compete on international markets.

Thus military contractors should be given funds not just to produce military eulpment, but also to produce skilled workers. They should be prohibited from hiring skilled workers from civilian industries but paid to train all of the extra skilled workers that they will need over the next five years. And when the current expansion of military production is over, the economy would receive an extra bonus in the form of a much larger supply of skilled blue collar workers.

The military-industrial complex should be made into the prime training ground for skilled blue collar workers. It is in their interest in the short run and everyone's in the long run.

[From the New York Times, Dec. 6, 1981]

THE JOBS THAT WON'T COME BACK

(By Winston Williams)

Like hypersensitive economic bellwethers, the old smokestack towns of the East and the Middle West have for many years foreshadowed what economists call America's "slow economic rot." This sulfur-filled town 40 miles southwest of Chicago is no different. It emerges weaker from each recession than it did from the last, and it is likely to do the same this time around, too.

The gradual degeneration of Joliet became apparent when the Vietnam War ended. A local munitions factory closed, stripping 7,000 jobs from this community of 78,000 jobs. A few years ago the United States Steel Corporation shut an old mill, and Texaco Inc. mothballed an obsolete refinery here, idling hundreds more workers.

New little businesses had come along to take up some of the slack when the automobile and housing industries entered their prolonged slump more than two years ago. Unemployment, which reached 11.3 percent locally last month, is rising again as Caterpillar Tractor, GAF, Dow Chemical, Mobil and Olin Mathieson and others trim production and lay off additional workers because of the current recession.

In recent weeks, throughout the industrial belt and in much of the country, hundreds of communities are confronting events similar to Joliet's. Manufacturing plants are shutting down in Louisville, Ky. Ore miners are being laid off in Minnesota. Aircraft production is winding down in Seattle and Wichita, Kan., and textile output is falling in New England.

Uemployment in the nation jumped to 8.4 percent last month, higher than had been expected, and public officials are concerned that many of these jobs may disappear forever, leaving unemployment at high levels for some time to come. And a number of social activists, noting that many public programs such as unemployment compensation, CETA and trade readjustment assistance have been trimmed in the Federal budget cutbacks, are predicting unusually harsh times even for a recession.

"The implications of a renewed recession are particularly serious for Illinois and the neighboring Great Lakes states" where much of the nation's manufacturing is concentrated, said Roland Burris, controller for the State of Illinois. "They have yet to fully recover from the recession of the second quarter of 1980." In September of this year, he said, the number of jobs in Illinois was five-tenths of 1 percent below the level of March 1980, just before the 1980 recession began.

Growing unemployment will leave its mark on the rest of the nation, too, experts say. Rising unemployment will undoubtedly aggravate the Federal deficit, now officially projected to be in the $40 billion to $60 billion range for the current fiscal year. According to the Congressional Budget Office, a 1 percent jump in the unemployment rate increases the Federal deficit by $27 billion as the falling level of economic activity cuts tax revenues for the Government and soaring unemployment increases unemployment compensation benefits and other transfer payments that the Government has to pay out.

And the probability of unemployment going as high as 9 percent and remaining in the 7.5 to 8.5 percent range for most of next year, as many economists predict, will also bring mounting pressure on the Administration to alter its economic program.

In recent months, the recession has spread beyond the automobile industry, affecting office workers and government employees. General Motors indicated in Detroit last week that it would lay off 13,000 white-collar workers. In Chicago, the city announced layoffs of hundreds of health workers and bus drivers.

"These interest rates have to come down," said Michael Biernat, an unemployed carpenter, who chatted with a friend about the housing industry as they waited in a long line at an unemployment claims office in Joliet. "The Government could ease up a little on money," he added.

A partner with his brother and father in a small construction company, Mr. Biernat said he had become disenchanted with Reaganomics. "The election was supposed to bring the rates down, but they went up," he said. "It looks like they've lost confidence in everything they were trying to do."

But conservative economists in Washington, who see a labor bargaining calendar for 1982 that encompasses contracts covering 40

percent of organized labor, say a sustained period of unemployment is necessary to dampen wage demands and to cool inflation.

"The most constructive thing that should be done is nothing," said Marvin Koster, a specialist in labor economics at the American Enterprise Institute. "Anything done now would have adverse consequences later and no immediate beneficial effects."

In Washington, officials expect the unemployment situation to correct itself. The Administration hopes that the interest rates will fall enough next year to stimulate a recovery.

The next round of tax cuts set for June 1982, will put money in the pockets of consumers and business, insuring a recovery, according to Administration economists. In the meantime, they say, short-term deficits from the recession should not cause alarm.

Needless to say, that outlook has not gone unchallenged. Many economists say that even after a recovery, businesses add workers slowly and cautiously and many managers use slow periods to permanently reduce their work forces.

Laurita Parish, a secretary who was laid off last month from the GAF building materials plant in Joliet, said she has seen examples of this at GAF since she started working there a few years ago.

"Every year they lay off people, saying it's temporary," she said. "Only two people have come back. They worked a few months and were laid off again." She said the office staff dwindled to 17 from 45 during her tenure, while the production force, at 300 now, is about a third of what it had been.

Others say the large budget deficits will prevent an economic self-correction. "You're going to have these tremendous deficits from the recession," said Marion Anderson, executive director of Employment Research Associates, a Lansing, Mich., consulting firm. "The Government will be going to the debt market next year for more than a billion dollars a week. That's going to send interest rates back up and choke off the recovery."

Barbara R. Bergman, an economist at the University of Maryland, has questioned the stimulative effects of the tax cuts, saying they may not lead to high employment and output because they mostly benefit the rich and will not greatly stimulate demand for durable goods such as autos and appliances.

At the same time, such developments as U.S. Steel's $6.3 billion bid for Marathon oil have raised questions about the commitment of big business to such distressed industries as steel, rubber, textiles and automobiles. During the last decade tens of thousands of jobs have been lost in these industries to more-efficient foreign plants and cheaper overseas labor; the tax reductions were supposed to help win them back.

But even if the tax plan were working according to plan, industrial jobs would still be disappearing, experts say. Robots have been eliminating jobs in the auto industry since General Motors started using them at its Lordstown, Ohio, plant several years ago. And their use has been spreading rapidly to other industries since then.

The bleak prospects for employment are producing louder pleas for help from the unemployed. "I'm a conservative myself," said Gary Stiller of Waseca, Minn. "I know we have to save money, but the Government ought to be able to do something." Despite his political leanings, he says he favors some sort of public works employment program, recalling that it helped his parents during the Depression.

Mr. Stiller, a 42-year-old truck driver who had worked for the same company for more than 23 years, was thrown out of work last April when his employer, Herter's, a sporting goods chain, went bankrupt, tying up more than $17,000 he had in the company's profit-sharing account. With a daughter in college and a son in high school, the family is surviving on the wife's part-time job.

Having drawn his final $86-a-week unemployment check, he is getting despondent. "It's getting out of hand," he said of the recession. "It looks like the bottom could drop out."

Some social activists insist that the bottom could fall out for people if unemployment remains unusually high for a long period. Extended benefits, which sustained some of the unemployed for more than a year during the 1974–75 recession, have been severely curtailed under the Reagan program, making it much harder to receive benefits past 26 weeks.

Other transfer payments, which are sometimes called "automatic stabilizers" because they prevent a recession from spiraling downward into a depression, have been cut also. In addition to welfare and food stamp cuts, there have have been changes in trade readjustment assistance and the Comprehensive Employment and Training Act.

And many of the supplemental funds of the auto, rubber and steel companies, which add to the income of furloughed workers, are close to depletion because of the prolonged slump in those industries.

The unemployed defend these programs vigorously. "If it weren't for unemployment compensation, I would have missed a few mortgage payments," said Mr. Biernat, the Joliet carpenter, who is single. He insists that he would much rather work than collect the payments. But, he says, his company has not built a house in three years, and they have had to settle for small, occasional remodeling jobs, which are now becoming even more scarce.

The cutting back on transfer payments and the scaling back of subsidies to the unemployed by the Federal Government has another purpose besides saving Federal dollars. "The theory is that the stabilizers have taken away people's incentive to work at certain wages and for companies to lower prices," said George Schwartz, the associate director of research for the United Automobile Workers.

Next year, labor contracts covering the auto, trucking, rubber, construction, electrical equipment, oil refining and food processing and production industries will be negotiated. The Administration is counting on the swelling ranks of the unemployed and the reduction in Government benefits, including the denial of food stamps to strikers, to moderate wage demands.

The economy's poor performance has already caused unions of railroad, airline and automobile workers to offer concessions to troubled companies. And individual workers seem willing to experiment with lower pay within limits.

Mrs. Parish, the furloughed secretary at GAF, said she would accept a job paying as low as $5.50 an hour, down $3 an hour from her old rate. Mr. Biernat has considered moving to Miami or Houston to find work as a carpenter, but the $6 to $8 an hour that he could make in the Sun Belt is less than half the local scale of $13 to $17 an hour.

Liberal political groups in the area are saying they hope to mount enough pressure before next year's Congressional election to prevent the unemployed from making such dire sacrifices. National People's Action, a Chicago-based activist group that has taken the Federal Reserve to task at a series of "town meetings" it sponsored around the country with the central bank, says it is now turning its attention toward organizing the unemployed.

"What this country has to see is a lot of angry unemployed people demonstrating and demanding jobs," said Gail Cincotta, executive director of the group. "We learned some things in the 60's—how to organize people and how to build coalitions. Without organization we would run the risk of something happening spontaneously. This could be a rough summer."

[From the Wall Street Journal, Oct. 26, 1981]

STEEL-COLLAR JOBS: AS ROBOT AGE ARRIVES, LABOR ASKS MANUFACTURERS FOR PROTECTION AGAINST LOSS OF WORK

(By Joann S. Lublin)

LOUISVILLE, KY.—Two men in T-shirts and work pants chat as they casually aim paint sprayers at clothes-dryer doors moving along an assembly line. Across the hall, in another glassed-in booth at General Electric Co.'s Appliance Park here, a robot silently sprays enamel on washing-machine lids at a consistent, careful pace.

The robot, essentially a large, computer-controlled mechanical arm, "doesn't talk back and it doesn't take breaks," observes Clarence Engle, a fabrication manager at the giant manufacturing complex. It doesn't draw a paycheck, either. By year-end, the two men's $8.14-an-hour jobs "will be taken by robots," Mr. Engle says, and the employees will be transferred to other work here.

Industrial robots are rapidly moving into the U.S. labor force as manufacturers accelerate automation in order to hold down costs, boost sagging productivity and compete better in world markets. Nearly 5,000 robots currently are toiling away in the U.S. up from 1,300 as recently as 1979. There may be 120,000 robots at work by 1990, predicts Laura Conigliaro, a securities analyst at Bache Halsey Stuart & Shields Inc. If the modernization push succeeds in increasing sales, manufacturing executives contend, robotics will create more jobs in the long run.

LABOR IS SKEPTICAL

Union leaders share these hopes but have their doubts. They fear that efficient, sophisticated "steel-collar" workers will usurp countless blue-collar jobs in factories across the land. So unions are pressing for stronger guarantees against job losses from automation, including more time off, advance notice of robot installations and retraining for jobs at equal or better pay.

"New technology based on computers, as symbolized by robots, will be one of the—if not the—collective bargaining issues of the coming decade," asserts Harley Shaiken, a researcher at Massachusetts Institute of Technology who is also a union consultant.

To date, employers have installed robots primarily in dirty, dull or dangerous jobs that few humans enjoy and have absorbed the displaced employes through attrition. Unlike the single-task machines installed in earlier stages of factory automation, robots can be programmed by computer to do one job and then reprogrammed to do an altogether different one. The pioneering generation of robots has been programmed mainly to forge, weld, spray paint, handle materials, cast dies, load machines and inspect auto bodies.

But now robots with rudimentary vision and touch abilities are taking on new tasks: They are starting to assemble simple parts. At General Motors Corp., about 50 small robots are fitting light bulbs into dashboards and speakers into car radios. Within five to 10 years, experts say, a new generation of "smart" seeking and feeling robots should be able to perform a broader range of complex assembly and inspection jobs. Those are the bread-and-butter work of many of the nation's 21.6 million highly unionized manufacturing employees.

OUTLOOK FOR 1990

Today's robots could replace one million workers by 1990 in the automotive, electrical-equipment, machinery and fabricated metals industries, concluded a recent study by Carnegie-Mellon University. "Some time after 1990, robot capabilities will be such as to make all (7.9 million) manufacturing operatives (in these industries) replaceable," and three million jobs actually may be lost, says Robert Ayres, an engineering and public-policy professor at Carnegie-Melon. "Clearly, the members of those unions are at risk."

Seeing the threat to jobs, union officials vow to make protection against the robot invasion a top priority in bargaining next year. The United Auto Workers union already has won advance notice and retraining rights from major auto makers. But it hopes to strengthen those safeguards, perhaps spreading the work by means of a four-day workweek, more paid holidays or earlier retirement. The union believes that employers are bent on reducing their labor forces. "Nobody puts robots in because they think they're going to end up with the same or more workers," says Howard Young, an assistant to UAW President Douglas Fraser.

In coming contract talks with GE and Westinghouse Electric Corp., the machinists' union and the three major electrical-workers' union plan to push for automation concessions similar to those sought by the UAW. The unions may go a step further and seek such provisions as:

Establishment of labor-management committees that not only negotiate in advance about the impact of new technology but have a voice in the decision on how and whether to use it.

Retraining of displaced workers for new positions in the same plant, elsewhere in the local community or in a company's other plants. Transferred employes would receive moving allowances.

CONCESSIONS PREDICTED

"I think we'll definitely get something along these lines in 1982," predicts a top official of one electrical union. Such protections "will be a bargaining issue at every negotiation next year" besides the GE and Westinghouse talks and will come up in the aerospace industry in 1984, says Reginald Newell, the machinists' union's research director.

"We aren't Luddites running around breaking machines," he emphasizes. "We know new technology is here and is necessary to increase productivity." But unions refuse to "give companies a blank check," he says.

With robots taking over a significant number of blue-collar assembly jobs, industry unions may intensify white-collar organizing—and some white-collar employes may become more receptive to union overtures. The coming computerization of certain professionals' jobs, such as draftsmen's, means that job security for white-collar workers is no longer a given," says MIT's Mr. Shaiken. "This may be a pivotal organizing tool."

At the same time, UAW sees potential members among the growing number of workers who build robots and related computer controls. The union already has tried to sign up employes of Unimation Inc. of Danbury, Conn., the nation's largest robot maker.

It is unclear whether unions can successfully blunt the impact of robots on their ranks, given their weakened bargaining posture in ailing industries. In any case, some robot experts believe that the threat to jobs has been overblown. "Something like more than 440,000 workers will be replaced by 1990, but only 22,000 will actually be dismissed because of automation. The rest will be retrained or eliminated by attrition," says Peter Blake, executive director of Robotics International, a professional group that recently polled 100 users and manufacturers or robots.

More important, contends Fred Haubold, a General Motors labor-relations director, robots should improve the car maker's competitive position by holding down costs. Though robots sell for an average of $50,000 each, they cost about $6 an hour to operate, a fraction of the $20 an hour in wages and benefits paid to the average auto-assembly worker.

As GM competes more effectively, Mr. Haubold says, robots should create more jobs than they eliminate. "We have 70,000 people on layoff and our sales are down to about half of what we'd like to see," he says. "If we could increase our sales to their former levels, we'd see a much more dramatic impact on employment opportunities" than robots will have.

Yet employers recognize they need organized labor's cooperation for robotics to succeed. To avoid being perceived as callously exchanging humans for machines, personnel executives endorse certain cushions for workers. The unions' desire for advance notice, retraining and some other benefits for displaced employes represents "a healthy direction, one that's manageable through the normal process of labor relations," says Frank Doyle, GE's senior vice president for corporate relations. His company uses more than 200 robots, nearly triple the number of two years ago, and if expects to have 1,000 installed by 1984.

Nonetheless, contract provisions that inflate already-high labor costs or restrict management's options won't be welcomed in the executive suite. GM, in fact, will very likely fight to reduce its UAW members' paid personal holidays. They now get nine a year, in addition to regular holidays. The extra time off, first won in 1976, "has increased our costs and made us less competitive, so we have less job opportunities," Mr. Haubold says.

For its part, GE refuses to offer unions a say in robot purchase decisions or a contractual assurance that attrition will continue to offset jobs lost to automation. "I don't think a U.S. management will give unions the veto power over whether or not to automate a plant," Mr. Doyle says. And while he is willing to consider guaranteed retraining of displaced workers, the GE executive cautions that a low-skilled assembly worker might only move to "a more complicated assembly job" rather than to a better-paid, highly skilled position as a robot overseer or repairman.

Labor and management's differing views about robotics and jobs are evident at GE's Appliance Park, a 1,000-acre complex with six manufacturing plants, 50 robots and 15,000 employees. A $38 million effort to automate the dishwasher plant by 1983 will include the addition of seven robots, for a total of nine.

The first robot in that plant, installed in December 1979, paid for itself in 10 months, 14 months sooner than expected. (Company-wide, robots have proven 10% to 35% more productive than humans, GE officials report.) The robot takes uncoated dish racks from a 600-degree oven and dips them into a bed of polyvinyl powder. An assembly line then moves the racks to bake in another oven. Four workers did the hot, dusty work before and sometimes created production problems when they worked at uneven speeds.

The International Union of Electrical Workers Local 761, which represents 14,000 Appliance Park employees, didn't object to losing the four jobs "because they knew it was an unfavorable work spot," recalls Ray Rissler, manufacturing manager at the dishwasher plant.

On its own, management gave the four employees six months' warning of the robot's arrival and later transferred them to another assembly area. "We're not out to devastate the labor force," says Roger Schipke, general manager of GE's laundry and dishwisher division.

Even so, the sluggish economy makes him worry about keeping an informal 1980 promise to the IUE that attrition would handle any jobs lost to automation. "We're essentially walking a tightrope," he says.

IUE Local 761 supported the modernization on the assumption that higher sales would expand the plant's hourly paid jobs by more than 300, to 1,425, by 1983. Otherwise, "I felt we could have stopped it (the project)," says the local's president, Kenneth Cassady. He says that doubt about Mr. Schipke's pledge explains "why it's absolutely essential" for the union to win stronger protection against automation.

The local leader doesn't necessarily welcome robots' takeover of dirty or dangerous jobs, either. "People on layoff would like them," he says. "People can't find a job digging ditches." (Nearly 800 Appliance Park employees are on indefinite layoff, with 900 more to be let go Nov. 9.)

Furthermore, some workers shunted to other jobs by robots haven't been entirely happy. One spray-painter took a more difficult job running a 250-ton press at the same pay. But he couldn't learn the skill fast enough and had to be transferred again, according to Jerry Bodner, an IUE steward.

Another ex-painter, 58-year-old Earl Beeler, now fills in as needed on the assembly line. He has mixed feelings about the robot that does his old painting job. "At first I was bitter," he says. "How would anyone feel when a bucket of bolts comes in and takes their job away?" But "I didn't like breathing the paint," he recalls. "The robot may be saving my life."

THANKSGIVING IN A CITY OF 7,000 JOBLESS

(By Nathaniel Sheppard, Jr.)

KOKOMO, Nov. 26.—The Smith family was separated for Thanksgiving dinner today. Unable to afford the traditional family meal, James Smith and two of the children had dinner at his mother's house and Patricia Smith and the third child dined with Mrs. Smith's parents.

The Smiths and thousands of others here have been laid off by the Chrysler Corporation plant here more than a year.

For Joseph M. Stahl, another suspended Chrysler employee and a single parent, Thanksgiving is "just another sad day." Mr. Stahl said he would let his two young sons decide if they wanted hot dogs or hamburgers for dinner, as he might on any other day.

Elsewhere in Kokomo, an industrial city of 46,362 people, 7,000 of whom are unemployed, thousands of other families paused to reflect on their blessings while thousands more struggled to find blessings to be counted.

CHURCH AND MISSION OFFER MEAL

Two hundred people filed into the Grace United Methodist Church for the free Community Thanksgiving Dinner sponsored by the church and the Kokomo Rescue Mission. There were families with small children, single adults and elderly people. Some wore tattered clothing. Some appeared downcast. Some seemed cheerful. A few ate as if they had not eaten in some time. Farris Trueblood dined in a leisurely manner, sampling all of the pressed turkey and ham, mashed potatoes, string beans and candied yams and the eight desserts.

Mr. Trueblood, who has lived in Kokomo all his 80 years, said: "Sometimes there are sunny days, sometimes there is rain and sometimes there are days that are darkened by clouds. For the past two years it has been cloudy, and the city has had more trouble than at any time that I can remember."

Kokomo is a small manufacturing center 52 miles north of Indianapolis. The first commercially built automobile was produced here. The discovery of natural gas, the development of stainless steel, the first pneumatic rubber tire, the first mechanical corn picker, the first pushbutton automobile radio and the first all-transistor automobile radio—all these helped steer the city toward industrialization.

WHEN INDUSTRY AND CITY THRIVED

Until two years ago, the automobile industry and Kokomo thrived. In 1978, a typical blue-collar family here had $20,750 to spend after taxes, ranking the city 15th in the nation, and spent an average of $13,328 on retail sales, ranking it 30th. Last year the city slipped to 30th position for spendable in-

come, with an average figure of $23,094. In 1980 retail sales slipped to $11,987 per household, ranking the city 176th.

Because Kokomo's economy is not diversified, the city has been hit hard by the nation's economic ills. In 1980 the average monthly unemployment rate was 16 percent, as against 11 percent in 1979 and 6 percent in 1978. Last year about 7,000 people a month were jobless. Since 1979, the labor force has dropped to about 43,000 from 44,800. "It suggests," said Dilip Pendse, chairman of the economics department at Indiana University's extension here, "that about 1,800 people have left the area or have become so discouraged that they no longer are looking for work."

Richard Chamness, director of a United Automobile Workers' center to help the unemployed Chrysler workers, said he was convinced that 2,000 to 3,000 workers were not in the statistics because they were no longer looking for work.

Kokomo's three largest employers are Delco Electronics, a division of the General Motors Corporation that employs about 12,000 workers; the Chrysler Transmission and Casting plant, which employs about 3,500 workers, down nearly 50 percent from normal; and the Penn Dixie Steel Corporation, with about 1,500 employees. Penn Dixie is currently in bankruptcy proceedings.

FOOD STAMP FIGURES RISE

Kokomo has gained nine new businesses since 1980, but they are largely fast-food restaurants, not the kinds of businesses to offset the loss since 1980 of 14 businesses. In two years, the number of families receiving food stamps and the dollar amount that Howard County, in which Kokomo is situated, spends on food stamps tripled, according to William Norris, a supervisor in the food stamp program.

The county spends $300,000 a month on food stamp assistance, an amount Mr. Norris said would be even higher if changes in rules had not made many families ineligible. Charity agencies here report increased activity. Kenneth Beasley of the Rescue Mission said his agency gave away 5,000 more items of clothing to the needy this year than last.

"For a while I got to drinking pretty heavily when I could not find work," said Mr. Smith, who earned $250 a week as a machine operator. "I would sometimes find odd jobs, like doing roofing work, but we finally got down to nothing and had to go on welfare. I felt like going out and begging and that's hard to do after working at a job for eight years."

"Sometimes I felt like I wanted to kill and at other times I felt like I wanted to just give up," said Mrs. Smith, who worked in the cafeteria at the Chrysler plant until she was laid off.

TENSIONS AND A SEPARATION

The Smiths said that the tension of their economic problems made them hostile to each other and they separated; Mr. Smith sought treatment at a mental health clinic and they reunited. They said they were trying to make a new start. "We don't want to leave Kokomo, but would, if it meant getting jobs," Mr. Smith said.

"I was used to providing for myself and my family," Mr. Stahl said. "Now I am like someone reaching out from the gutter for help." He said he had lived on food stamps and money from odd jobs like cutting firewood and helping with home remodeling. "But it's not enough to keep up with my bills," he said. "I survive because my father is paying my house note until I get back on my feet."

CITY'S OFFICIALS SEE HOPE

Mayor Stephen J. Daily and Herman Stine, the executive director of the Chamber of Commerce, say Kokomo's problems have stabilized and the future looks brighter. Both men acknowledged that the city had waited too long to act to diversify its economy, but they also said that Kokomo was preparing a drive to attract high-technology businesses.

"We expect there to be 500 new engineering jobs in the city during the next five years," Mr. Stine said. "And we are planning to build a large technology center that will function like an industrial park."

Dr. Pendse, the Indiana University economist, said that even so, people like the Smiths and Mr. Stahl would not have the skills for such work.

Mayor Daily listed initiatives the city had undertaken, among them a tax abatement plan that has already prompted five businesses to announce $85 million worth of expansion and rehabilitation efforts.

"Kokomo used to be the kind of place where a kid could come out of school and get a good-paying job without having to leave town," Mr. Stine said. "We are now looking at a different scenario. We won't see a lot of growth in blue-collar positions. Rather, the growth will be in the high-technology area and the road to recovery will be slow."

[From the U.S. News & World Report, Aug. 11, 1980]

LABOR: WHERE JOBS GO BEGGING EVEN IN RECESSION

In city after city, despite a rising unemployment rate, employers claim they just can't find enough workers to fill all the available jobs.

Consider Detroit, where the jobless rate exceeds 14 percent. "We're getting little response," says Kay Archer, whose agency lists many opening for clerical workers. "With unemployment the way it is, I thought we'd be swamped."

Her complaint reflects a puzzling contradiction in today's recessionary economy. Even with 8 million Americans out of work, there are many jobs that employers find hard to fill.

Nurses, engineers, clerical workers, retail clerks, computer specialists, housekeepers, taxi drivers—these people are particularly difficult to recruit in many part of the nation. Although no one knows exactly how many such jobs are now vacant, the U.S. Employment Service regularly lists more than 150,000 openings that remain unfilled at the end of every month.

Why do so many jobs remain vacant while millions of people are hunting for work? Experts cite these reasons:

Skills: Many vacant positions require skills that today's unemployed workers do not possess. Engineering, computer science, nursing and teaching demand extensive formal training. Most clerical jobs require a level of literacy that is often beyond that of the average unemployed urban teen-ager.

Unattractive jobs: Low-wage jobs such as housecleaning are scorned because the expense of working—higher taxes, transportation and clothing costs—often exceeds the income derived from the job. Unemployed housewives sometimes spurn low-paying jobs for this reason. As one recruiter notes: "There are a lot of jobs that go begging because they are not desirable jobs."

Women's aspirations: Many women are no longer interested in being a nurse, a teacher, a secretary—the traditional women's jobs. While women move increasingly into male-dominated jobs, only a few men are willing to take jobs previously held by women.

Unemployment benefits: Government benefits discourage unemployed workers from seeking work until they have received their last check, according to a study by the General Accounting Office. The Labor Department says 4 million Americans were receiving unemployment benefits in mid-July.

Location: Workers laid off in the Northeast and Midwest are reluctant to move to areas with more opportunities, such as the Southwest. While Detroit suffers double-digit unemployment, California's "Silicon Valley" feels little impact from the recession.

Of all these reasons, the biggest obstacle facing unemployed workers is a lack of skills. A Washington Post study of its own help-wanted pages shows only 26 percent of the ads offer full-time employment for unskilled workers. Such jobs are snapped up in a hurry. "If the job requirements are low, generally the same day it is listed it's filled," says Earl Lee, a Labor Department analyst.

The most severe shortage of skilled workers exists in high-technology fields such a engineering and computer science. E-Systems, a Dallas-based high-technology company, for example, has 300 to 400 openings for engineers, with salaries ranging from $22,200 for beginners to $45,000 for those with experience. "These same shortages are industrywide," says a spokesman.

Experts say the rapid growth of technology has helped create this shortage. "The growth of technology has outstripped the resources and it won't be remedied for the next 10 years," says Pat Healy, employment manager for Boeing Company in Seattle.

Richard O. Berube, a spokesman for Digital Equipment Corporation of Maynard, Mass., blames educators and business leaders for failing to steer students into high-technology fields. He says teachers and guidance counselors ought to stay abreast of the changes in technology. "What a young person studies in high school now becomes a question at some point," he says.

The shortage of skilled engineers has created what one E-Systems official describes as the "gypsy engineer"—a highly specialized person who moves from company to company to work on a single project at a preminum price. "They are hired guns," he explains.

Amoco Production Company in Denver reports a turnover rate of nearly 25 percent among engineers, geologists and geophysicists. Fred Birdsall, director of administration and personnel for Conoco, Inc., says his company loses skilled people as fast as they are trained and that, as a result, "they call us 'Conoco U.' "

Profitable moves: Computer specialists also command high salaries by moving from job to job, according to an official of Hewlett-Packard in California's Silicon Valley. Although salaries range from $25,000 to $70,000 for top people in management systems and design, most big companies cannot find enough people to hire.

Some firms have lowered their standards in an effort to fill these positions. Roland Theriot of Amoco Production Company in Denver says his firm no longer requires its geologists to have master's degrees. "It's nothing for a new geologist just out of school to have 20 interviews and 20 job offers," he says. "They know they're in the driver's seat."

Relatively poor wages and working conditions are believed to be a major reason behind a current shortage of nurses, clerical workers and teachers. Teachers now earn an average of $15,589 a year, and typists often begin at the minimum wage of $3.10 an hour Although nurses in New York City are averaging $7.27 an hour, they note that their job also requires them to work nights and weekends.

The American Hospital Association, which reported 84,000 nursing vacancies in March, 1980, predicts the number will hit 120,000 by 1985. "There is an acute nursing shortage nationwide," says Barry Carr of Pittsburgh's Mercy Hospital. "There probably is not a hospital in the U.S. that is not advertising for professional nurses."

Carr says the hours worked by nurses tend to keep young people out of the profession. "This poses a problem, especially for young women or men who are single and desire free time in the evenings or weekends for dat-

ing," he says. "Who wants to work 3 p.m. to 11 p.m. or 11 p.m. to 7 a.m.?" Carr adds that benefits do not appeal to these young people as much as a few more dollars in their paychecks.

"Pay is still a factor, particularly when bus drivers make more money and you know the importance of your decision is more crucial than theirs," says Mary Mallison, assistant director of nursing at Grady Memorial Hospital in Atlanta. Grady, which pays $1,040 a month, needs 120 to 140 nurses.

A shortage of teachers exists in some parts of the country. Although many school districts still have thousands of teachers on layoff, Georgia is searching for 3,000 instructors this year to teach speech, languages, special education, English and social studies. Schools in Kankakee, Ill., say their shortage involves special-education teachers.

"We in the teaching profession can't compete with industry," says Arthur Keller, special-education director in Kankakee, where salaries begin at $11,600. "International Harvester and John Deere, even at the $12,000 point, are going to beat us."

Kay Archer of Detroit cites low pay as the reason her agency gets such a poor response to advertisements for clerical workers. "If the job pays more than $15,000—great," she says. "Under that, it's kind of spotty." She adds that most applicants do not have the necessary skills.

Qualified women nurses, teachers and secretaries also appear to be moving into other occupations that were not open to women many years ago. Ravada Hodgkin, a nurse recruiter at Denver General Hospital, says that many former nurses are now working in real estate, banking and business. The National Education Association reports that many of its members are abandoning teaching for better pay in the business world.

Bonus for drivers: In Chicago, the Checker Taxi Company has offered $50 to each of the first 100 applicants hired after answering newspaper advertisements for drivers. "With so many people out of work, it's surprising that we're not getting as many this summer as we did last summer," says Robert Collins, Checker vice president. "Our biggest competition is unemployment compensation."

Detroit personnel agent Archer adds: "There are a lot of women laid off from the auto companies, collecting unemployment, who are willing to hold out for exactly the right job. They want that job as an executive secretary and won't settle for less."

Like Checker, companies that need qualified workers are now resorting to gimmicks. One of them, E-Systems, offers savings bonds to any stockholder who recruits an engineer. Conoco is coming up with new perks, such as club memberships and company cars.

Unfortunately, these appeals are aimed at workers who have other jobs, not the unemployed. As one expert puts it: "The people who are unemployed don't match up with the jobs that are available."

WORKERS IN DEMAND

Job categories with the most openings, according to the U.S. Employment Service's latest nationwide survey:

Job and salary:

Accounting clerk, $6,792 to $10,730 per year.

Auto mechanic, $3.30 to $7.33 per hour.

Bookkeeper, $6,737 to $12,707 per year.

Building-maintenance worker, $3.10 to $5.12 per hour.

Cashier-checker, $6,448 to $8,015 per year.

Commercial cleaner, $3.10 to $4.48 per hour.

Hand packer, $3.10 $4.93 per hour.

Housekeeper, $3.10 to $3.95 per hour.

Janitor, $3.10 to $4.79 per hour.

Laborer in store, $3.10 to $5.07 per hour.

Lock-stitch-machine operator, $3.10 to $4.14 per hour.

Nurse's aide, $3.10 to $3.79 per hour.

Receptionist, $6,450 to $9,493 per year.

Salesclerk, $6,448 to $8,545 per year.

Security guard, $3.10 to $4.69 per hour.

Sewing-machine operator, $3.10 to $3.62 per hour.

Short-order cook, $3.10 to $4.20 per hour.

Survey worker, $6,949 to $8,745 per year.

Truckdriver, $3.12 to $6.68 per hour.●

PREDATOR CONTROL: FACT AND FANTASY

● Mr. CRANSTON. Mr. President, on November 19, the U.S. Fish and Wildlife Service announced a return to former—and, I believe, discredited—policies on the killing of coyotes in order to protect sheep and cattle. As I stated on the Senate floor that day, this is not leadership toward the economic salvation of the livestock industry, but a pointless step back in time. I especially question the Service's desire to reinstate the use of compound 1080, a secondary poison banned in 1972 by President Nixon.

I direct the attention of Senators to a persuasive letter, signed by a number of concerned wildlife organizations, to Secretary of the Interior Watt and I ask that it be printed in the RECORD.

The letter referred to follows:

THE HUMANE SOCIETY
OF THE UNITED STATES,
Washington, D.C., November 19, 1981.

Hon. JAMES G. WATT,
Secretary of the Interior, U.S. Department of the Interior, Washington, D.C.

DEAR SECRETARY WATT: On August 24, 1981, Hogan and Hartson wrote to you on behalf of conservation and animal welfare groups listed below* regarding reports emanating from the Interior Department that your Department was contemplating revision of the Predator Control Policy promulgated by Cecil D. Andrus on November 8, 1979. In that letter, we noted, inter alia, that the previous departmental policy had been made after, and on the basis of, a two year review of the facts, a major study on Predator Damage management, and publication of a draft and final EIS. We further noted that revision of this policy would necessitate a factual record which supported the decision and similar legal and procedural steps. In response to our letter, your office, by letter of September 3, 1981, signed by Assistant Secretary Arnett, stated that Interior would "comply with all appropriate legal requirements." (Copies of both letters are enclosed.)

It was therefore with deep disappointment and distress that we learned today that the Interior Department's Fish and Wildlife Service has taken steps to once again allow denning and to allow the experimental use of 1080 in, but not limited to, drop baits. This action clearly violates the Department's commitment to comply with appropriate laws, which require, inter alia, environmental impact analyses and public notice of, comment on, and involvement in important policy decisions. In addition, in seeming violation of the arbitrary and capricious standard of the administrative procedures act, this action has been taken in apparent disregard for the extensive record of scientific data, analysis, and public comment which supported a contrary decision by Secretary of the Interior Cecil D. Andrus.

Denning, the destruction of coyote pups in their den, is, contrary to Interior's assertions, usually carried out through the use of flares, barbed wire, burning, and/or suffocation. It is inhumane, wasteful and scientifically absurd. True, some coyotes do occasionally kill sheep. However, it is axiomatic that in order to stop the coyote from killing sheep, it is necessary to target the coyote that is doing the damage. It is, therefore, equally axiomatic that killing six- to nine-week old coyotes is wasteful and counterproductive since they could not possibly kill sheep. Secretary Andrus recognized these facts when he essentially banned denning. By contrast, Interior's action is once again allowing the cruel and barbaric destruction of coyote pups, whose only offense is being alive, is ecologically insensitive, wasteful of public funds, and makes a mockery of professional wildlife management.

The Department's attempts to once again allow the widespread use of compound 1080, under the guise of an experimental program, present similar problems. Compound 1080 is a secondary toxicant, which, by definition, is indiscriminately destructive of the animal which initially consumes it and is likely to destroy those animals which feed on the carcass of the initial 1080 victim. Death due to 1080 poisoning may bring on hours of tortuous convulsions and 1080 kills anything: eagles, badgers, foxes, coyotes, hawks, owls and humans. Before 1080 was banned by President Nixon's Executive Order in 1972, the destruction of wildlife was awesome and the public outcry overwhelming. The misguided actions Interior is attempting to allow can only result in a replay of the death and destruction we thought was a thing of the past.

Finally and perhaps most importantly, the coyotes and other wildlife that will be destroyed as a result of your department's actions reside on and fill an important niche in the ecosystems of public lands of this nation. As such, this wildlife—the coyote, eagle, badger, fox and others—is the property of every citizen of this nation and is held for them in public trust. To foster the mass destruction of the public's wildlife through these actions is a blatant violation of the responsibilities that you, as the Secretary of Interior, have to uphold the public trust and provide competent stewardship for this nation's wildlife.

For all these reasons we strongly oppose these actions. We specifically request that you immediately overturn these decisions, that you have your Department comply with all relevant laws, as you have agreed, and that in absence of the foregoing, you provide pursuant to the attached letter, copies of all documents developed since November 8, 1979, upon which the Department has relied in making these decisions.

Sincerely,

JOHN W. GRANDY, Ph.D.,
Vice President,

On behalf of the following organizations, all of which have asked to be included as signatories: Sierra Club, Defenders of Wildlife, Environmental Defense Fund, Fund for Animals, National Resources Defense Council, Society for Animal Protective Legislation, Wilderness Society, National Parks and Conservation Association, National Audubon Society, and Friends of the Earth.

Enclosures.

THE HUMANE SOCIETY
OF THE UNITED STATES,
Washington, D.C., November 19, 1981.

Hon. JAMES G. WATT,
Secretary of the Interior, U.S. Department of the Interior, Washington, D.C.

Attn: FOI Act Officer.

To the FOI Act Officer: This request for records is made under the federal Freedom of Information Act, 5 U.S.C. Sec. 552, and regulations of the Department of the Interior, 43 C.F.R. Part 2.

*Humane Society of the United States, Defenders of Wildlife, Environmental Defense Fund, Fund for Animals, National Resources Defense Council, Society for Animal Protective Legislation, Wilderness Society, National Parks and Conservation Association, National Audubon Society, Friends of the Earth, Sierra Club.

On or about November 19, 1981, your agency announced a decision to modify existing rules and/or guidelines concerning the practice known as "denning," and other methods used to control predators.

Accordingly, please provide me with all reports, memoranda, and other records developed since November 8, 1979, containing statistical data and other information upon which your agency has relied to justify these actions.

As you know, the FOI Act provides that if portions of a document are exempt from release, the remainder must nevertheless be segregated and disclosed. Accordingly, please provide all non-exempt portions of the records I have requested and justify deletions, if any, by reference to specific provisions of the FOI Act.

The Humane Society of The United States is prepared to pay lawful search and duplication fees incurred in connection with this request. However, we request a waiver of these fees, as provided by the FOI Act, 5 U.S.C. 552 (a) (4) (A), and by regulations of the U.S. Department of the Interior, 43 C.F.R. Part 2. The Humane Society of The United States is a charitable, non-profit organization and makes this request as part of its on-going efforts to promote the humane care and treatment of all animals, including those for whose protection Congress has enacted specific legislation. Information obtained by the society is routinely compiled, analyzed, and disseminated to the Society's national membership, and to the general public through the media. If, however, you deny this request for a waiver, and if fees will exceed $20.00, please notify me so that I may decide whether to authorize a larger expenditure or appeal your decision.

In order to facilitate timely disclosure, please contact me by telephone, rather than by mail, if you have questions about this request. Thank you for your assistance, and I will look forward to receiving your reply within ten business days, as required by law.

Very truly yours,

JOHN W. GRANDY,
Vice President,
Wildlife and Environment.

HOGAN & HARTSON,
Washington, D.C., August 24, 1981.

Re Animal Damage Control Program.

Hon. JAMES G. WATT,
Secretary,
U.S. Department of the Interior,
Washington, D.C.

DEAR SECRETARY WATT: We represented the Defenders of Wildlife and other interested citizen groups throughout the course of a two-year review of the Animal Damage Control ("ADC") program conducted by the United States Department of the Interior ("Interior"). That study culminated in wide-ranging departmental decisions on November 8, 1979, which revised the ADC program to conform to the public record developed during the study. Your statements in congressional hearings and published reports suggest that you now intend to develop a "new" departmental position on the ADC program.

As you are undoubtedly aware, Interior promulgated the November 8, 1979 revisions only after conducting a painstaking series of studies, hearings, and interdepartmental consultations to insure that the ultimate decisions comported with the requirements of, inter alia, the National Environmental Policy Act of 1969, 42 U.S.C. §§ 4321 et seq. (1976) ("NEPA"); the Federal Land Policy and Management Act of 1976, 43 U.S.C.A. §§ 1701 et seq. (1976); the Endangered Species Act of 1973, 16 U.S.C. §§ 1531–1543; the Wilderness Act, 16 U.S.C. §§ 1131 et seq. (1976); and the Administrative Procedure Act, 5 U.S.C. §§ 551 et seq. (1976).

The United States Fish and Wildlife Service (the "Service") held public hearings in several states and published draft and final reports entitled "Predator Damage Management in the West in 1978. In 1979 the Service held public hearings and published draft and final programmatic environmental impact statements on the ADC program. Finally, the principal options addressed by these studies were presented to Secretary Andrus in several secretarial issue documents.

Cumulatively, the record which served as a foundation for Interior's decisions runs to tens of thousands of pages. It represents the contributions of thousands of citizens and Interior staff members who submitted comments or prepared Interior's studies and secretarial issue documents.

In our view, the decisions ultimately reached by Interior were consistent with, indeed compelled by, this extensive public record. Any significant departure from these decisions must now either be shown to be consistent with the existing record or plainly supported by a new record compiled with similar attention to the requirements of NEPA and the other statutes cited above.

If you do intend to reopen the record for further analysis and opportunity for comment, our clients would appreciate an opportunity to be heard at the earliest possible time. If, on the other hand, you intend to revise the ADC program without additional study or comment, we would appreciate being so informed.

Sincerely,

STUART PHILIP ROSS.
HAROLD E. MASBACK III.●

FATHER LUIS PELLECER

● Mr. SYMMS. Mr. President, one of the scandals of modern America is the conspiracy of silence being practiced by the media about the true state of affairs in Central America. While ax-grinding reporters receive journalism awards, the countries their dispatches helped undermine slip into totalitarianism, their people ground under a heel of oppression far worse than the mild authoritarianism it replaced.

As an example, I cite the defection from the forces of subversion of Father Luis Pellecer. For 8 years, Father Pellecer worked actively to undermine the Governments of El Salvador, Nicaragua, and Guatemala.

Despite the firsthand evidence of subversion Father Pellecer provided upon his defection in September of this year, the American media have told us almost nothing about it. Instead, we continue to be fed the standard line that nothing more is involved in Central America than the indigenous uprising of peasants against horrible tyrants.

Mr. President, it is obvious to me that there is a great deal of news from outside this country that we simply are not given. In an effort to correct that lack of perspective, I ask that an article from the current National Review, treating the Pellecer case, be printed at this point in the RECORD.

The article follows:

FATHER PELLECER'S STORY

On June 9 of this year, in Guatemala City, a 35-year-old Jesuit priest was abducted in broad daylight by six armed men. Four months later, on September 30, the Jesuit stood at a microphone under klieg lights, before an audience of diplomats, cabinet officers, academics, ecclesiastics, foreign correspondents, and local journalists, to reconstruct for the television audience the past eight years of his life, years spent in what he described as "the direct and indirect subversion" of the peoples of El Salvador (six years), Nicaragua (six months), and, most recently, Guatemala (a year and a half), where he worked within a guerrilla terrorist movement, the Guerrilla Army of the Poor (EGP).

An arresting, poignant, richly instructive personal chronicle, the press conference (conducted wholly in Spanish) caused a sensation in Central America, and its effects are still being felt. No one in Washington, the media capital of the world, can explain why the U.S. press has almost totally ignored the event, except to speculate that the priest-defector's testimony undercuts journalistic preconceptions here so severely that the pressies have no choice but to make believe that it didn't happen.

A native Guatemalan, Father Luis Eduardo Pellecer Faena holds degree in the humanities, communications, philosophy, civil engineering, and theology, and has done graduate study in medicine. He called the TV press conference, he said, to explain how someone with his background, training, and gifts could be "bewitched into choosing a life of violence," and to plead for forgiveness from his fellow Guatemalans.

At the outset he explains that he himself had engineered his own abduction with the help of an old college friend on the police force. He wanted to "disappear" in such a way, he said, because it was a relatively safe exit from an uninhibited revolutionary organization (now probably bent on exterminating him).

To understand his odyssey, Pellecer said, one must first understand how manipulative is the "intellectual machinery" of the theology of liberation now operating with special force in Central America. "First and foremost," he stated, liberation theology is "the introduction of the poor to a new Jesus Christ, a Jesus totally different from that of the Gospels or the catechism used in preparing for First Communion. It is a rebellious Jesus, a Jesus opposed to the capitalist system, a revolutionary Jesus, a Jesus who is a partial or exclusive God, a God of the poor, a God solely and exclusively devoted to the salvation of the poor, the needy, the destitute, and forever banishing the rich, the powerful, those at the head of government, from all possibility of salvation."

Pellecer pointed to the distortion in this image of Jesus, namely, that Jesus, then, is not everyone's God, but only the God of the poor. "What about the others?" he asks. The answer from the Jesuits who are coevals of his or younger (Pellecer is careful to distinguish throughout between the beliefs of the traditionalist Jesuits of older generations and the Jesuits of his age bracket) goes like this: "The rich have had four or five centuries of union with the Church. Now the Church once and for all must break with the powerful, break with the rich, and turn once again to the exclusive service of the poor."

Father Pellecer and other Jesuits were "indoctrinated" with Marxism-Leninism during four or five years of university study. The final weapon in the revolutionary arsenal he acquired, and the most horrifying perhaps, was the targeting strategy: the focus would be on the poorest sectors of the rural and urban population.

Using our faith, taking advantage of the most sacred and most profound feelings of our people, we planted the first seeds of distortion, introducing a new Gospel, a new previously unknown Jesus—a bloodthirsty Jesus . . . The Jesuits [of my generation] were fully capable of indoctrinating people, of saturating them with the whole theology of liberation and science of Marxism, knowing how to bring it all down to the level of the masses with very little general education and political sophistication. We were able to create a whole new set of teachings for the

oppressed. We disseminated our knowledge through formal catechism, through audio-visual aids, using our power and authority as priests.

The Jesuit described the revolutionary cell structure as carefully and elaborately compartmentalized (reminiscent of the Vietcong and the North Vietnamese), his work in El Salvador as a "penetrador" (penetrating agent) and later, a "consolidador" (reinforcement agent), the purpose of which was to create a second tier ("in reality a rudimentary Marxist political platform") within the organizational pyramid, the first being the religious base itself. "I was one of those who led the unsuspecting lambs to their slaughter, laying the foundation for all those innocent farmers to be captivated by the authority of the Church, then to be swallowed up by the People's Liberation Forces."

The Jesuits are not going to believe that my words are deeply personal and sincere," said Father Pellecer at the press conference. "They will always accuse the authorities—the security forces—of having been responsible for these statements." Then he added, almost as an afterthought, and sadly, "There is a great deal of pride among the Jesuits."

On the first count, he was certainly right. No sooner had he finished the conference than the Jesuits raced to the mimeograph machines and telexes. "Fabrication to justify a religious persecution" against the Catholic Church and the Jesuits, they charged, and suggested that Pellecer was either stoned on drugs or brainwashed ("No doctor has verified his state of health" or "his physical or psychological integrity"). Who issued that statement? The Central American Jesuit Provincial headquarters in San Salvador, the Jesuit Provincial himself being in absentia, according to Father Pellecer. Where was he? "In Nicaragua, collaborating with the Sandinista regime." ●

SENATOR DENTON CHAIRS UNITED FAMILIES OF AMERICA

● Mr. SYMMS. Mr. President, I was happy to note that our colleague, Senator JEREMIAH DENTON, of Alabama, has become the chairman of the Board of United Families of America. Many of my own constituents are members of this energetic young organization, and I know that Senator DENTON's association with UFA will be beneficial to both parties.

In accepting the invitation to become chairman of the board, Senator DENTON delivered some extremely thoughtful remarks on the present status of the family and on its future. I think all of my colleagues ought to have a chance to see these remarks, and ask that they be printed at this point in the RECORD.

The remarks follow:

STATEMENT OF SENATOR JEREMIAH DENTON

It is an honor and a pleasure for me to announce that I have accepted the invitation of the Directors of the United Families of America to become the Chairman of its Board. Even though UFA is still young, I am convinced that its beliefs and goals are relevant and important.

I believe that many major national problems, being approached one by one as if they have no relationship at all to family issues, stem from the fundamental fact that all is not well with the American family. A number of directly related social problems are often mentioned: Divorce, teen drug use, adolescent pregnancy, juvenile crime. But these are consequences, not causes, of the underlying problem.

That basic problem is a deterioration of our national attitude toward the family and family life. The personal values of spousehood and parenthood stand too far down the hierarchy of society's values relating to individual responsibilities, accomplishments, and vocations. The deterioration is plainly evident in the mores and cultural trends that condition and are reflected by government policies and programs, and that are in turn influenced by what government does. The consequences are found not only in the specific social problems I mentioned. They are manifest in our inability to respond effectively to all the major challenges of our society, our economy, and even our national defense.

Many parents no longer make the effort to rear their children in even a minimally satisfactory manner. Many parents no longer seek to instill in their children the basic values and standards essential to development of the sense of responsibility, the discipline, and the compassion required for the well-being of both individuals and society. There is no public agency or institution that can substitute for parents in this central aspect of child rearing. I do, of course, recognize that many parents make the effort but fail for reasons beyond their control.

Let me emphasize that I, personally, have no problem with the idea of working mothers. There are, however, perhaps too many instances where a husband and/or wife, in their quest for more material goods, inevitably though perhaps inadvertently neglect their responsibilities as parents.

In any case we all need to ask what possibly could have changed our perception, as individual parents and as citizens, of the importance and nature of parental responsibilities? In considering this question, we must recognize that teachers, peers, television, movies and other influences also share in the rearing of our children.

Especially during the past two decades, many Americans have drifted into an attitude of instant self-gratification, of "what can I grab for myself right now," with little thought or concern for the long-range consequences.

Our society measures success too much in terms of affluence, of material possessions. I am not wealthy, but it has been my experience and my observation that wealth is not, by any stretch of the imagination, a guarantee of happiness. And affluence had very little to do with the beginnings of this nation or with its real sources of greatness. Quite to the contrary, few of our forebears were affluent, but they all adhered to essential common principles.

True happiness can be achieved despite fame and fortune, but not because of them.

Today the ideal of the "normal happy family" is consistently ridiculed and defiled, sometimes openly but often in more subtle, even devious, ways. Our society's attitudes toward marriage and child-bearing are certainly not nearly as supportive as they were in 1960. Many denigrate the terms "housewife" and "mother" as if they signified some form of slavery.

Contemporary literature, entertainment, and the mass media, especially television, not only reflect but to a large degree shape those derogatory attitudes toward family life and parental responsibilities. Few television programs depict a normal family relationship. They portray joyful love as existing mostly outside marital bonds. Much programming suggests that adultery is okay, that sexual relations outside marriage are inevitable and routine, even among adolescents.

As a result, children identify with the wrong types of role models. Instead of emulating responsible parents, who may not in fact be available to them, young people choose the "fast living, fast loving" characters portrayed on the television and movie screens. Such children seldom become good parents, so the social disintegration that is at the heart of our problems accelerates at a geometric rate.

And that's only part of television's impact. As the preeminent child psychologist, Urie Bronfenbrenner, has said: "The primary danger of the television screen lies not so much in the behavior it produces—although there is danger there—as in the behavior it prevents: the talks, the games, the family festivities and arguments through which much of the childs learning takes place and through which character is formed. Turning on the television set can turn off the process that transforms children into people."

The decline in the quality of public education further aggravates the problem. Many schools have fallen victim to utopian notions of social interaction, notions that prevail at the expense of a basic and fundamental education that integrates the immature individual into the established society as a responsible and productive member.

Traditional values, including those of religion, are banished from the classroom. They are replaced with promotion for social rather than educational reasons, with absence of discipline, with "values clarification," with sex education devoid of values and advocacy of "alternative life styles." Much instruction amounts to little more than providing adolescents with justification, indeed encouragement, for leading the hedonistic lifestyles depicted by the mass media.

"Conservatives" are not the only ones concerned about these attitudes toward the family. "Liberal" parents also worry about their children and drugs, about juvenile delinquency, about precocious adolescent sexual activity, about poor education. United Families of America hopes to reach not only the traditional constituency of conservatism, but also the millions of other families, black and white, Jewish and Christian, blue collar and white collar, that are subject to the same pressures of modern life. We should all welcome and support UFA's already effective efforts.

My decision to come to Washington was not an easy one. After my retirement from the Navy, I worked with organizations like United Families of America. I was attempting with them to form and articulate a consensus about the challenges to our fundamental American values, particularly the challenges presented by some of the media and the educational system.

I learned from that experience just how much governmental decisions affect family life. That lesson played a major role in my decision to seek the office I now hold.

Our laws, the attitudes of Federal officials both elected and appointed, the policies and programs of government, all reflect national attitudes toward the family. If our fiscal policy weakens the family, if our public pronouncements undermine the family, if our cultural community develops a prejudice against family life, the family cannot be expected to survive, much less thrive.

The family is the engine that drives civilization. Throughout the history of mankind, those cultures that have failed to found the rules and attitudes of society on the central importance of the family unit have decayed and disintegrated.

I believe my association with United Families will be consonant with my official duties in helping to define the laws and policies that affect our families and shape our society. I believe it is appropriate and desirable that United Families be an active influence on the governing process. I will support UFA in its efforts, and I will lend whatever advice and counsel its Board may seek. ●

THE EXPENDABLE PEOPLE

● Mr. LEVIN. Mr. President, today as we near our intersession break, most of us cannot help but look forward to the

coming days when we will be joining our families for the holidays. It is terribly sad, however, that while we will be enjoying the comfort of the warmth and security of our own homes or the homes of our relatives and friends, thousands of destitute Americans will be fighting off the bitter cold on sidewalks, steam grates, and abandoned buildings. I am referring to those that are known as drifters, bag ladies, or most commonly—street people. A new name however, was brought forth by Sydney Schanberg in yesterday's New York Times. Mr. Schanberg refers to such persons as "The Expendable People."

Mr. President, I do not believe that there is anyone in this Chamber who thinks that any person is expendable. Yet, I also cannot believe that any member of the richest and freest country in the world should have to sleep outdoors on hard pavement in the freezing weather we face today. When a homeless person freezes to death on our city sidewalks it creates a dark spot on our national conscience.

Currently, many devoted and concerned men and women dedicate large portions of their time, energy, and resources to assist these poor people. One such group, the Washington, D.C.-based Community for Creative Nonviolence, amply depicts the day-to-day existence of the "street people":

Life on the streets is incapacitating and humiliating. It is both physically and mentally trying: Imagine sleeping on a steam grate, waking in the cold, walking miles to a bathroom or a free meal. All the while you are ignored, shunned, or insulted by passers-by. Your physical appearance deteriorates. You worry about snow and rain and rats, about bottles thrown from passing cars, about police raiding the abandoned house where you find shelter. In welfare offices and hospitals, people make demands for papers, numbers, forms, and address. You sit for hours on benches and curbs. Your shoes didn't fit and you had no socks—now your leg is infected and swollen. Conventional medical care is a foreign concept in this environment. It is remote and depersonalized, with no understanding of causes and effects.

For the homeless persons, the smallest physical problem can develop into a major ailment when combined with neglect, effects of weather, and poor nutrition.

In New York City great strides have been made toward providing adequate care for the estimated 10,000 street people in that city due, in large part, to the valiant legal efforts of a single young lawyer, Robert Hayes. The Washington Post, New York Times, and the recent documentary of New York's Channel 4, "Shame of the City", have brought increased public attention to this painful situation. Let me quote from Sydney Schanberg's stirring article:

Two social workers recalled a woman of about 65—neatly dressed, proud of her appearance—who was spending her winter nights shivering at a subway entrance in Grand Central Station because her Social Security check was no longer enough to pay her rent. She was not mentally disoriented nor even remotely senile. Looking around her at the 15 men and women in similar straits at this subway entrance, she groped for an explanation and then said rhetorically: 'Its disgraceful that in such a rich country as this, so many people stand in doorways all night with no home to go to. It must be mismanagement of funds or something. It must be some kind of experiment to see how long people can survive without sleep or food.

Mr. President, the efforts of church groups, volunteers, and community organizations represent civic virtue and duty in the finest American tradition—but it is simply not enough. Our help is essential. Effective outreach programs and warm shelter facilities are desperately needed.

Over the holidays, as we reflect about good will toward all people, perhaps we can begin to consider meaningful action that can be taken when we return in January. I can only remind my colleagues that by January 7 of last year eight people had already frozen to death right here in our Nation's Capitol. By the end of the winter, there were a total 12 deaths.

In closing let me leave you with the words of John Stuart Mill:

Apart from any . . . considerations . . . it will be admitted to be right that human beings should help one another; and the more so, in proportion to the urgency of the need. . . . The claim to help, therefore, created by destitution, is one of the strongest that can exist; and there is prima facia the amplest reason for making the relief of so extreme an exigency as certain to those who require it, as by any arrangements of society, (that) can be made.●

THE BUDGET: DON'T CUT CONGRESS OUT

● Mr. DOMENICI. Mr. President, Senator LAWTON CHILES, my distinguished colleague from Florida, recently published in the Washington Post an article about the obligations of Congress and the prerogatives of Congress, in the budget and appropriations process.

Senator CHILES' points are well-taken. He has been a leader in the centrist coalition that has been the main force on the Senate Budget Committee since its inception. As a member, also, of the Senate Appropriations Committee, he has an excellent opportunity to wacth the budgeting behavior of the Congress.

In his article in the Post, Senator CHILES argues three things: First, that Congress has a constitutional role in the spending process that involves highly-specialized judgments about priorities; second, that across-the-board cuts are usually counterproductive because they penalize good programs as well as bad; and, third, that an unprecedented amount of courage will be needed if the Congress is to confront the fiscal problems ahead.

Mr. President, while I might quibble with Senator CHILES' unequivocal rejection of Presidential impoundment authority in each and every case, I agree with the central theme of his article. As usual, he has pointed out the pitfalls with precision.

I agree that we will need great courage next year to control Federal spending. And, I agree that we must begin to make individual judgments on programs so that good programs prosper, while bad programs die. This process of overview and setting priorities is the heart and soul of the legislative process and, to the extent that it has suffered this past year, the legislative funding process has suffered. I commend Senator CHILES' article to my colleagues and ask that it be printed in the RECORD at this time.

The article referred to follows:

THE BUDGET: DON'T CUT CONGRESS OUT

(By LAWTON CHILES)

Recent congressional actions on appropriations measures have posed a serious threat to the integrity of the legislative process. The immediate disputes over funding levels should not be allowed to obscure the longer-term procedural issues. What we have at stake is not a power struggle between Congress and the president, or between Democrats and Republicans. The real stake is in maintaining our constitutional system of checks and balances, which ensures a full measure of accountability to the public for federal spending decisions. Accountability means putting specific spending figures into laws and having members of Congress stand up and be counted on where to cut and where to add.

The most recent threat to constitutional checks and balances came in the continuing resolution passed by the Congress last Friday. The press and the public have focused on the funds cut by that resolution and paid too little attention to the methods by which it would be carried out. The language of the resolution requires the president to make a 4 percent cut in spending for domestic programs in five large appropriation areas. Within each spending account, the administration may decide to cut a particular program or activity by anywhere from zero to 6 percent as long as the overall account is reduced by 4 percent. In the floor debate in the Senate, however, it was clarified that Congress expects the administration to seek approval for any particular cut that deviates from the 4 percent.

Not all the detailed decisions made in the appropriations bill are made by the president. Anyone who has worked through appropriations bills knows that only a few major decisions, like the B1 bomber or Social Security benefits, are actually made by the president. Most of the 1-, 5-, or 50-million-dollar decisions are made by mid-level bureaucrats in the agencies or in OMB. Those bureaucrats have some professional judgments about what is good for the country; they also have personal opinions, whims and pet projects, like anyone else. But those bureaucrats do not have to go home to 50 states and 435 congressional districts to defend their decisions or see the results. The legislative process may be cumbersome, but it is tremendously open to the public. Once the president's budget proposals come out, members of Congress—particularly those of us on the Budget and Appropriations committees—get a flood of firsthand information about the details of those programs. Farmers tell us which pest control program works and which should be scrapped. Parents and schoolteachers tell us which education programs are effective. Local officials and concerned citizens tell us what will happen if we delay or proceed to build a new road or park. While congressional revision of administration proposals sometimes reflects the protection of special interests, to a greater degree it reflects the role of the American public in shaping legislation.

The only way the public can hold members of Congress accountable for spending is by requiring them to stand up and be counted on specific budget figures, whether they be cuts or increases. It is far too tempting to be able to stand up and tell each group—farmers, schools, retirees, defense—that you

voted for full funding of their program, but then turn around and say you voted for a balanced budget, because you gave the president the authority to withhold 5 or 10 percent. No one would know what you really stood for. That is what we had before the 1974 Budget Act. Members voted for individual spending bills, but never had to vote on the bottom-line total. The result was massive spending and huge deficits.

Impoundment authority would also undermine public accountability of the president. He could submit a budget that made all his major constituents happy—and all presidents like to make people happy—by not detailing his proposed cuts. He could then request a 5, 10 or 25 percent cut authority to hold down the total. No one would even really know what the budget for a program was, or who had cut it. The full funding figure would be printed in the books, but somehow it would not get spent. That may be the easy way out for politicians, but it is not a good way to let the public grade the people it elects.

Tough as this year's budget decisions are, next year's will be even worse. At the Budget Committee we are looking at federal deficit projections ranging from $92 billion in 1982 to $165 billion in 1984. The American people are still being told that they can have only good things—a 25 percent tax cut, a big national defense buildup and painless cuts of waste and fat in domestic programs.

Moving to a balanced budget is going to require telling the American people that they cannot have all these things at once. Cutting back tens of billions of dollars in federal spending is going to require hard decisions that many politicians would rather avoid. Making those cuts in a fair and efficient manner is going to require that the public be given a full chance to participate by means of the legislative process, and that members of Congress continue to listen to the wisdom of the public.●

MR. JACK BRYNE

● Mr. WEICKER. Mr. President, recently the remarks of Mr. Jack Bryne, chairman of Geico Corp. concerning the special olympics have come to my attention. Mr. Bryne's words are an eloquent example of how the private sector can be a true working partner in service to the disabled. I ask that they be included in the RECORD.

The remarks follow:

1981 DIRECTORS' CONFERENCE

(By Mr. Jack Bryne)

I really only have a very short message and only one point to make. When it comes to fundraising, we both have the same problem. There are literally hundreds of organizations in every community today that are searching out corporate support. It's more so, I might add, in the last three months than anything I can remember in the last ten years. I've been responsible for large professional responsibility efforts in very large corporations for 10 or 12 years now, and I never remember anything like what's going on now as more and more organizations fear the pinch and are turning to a variety of constituencies, one important one being the corporate constituency.

It's really a problem for you because you have a lot of competition for the donations you need and so on. It's a problem for me because, as I sit at the head of the corporation, I have to try to sort out what are deserved among the hundreds of requests that come across my desk, and I don't think it's an exaggeration to say that in the typical week probably 15 or 20 requests for support, for corporate support, come across my desk. One of the things I have to decide is which organizations really accomplish all that they claim to.

I'm sure that many of you wish that you could simply run your athletic program and forget all about fund raising. Some of you maybe even dread fund raising. You feel compelled to sell, sell, sell the Special Olympics. Well, let me talk to you for a few minutes as the man who sits on the other side of the table.

If it is selling you feel you have to do, the Special Olympics is surely one of the best products anyone has ever been handed to sell. My company is devoted to providing insurance at the lowest possible cost. We're what we call in the business world a low cost operator. That's our strategy. And I like to think of us and we like to think of ourselves as doing God's work in trying to be a low cost operator.

But you of all the organizations I have ever met and worked with, you are truly doing God's work. You are not raising money for research into some nebulous disease. You are not requesting support for a bloated arts organization that has exceeded its budget. You are fueling the flame of happiness for a group of children whose only crime is that they suffer the injustice of mental retardation. Through your efforts you are touching individual lives, and you're changing them for the better, and everyone who works with you can see that happen.

That's very important. Everyone who works with you can see that happen. What a product to be able to sell! Well, frankly, I think you could do even better if you didn't think of this part of your work in terms of selling. Sure, you can walk into my office, show me charts and graphs, tell me how you need new uniforms or need the use of a gymnasium or need some bus tickets. And you could sell it to me. But how many of you think about what it is that I need?

It's a very rare person who comes into my office and says, Mr. Chairman, let me tell you what I can do for you. It happens almost never. And when it happens, it really gets my attention. It is not necessary to sell a Special Olympics relationship to a company. It really is only necessary to expose a company to the opportunity to participate and to show them how they benefit from that participation.

Now, I'm sure that each of you could list a dozen ways that a corporate enterprise would benefit from a Special Olympic relationship. But let me mention one or two that may not be totally obvious to you. Five years ago, as Eunice mentioned, my company, GEICO, almost went bankrupt. We lost $126 million in 12 months. I came into that situation to see if I could do something about it.

I'll have to think a while. What makes that funny is, you know, I never thought it that funny.

Maybe we made too many donations. But the accountants told us those were deductible! At any rate, we had a very troubled enterprise; 9,000 employees, all reading every day that their company was about to go under. I was a newcomer on the scene. I was unknown to the employees. It was my job to try to do something about this awesome set of losses.

We had $20 million left in the till, but we were losing two million a week, and things didn't look too good. Yet at the very height of those difficulties we decided to become involved with the Special Olympics. And we sold it to our Board of Directors. Excuse me. We didn't sell it. We exposed them to the opportunity to get involved.

Now, how and why? Why would a company in such serious financial trouble spend thousands of dollars on the Special Olympics? Because we thought that the Special Olympics would help us solve some of our problems. Here's how. One of our major problems was employee morale. In order to survive we had to layoff thousands of employees and cancel one million customers, customers that had taken us 50 years to build up. We closed offices across the nation, all very painful steps.

Many of our employees were beginning to think of our company as callous and uncaring, and well they might. Stranger—new to the till, and the first thing they see is thousands of employees leaving, a million customers leaving and offices closing across the country. So they began to think of us as callous and uncaring.

It's a very serious problem because, while I knew that the financials might emerge out of the bottom of the valley, neverthe.ess, I still had to work with 9,000 and 8,000, then 7,000 and 6,000 and finally 5,000 employees and try to keep their morale up. The Special Olympics gave us a rare opportunity to change that perception.

It became one of the—it truly become one of the keystones of our strategy with respect to how to get the employees thinking like partners with us again as a company. We got the employees involved in the fundraising. We had raffles. We had bake sales. I raffled off my parking spot. We had car washes.

And I walked to work for a while.

But I guess the key here is we could have, we could have done what many other companies do. We could have written a check for $5,000 or $10,000, when Eunice and Bob and Herb came to me and asked would I personally be the chairman of one of the benefits—"The Empire Strikes Back." I guess it was the first time. And that's typically the way a corporation gets involved. And we were willing to do that.

But it occurred to us that we were missing a great opportunity if we did just that and what a much bigger bang we would get and how much of our problem we should solve if we got the employees of our company working together with our company in this effort. So that's what we did. We still wrote the check, and we were still chairman of the benefit, but we did it in partnership with our employees. We got hundreds of our employees involved in these bake sales and car washes. We were rushing around that day. We had benefit dances. The employees in the company worked together as partners in the wonderful program of the Special Olympics.

And it restored the family spirit at GEICO. Today the 4,500 employees that we have at GEICO, we have a very successful company. The company's doing well. Those employees have a wonderful feeling of relationship with the company, and I can truly say that the, our relationship with Special Olympics was a keystone to our strategy. That is the kind of special opportunity that you can offer a company, and believe me, when you can solve problems for a businesman, you have no trouble getting his full attention.

In terms of fund raising, your hardest work is already behind you. You have an enterprise that is well established and respected, an enterprise that regularly attracts the best in American business, both McDonald's, Procter & Gamble, companies that like to be associated with winners, and you are a winner.

There are companies out there waiting to be approached. The chance to be part of the Special Olympics can be one of the most exciting opportunities that crosses the chairman's desk, if you think of it that way. Find what his priorities are, what problems he needs solved and show him what Special Olympics can offer for him in the process of running his enterprise. You are offering family, joy, love in a unique package.

I have heard Eunice Shriver say to Special Olympics that, "What you are winning through your efforts is life itself." I believe that is what you should offer a company, winning thorugh your efforts. How would a company fail to be a part of that?

Thank you.●

SENATOR KENNEDY ADDRESSES THE UNION OF AMERICAN HEBREW CONGREGATIONS

● Mr. METZENBAUM. Mr. President, I want to call the attention of the Senate to a thoughtful and elegant speech delivered on December 6 by the senior Senator from Massachusetts before the 56th General Assembly of the Union of American Hebrew Congregations.

Senator KENNEDY's message to this gathering was very much at variance with the views that today prevail in Washington on both foreign and domestic policy.

At a time when this Nation's commitment to human rights has been replaced by the kind of amoral "quiet diplomacy" that winks at repressive governments that profess to be our "friends," Senator KENNEDY said forthrightly that—

We must speak out for human rights at home and abroad. We must stand with the victims of repression from the left or the right—in Latin America, in the Soviet Union and Eastern Europe, or wherever people hope for our help.

At a time when the American administration is providing lethal weaponry to sworn enemies of Israel, Senator KENNEDY pointed out that—

Support for Israel is not an act of charity; it is a case of America's national security and America's moral commitment to Israel. Those who forgot the facts about Israel during the AWACS debate should be reminded that the only way for America to have an ally is to be one.

And finally, Senator KENNEDY reminded us of our obligation "to speak out for social and economic justice at home. Sacrifices," he said, "must be made, but they must be fair."

Mr. President, I ask that the full text of Senator KENNEDY's address be printed at this point in the RECORD.

The address referred to follows:

ADDRESS OF SENATOR EDWARD M. KENNEDY

It is good to welcome the Union of American Hebrew Congregations to Massachusetts—and to be welcomed home by so many good friends.

You honor me today, and I am proud to accept, on behalf of my family, this Torah for the Kennedy Library here in Boston.

The Torah is so fitting a gift for that library, which is a memorial to an ideal as well as a man. For the Torah contains the enduring ideals of human existence. It is the foundation of a magnificent religion and philosophy that have truly transformed the history of this earth.

It is a special honor to receive this Torah from Rabbi Alexander Schindler—my close friend, who is also one of the great religious and community leaders in our nation, a man of deep commitment to individual freedom and to the great goals of economic progress and social justice. As your President, he has brought together more than one million members in 760 congregations to stand and to strive for the defining values of the Jewish tradition. This Torah has other special meanings for us. It was kept for the past 18 years in your Religious Action Center in Washington. That Center is a living extension of the ideals of the Torah, and of the prophecy that: "Justice shall roll down like waters and righteousness like a mighty stream."

This Torah once belonged to Isaac Mayer Wise. His dream of a Judaism rooted in ancient tradition but responsive to the modern age marked the beginning of your movement. Most of all, this Torah has a special meaning because it was originally presented to President Kennedy. It symbolizes the common bonds between all of you and all the members of my family.

When the original presentation was made in 1962 by Rabbi Maurice Eisendrath and Justice Arthur Goldberg, Justice Goldberg jokingly asked by brother: "Mr. President, don't you know that if you hold the Torah you have to wear a yarmulka?" To which President Kennedy replied: "Not so—don't you know that I am a Reform Jew?"

We meet today at a time of uncertainty and dismay about the great dream we share—our abiding dream of peace in the Middle East and a secure future for Israel, our closest friend and our strongest ally in that region of the world.

Only a few weeks ago, the United States Senate, by the narrowest of margins and under the most intense pressure, approved the Administration's plan to sell the most sophisticated American weapons to Saudi Arabia. Last February, I was the first Senator to condemn that proposal. I regarded it then and I regard it now as the most dangerous and damaging arms sale ever sought by any Administration of either party. For me, this kind of deal can never be a question of fleeting calculation or political convenience. I stood against this AWACS sale—and I stood against the past Administration's sale of F–15s to Saudi Arabia—because both of these decisions were fundamentally wrong. They were wrong for our own national security, wrong for the cause of peace in the Middle East, and wrong for the people of Israel.

We heard many things said during this debate that should never have been spoken at all. Harry Truman was a President who overruled the kind of advice the Reagan Administration accepted. In the spirit of Harry Truman, who recognized the state of Israel on the first day of its existence, it is time for us to engage in some plain speaking of our own.

We heard it said that opposition to the AWACS sale was based solely on our concern for Israel. In fact, that sale will threaten the national security of both the United States and Israel—and it was not just pro-Israel, but pro-American to stand against it. It makes no sense to jeopardize our highly sensitive military technology by injecting it into an unstable region, where it can too easily fall into the wrong hands.

In the past, and for the same reason, I opposed the sale of AWACS to Iran, despite the assurances of the past Administration that Iran was an island of stability. And today, we must be thankful that AWACS were never sold to Iran.

This sale to Saudi Arabia is also wrong, because it will fuel an escalating arms race in the Middle East. It will raise—not reduce—the risk of war.

I reject the implication made during and after the debate that the interests of Israel are at odds with the interests of the United States. In his case, as so ofen in the past, what is right for America is also right for Israel.

It is a fundamental fact that Israel is our most faithful ally in the Middle East. It is a fundamental fact that Israel has protected American interests in the past, and that Israel will do so in the future.

Support for Israel is not an act of charity; it is a case of America's national security and America's moral commitments to Israel. Those who forgot the facts about Israel during the AWACS debate should be reminded again that the only way for America to have an ally is to be one.

We have heard something else during this debate that must be denounced. I reject absolutely the unworthy appeals which in effect questioned the patriotism of Jewish-Americans and accused them of dual loyalty. What has been derided as lobbying is in reality the basic First Amendment right to participate in public debates. The Bill of Rights was not written to protect the majority, but the minority—and to enable the minority to persuade the nation to a different view.

All Americans, regardless of religion, can exercise that right. We must never condone tactics that raise the spectre of religious prejudice and anti-Semitism—that blame dissent over public policy on diversity of religious faith. Americans of all faiths and both parties pursued their opposition to the Saudi arms sale honorably and in the best tradition of our country and our Constitution.

As American Jews or American Catholics, we do not apologize for our religious upbringing and our religious values. And as American patriots, we should say this to all our fellow citizens—regardless of race, religion or national origin—that you have the same Constitutional right to assemble, to speak and write, to petition the government, as any other citizen of the United States.

The Administration complained that Jewish-Americans were vigorously expressing their views. But where were the Administration's complaints about the corporations that lobbied hard for AWACS because of the business it would bring? And why were there no complaints about Saudi princes gliding through the halls of Congress?

I believe that no Americans are any less American because they care about Israel—or understand that the security of Israel is vital to the security of the United States.

For me, this is not a religious issue. I had assumed that the religious issue was long since banished from our politics. My own support for Israel is deep and continuing. It is rooted in an abiding conviction that such support is both morally right and essential to American interests. I welcome the widest and most vigorous debate on the issues. But never during that debate should people be blamed for how they themselves or the generations before them worshiped God. And now, after the AWACS defeat, is the moment when we must speak with renewed conviction.

We must unequivocally repudiate the incredible suggestion that the United States should recognize or deal with the terrorists of the PLO. It is bad enough to hear that suggestion at any time about a group sworn to destroy Israel. It was even worse to hear it in the very hours when the PLO brigades were dancing on the grave of Anwar Sadat.

Israel has no need for fair-weather friends. Neither Israel nor the United States will be served by politicians who profess one thing and do another. And none of us can rely on New Right conservatives proclaiming a biblical allegiance to Israel who can be turned around in a single White House meeting.

There is another message that we must deliver to the Reagan Administration. They have promised that this arms sale will persuade Saudi Arabia to join the search for peace. Let us insist that this must not be a promise of words, broken in fact. Let us insist that it is wrong to lavish praise on the so-called Fahd peace plan, which fails to recognize the state of Israel, fails to accept Israel's right to live in peace with secure and defensible borders, and fails even to accept U.N. Resolutions 242 and 338. Let us insist that the Administration must reject the Saudi demand for a new Palestinian state with Jerusalem as its capital. Let us insist that it is wrong for President Reagan to turn a blind eye when his new Saudi friends seek to bribe their neighbor, Oman, to deny vital military bases to America.

Instead, this Administration must be taught to tell Saudi Arabia that a true security relationship is a two-way street.

We are entitled to Saudi cooperation, not rejection, of the Camp David peace process.

We are entitled to the reality, not a charade, of oil price restraint and oil supply reliability in the Middle East.

We are entitled to Saudi support, not opposition, in our struggle to rid the Middle East of terrorism.

We are entitled to Saudi support, not opposition, in the effort to strengthen our military capabilities in the Persian Gulf.

Instead of giving the Saudis more offensive weapons, let us work with them to meet the very real threat they face of internal decay and subversion. Let us respond to the external threat in that region posed by the Soviet Union, South Yemen, Ethiopia, Iran and Iraq.

I support now, as I have in the past, American supply of defensive arms such as antitank and anti-aircraft weapons to Saudi Arabia. And I support American cooperation with that country to make it clear and certain that any military assault against Saudi Arabia will be deterred effectively.

But of this we must also be certain—that the defensive arms we send to Saudi Arabia or any other Middle Eastern state must always be pointed in the right direction—and never against Israel.

Now that the AWACS debate has ended, the Administration must also end months of inaction on the peace process. The President must define and state his objectives, and advance them consistently, reliably, and effectively.

First, now more than ever, we must assure the security and prosperity of Israel, which may confront new and deeper dangers because of what the Administration has just done. When Prime Minister Begin visited Washington, the President pledged a new era of "strategic cooperation" between the United States and Israel. This past week, Israel's Defense Minister signed a memorandum of understanding to "enhance" this strategic cooperation with our Secretary of Defense, and the Administration now has the chance to prove that it is serious about the substance of this policy. We must not rush to arm the enemies of Israel and then refuse the means of self-defense to the people of Israel.

Second, we must hold a steady course on the Camp David path to peace. Israel and Egypt are strategic cornerstones of the broader settlement we must seek. The Camp David Accords are a historic achievement. We must not permit the Soviet Union or its surrogates to subvert that process. And we must not set the Accords aside in a futile effort to appease those sworn to an unholy war against the Holy Land of Israel.

So I call upon the Reagan Administration to appoint at long last a new negotiator to succeed Sol Linowitz and to press ahead with our discussions in the Middle East. Prime Minister Begin and President Mubarak have reaffirmed the commitments of Israel and Egypt to peace. We cannot afford to let this moment slip away.

In pursuing negotiations, the United States must now reaffirm one of our own central principles: the PLO must never play a part in the peace talks until it has abandoned terrorism and renounced absolutely and forever the oath to destroy Israel.

In the Middle East, as in the United States and in other parts of the world, we must speak out for what we believe wherever the issue is drawn. And in 1981, we face critical issues on every front.

We must speak out for nuclear arms control, and against the buildup of nuclear weapons that can lead to humanity's final war. As Rabbi Schindler told this conference, "There are no 'possible limits' to a nuclear conflict. There is no 'acceptable level' of radioactive poisoning. There is nothing 'clean' whatsoever about maimed limbs and burned flesh and the whole dark butchery without a soul."

We must speak out for human rights at home and abroad. We must stand with the victims of repression from the left or the right—in Latin America, in the Soviet Union and Eastern Europe, or wherever people hope for our help.

And we must stand, now more than ever, with that brave husband and his brave wife in that hospital in Gorki, in the Soviet Union. Their hunger strike for human rights has touched the conscience of the world. We here today join all others on this earth who care about human liberty and individual freedom. We say to the Soviet authorities: let Miss Alekseyeva go—let Andrei Sakharov and Ellena Bonner live.

It is not a sign of weakness to proclaim the cause of human rights. Twenty years ago, a President of the United States stood up for human rights, and then stood up against the Soviet Union during the Cuban missile crisis. Today the President of the United States can stand up for America without sacrificing the ideals for which America must always stand.

And we must speak out for social and economic justice at home. Sacrifices must be made, but they must be fair. We must reject fraudulent tax cuts which favor the very rich and we must demand real tax justice for workers and the middle class. We must insist that high interest rates, high deficits and higher unemployment can never move America forward. We cannot accept an economic program that offers tens of billions of dollars to corporations who buy and sell tax loopholes, while elderly Americans will be forced to choose this winter between heat for their homes and food on their tables.

The President insists that he will stand his supply-side ground. But that ground is composed of the sinking quicksand of economic decline.

I reject the cruel theory of government of the rich, by the rich and for the rich.

I reject the insensitive policy of billion dollar tax breaks for the oil companies and thousand dollar china plates for the White House.

When you look at the record behind the rhetoric, here is what this Administration has achieved. Their shell game of budget cuts has only shifted a heavier burden to cities like Boston and New York and to hard-pressed taxpayers in local communities. The Administration has financed the greatest special interest tax giveaways in history by taking away help for the handicapped. They have told impoverished widows to feed their children on 50 cents a meal. And when those families complain, the Administration has prepared a new response. They can always say: "Let them eat ketchup."

Other leaders in other days have appealed to our best instincts as a nation. They have challenged our people to give something back to America in return for all that America has given to us. Instead, this Administration has summoned us to selfishness; they have replaced a tradition of compassion with a standard of greed.

I voted against the President's tax cut because it was unfair—and because its size was unwise in an unstable economy. The Administration claimed that they need time for their plan to work. Only a few of us were ready to resist because we knew their scheme was wrong. Now the Administration pleads for more time and we reply: We have seen what they have already done. They have brought us a recession in record time. They have brought us record interest rates. Give them more time—and truly they will wreck this economy.

Now we must seek and speak for a different and saner course. We must re-examine and revise the tax cut. We must condition the third year of the cut on the economic situation. And we must repeal the indexing provisions which will fuel inflation and fasten the nation with continuing deficits into the 1990's.

At the very least, we must repeal the 33 billion dollars in new tax breaks the Administration handed to the major oil and gas producers. They do not need the money—but America needs the revenue.

The Administration may hold relentlessly to failing policies. But we have faced their resistance before and we have defeated them.

Earlier this year, the President said we had to cut Social Security benefits. He said we can no longer afford to aid the disabled. And he claimed that people who had worked forty years or more were retiring too early.

There are other sensible reforms that can sustain Social Security without shortchanging senior citizens. But the Administration wanted massive reductions because that was the only way they could balance the rest of their budget.

So we raised our voices in the country and marshalled our votes in the Congress. We took our message to the people. We said it was wrong to cut Social Security, because Social Security is a right that Americans have earned and paid for. We said to the Administration: You shall not brighten your budgetary picture by tarnishing the golden years of senior citizens. We organized on that issue—we fought—and we won.

And I believe that in the end we will win the other great struggles which confront us. Together we will stand for the Equal Rights Amendment, for fair wages for women in the workplace, and against all discrimination because of race or sex, religion or national origin.

Together we will extend the Voting Rights Act, which has been the most powerful weapon in our history for the elimination of discrimination in the voting process.

Together we will oppose the attempts of extremists to undermine our Constitution by limiting the jurisdiction of the Supreme Court and the federal court system.

There have been hard hours for us all in recent months. And there will be more hard hours to come. But the troubles we have faced are far less than the hurt of the poor, of workers, and of middle income families. In our struggle for them, your commitment has never weakened or wavered. The Union of American Hebrew Congregations has done the hard work of gathering support in the Congress and the country.

In the truest sense, what is at issue now is the character of our country. We all know that America has meant so much to the world because to be American has meant so much to, so many here at home. That is why your grandparents and their parents came here from the shtetels of Poland and the Ukraine—and why mine came to Boston from the barren fields and the famine of New Ross and County Wexford. This country was shaped, in large measure, in the reflection of their vision and the realization of their hopes.

The Jewish people have made a unique contribution to our history and this heritage. It was the Jews who first proclaimed liberty as the indispensable condition of humanity. It was the Jews who first recognized the inherent quality and the infinite potential of every human being. And it was the Jews who first set down as an ethical imperative the responsibility of government, and of the rest of us, for the poor, the widow, the orphan, those who hunger and those who are homeless.

We must not falter now in our struggle to fulfill that vision. In Rabbi Schindler's words, we must work, harder than ever before, to achieve "an America that pursues its national purpose, that acts firmly on the moral principles that gave it birth, that once more provides hope and leadership to the

world—not because it has more guns or more steel or more wealth than other nations but because it has more faith in life, justice and the well-being of humankind."

And I believe that this vision truly is a dream that shall never die.●

SENATOR SIMPSON AND IMMIGRATION REFORM

● Mr. KENNEDY. Mr. President, our distinguished colleague, Senator SIMPSON, who is serving as chairman of our Subcommittee on Immigration and Refuge Policy, has worked tirelessly this year on the long overdue effort to reform our Nation's immigration laws.

Under his leadership, the subcommittee has conducted scores of hearings on every facet of the immigration law, and chaired the first joint hearings in more than three decades with the companion subcommittee in the House of Representatives. Both subcommittees are now grappling with the tough issues that have been placed before us by the Select Commission on Immigration and Refugee Policy, and by the Reagan administration, which has responded to the Commission's recommendations.

I commend Senator SIMPSON for his leadership and for his effort, through each of his hearings, to reach out to all constituencies concerned with immigration issues, and to hear all sides on the extraordinarily complex and difficult questions we now face.

Even more, I share Senator SIMPSON's view that "reform is imperative." We have neglected immigration problems for too long, causing one of our country's oldest tradiitons to become one of our most controversial and misunderstood issues. Instead of embracing our immigrant heritage, many Americans are coming to fear it and to see it as a process that is out of control. We must restore confidence in our Nation's immigration laws.

Mr. President, Senator SIMPSON recently reviewed some of the immigration issues that are now before us in a thoughtful address he delivered to a distinguished immigration conference in Williamsburg, Va. I commend to the attention of all my colleagues, and to the public at large, Senator SIMPSON's speech, entitled "United States Immigration Policy: Unsettled Issues and Emerging Policies." I ask that it be printed at this point in the RECORD.

The speech follows:

UNITED STATES IMMIGRATION POLICY'S UNSETTLED ISSUES AND EMERGING POLICIES

(By Senator ALAN K. SIMPSON)

No other country in the world so powerfully attracts potential migrants as the United States. No other country approaches the United States in the number of legal immigrants accepted or refugees permanently resettled. I deeply believe most Americans are very proud of both our reputation and our record as truly a land of opportunity and refuge—and I believe that reputation and that record have generally been good for this country.

However, existing immigration policy is no longer adequate to deal with the growing immigration pressure on the United States. Immigration to the United States is "out of control"—and is perceived that way at all levels of government and by the American people, and indeed by people all over the world.

Reform is imperative. This does not mean shutting ourselves off from the rest of the world. Immigration can continue to benefit the United States if the law is reasonably amended to be appropriate for contemporary conditions—and if the law can be enforced. This will in no way be inconsistent with our traditions. Immigration to America has been limited in various ways for more than a century and has been subject to various forms of numerical limitation for over sixty years.

Let us discuss some of the unsettled issues involved in the immigration reform process now taking place, as well as some of the policies which we see emerging.

To get into that subject, I will mention what I regard as a few settled issues.

First, some in our midst seem to believe that persons abroad have a moral right to settle in the United States anytime their interest would be served—regardless of the interest and wishes of those who are already here. But I have a feeling that most people hold a quite different view.

As mortals, we live in a world of limits—and, tragically, that must include limits to our charity. Each man and woman here faces daily in his or her own life the moral dilemma posed by other human beings in need; each must decide where to draw the line in helping others. It's tough—but we have all done that or we would not be here tonight.

There is an additional and related point which those of us in government or politics must take considerable care to remember. We are entitled as private individuals to make any sacrifices of our own interest that we may wish—for example, out of compassion or in order to satisfy our own moral beliefs. However, the primary obligation of government, indeed the very reason for its existence—and justification for its power—is to promote the national interest; that is the long-term well-being of the majority of the nation's citizens and their descendants. Accordingly, United States Government beneficence toward persons abroad is proper only if it embraces the interest of the American people.

I think most would agree that the interest of the American people includes not only economic aspects, such as jobs and real income, but non-economic aspects as well, such as freedom, safety, and political independence and stability. In addition to these specific benefits, it surely includes preservation of the public cultural qualities and the political institutions which are their foundations. After all, it certainly appears that it is the absence of such qualities and institutions which contributes to the lack of such benefits in many countries and, consequently, to the emigration of their citizens.

I am reminded of an old maxim with which I am certain most of you are quite familiar: "Don't spend capital." You know that if you fail to control your expenditures to a level below your real income, then you are in effect slowly liquidating.

There is an analogy between this saying and a fundamental truth about immigration. What corresponds to spending is the providing of an adequate life to the people of this nation. What corresponds to capital are the traditional values, institutions, and unity which are the roots of America's success as a nation.

That form of capital will be diminished if government pursues immigration policies which allow immigrants to enter the United States in numbers that cannot be fully assimilated into this society. The risk of this occurring may be greater as a result of certain government policies, which often seem to discourage such assimilation.

It is usual in discussions of immigration policy to refer to the Statue of Liberty. I would remind all that the complete, original name of that beautiful lady in the harbor is "Liberty Enlightening the World." The moving sonnet of Emma Lazarus was added seventeen years later. The statue is not called "we shall accept all who come to our shores—legally or illegally." Let us remember that we cannot enlighten the world if we are overwhelmed.

If we in government or politics are not able to bridle our compassion for the less fortunate people of other lands sufficiently to protect the national interest, then not only will we have failed in our primary official duty, including our duty to the least advantaged in our own nation, but there is a real and substantial risk that in the long run the American people will be adversely affected to a degree that they will be unable or unwilling to respond at all. I refer to this potential unwillingness to respond as "compassion fatigue." The signs are all around us that this is already developing.

These issues have been particularly compelling in recent years when the United States became, for the very first time, a country of "mass first asylum" when it received within a period of a few months an influx of 125,000 persons from Cuba, persons not selected by the United States but selected in many cases by Fidel Castro.

The United States seemed paralyzed by a form of moral uncertainty—unwilling or unable to enforce United States law. I will return to that a bit later.

Well, the difficulty, of course, lies in the application of a national interest standard, in determining the specific policies which really do best promote the national interest.

I think it is clear that America could not follow an "open border policy". There are a few economists who appear to advocate the free movement of people across borders, but I think it inevitable that this would result in conditions in the United States deteriorating to a "least common denominator" level. I do not perceive how the United States, or even the world as a whole, could supply the capital necessary to generate a United States standard of living for every person who does not now have it, even if we were to make the assumption that our institutions could survive an open border.

As has been frequently pointed out, the pressure is just beginning. The low economic and high population growth rates of the Third World—neither of which is under the control of the United States—present a dismal prospect, as does the fact that many countries of the developing world are only a walk or a short boat trip away. The United States-Mexico border is the only land border between a developed Western country and the developing world—and it stretches over 2,000 miles. The only physical barrier is a river, not an ocean.

Since the United States cannot accept all who would wish to come, the following very real questions arise:

(1) How many immigrants and refugees should be admitted?

(2) Which applicants should be given preference?

(3) Which applicants should be excluded?

(4) How should the United States enforce the policies which are adopted?

Let me discuss the last question first. How should United States immigration policy be enforced? Obviously, the potential benefits and protections to be obtained, even under the most carefully designed statutory standards for determining who may enter the United States, as well as for how long and under what conditions they may remain, will not be available in practice if those statutory standards cannot be enforced.

At the present time it is my own view that conventional law enforcement approaches would not be adequate to control illegal border crossing even if substantially greater resources were devoted to the effort than now appears likely. Furthermore, a significant portion of illegal aliens enter legally and vio-

late the terms of their visas. No amount of border enforcement would restrict this kind of illegal alien.

As long as greater United States job opportunities are available to foreign nationals who succeed in physically entering the United States, intense illegal immigration pressure on the United States will continue. This pressure will decline only if (a) the pull of the United States employment is eliminated, or (b) such disparity is reduced—either through improvement in the Third World or deterioration in the United States.

We should do all in our power to assist development in the Third World. But we must remember that the achievement of substantially higher living standards is a long-term prospect at the very best. Since deterioration in the United States is certainly not an attractive resolution, only one approach remains: that is prohibiting the knowing employment of illegal aliens.

In order to protect both employers and minorities, particularly Hispanic-Americans, we will require a secure system to enable employers to verify that job applicants are authorized to work in the United States. Existing documents are extensively altered and counterfeited—and genuine documents such as the birth certificate can be readily obtained through fraud. If employers were permitted to rely on those by themselves, then very little might be accomplished. On the other hand, if they could not rely on them, then many employers might feel so insecure that they would seek to avoid hiring persons who "looked foreign" to them. Therefore, a new system is needed.

It is claimed that a new verification system would be too costly and that it would pose a threat to privacy and civil liberties. Two brief points on that.

First, there are also tremendous costs involved in inadequate enforcement. The Congressional Budget Office has estimated that each unemployed person receives about $7,000 per year in unemployment and welfare benefits. Thus, even if the illegal alien population numbers only five million and only one percent of them displace American workers, this cost alone would total $350 million per year. I believe the cost is probably much higher since my hunch is that the actual displacement figure is higher than 1 percent.

Second, with respect to civil liberties, I have given much sincere thought as to how, say, changing the form of the Social Security card could pose risks to our liberty.

I have asked that question of many—from the ACLU to Arthur Flemming of the Civil Rights Commission. No one has yet given a satisfactory answer. Others—never known for their neglect of civil and human liberties—agree with me, including Father Ted Hesburgh, former Chairman of the Select Commission on Immigration and Refugee Policy; Senator Kennedy, ranking member of the Senate Subcommittee on Immigration; and the editorial writers of the New York Times and the Washington Post.

I do also recognize the possibility that substantial, adverse economic impact might occur as a result of a sudden reduction of illegal immigration. Therefore, I remain open-minded about the concept of a limited temporary worker program, at least during a transition period. Such a program should not be considered, however, unless (1) very carefully designed restrictions were included in order to minimize adverse impacts and reduce the opportunities for workers to stay permanently, and (2) such restrictions could be adequately enforced, which would require an effective employer sanctions program and a verification system. The European guest worker experience can serve as a helpful guide here—as to what should be avoided.

The next issue is numbers: How many immigrants and refugees should be admitted?

At the present time, net immigration—legal plus illegal—probably approaches or even exceeds 750,000 per year. Even if it is assumed that the fertility rate of the existing population remains at its present low level (which seems unlikely) and the fertility rate of the new immigrants immediately declines to that of the present population as a whole (which seems even less likely), a net annual immigration of 750,000 would lead to a U.S. population in a hundred years of 300,000,000. One third of that population would consist of immigrants who arrived after 1980 and their descendants.

Indeed, these figures actually underestimate the impact of immigration. Since it is concentrated in only a few regions of the country, the impact on these regions is of far greater import than the overall figure suggests. For example, under the same assumptions, the population of California would double by 2080. Over half of that state's population would then consist of post-1980 immigrants and their descendants.

The problems which may be caused by excessive population growth are well known and I shall not discuss all of them here.

However, one issue deserves particular mention.

I fully realize that what I am about to say is directed to a most sensitive and complicated issue and there is every risk of misunderstanding. Therefore, I wish to reemphasize my deep belief that no individual applying to this country lawfully in search of freedom and opportunity and desiring to integrate fully into American society should be discriminated against because of race, color, or religion.

Yet if immigration is continued at a high level, but a substantial portion of these new persons and their descendants do not assimilate into the society, they may well create in America some of the same social, political, and economic problems which exist in the countries from which they have chosen to depart.

And if language and cultural separatism rise above a certain level, the unity and political stability of the nation will—in time—be seriously eroded. Pluralism within a united, American nation has been our greatest strength. That unity comes from a common language and, partly as a result of that common language, a core culture of certain shared values, beliefs, and customs which make us distinctively Americans.

We know there are those who argue that no amount of population growth is desirable. Well then, why should the U.S. accept any immigrants? The reasons usually given include:

(a) To benefit individual citizens and permanent residents who wish to be reunited with family members now living abroad;

(b) To obtain needed labor skills;

(c) To benefit the immigrants or refugees themselves;

(d) To benefit the immigrants' native countries.

Of these reasons only the economic benefit of obtaining needed labor and the diplomatic benefit of assisting the native countries and aiding refugees could be considered as being of benefit to the American people as a whole. Actually, immigration would not necessarily result in needed labor unless immigrants were selected specifically on the basis of their job skills. In 1979 only 4% of the new permanent residents were selected on this basis. The diplomatic benefit of assisting the native country may or may not be present. To the extent that the workers are productive, their loss may be detrimental to their own country, as well as having an adverse job impact in the United States. To the extent that immigrants are not productive, the diplomatic benefit would have to be discounted by the cost to the United States of a non-productive immigrant, increased population, and, possibly, adverse social effects. The benefit of family reunification—our firm national policy—is available only to the relatively small group of Americans directly affected and must always be balanced against the impact on the nation as a whole.

I believe that the emerging policy in the area of numbers is one of caution yet combined with a determination that in actual operation the law will yield a level of immigrants and refugees which will remain consistent with the national interest. In addition there seems to be virtual unanimity that vigorous efforts must be made to reduce illegal immigration substantially.

The next question to be answered is which of the many applicants should be given preference? Only 4% of new permanent residents in the United States in 1979 were subjected to any selection for qualities that were likely to benefit the nation as a whole, and this was limited only to an analysis of job market impact. I very much support "family reunification," but we must determine what share of all immigrants should be represented by persons admitted for family reunification.

There seems to be some support for the idea of increasing the percentage of immigrants selected for skills and traits likely to benefit the United States, in part by the means of transferring the numbers now provided for the fifth preference; that is, brothers and sisters of adult U.S. citizens. I would also favor slightly narrowing the second preference to include only the nuclear family (spouse and minor unmarried children) of permanent resident aliens. I believe that the family reunification preferences should be based on the attitudes of the American people concerning the family—not on the attitudes of other nations.

In order to broaden the criteria for the selection of independent immigrants beyond purely job-related criteria, some degree of preference might be given to those with skills and traits which would maximize their opportunities for success in this country, as is done by other major immigrant receiving countries such as Canada and Australia. Those countries use "point systems," which consider traits relevant to both ability to work and ability to integrate into the society, such as: job skills, education, and English language ability.

I feel that the American people should give preference to persons who intend to integrate fully into American society, transferring their full allegiance to the United States and its institutions through the naturalization process. We often forget that the ability to read, write, and speak some English is a present naturalization requirement under our law, as is a "knowledge and understanding of the fundamentals of the history, and of the principles and form of government, of the United States." By providing such preference, the U.S. would be admitting those who could more easily integrate into American society, as well as satisfy the requirements for naturalization. This would encourage the immigrants fully to become part of our nation, who would be treated equally and not discriminated against. Because such knowledge could be learned, those wishing to obtain the preference could be assisted in doing so. U.S. consulates might well provide booklets on U.S. history and institutions and present lessons in English.

A related controversy involves the issue of whether current immigrants are assimilating as rapidly as those in the past. This issue is particularly significant with respect to Spanish-speaking immigrants, who probably represent at least 40–50 percent of the total, if illegal immigration is considered. Their naturalization rate is far lower than the rates of other immigrant groups. The significance of several factors which appear to uniquely impact Spanish-speaking immigrants should be carefully studied: the geographic proximity of Latin America; the large, continuous influx of large numbers of illegal immigrants from Latin America, many of whom do not intend to stay; and the sheer numbers of Spanish-speaking legal immigrants, which

now dominate current immigration flows and which numbers appear unlikely to decrease under present laws and enforcement policy.

Consideration should also be given to the effect of government policies such as bilingual/"bicultural" education, bilingual ballots, and affirmative action on the tendency of immigrants to integrate into American society. That's a hot one for you!

With respect to the job-related criteria there is a bit of controversy about the test which should be applied to determine whether a U.S. worker is available for a particular job. Should an employer have to show that in order to obtain a U.S. worker he would have to pay a wage that would put him out of business and also show that he could not mechanize that job at an affordable cost of some additional investment.

Under present law in addition to family reunification and labor-related preferences, there is another category of aliens who are accorded a preferred status: refugees and asylees. This area has recently been among the most controversial in immigration policy. In the same year that a new law governing refugee admissions was enacted, the Refugee Act of 1980, the most concentrated influx of illegal aliens ever to come to our shores occurred. These people from Cuba and Haiti have generally been called "refugees" although many of them do not appear to fit the definition under the new law, which requires a well-founded fear of persecution on account of "race, religion, nationality, membership in a particular social group, or political opinion." In any case the Refugee Act was not applied to them. They were given a special temporary legal status pending a final resolution of the issue, which has yet to occur. Dealing with the Cubans was, of course, made extremely difficult by the fact that their country did not want them back and refused to accept them. Although the Haitian entrants could have been returned, as other entrants were before and have been since the Cuban influx, domestic political considerations have made that most difficult.

Two issues of extreme importance have emerged from the Cuban/Haitian problem:

Our processing procedures are totally inadequate to deal with mass asylum applications. Indeed, this country is unable to even deal with the reduced level of Haitian asylum seekers who seem to have now become a steady flow. The policy of allowing those who are apprehended to be released into the community, with permission to work pending final adjudication, which usually requires extraordinarily long delays, has not, needless to say, acted as very much of a deterrent.

The second issue to emerge out of the Cuban/Haitian influx is how do we deal with the new reality that the U.S. has become a nation of first asylum.

This development is a severe challenge to the U.S. The U.S. situation is unlike that of any other first asylum country in that not only do the people granted asylum wish dearly to remain in the U.S. even if resettlement in another country is offered to them, but they have a right to stay under our law as long as they satisfy the definition of "refugee."

Of all the facets of the Reagan Administration's immigration package, the asylum component fortunately appears generally to be the most seriously intended and best thought through.

The next question concerns which aliens should be excluded.

There appears to be little disagreement with one proposition that the American people have a right to exclude aliens who would threaten the public health and safety, adversely impact the job market, become a burden upon the taxpayers, or endanger national security.

Controversy seems concentrated on two existing grounds of exclusion: ideolcgical and moral.

There is no time to discuss these in detail today, except to ask the question: if two aliens are applying for admission to the U.S. and only one can be admitted, and they are equally qualified except that one has a certain trait which a majority of the American people may find offensive on the grounds of taste, morality, or otherwise, should the people through their government have a right to choose the alien without such a trait? I just don't know * * *. There are far more applicants for admission to the United States than can ever be accommodated. We could choose them under a lottery system or on a first-come, first-admitted basis. Should the American people be able to select those they like best—or feel most comfortable with?

And finally a last topic, one particularly timely in view of the summit meeting in Cancun, Mexico and the talk of so-called "global negotiations." The long-term solution to foreign immigration pressure on the United States requires that the conditions which "push" people towards our border be changed. That should be accomplished by assisting people to improve the quality of life in their own country. In this effort, the best gift of the heart which the United States could provide would be the clear communication of the basis of our own success.

It is no coincidence that America has been a symbol of both freedom and prosperity. These two valuable conditions are intimately related and both rest on certain traditional values and national institutions. This is a theme which should be studied more fully and communicated to the world in a much more effective way than we have been able to do to date.

Let me conclude by saying that one of the things that we must monitor most carefully is the impact of immigration reform upon Hispanic-Americans. They have much to fear and much to lose if that reform is not very carefully and reasonably pursued. We must guard against policies which cause discrimination against any minority groups. Our past immigration policies were filled with it. But that is precisely why Hispanic-Americans must assist us in the course of our deliberations. I have made a special effort to communicate with the Hispanic groups of this country. They have testified at 7 of 9 hearings we have held.●

PRELIMINARY NOTIFICATION PROPOSED ARMS SALES

(By request of Mr. BAKER, the following statement was ordered to be printed in the RECORD:)

● Mr. PERCY. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of $25 million or, in the case of major defense equipment as defined in the act, those in excess of $7 million.

Upon receipt of such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sales shall be sent to the chairman of the Foreign Relations Committee.

Pursuant to an informal understanding, the Department of Defense has agreed to provide the committee with a preliminary notification 20 days before transmittal of the official notification. The official notification will be printed in the RECORD in accordance with previous practice.

I wish to inform Members of the Senate that such a notification was received today.

Interested Senators may inquire as to the details of this preliminary notification at the offices of the Committee on Foreign Relations, room 4229 Dirksen Building.

The notification follows:

DEFENSE SECURITY ASSISTANCE AGENCY,
Washington, D.C., December 16, 1981.
In reply refer to: I–12503/81ct.
Dr. HANS BINNENDIJK,
Professional Staff Member, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR DR. BINNENDIJK: By letter dated 18 February 1976, the Director, Defense Security Assistance Agency, indicated that you would be advised of possible transmittals to Congress of information as required by Section 36(b) of the Arms Export Control Act. At the instruction of the Department of State, I wish to provide the following advance notification.

The Department of State is considering an offer to a NATO country for major defense equipment tentatively estimated to cost in excess of $7 million.

Sincerely,

ERICH F. VON MARBOD,
Director.●

PROPOSED ARMS SALES

(By request of Mr. BAKER, the following statement was ordered to be printed in the RECORD:)

● Mr. PERCY. Mr. President, section 36 (b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of $25 million or, in the case of major defense equipment as defined in the act, those in excess of $7 million.

Upon such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of a proposed sale shall be sent to the chairman of the Foreign Relations Committee.

In keeping with my intention to see that such information is available to the full Senate, I ask to have printed in the RECORD, at this point, the notifications which have been received.

The notifications follow:

DEFENSE SECURITY ASSISTANCE AGENCY,
Washington, D.C., December 16, 1981.
In reply refer to: I–12168/81ct.
Hon. CHARLES H. PERCY,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith Transmittal No. 82–15, concerning the Department of the Navy's proposed Letter of Offer to Canada for technical and engineering services estimated to cost $31 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

ERICH F. VON MARBOD,
Director.

TRANSMITTAL NO. 82-15

(Notice of proposed issuance of letter of offer pursuant to Section 36(b) of the Arms Export Control Act)

(i) Prospective purchaser: Canada:
(ii) Total estimated value: *Millions*

Major defense equipment*	0
Other	$31
Total	31

*As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

(iii) Description of articles or services offered: U.S. Navy technical and engineering services in support of the establishment and operation of the Canadian CF-18 weapon system Integrated Avionics Software Support Facility (IASSF).

(iv) Military department: Navy (GSM).

(v) Sales commission, fee, etc., paid, offered, or agreed to be paid: None.

(vi) Sensitivity of technology contained in the defense articles or defense services proposed to be sold: None.

(vii) Section 28 report: Case not included in Section 28 report.

(viii) Date report delivered to Congress: December 16, 1981.

POLICY JUSTIFICATION

CANADA—TECHNICAL AND ENGINEERING SERVICES

The Government of Canada has requested the purchase of U.S. Navy technical and engineering services in support of the establishment and operation of the Canadian CF-18 weapon system Integrated Avionics Software Support Facility (IASSF) at an estimated cost of $31 million.

The proposed sale will greatly enhance the mission effectiveness of the Canadian CF-18 aircraft beyond 1985. As a NATO ally, and a partner in NORAD, Canada needs effective air combat capabilities to decrease the burden otherwise carried by U.S. forces in North America and Europe. The CF-18 represents a significant upgrade of Canadian Forces (CF) and its continued reliability into the 1990's is in the interest of both the U.S. and Canada.

Canada requires continued CF-18 software support after 1984 when the contractor effort ends. Reprogramming of the various mission computers in the CF-18 will allow the CF to maintain a "state-of-the-art" air combat capability with the CF-18. Without such support the CF-18 would soon suffer significant degradation of mission capability to the detriment of Canada and its allies.

The sale of these services will not affect the basic military balance in the region.

The services will be performed by the Naval Weapons Center (NWC), China Lake, California. Certain aspects of these services could be performed, in whole or in part, by contractors under the direction of NWC China Lake.

Implementation of this sale will not require the assignment of any additional U.S. Government or contractor personnel to Canada.

There will be no adverse impact on U.S. defense readiness as a result of this sale.

DEFENSE SECURITY ASSISTANCE AGENCY,
Washington, D.C, December 16, 1981.

In reply refer to: I-12434/81.

Hon. CHARLES H. PERCY,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith Transmittal No. 82-17, concerning the Department of the Army's proposed letter of Offer to Korea, for defense articles and services estimated to cost $72 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

ERICH VON MARBOD,
Director.

TRANSMITTAL NO. 82-17

(Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act)

(i) Prospective purchaser: Korea.
(ii) Total estimated value:

	(*Million*)
Major defense equipment*	0
Other	$72
Total	72

*As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

(iii) Description of articles or services offered: Modification kits for 28 Improved-HAWK batteries and 6 AN/TPQ-29 simulators, concurrent spare parts, training, and services to install the kits.

(iv) Military department: Army (WXH).

(v) Sales commission, fee, etc., paid, offered, or agreed to be paid: None.

(vi) Sensitivity of technology contained in the defense articles or defense services proposed to be sold: None.

(vii) Section 28 report: Case not included in Section 28 report.

(viii) Date report delivered to Congress: December 16, 1981.

POLICY JUSTIFICATION

KOREA—IMPROVED-HAWK (I-HAWK) AND SIMULATOR MODIFICATION KITS

The Government of Korea has requested the purchase of modification kits for 28 I-HAWK batteries and 6 AN/TPQ-29 simulators, concurrent spare parts, training, and services to install the kits at an estimated cost of $72 million.

This sale will contribute to the foreign policy objectives of the United States by helping to improve the security of a friendly country which has been and continues to be an important force for modernization and progress in eastern Asia. The sale of this equipment and support will enhance deterrence and contribute to the preservation of peace and stability on the Korean Peninsula.

The product improvement program modification kits proposed in this sale will upgrade the I-HAWK batteries used in the Republic of Korea for air defense. Since the North Korean Air Force enjoys more than a 2:1 numerical advantage in numbers of combat aircraft, this sale is vital to offset this quantitative disadvantage.

The sale of this equipment and support will not affect the basic military balance in the region.

The prime contractors will be the Raytheon Company of Andover, Massachusetts, for the I-HAWK modification kits and the Applied Devices Corporation of Kissimmee, Florida, for the simulator modifications kits and the training.

Implementation of this sale will require the assignment to Korea of one U.S. Government employee for three years and 17 contractor representatives for an average of 55 days.

There will be no adverse impact on U.S. defense readiness as a result of this sale.●

CARBON DIOXIDE IN THE ATMOSPHERE

● Mr. TSONGAS. Mr. President, a year ago last April, I held hearings on the effect of the carbon dioxide (CO_2) buildup in the atmosphere. A number of top scientists in the field of atmospheric research and the CO_2 buildup testified.

They generally agreed that continued burning of fossil fuels and the resulting buildup of CO_2 in the atmosphere would cause a serious warming of the world's climate—the so-called "greenhouse effect"—in the next century, affecting precipitation patterns and agriculture throughout the world.

At the same time, they warned that there was then no evidence of these temperature increases and that they might not be clearly observable until significant climatic change was inevitable—probably toward the end of this century.

Recently, evidence of global warming that supports the predictions of the CO_2 theory has begun to accumulate. New research indicates that because of other polluting gases that have effects similar to carbon dioxide, the warming of the world's climate may be even more serious and occur more quickly than previously thought.

In view of the potential danger of excess CO_2 and other pollutants in the atmosphere, it is vital that we pursue two goals vigorously.

First, we must reduce the scientific uncertainty surrounding this problem as quickly as possible. Studies of CO_2 loading of the atmosphere and its impact should be fully supported.

Second, we must lessen the dangers implicit in the CO_2 problem by reducing our consumption of fossil fuels through energy conservation and encouraging the transition to renewable energy resources. That this is usually highly cost-effective today and necessary in the longer term anyway is an added bonus.

Mr. President, two recent studies in Science magazine—one by J. Hansen et. al., and the other by G. Kukla and J. Gavin—show the first evidence for global warming likely due to the CO_2 effect. A study by A. Lacis et. al., in Geophysical Research Letters shows that methane, chlorofluorocarbons, and N_2O may significantly increase greenhouse warming above that due to carbon dioxide alone. Mr. President, I ask unanimous consent that summaries of each study, along with a brief describing the CO_2 issue that I have prepared, be printed in the RECORD.

The material follows:

[From Science, Aug. 28, 1981, Vol. 213, No. 4511]

CLIMATE IMPACT OF INCREASING ATMOSPHERIC CARBON DIOXIDE

(By J. Hansen, D. Johnson, A. Lacis, S. Lebedeff, P. Lee, D. Rind, G. Russell)

SUMMARY

The global temperature rose by 0.2°C between the middle 1960's and 1980, yielding a warming of 0.4°C in the past century. This temperature increase is consistent with the calculated greenhouse effect due to measured increases of atmospheric carbon dioxide. Variations of volcanic aerosols and possibly solar luminosity appear to be primary causes of observed fluctuations about the mean trend of increasing temperature. It is shown that the anthropogenic carbon dioxide warming should emerge from the noise level of natural climate variability by the end of the century, and there is a high probability of warming in the 1980's. Potential effects on climate in the 21st century include the creation of drought-prone regions in North America and central Asia as part of a shifting of climatic

zones, erosion of the West Antarctic ice sheet with a consequent worldwide rise in sea level, and opening of the fabled Northwest Passage.

[From Science, Oct. 30, 1981, Vol. 214, No. 4520]

SUMMER ICE AND CARBON DIOXIDE

(By G. Kukla and J. Gavin)

SUMMARY

The extent of Antarctic ice in the summer, as charted from satellite imagery, decreased by 2.5 million square kilometers between 1973 and 1980. The U.S. Navy and Russian atlases and whaling and research ship reports from the 1930's indicate that summer ice conditions earlier in this century were heavier than the current average. Surface air temperatures along the seasonally shifting belt of melting snow between 55° and 80°N during spring and summer were higher in 1974 to 1978 than in 1934 to 1938. The observed departures in the two hemispheres qualitatively agree with the predicted impact of an increase in atmospheric carbon dioxide. However, since it is not known to what extent the changes in snow and ice cover and in temperature can be explained by the natural variability of the climate system or by other processes unrelated to carbon dioxide, a cause-and-effect relation cannot yet be established.

[From Geophysical Research Letters, Vol. 8, No. 10, Oct. 1981]

GREENHOUSE EFFECT OF TRACE GASES, 1970–1980

(By A. Lacis, J. Hansen, P. Lee, T. Mitchell, and S. Lebedeff)

ABSTRACT

Increased abundances were measured for several trace atmospheric gases in the decade 1970–1980. The equilibrium greenhouse warming for the measured increments of CH_4, chlorofluorocarbons and N_2O is between 50 percent and 100 percent of the equilibrium warming for the measured increase of atmospheric CO_2 during the same 10 years. The combined warming of CO_2 and trace gases should exceed natural global temperature variability in the 1980's and cause the global mean temperature to rise above the maximum of the late 1930's.

THE GREENHOUSE EFFECT

There is clear and well documented evidence that the concentration of carbon dioxide in the atmosphere is increasing. Measurements at different sites around the world, particularly at Mauna Loa in Hawaii, have shown a steady increase in carbon dioxide (CO_2) levels over the past twenty years. Today, the concentration is roughly 339 parts per million (ppm)—an estimated 14 percent over pre-industrial levels. Annual increases in CO_2 concentration are now roughly 1.5 ppm/year and growing.

The burning of fossil fuels is unquestionably the predominant factor in this increase; the impact of poor land use including deforestation is not yet clear but is probably significant. At the 4 percent growth rate in fossil fuel use existing from 1940–1973, the atmospheric concentration of CO_2 is expected to double by the year 2025–2050 depending principally on the rate it is absorbed by the ocean. If worldwide fossil fuel use is stabilized at current levels, doubling would be delayed by roughly 50 years. Existing pollution control devices do not affect these CO_2 emissions. Furthermore, there is no known practicable technology for controlling them nor is there likely to be. The only control is to not burn fossil fuels in the first place.

Carbon dioxide, along with carbon monoxide, methane, oxides of nitrogen, water vapor, and other atmospheric constituents, strongly absorbs infrared radiation. In the atmosphere, then, these gases act like a blanket and reduce the loss of heat from the earth to space—the so-called greenhouse effect. Increasing the concentration of these gases in the atmosphere will cause the average temperature to rise which, in turn, increases the water vapor content of the atmosphere—holding in even more heat. Warming may also decrease the worldwide cloud and snow cover, allowing more sunlight to be absorbed.

For a doubling of CO_2 over pre-industrial levels, current best estimates of the resulting worldwide temperature rise are 3C (degrees centigrade). Much of this temperature increase would occur in the higher latitudes where the effect of increased water vapor would be most significant (tropical air already has considerable water vapor in it). At the North Pole temperature increases of up to 10C are predicted. The impact of increasing atmospheric concentration of polluting gases other than CO_2, such as methane or oxides of nitrogen, will likely make these temperature increases more severe.

This 3C temperature increase is expected to cause a significant change in world precipitation patterns, and in atmospheric and oceanic currents. A 6C temperature drop, for example, corresponds to the depths of the last ice age. A 2C temperature increase during the altithermal period 4000–8000 years ago increased rainfall more than evaporation in some areas such as North Africa and the Middle East but caused many others including the American Midwest to dry considerably. Some have characterized the Midwest during that period as a dustbowl. Further, the large difference in temperature between the Equator and the poles which drives the world's winds and ocean currents will be greatly reduced—reducing and altering the atmospheric and oceanic currents.

These climatic changes will most certainly affect the distribution, composition, productivity, and stability of both natural and man-made ecosystems. Wind and ocean currents mix the ocean's waters and circulate its nutrients. Their decrease will reduce the yields of fish and other harvestable protein. Increasing CO_2 concentrations will increase the ocean's acidity slightly and possibly affect the productivity of the phytoplankton. For agriculture the climate zones now associated with the more productive regions would generally shift toward the poles into less productive soils. Although some areas would benefit, the overall impact may well be negative. Despite the difficulty, developed countries may have the technology and resources to adapt to these changes—particularly through advanced plant breeding programs; underdeveloped countries, many of which are already on marginal lands, may well not be able to adapt.

The west antarctic ice shelf may be vulnerable to such a temperature rise as well and could disintegrate, causing a rise in sea level of 5–8 meters. In the USA today this would displace 5–7 percent of the population.

Because of the ocean's ability to absorb a tremendous amount of heat and thus delay change and because of the normal variation in climate from year to year, the expected change in climate may not be significant and easily observable until massive changes are inevitable.

Let us assume a low energy growth scenario in which there is declining energy use by the USA, and less developed countries (LDC's) increase their fossil energy consumption at a minimal rate of just 2.4 percent annually. Even so, in order to stabilize the CO_2 level at twice preindustrial levels (3C temperature rise), non-fossil fuels would have to provide half the world's energy requirements within 40 years. Clearly, to offset these demands we need a massive conservation effort. Improved land use will also help.

The CO_2 problem is a global one in both cause and impact. For years to come, fossil fuel consumption by LDC's will continue to grow as they develop economically. (Fossil fuel use by developed countries appears to be stabilizing.) Though LDC's will thus be an increasingly important contributor to the CO_2 buildup, they may well hesitate to slow their fossil fuel consumption, and possibly their development, to help solve a "Western caused" problem. The developed countries, then, must both set an example and develop the alternative energy resources which will allow continued economic gains for all without contributing further to the CO_2 problem.●

FEDERAL SPENDING

● Mr. HEINZ. Mr. President, as this is likely to be the last day of this session of Congress, I wish to reflect on the need to continue the critical process we have begun this year, controlling the growth of Federal spending.

Earlier this year, on March 10, the same day that President Reagan submitted his first spending reduction proposals, I introduced Senate Joint Resolution 54, an amendment to the Constitution limiting the growth of the Federal Government. Specifically, this amendment limits the growth in Federal spending to the growth in national income as measured by the gross national product.

I believe the Reagan administration and responsible Members of Congress deserve great commendations for the bold and critical steps that have been taken throughout this year to reduce the growth of Federal spending.

It is the firm intention of this administration to reverse the alarming trend of prior years by which the Federal Government consumes an ever-increasing share of the Nation's economic output as measured by GNP.

I am concerned that we now lack a mechanism for imposing fiscal discipline in future years—when we may not have a President who is willing to demonstrate such leadership or a Congress willing to act responsibly in the face of hard political decisions the key to solving simultaneously the problems of double-digit inflation and high unemployment is to bring under control the amount of our output, the amount of our productive resources, usurped by the Federal Government.

Every dollar spent by the Government, whether borrowed to cover the Federal deficit or raised by taxes is one less dollar to invest in real economic growth, one less dollar generating permanent jobs, and private savings and investment.

Mr. President, I favor a balanced budget. But I must point out that balancing the budget alone will not solve this country's economic problems. If Congress raised taxes as it has so often in the past we could easily have a budget much larger than the one we have now and balanced at, say $1 trillion. There would be no Federal deficit—but the burden of taxation resulting would devastate the working people of America and drag this country into economic ruin.

My amendment would put an end to this threat to our way of life by consti-

tutionally limiting power of Congress to recklessly increase the Federal budget. The further growth of the Federal Government at the expense of State and local governments and economic freedom should be provided under the Constitution. The amendment I have proposed well, of restoring the Federal Governsistent with the goal, one supported I believe, by the Reagan administration as well of restoring the Federal Government to the role relative to the States and private citizens, envisioned by the framers of the Constitution.

The joint resolution, drafted with the assistance of Nobel laureate Dr. Milton Friedman and the National Tax Limitation Committee, would accomplish this goal in the following ways:

First, it would limit the growth in Federal spending to the growth in national output as measured by nominal gross national product.

Second, it would require that any budget surpluses be used to retire the national debt.

Third, it would authorize increases in the spending limitation following emergency declarations by the President and supermajority votes of Congress.

Fourth, it would prohibit the Federal Government from requiring additional services to be performed by the States without also providing the financial resources to pay for them.

The case for passage of this constitutional amendment is clear and compelling, as evidenced by the alarming trends of recent years. Federal spending as a percentage of GNP has increased from 18 percent in 1965 to a target level of 23 percent in fiscal year 1981.

For 10 of the past 15 years, Federal spending has increased at a faster rate than has GNP. In 1 year alone, fiscal year 1967 Federal spending increased by more than twice the 8.2-percent increase in GNP. In 3 other years, Federal spending increased by 4.5 percent or more than the most recent increase in the GNP.

My joint resolution—unlike measures which would limit Federal spending to a fixed percentage of GNP—would bring about reductions in the growth of spending gradually. Thus provided would be a reasonable transition period to the fiscal discipline we so desperately need, without drastic cuts in ongoing programs.

Mr. President, thanks to a considerable amount of analysis, I can provide some idea of the benefits of this legislation. For example, had it been in effect just since 1970:

Our national debt would be lower today than it was in 1970, instead of its actually being $624 billion higher.

Interest payments on the national debt would be at least $35 billion lower this year, instead of being over $60 billion.

Federal debt per household would have been cut significantly from $6,098 per household in 1970 to $4,788 today. Unfortunately, in the real world without this legislation, the Federal debt per household today is instead a staggering $11,652.

I ask that tables demonstrating the impact which this measure would have had on Federal outlays since 1965 (table 1) and Federal debt since 1970 (table 2) be printed in the RECORD.

The tables follow:

TABLE 1.—TOTAL OUTLAYS OF THE FEDERAL GOVERNMENT, 1965–82

Year	Total outlay (billions)		Year to year (percent change)		Share of GNP (percent)	
	Actual	Amendment	Actual	Amendment	Actual	Amendment
1965	118.4	NA	−0.2	NA	18.0	NA
1966	134.7	NA	13.8	NA	18.7	NA

Mr. HEINZ. Mr. President, in short, passage of this joint resolution is necessary because—like the compulsive eater, the chronic gambler, and the alcoholic—the Federal Government needs to be saved from itself. Although like following a doctor's advice, many may be reluctant at first to embrace what we prescribe. But I am convinced this treatment will help reverse the habits of nearly two decades that have weakened our economy and productive base.

I believe the end result will be to liberate enormous reserve of creative energy and productivity today latent in America.

I strongly urge my distinguished colleagues to support this constitutional amendment.

I ask that the text of the joint resolution be printed at this point in the RECORD.

The resolution follows:

S.J. RES. 54

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is hereby proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States within seven years after its submission to the States for ratification:

"ARTICLE —

"SECTION 1. (a) Total outlays of the Government of the United States during any fiscal year shall not rise more than the rate of increase in gross national product in the last calendar year that ended before such fiscal year.

"(b) For purposes of subsection (a), total outlays includes both budget and off-budget outlays, but does not include redemptions of the public debt or emergency outlays authorized under section 3 of this article.

"SEC. 2. When, for any fiscal year, total revenues received by the Government of the United States exceed total outlays, the surplus shall be used to reduce the public debt of the United States until such debt is eliminated.

"SEC. 3. Following declaration of an emergency by the President, the Congress may authorize, by a two-thirds vote of both Houses of Congress, a specified amount of emergency outlays in excess of the limit prescribed by section 1 for the current fiscal year.

"SEC. 4. The limit on total outlays prescribed by section 1 may be changed by a specified amount by a three-quarters vote of both Houses of Congress. The change shall become effective for the fiscal year following approval.

"SEC. 5. The Congress may not by law require or authorize any agency of the Government of the United States to require, directly or indirectly, that State or local governments engage in additional or expanded activities without compensation equal to the necessary additional costs.".●

ARCTIC POLLUTION

● Mr. MURKOWSKI. Mr. President, I want to share an article with my Senate colleagues concerning the presence of industrial pollutants in the high Arctic. Although the Arctic is often reviewed as a pristine, untouched wilderness, recent studies undertaken by the University of Alaska's Geophysical Institute have shown that a surprising amount of industrial pollutants linger in the Arctic atmosphere. This article, from the University of Alaska's publication "Now in the North," describes the specific air quality research being carried out by the geophysical institute.

While the air sample collection experiments described in the article were originally expected to find natural particles—chemical traces of sea and land—a variety of industrial pollutants were found which could not have been generated within Alaska. They are therefore, believed to have been blown northward from industrial areas in Europe, Asia and perhaps North America. Clearly, this is an international problem that may need to be addressed by the Federal Government.

Mr. President, I introduced legislation earlier this year which will lead to the formulation of an Arctic research policy and the prioritization of federally funded research projects. The adoption of this legislation, S. 1562, would insure that well-conceived and adequately funded research related to national needs and responsibilities.

Mr. President, I ask that the text of the article appear in the RECORD in full.

The article follows:

INDUSTRIAL POLLUTION LINGERS IN ARCTIC ATMOSPHERE

(By Doreen Fitzgerald)

In the springtime at Barrow, Alaska the dirtiest air comes from the north.

At Barrow in 1975 researchers from the university's Geophysical Institute set up their air samplers expecting to collect natural particles—chemical traces of the sea and land. Instead, their filters turned gray with what are now believed to be industrial pollutants blown northward from industrial areas in Europe, Asia and perhaps North America.

Geophysical Institute scientists were instrumental in the confirmation of what one of them called, "the most serious man-caused degradation of the environment yet recorded."

Its seriousness lies in the size of the area involved—the entire polar cap of the world—and in the possible effects of this Arctic haze on world climate which are as yet unknown.

"Our results in Barrow in 1975 were most puzzling because the air was much dirtier than anyone had any reason to suspect," said Glen Shaw of the institute.

"We started working with Kenneth Rahn of the University of Rhode Island, Kingston to analyze the pollutants."

The Rhode Island school has the capability of measuring and identifying minute amounts of trace compounds in air. Using neutron activation, air samples are irradiated in the nuclear reactor. Compounds can be identified by the rate of radiation decay.

Much to the astonishment of the investigators, the compounds in the air from Barrow were industrial (manmade) rather than natural (dust, for example).

The original announcement of this finding was met with skepticism on the part of scientists who felt the measurements must be in error. But subsequent research has led to a consensus that the arctic haze does indeed exist, formed by distant industrial pollutants that travel up to 5,000 kilometers to the Arctic.

The black soot in the haze efficiently absorbs solar radiation and it is believed this will heat the lower Arctic atmosphere in the spring.

How much and the subsequent effect on the Arctic and world climate is unknown.

"The Arctic had always been though of as pristine—considered untouched and about as remote as Mars," Shaw said.

"I think that attitude can be explained by the early explorations—by going to the pole. It is part of the romance of the Arctic."

Until recently most scientists viewed the polar regions as untouched, untampered with and of no particular interest.

Shaw said that one reason for this was that up until 1975 most if not all studies of atmospheric and precipitation chemistry had been done in the summer. This prevented the observation of Arctic haze which is primarily a cold-weather phenomena, peaking in March and April.

A lot of work has been done to identify the source of the pollutants, but it is not agreed which source predominates at any given time. The industrial sectors of the U.S.S.R. and Central Europe and possibly the northeastern United States—heavily industrialized areas at high latitudes—are the generally agreed regions from which the pollutants originate.

"There is now some evidence that all this has occurred since the industrial revolution," said Shaw. And it has recently surprised the Soviets, Scandinavians and others pushing industry northward to find out the amount of pollution they are causing."

The amount of haze in the northern and southernpolar regions is apparently proportional to the amount of industrialization in the northern and southern hemispheres. Only 10 percent of the world's industry is located at southern latitudes.

The combination of meteorological and geographical circumstances in the Arctic during the winter and spring months seems to account for the buildup of pollutants there.

At higher latitudes, the residence time for pollutant particles may be about 10 times longer than for those farther south. In New England, for example, the particles in smoke may stay aloft for about two days, compared with 20 days in the Arctic. Some pollutants fall out as particles near their source, but others, beginning as gases, do not form particles until later.

In the Arctic during the winter and spring, there is little precipitation to wash pollutants from the air as it moves into the polar regions. Winter-spring air circulation patterns can pick up pollutants from industrialized areas, carrying them to the Arctic, where they build up as the haze.

Since 1975, a network of air monitoring stations has been established in the Arctic to monitor air samples for particles and gasses. Scientists at about 20 institutions are now studying the problem.

"This should raise a very definite warning flag for those planning industrialization for Alaska," Shaw said. "It is a subject that must be placed on the planning agenda.

"It is important for the state and for the nation, and it enters into international and intercontinental relations."●

JIM MILLER ON ADVERTISING

● Mr. DANFORTH. Mr. President, a few weeks back, FTC Chairman Jim Miller held a press conference which was widely reported on the business pages of American newspapers. Several of his comments, as reported in the press, provoked considerable controversy. Of particular concern were reports that Mr. Miller saw no reason to protect consumers from unsubstantiated advertising claims.

Because I was convinced that the news accounts of Mr. Miller's statements did not accurately reflect his views, I wrote him on November 9 to obtain a clarification of his reported statements. In a letter dated December 11, he has responded to my concerns, and I want to share that letter with my colleagues.

In his letter he makes clear that he has "no problem with the concept that an advertiser should substantiate its claims, particularly in the face of indications that the claims are false and deceptive." His real concern, he goes on to point out, is not with the prosecution of false, deceptive, or unsubstantiated advertising claims, but with the possible costs of the FTC's substantiation program. The letter continues:

If the Commission requires excessive substantiation . . . it may impose significant costs on consumers without significantly improving the accuracy of advertising. In some cases, advertisers may even retreat to puffery and slogans rather than hard data, to the detriment of the informational value of advertising.

Mr. President, I ask that my correspondence with Jim Miller be printed at this point in the RECORD, together with a copy of his November 10 speech to the Association of National Advertisers.

The material follows:

NOVEMBER 9, 1981.

Hon. JAMES C. MILLER III,
Chairman, Federal Trade Commission, Washington, D.C.

DEAR JIM: As you are, I am sure, well aware, your recent press conference has caused no small amount of controversy. My suspicions, however, are that a good deal of concern rests on press accounts of the press conference which may not have accurately reported your views.

For example, the New York Times reported: "James C. Miller, 3d, the new chairman of the Federal Trade Commission, said today that the commission should no longer protect consumers from defective products and unsubstantiated advertising claims."

I cannot believe this accurately states your views.

Because this is such an important question, I would appreciate a letter from you explaining what you see as the appropriate function of the FTC in regulating the truthfulness of advertising claims. It will be my intention to put your response in the Record in order to clarify any confusion which might have been generated by the press conference, so I urge you to be as comprehensive in your response as you deem necessary.

Sincerely,

JOHN C. DANFORTH.

FEDERAL TRADE COMMISSION,
Washington, D.C., December 11, 1981.

Hon. JOHN C. DANFORTH,
U.S. Senate,
Washington, D.C.

DEAR SENATOR DANFORTH: Thank you for the opportunity to clarify my views on the FTC's role in ensuring truthful advertising. My remarks have generated controversy not because of what I actually said, but because of erroneous press reports.

As I have noted in the past, advertising is a vital element in maintaining competition and assuring an efficient allocation of the nation's resources. It cannot fulfill this role if it is false and misleading. Although there are incentives for firms to keep their advertising truthful, inevitably some questionable claims will slip through. When they do, the Commission should prosecute firms that are guilty of deceptive advertising. As Chairman, I will expend considerable effort on this mission.

I have raised questions about how the Commission has used one part of its regulation of advertising, the substantiation requirement. I have no problem with the concept that an advertiser should substantiate its claims, particularly in the face of indications that the claims are false and deceptive. If the Commission requires excessive substantiation, however, it may impose significant costs on consumers without significantly improving the accuracy of advertising. In some cases, advertisers may even retreat to puffery and slogans rather than hard data, to the detriment of the informational value of advertising. These and other concerns regarding substantiation are discussed in more detail in a speech I recently gave, a copy of which I enclose.

Clearly, any changes in substantiation requirements require careful assessment of hard evidence. Over the coming months, I plan to examine these questions and the available evidence very closely. In each case, I will be guided by the statutes we administer, and by my assessment of the evidence.

Sincerely yours,

JAMES C. MILLER III,
Chairman.

REMARKS OF CHAIRMAN MILLER*

Thank you very much for this opportunity to share with you some of my preliminary views on the Commission's role in advertising. I especially welcome this opportunity, since there appears to be considerable confusion over just what those views are!

Before giving you my views, however, I want to emphasize two things. First, just how these views should be translated into appropriate policy hinges on what the evidence shows. Whether the Commission should change its policies toward advertising depends on the relevant benefits and costs to society of doing so, and this must be considered on a case-by-case basis. Second, any formal change in Commission policy would have to be approved by a majority of the Commission. As opportunities arise to decide particular advertising cases, my colleagues and I will examine the evidence very carefully in light of our Congressional mandate. Only then might there be formal changes in Commission policy.

As I have noted in the past, advertising plays an important role in our competitive economy. It is one of the principal means by which information is communicated in the marketplace, and thus is a key element in maintaining competition and assuring an efficient allocation of the nation's resources.

Although not always readily apparent, all advertising provides information. It may be only a reminder that a product or service is available. It may communicate information about products and services previously unknown to the consumer, whether they be interest-free checking or non-slip decals for the bathtub. Or, it may explain the advantages of one brand over another, as in "brand X gets more mileage than its nearest competitor," or "XYZ Airlines has the lowest fares to Florida." Armed with information provided by advertising, consumers are in a better position to choose those products and services that provide them with the greatest possible satisfaction.

Advertising benefits producers as well, for it enables them to match their own unique offerings with those consumers who find their particular products and services most attractive. Of especial importance is the role of advertising in facilitating the emergence of new competitors, and thus the maintenance of a viable competitive environment.

Although serious debate within the economics profession continues, there is substantial and increasing evidence that advertising facilitates the entry of new firms and new products. Even advertising's harshest critics would probably agree that without advertising there would be a slowing of the rate of entry of new firms and the rate of introduction of new innovative products.

All of the above, of course, assumes that advertising will be reasonably truthful. I say "reasonably", because "reasonable" people can differ, and often do, over what constitutes "truth". But let me be very clear: truthful advertising is a highly desirable goal, and as Chairman of the Commission I will pursue it with vigor.

The relevant question is how best to achieve truthful advertising. The starting point should be a realization that the Commission is only one of the actors in this drama. Companies have incentives to make sure their advertisements are truthful even without government sanctions. A company's reputation is a valuable asset. Reputations are built by selling products that deliver on the claims made for them.

Reputations built on years of good performance can be destroyed very quickly by promises that cannot be fulfilled. Advertisers cannot fool most consumers very often or very long, and when consumers discover they have been fooled they have a propensity to take out their frustrations at the cash register. Products which are frequently purchased and easily evaluated that do not reasonably perform "as advertised" do not perform at all for very long.

Companies must also take care to assure the truthfulness of their advertising to avoid lawsuits from slighted competitors, who are usually the first to feel the brunt of misrepresentations of competing products and services. Under the Lanham Act competitors can sue for injunctive relief and monetary damages whenever a company makes a false claim about its own product or service. Although Lanham Act cases are not common, the prospect constitutes an added incentive for firms to be truthful about their advertising claims.

One of the most significant inducements to truthful advertising is the industry's own self-regulation. The National Advertising Division of the Council of Better Business Bureaus and the National Advertising Review Board currently process a large volume of cases and achieve an exceptional degree of cooperation from advertisers in voluntarily changing potentially deceptive ads. The expeditious nature of this process avoids much needless friction between government and business and leads to improved accuracy in advertising. I applaud these efforts and promise my cooperation to assure they accomplish their objectives without anti-competitive consequences.

To complement these mechanisms, the Commission can, and should, play a constructive role. Inevitably, objectionable claims will slip through private monitoring and industry self-regulation processes. When they do, the Commission should stand ready to prosecute firms that are guilty of fraudulent and deceptive advertising practices. I assure you that as Chairman of the Commission I will expend considerable effort in this direction. Not only does this policy protect consumers and honest competitors, it also reinforces private monitoring and self-regulatory efforts.

So much for the first pillar of the Commission's contemporary approach to advertising—that is, the prosecution of false and deceptive advertising. As you know, I have questioned certain premises of the second pillar of the Commission's current policy: substantiation.

Ever since the Pfizer decision of nearly a decade ago, the Commission has required companies to have a "reasonable basis" for factual claims about their products and services. I have no problem with the concept that an advertiser be required to substantiate a claim, especially in the face of indications that a claim is false or deceptive. Consumers should be able to expect that when an advertiser makes a claim, the advertiser has reason to believe that the claim is true.

Indeed, sound business judgment would seem to dictate that firms possess solid foundations for their factual statements. I'm troubled, however, by certain aspects of the substantiation doctrine. Although I have not yet drawn strong conclusions about the doctrine, I do have several concerns that I intend to explore over the coming months.

First, the Commission may not have made sufficiently clear which claims need to be substantiated. Although the case law requires substantiation of all affirmative performance claims, the line between those claims that require substantiation and those that do not appear unclear to many advertisers. For example, a fruit juice vendor's plea for consumers to "try my product and see if you don't think it's the best" would probably not require substantiation today.

But what about a claim that "people who try our product usually like it"? Although in most contexts the latter claim is not materially different in substance, it could be read to imply that the advertiser had supporting survey evidence. Uncertainty over how the Commission will exercise its discretion imposes costs on firms that advertise and on their ultimate consumers.

A second, and closely related, concern involves the Commission's determination of the meaning of claims. In the past there may have been too great a tendency to find implied claims that did not fit the commonsense meaning of the words. When an implied claim that the firm did not think it was making must be substantiated, problems arise, because the firm is not likely to have adequate substantiation for the implied claim. A tendency on the part of the Commission to impute claims that were never intended or were understood by only a small minority of consumers could lead to restrictions on useful information and thus harm to consumers in general.

Third, I am concerned about the quantum of substantiation required. The Commission has used a flexible approach in the past, but we need to assess these standards carefully. For example, if the reasonable basis requirement is too burdensome, consumers will pay more in increased costs than they receive by way of more accurate information. Also if objective claims require elaborate substantiation, while subjective claims do not, substantiation may reduce the overall informational value of advertising. That is, in their advertising, firms will tend towards slogans and puffery, and away from hard information that may be more useful to consumers.

*The views expressed are those of FTC Chairman James C. Miller III. They do not necessarily reflect the views of the Commission or other Commissioners.

For these reasons I would like to consider whether there should be lower standards of evidence for reasonable basis than for claims once they have been challenged. And even in the extreme, I think we should reevaluate whether the Commission should impose any requirement for substantiation prior to the making of claims. I hasten to add, however, that even if the Commission were to revise its policy, this would not mean the end of ad substantiation. Indeed, for the reasons mentioned above—preservation of reputation, avoidance of lawsuits, and meeting industry self-regulatory standards—I would expect most firms to continue their substantiation programs, especially in view of effective Commission policy of prosecuting false and deceptive advertising.

Over the coming months, I will have much to say on this and other issues before the Commission. I want you to know, however, that in each case I will be guided by the statutes we are responsible for administering and by my assessment of the evidence. Like most academics, I consider vital a willingness to question conventional wisdom. I promise you an open mind and a careful weighing of the facts.

Thank you very much.●

EAST TIMOR

● Mr. TSONGAS. Mr. President, on past occasions I have expressed concern over the tragic situation in the former Portuguese colony of East Timor, and have suggested steps that might be taken to help remedy the situation. Last year nine of my colleagues joined me in expressing some of these concerns in a letter to then Secretary of State Muskie. We spoke of the need to maintain and expand an independent international presence in the territory, in light of continuing reports of armed conflict and the jailing of large numbers of political prisoners. Our letter also underscored the plight of families who have been separated by the conflict—of those who have wished to leave East Timor for Portugal and Australia but have been prevented from doing so.

I have reiterated these points several times and have also stressed the need to open East Timor to the news media and, ultimately, to find diplomatic means to bring this conflict to an end. Last week marked 6 years since Indonesia invaded East Timor.

Recent information I have received only confirms the necessity of these and other measures. In October, Amnesty International released a report on the Timor situation that once again drew attention to accounts of summary executions and "disappearances" carried out by the Indonesian forces, as well as to arbitrary imprisonment, primarily but not exclusively on the offshore island of Atauro. For 6 years these prisons have been closed to inspection by neutral international humanitarian agencies.

Reports from Roman Catholic sources in East Timor have indicated that a recent Indonesian military offensive in the territory could lead to serious food shortages in the coming months, among a civilian population still recovering from the Cambodia-like catastrophe of 1978–80. A similar report appeared in the November 26 edition of the Boston Globe. International relief agencies should be allowed to establish sufficient food stockpiles in East Timor to avert further disasters.

Only a few days ago, I received a copy of a letter, dated November 19, from a distinguished Roman Catholic cleric in East Timor. The letter details the most gruesome of atrocities, and warrants our closest attention. Unfortunately, I have not been able to adequately substantiate the number of people killed as reported in the letter. It is very clear, however, that the conflict continues and that innocent Timorese people are being killed.

Mr. President, for the benefit of my colleagues I ask that the excerpts from the priest's letter be printed in the RECORD, followed by the above mentioned Amnesty International document and the article from the Boston Globe.

The material follows:

LETTER FROM ROMAN CATHOLIC PRIEST

(Dated November 19, 1981)

The news from Timor is quite bad. However it is necessary to have the courage to receive it, considering that it is based on the truth.

With the military operation that took place in July, August, and September, it seems as if a cyclone had swept Timor from end to end, leaving the island in a true tragedy: The death of innocent children of two to three years of age, pregnant women and defenseless people massacred only because they did not want to lose their identity among the nations of the world. Approximately 500 people were accused and killed without hesitation or pity, exclusively for the crime of not wanting to integrate into the Republic of Indonesia, preferring above all to be slaves in their own independence to being well-off under the paw of others. After all this we come to the conclusion that the military operation undertaken by Indonesia in Timor not only did not produce the desired effect, but was actually counterproductive. The question of Timor cannot be resolved by shooting, only through dialogue.

But let us leave this to the politicians, considering that the policies adopted until now have been an authentic disaster. The Indonesians would like to excuse themselves with material development which they would like to undertake. However, how can there be authentic development without the participation of the Timorese people, who are now reeling from hunger, disease and all kinds of physical misery? The greatest wealth of Timor is the Timorese people, without which everything else would have no sense. Let me ask God to enlighten men so that they can understand that above all it is human dignity that should be valued, in accordance with the teachings of the last Papal Encyclicals.

STATEMENT ON BEHALF OF AMNESTY INTERNATIONAL

Mr. Chairman, I thank you for this opportunity to present Amnesty International's concerns in connection with the Committee's consideration of the question of East Timor.

The areas addressed in this statement are those which fall within the specific mandate of the organization: Amnesty International seeks the release of "prisoners of conscience"—persons who have been imprisoned for the non-violent exercise of their beliefs, for their ethnic origin, colour, sex, language or religion. It works for fair and early trials for all political prisoners and on behalf of prisoners detained without charge or trial. It opposes without reservation the death penalty and torture or other cruel, inhuman or degrading treatment or punishment.

As Amnesty International noted in a statement before this committee last year and again in a statement to the Special Committee on Decolonization's Sub-Committee on Petitions, Information and Assistance in June 1981, it was evident that violations of the human rights within the mandate of Amnesty International continued to take place in East Timor. To summarize Amnesty International's concerns in East Timor as presented on those occasions: Amnesty International has been concerned that Timorese have "disappeared" after surrendering under the terms of amnesty guaranteeing their personal safety after being captured; that others who had surrendered to or been captured by Indonesian forces have been summarily executed; that large numbers of persons have been detained without trial, some for the full period since the invasion, and held in harsh prison conditions which constituted cruel, inhuman and degrading treatment or punishment.

Information received by Amnesty International since June indicates that grounds for grave concern remain.

Since June, Amnesty International has received reports that a number of persons who had "disappeared" were in fact killed shortly after being taken into the custody of Indonesian troops. These include three persons who were reported to have "disappeared" in early 1979: a 17-year-old student named Maria Gorete Joaquim, who "disappeared" with her uncle, Leopoldo Joaquim, and two young men, Filomeno Alves and Manuel Exposto, who had been well known in Dili before the Indonesian invasion as members of the popular musical group, Os Cinco do Oriente. A third member of the musical group, Onorio Pereira, about whose fate Amnesty International had previously received information, is now reported also to have been shot and killed by Indonesian troops in early 1979. Amnesty International feels that the circumstances of these deaths must be investigated thoroughly.

In recent months Amnesty International has received more extensive reports about the imprisonment without trial of large numbers of East Timorese. These reports indicate that in two places of detention, the former Dili District Prison (Cadeia Comarca under the Portuguese administration and still known as the Comarca) and the island of Atauro off the main island of Timor, at least 2,000 persons are detained. Those held in the Comarca are reported to be predominantly former combatants, although an unknown number of them are former Timorese soldiers of the Portuguese Army who did not engage in combat against the Indonesians, while others, believed to have taken part in fighting the Indonesian invasion, have been imprisoned without trial since immediately after the invasion in December 1975. Amnesty International drew the Committee's attention last year to the harsh conditions and poor diet in the Comarca which seriously endanger prisoners' health.

Since June 1980 Amnesty International has received continual reports of persons being held on the island of Atauro to the North of the main island of Timor. According to information received by the organization, those taken to the island are civilians held simply on suspicion of being sympathetic to the independence cause. In some cases, their families have been compelled to accompany them. Once on Atauro, they are required to build their own quarters and grow their own food. There are reported to be grave shortages of some essential foodstuffs. Information on the conditions in which they are held is sparse and hard to obtain.

Amnesty International would again like to stress, as it has on previous occasions, that it cannot regard the information available to it on the human rights situation in East Timor as complete, primarily because of the strict prohibition imposed by the Indonesian occupation forces which prevents unhindered access to the territory and the free flow of information from it. The organization has received other reports indicating detainees

are being held in other places, both on the mainland of Timor and on other offshore islands. Although it cannot confirm these reports, Amnesty International considers that, together with the recent well-founded reports of imprisonment in Dili and Atauro, they give urgency to its earlier recommendation that the International Committee of the Red Cross be allowed to undertake tracing and prison visitation programs in East Timor.

Amnesty International has now accumulated considerable evidence that East Timorese taken into the custody of Indonesian occupation forces have been and continue to be treated in violation of international standards, whether their fate be imprisonment without trial, extra-judicial execution or "disappearance". Amnesty International remains concerned that the Indonesian Government still has not responded to the recommendations made to it in April 1980 for the protection of the human rights of the people of East Timor.

Amnesty International presents these findings to the Committee in the belief that they are relevant and important to your consideration of the question of East Timor.

[From the Boston Globe, Nov. 26, 1981]

PORTUGUESE NEGLIGENCE CITED IN EAST TIMOR WAR

(By Peter Wise)

LISBON.—Military documents released last month by the Lisbon government show that the negligence and lack of discipline of Portuguese troops stationed on the former Portuguese colony of East Timor nourished the outbreak of civil strife between rival independence movements and facilitated the 1975 invasion by Indonesia. More than 200,000 died in these hostilities and the ensuing famine.

The controversial documents, kept secret since they were compiled in 1975 and 1976, were disclosed by the center-right Democratic Alliance coalition government to end speculation touched off by a recent documentary on the state-run television network. In the program, left-wing leaders of the 1974 "Revolution of Flowers" were accused of vacillating during secret talks with the Indonesians, thus easing the way for Indonesia's 1975 invasion of East Timor, a remote island 300 miles off the northwestern tip of Australia.

Three prominent Socialists and several other persons are filing defamation suits against the authors of the program. They claim the program deliberately set out to discredit the left. But the two journalists concerned and the government-appointed head of the television network maintain that the documentary was an objective narrative of events, compiled after four months of research.

The controversial documentary has finally brought the question of Timor—up until now known here as the "silent Vietnam"—to the forefront of Portuguese politics, sparking a bitter, three-way confrontation between the center-right Democratic Alliance, the opposition Socialist Party and the military Council of Revolution, a left-wing constitutional watchdog and a holdover from the early days of the revolution.

The documents released by the government indicate that two factors created the climate of instability in East Timor that led to civil war and later served as a pretext for the invasion by Indonesia—an operation carried out with US-supplied arms and endorsed by successive Washington administrations.

First, following the overthrow of the Salazar dictatorship in Lisbon in April 1974, revolutionary euphoria spread quickly from Portugal to troops on Timor. Several Portuguese officers and their troops defected to Timorese independence movements while several other units were so undependable that they were taken off the island. Political differences among Portuguese military commanders had "serious repercussions both at civilian and military levels," the report says.

By August 1975, "The Portuguese army no longer held decisive power on Timor," the documents conclude. "This breakdown of military command created the conditions for civil war" when fighting broke out between rival independence movements last month. "The colonial armed forces did not have the capacity to intervene" and the Portuguese withdrew to an offshore island where they maintained a "symbolic presence" until the invasion by Indonesia five months later.

Second, the indifference of political parties in Lisbon toward the decolonization of remote East Timor worsened the insecurity of the traditionally anti-Indonesian islanders, leaving them "convinced that Portugal would abandon the territory" and exacerbating the struggles between rival groups. The documents say the pressing problem of decolonization of the richer, more densely populated African colonies, where Portugal had been at war for several years, relegated the question of Timor to a minor priority.

Portugal's post-revolutionary governments were against maintaining a link with Timor, disapproving the financial aid necessary to develop the island, while diplomatic efforts by successive Lisbon governments were not able to pressure other powers into opposing the Jakarta aggression towards Timor, the reports conclude.

The principal document released by the government was written by Col. Lemos Pires, who was appointed military governor of the island by the revolutionary government in November 1974. His 700-page report to his military chiefs in Lisbon describes how the political and military situation on the island slipped out of his control, forcing him to withdraw his troops in August 1975.

Another of the hitherto secret documents is a 200-page report on the conduct of the Portuguese military in East Timor compiled in 1976 by a four-man military commission at the orders of left-leaning President Antonio Ramalho Eanes, then chief of the armed forces. The commission is strongly critical of Col. Pires for not using force to halt the fighting between rival Timorese factions.

The release of the dossiers is highly compromising for the Socialists, and in particular for the left-wing soldier-politicians who led the 1974 Portuguese revolution. The government maintains that its only motive for publication was "the public's right to know."

But the Council of Revolution says that by declassifying secret military documents that discredit the left, the government is using the case of East Timor for political ends.

Although the present dispute is about where the blame lies for the tragedy of Timor and is centered on the events of 1975, the furor has also cast a harsh light on the present government's unsuccessful attempts to do something about the plight of the East Timorese today.

Catholic Church sources in East Timor report that an Indonesian army "cleanup" operation against nationalist guerrillas still holding out in mountain areas could lead to renewed famine.

Since mid-September, security forces have been sweeping east and west through the island in a pincer movement aimed at driving out resistance fighters, says the Australian-based organization, Action for World Development.

All male islanders between 15 and 50 and many women and children have been conscripted to help round up their countrymen. Schools and public departments have been closed, say the church reports.

This mobilization has taken the Timorese away from their lands during the vital crop-sowing season and threatens a serious food shortage, the church contacts say.

In the wake of the Indonesian invasion in 1975, thousands died from starvation and disease when crops were destroyed.

Timorese refugees recently arrived in Lisbon say one of the factors holding back thousands who wish to flee the island is the difficulty in obtaining Portuguese passports. Meanwhile, the Portuguese diplomatic initiative launched a year ago with the aim of securing self determination for the islanders and a rapid solution to their vast humanitarian problems has so far shown no results.●

NUCLEAR MORALITY

● Mr. HOLLINGS. Mr. President, I have always taken with utmost seriousness the injunction that the safety of the people is the first obligation of the public servant. In insuring that safety, we cannot play games, we can not play fast and loose, we must look at the world as it is. Sometimes, unfortunately, we get sidetracked from the central issues, as for instance when some among us speak of nuclear morality in such a way as to infer that all the moral decisions about having nuclear weaponry are made on our side of the issue.

The fact of the matter, of course, is that the other side possesses the same instruments of nuclear destruction, and we must then assess whether self-denial or unilateral restraints serve the cause of avoiding nuclear terror. If the history of this century shows anything, it is that conceding the field to our adversaries only encourages aggression and the worst kind of destruction that contemporary weapons are capable of.

The best of our moral philosophers, aware of the problem, are also aware of the solution. The great Augustine said:

To maintain peace within the natural order of men, rulers require the power and decision to declare war.

He went on to argue that those rulers must "defend the State against external war weapons."

The above quote, as well as a cogent analysis of this whole problem, is from a recent column written by George F. Will. Always incisive and penetrating, Will shows his mastery again in the December 21 issue of Newsweek.

Avoiding the temptation to synopsize that which Mr. Will has already reduced to brevity, I ask that this worthy column be printed in the RECORD.

The article follows:

NUCLEAR MORALITY

(By George F. Will)

Among the sundry and manifold changes in the world (the words are from the prayer book; a theological tone is apposite this week) is a political message from the portions of the clergy, especially the Roman Catholic clergy.

The bishop of Corpus Christi has protested the naming of a submarine for that city. This has drawn from the Navy Secretary (a Catholic) a starchy letter rejecting the implication that "naval ships and even military service are somehow profane." He says church teachings recognize the need for deterrent systems for the virtuous task of peace-keeping. "To maintain peace within the natural order of men," Augustine said, "rulers require the power and decision to declare war." They must, Aquinas said, "defend the state against external war weapons."

Do nuclear weapons invalidate that? When an Indianapolis parish votes to protest nu-

clear-arms spending by withholding half the $50 tax on its yearly phone bill, it is just confusing right-mindedness with moral seriousness. But when the bishop of Amarillo urges workers at a nuclear-weapons assembly plant to consider seeking other jobs, is he saying that deterrence is possible without nuclear weapons? That deterrence is not a great enough good to justify involvement with nuclear weapons because they are inherently immoral? It is morally incoherent to will an end without willing the means to that end. If the bishop desires a free Europe and America, and also desires unilateral nuclear disarmament, can he say how he thinks his desires are compatible?

IDOL

Seattle's archbishop urges people to consider refusing to pay half their Federal taxes to protest spending on nuclear arms. (Such spending accounts for about 2 cents of every tax dollar.) He says: "We have to refuse to give our incense—in our day, tax dollars—to the nuclear idol. Some would call what I am urging 'civil disobedience.' I prefer to see it as obedience to God." The archbishop is hardly the first person to put his political objectives above the law and to think he hears God's applause for doing so. He says, "When crimes are being prepared in our name, we must speak plainly." Moralists, especially, must speak carefully, which the archbishop is not doing when he uses words like "idol" and "crimes."

A coherent position, consistent with traditional church teaching, can turn on the distinction between what is tolerated and what is approved. Instruments of mass destruction, which for reasons of accuracy or controllability cannot be or are not apt to be used in ways that discriminate between military and civilian targets, cannot be approved. But they can be tolerated if the unilateral repudiation of them would bring on an intolerable evil (such as subjugation to an evil regime), and if the nation strives to reduce and end reliance on them.

Unless the bishops, including the Bishop of Rome, think and speak about this, clearly and soon, the church's reputation for rigorousness in moral reasoning will be jeopardized, and they will forfeit their rightfully important role in the Western world's debate about practical policy options. Already a growing number of clergymen assert that any use of nuclear forces, against any target, even in response to a Soviet use, is immoral, and so is the threat to use them under certain conditions, which is the basis of deterrence. As a practical matter in today's world, this amounts to asserting a moral duty to eschew effective resistance to a gross evil, Soviet tyranny.

Any of the wide variety of possible uses of nuclear weapons would be dreadful. However, it is reckless to decree that any use, even any possession for deterrence purposes, is necessarily a larger evil than the long night of centuries that would follow the extinguishing of Western cultural values by armed totalitarianism.

The idea that nuclear weapons require such radical revision of all rules about the use of force derives, in part, from the idea that those weapons make possible devastation on a scale hitherto unimaginable. But it is well to remember that wolves roamed through deserted villages at the end of the Thirty Years War, when weapons were primitive. In the 1950s John Courtney Murray wrote that "the whole concept of force has undergone a rapid and radical transformation, right in the midst of history's most acute political crisis."

The technology of nuclear weapons and delivery systems has driven us to a deterrence policy based on a practice that was once universally condemned: holding enemy civilian populations as hostages. But even before Aug. 6, 1945, injuries inflicted on noncombatants were not just unintended collateral effects of war; they were deliberate results, on a vast scale, of tactics tailored to conventional weapons.

What was done to Dresden and other cities does not make the use of nuclear weapons any less dreadful. But our thinking should not be controlled by the mistaken notion that any use of a nuclear weapon, of any size, would involve violence vaster and less discriminating than anything mankind has experienced.

The tone of this century (as it has been experienced by Cambodians, Biafrans, Russian Kulaks, European Jews, among others) was set by the Turkish massacres of Armenians (1914–15), which followed the Bulgarian massacres of Armenians (1894–95). They did not require sophisticated technology. Sixty thousand people died in a single day in the first world war, half a million died at Verdun, without the use of missiles, nuclear weapons or even bombing.

CARNAGE

Between 1914 and 1918 not a single photograph of a corpse appeared in a French, German or British newspaper. Perhaps that is one reason why the carnage continued so long that our civilization suffered wounds that may yet prove terminal. Clearly, societies should face facts, and the facts about nuclear weapons are so appalling they can numb any imagination not already numbed by modern history, and can provoke unreasonable responses. That is why when the subject is nuclear weapons, everyone, and especially persons propounding radical and dubious new religious duties inimical to deterrence, should remember the duty to be clear in their own minds about where their logic leads, and to be candid with others about the probable real-world consequences of the behavior they favor.●

SOIL EROSION

● Mr. GRASSLEY. Mr. President, we are well aware of the ramifications that continued soil erosion presents to our Nation as well as to the world. If we cannot bring soil erosion under control, we will at some point find ourselves unable to feed ourselves, let alone the rest of the world.

We are also aware of the financial difficulties that our farmers are experiencing. Simply, their costs have skyrocketed well beyond their incomes. Our latest bumper crops have depressed prices even further. There are a number of things that can be done to help farm prices, but clearly, the best approach is to expand agricultural markets—both at home and abroad.

Expanded exports, however, have been singled out as a significant cause of soil erosion. We have all heard the argument that we are exporting our soil along with our grain. If this is true, it presents a serious dilemma for our agricultural sector and the country as a whole—how can we expand our exports to increase farm income if it means that agriculture's lifeblood, soil, is exported with the commodities?

I have seen a number of articles that support this soil export theory. Recently, however, a friend of mine who farms in Iowa, Mr. Howard Mueller, sent me a copy of an article that was written in the November 30, 1981, edition of Farmland News. As Mr. Mueller pointed out to me, this seems to be one of the few articles that presents the other side of this soil export theory.

I think that this is a very good article and am taking the liberty of submitting it for the RECORD to share with my colleagues. This is an issue of extreme importance to our farmers, and therefore, we need to keep the whole matter in proper perspective. Let us make certain that before any action is taken based upon a theory that can have profound effects upon our farmers, that we have some proof as to the validity of this theory. I urge all of my colleagues to take a few minutes to read this article.

The article follows:

THOUGHTFUL STUDY FINDS NO FIRM LINK BETWEEN INCREASED EXPORTS AND SOIL EROSION

The release of the USDA's new soil conservation proposals by Secretary of Agriculture John Block has turned up the heat under an already simmering cauldron.

Coming to a boil is the issue of how increased exports of U.S. grains affect the condition of this country's soil resources. In the pot is a vegetable stew of editorial writers, economic analysts, soil conservation professionals, farmers, politicians, voters and taxpayers.

Out of that pot could come the decision to impose strict limits on further exports of U.S. agricultural products in the name of preserving our soil resources for future generations.

Should that decision become law, it would inflict even further injury on the already wounded agricultural sector of our economy.

It would be the wrong decision made for the wrong reasons based on a rationale that relies too heavily on "common sense" assumptions and superficial analysis of the problems at hand.

While it is legitimate and necessary to continually question the effects of increased exports on soil conservation, it is not rational to blame increased exports for an assumed decline in the quality or quantity of our soil resource base. To simply ask a question does not mean that there is a problem.

In fact, a recent analysis by Leo V. Mayer, just appointed associate administrator of the USDA's Foreign Agricultural Service, suggests strongly that far from damaging our soil, the increase in exports this past year may have significantly improved our soil resource base.

In a recent telephone conversation, Mayer said he began his research trying to prove there was a strong link between the increased exports of U.S. food and the deterioration of this country's soil. He found no such linkage.

The issue of how increased exports, generated by the "fence row to fence row" production philosophy of the '70s, affects soil conservation came before the Congress in 1977 and resulted in passage of the Resource Conservation Act (RCA) of 1977. One feature of that legislation called for a survey of the nation's soil and water resources.

While it is almost impossible to make a direct correlation with similar surveys of past years, some comparisons can be made.

Those comparisons with resource surveys made in 1963 and 1964 suggest strongly that "soil conditions must have improved in order for crop yields to improve so substantially over the past half century," Mayer said.

The 1934 survey is of particular interest, for it was made before federal soil conservation programs were begun. The 1977 survey found 77 percent of cropland with only slight erosion compared to 47 percent in 1934. Moderate erosion was found on 13 percent of the land in 1977 compared with 38 percent in the 1934 survey while severe erosion afflicted only 10 percent of our cropland in 1977 compared to 15 percent in 1934.

"Even taking into account differences in the ways the two surveys were conducted, the improvement is so substantial as to warrant a conclusion similar to that based on the increases in crop yields," Mayer said. "The na-

tion's soil resources have improved vastly over the past half century of federal efforts at soil conservation."

It does not appear that the frenzied reaction of some analysts and editorial writers is justified, Mayer said in calling for a further analysis of what the true situation is with respect to soil losses and exports.

That sentiment was echoed in a letter to the editor of the Chicago Tribune from Roger Clark, Brady, Neb., farmer who is chairman of the Agricultural Council of America and a member of Farmland Industries' board of directors. Clark wrote, "The notion that we 'export our soil with our grain' has been current virtually from the start of the farm-export boom in the early 1970s. It should neither be embraced nor rejected because of its bumper sticker simplicity, but should be explored far more thoroughly."

Mayer said, "The current efforts of some writers to press the issue of soil losses by questioning the advisability of food exports is out of step with the economic realities facing agriculture.

There is today no possibility of bringing to bear expensive soil conservation programs that are totally funded by the federal government. In the first place, the government simply does not have the money nor does it have the will.

Any further development of soil conservation programs is going to follow, more or less, the line suggested by Secretary Block when he put the USDA's new program before Congress. Farmers benefitting from soil conservation programs are going to have to bear some of the costs.

If we restrict exports to save the soil, we are going to reduce farm income significantly further than it has been reduced. The end result will be that most farmers will have less money to invest in long-term soil conservation programs with little or no immediate return on those investments. The inability of farmers, to pay their share of the costs of such programs will mean that they will choose not to participate.

It may be that soil conservation professionals have some unreasonable goals in mind in their desire to promote soil conservation. There is, in short, a difference between practical programs and perfect programs.

In one case cited by Mayer, he quotes Norman Berg, administrator of the Soil Conservation Service, who said in 1979, "There are 1.2 billion acres with an annual soil loss of five tons per acre or less; there are 124 million acres with a loss of between five and 14 tons per acre per year; there are 61 million acres suffering an annual loss of more than 14 tons per year."

Taken at face value, those are frightening statistics. All that soil sliding into the seas or adding to the air pollution afflicting our major cities on the eastern seaboard. One could easily conclude that two or three more years of erosion at this rate, and we would all be plowing bedrock.

Yet this year alone, we will harvest a record corn crop, our second best soybean crop, a record wheat crop and a very good milo crop. What's happening?

Berg went on where many analysts and most editorial writers stopped. There is a "soil loss tolerance" of about five tons of soil a year, the amount of soil that is replaced each year by crop residues and other activities of nature.

Taking into account, the conclusion is that 1.2 of the 1.4 billion acres are in stable condition. Of the remaining 200 million acres, about two-thirds are experiencing moderate erosion and about one-third—a small percentage of the whole—is suffering serious erosion problems.

"Still, this could be interpreted as a serious problem," Mayer observes. That's particularly so if analysts, editorial writers and soil conservation professional are trying to make a case for a perfect soil conservation program.

"It might be held that if the amount of erosion was going down over time," Mayer wrote, "progress was being made and no national soil loss problem existed. Another view might be that any amount of eroding land threatens productivity and is a national problem. The latter view appears to have been adopted by the technical soil scientists."

In conjunction with the RCA surveys of current conditions, projections were made to estimate the effects of increased exports on soil conservation through the year 2030. Briefly, the results indicated that crop yields will increase over the next 50 years even with a continuation of current erosion rates. Interestingly, the projected increases in yields will involve progressively less of the marginal cropland that is most prone to erosion.

"This evidence is not consistent with current news reports that imply that erosion rates are out of control and threaten future farm productivity, Mayer concluded.

Clearly, the situation is not the "raging inferno" as suggested by a staff member of the National Resources Defense Council.

In his study, Mayer suggests a far more important problem, one that is infinitely more complex, is the question of allocating this nation's declining water resources. "This problem may be far more troublesome in another decade than soil erosion will be," Mayer said. "The politics of this issue will be intense."

And he suggests, as do a number of other thoughtful observers of American agriculture, if we are going to question U.S. farm export policies and goals, should we not consider what we are importing?

Currently all the emphasis is on exporting raw, unprocessed grains. Mayer observes that should the United States convince other countries to open up their markets to secondary farm commodities like meat, then American farm production could shift toward more animal products and the waste by-products could be returned to the fields to maintain soil tilth and fertility.

Emphasis on exporting ruminant animals, in particular, would also have the advantage of increasing utilization of those marginal lands which should not be converted from pasture to cropland. It would greatly stabilize, if not enhance, the current economic plight most livestock producers are suffering.

The main point to remember, though, is that increasing U.S. farm exports this past decade has not caused the irreparable damage to our soils that many claim. Exports, increased exports are the one firm hope most American farmers have for their economic salvation. To restrict exports now would condemn many now in farming to lives of really grim economic disappointment.

There are issues to be faced in the area of the impact of exports and the conservation of our natural resources.

The future prosperity of American agriculture rests on economic and political decisions. We must be strong enough to face the real issues and not be diverted by controversies that exist only in the minds of some analysts and editorial writers.

Above all, those with interests in American agriculture—ultimately all this nation's citizens—must insist that the decisions we make about agricultural issues be ultimately based on reason and understanding.

—JACK KENWARD.●

ARMANDO VALLADARES—CUBAN POET

● Mr. JACKSON. Mr. President, the Cuban poet and political prisoner Armando Valladares has suffered greatly for his refusal to cooperate with the Castro government and to remain silent about its abuses. Arrested for expressing religious and philosophical convictions incompatible with the Castro government, Valladares has been in Cuban prisons since 1960, when he was just 23 years old. As a result of his prison experiences, he suffers from serious physical ailments including a heart condition and polyneuritis which has left him an invalid.

Despite this suffering and the promise of more, Valladares has refused to lay down his pen and some of his poems have been smuggled out of Cuba. Two years ago, a book of his poems entitled "Prisonnier de Castro" appeared in Paris. This work is dedicated to his brothers in prison and describes their suffering at the hands of the Castro authorities. For this act of defiance, Valladares was removed to a remote prison, deprived of his books and other possessions, and held incommunicado.

In addition, it is reported that his elderly parents and sister, who have permission to come to the United States, are being denied exit permits by Cuban authorities until Valladares signs a letter denying his mistreatment in prison. This, Valladares has refused to do.

Armando Valladares, who has been adopted by Amnesty International as a "prisoner of conscience," is a courageous spokesman for freedom and human dignity in Cuba. In late December 1977, together with 46 Senators, I wrote to Castro expressing special concern for Valladares and urging his release on humanitarian grounds. This December 12, in a letter to the Washington Post, Martha Valladares, the wife of Armando, again appealed for the release of her husband. I join this latest appeal and ask that her letter be printed in the RECORD.

The letter follows:

WILL ARMANDO VALLADARES EVER BE FREE?

On Dec. 27, my husband, Armando Valladares, will have completed 21 years of incarceration as a political prisoner in Cuba. He was 23 when he was sentenced to 30 years for "conspiring against state powers." Since then, Amnesty International has urged the Cuban government to review those sentences, pointing out the irregular nature of many trials during the early days of the revolution. Amnesty International has repeatedly called for Armando's release.

Armando is virtually paralyzed, and has been confined to a wheelchair since 1968 as a result of prison mistreatment. His condition is known as polyneuritis, a flaccid paralysis of the lower extremities that may be reversible if he is given adequate medical treatment. This malady resulted from a 47-day deprivation of food enforced by the prison authorities because he refused to wear the uniform of a common criminal. He has been beaten many times and has not been allowed visitors for more than four years.

Armando is a poet. His poems, smuggled out of prison, have been collected in several books published in Spain, France and the United States. His mother, sister and brother-in-law, himself a former political prisoner, are virtual hostages of the Cuban government. Although they have the foreign visas needed to emigrate, the Cuban government has denied them the required exit permits, and prison authorities have informed my husband that he will have to sign a letter denying his prison mistreatment if his family is ever to be permitted to leave Cuba.

What can induce the Cuban authorities to set him free?

MARTHA L. VALLADARES.●

EL SALVADOR

● Mr. MOYNIHAN. Mr. President, today, even while the eyes of the world are turned anxiously toward Poland, awaiting the outcome of the current, momentous struggle between Solidarity and the democratic principles it embodies, on the one hand, and the repressive, totalitarian tendencies of the increasingly harsh military rule which has recently been imposed, there continues to evolve in El Salvador a not dissimilar struggle between persons who would establish democracy and forces which would prevent it.

Elections have been set for March 28, 1982 in that war-ravaged land, in the hopes that a popularly elected government would be created and will thereafter be able to bring to an end the violence that has brought El Salvador to the brink of economic and social ruin. Seven parties have registered to compete in those elections. Sadly, the principle opposition formations have, as yet, not consented to participate.

One hopes that the administration will use what influence is at its disposal to facilitate the participation of the moderate opposition in these elections. I believe that all Senators would want to see this happen. I know every Member of the Senate shares my concern about the situation there. In the interests theremore of furthering knowledgeable discussion and debate in this body, and throughout the Nation, with respect to events in El Salvador, I ask that there be printed in the RECORD the text of a report issued just yesterday, at the National Press Club, by a committee of distinguished Americans—religious, civic, and academic leaders—who have recently returned from a trip to El Salvador.

The material follows:

CITIZENS' COMMITTEE ON THE EL SALVADOR CRISIS

In response to the rising concern in the United States about developments in El Salvador, a group of seven members of civic, academic, religious and other non-governmental organizations visited there from December 4th to 13th, 1981. The objective of our mission was to evaluate current conditions and assess the possibilities for a democratic approach to improving the political and economic situation, and thus to aid in moving toward solutions to that bloody conflict. We conferred with a wide spectrum of citizens and leaders, governmental and otherwise. The list is appended.

While we see no easy road ahead for El Salvador, some essential steps toward peaceful democratic solutions to the current and often violent conflicts are under way: the sweeping land reform program enacted by the Christian Democratic government in March and April of 1980, and the elections that are scheduled for March 28, 1982, to name a Constituent Assembly.

However, the success of these processes is endangered by the violence and terror which are ripping apart the fabric of this society, not only due to the conflict between the guerrilla forces and the government but also to the violence against the people of El Salvador perpetrated by terrorists of the extreme right and left, and by elements of the government's own security forces.

(1) The land reform program has broken the grip of the "oligarchs" on the country's economic, social and political systems. This program turned into owners of the land they had cultivated as laborers, tenants and sharecroppers over two-thirds of the formerly landless campesinos or farm families of El Salvador. About 40 percent of all crop land has been transferred to over 200,000 of the 300,000 landless rural families, totaling about 1,200,000 persons. This kind of economic and human development is essential to building a foundation for a strong domestic economy that can support further industrial development.

That the land reform program is irreversible is widely accepted throughout most sectors of the society. It is generally recognized that any widespread effort by the former owners to take back the land would result in even more deplorable levels of violence.

We found a surprising degree of agreement on the need for campesino ownership of their own land, not only by the representatives of urban and rural workers, but also on the part of leaders of the business community as well. Moreover, the campesino organizations join the other leaders in calling for prompt payment of compensation to the former land owners.

However, the slow pace of issuing formal titles to the new owners is increasingly encouraging former landlords to evict illegally campesinos who have a rightful claim to the land, sometimes with the help of government security forces. Since no government undertaking land reform has prior experience in doing it, outside technical assistance is essential for establishing procedures for rapid issuance of titles. But such assistance is thus far badly lacking. Likewise, participation by the campesino organizations at all levels of implementation of the title process and administration of the land reform program is essential to its success.

The land reform program, and in turn, the prospects for peace, will be seriously jeopardized unless there is a rapid acceleration of title issuance process.

(2) The Government of El Salvador is committed to the electoral process, with the official campaign beginning on January 6, 1982, and culminating on Election Day, on March 28. All parties have been invited to participate, and so far seven have announced their intention to do so. February 28, 1982, is the deadline for registration of parties. So far the Frente Democratica Revolucionaria and its affiliates have regrettably refused to join this process. We encourage all parties to explore ways to bring into the electoral process all those who want a political rather than a military solution. We urge continuing efforts to conduct a dialogue to ensure maximum participation in El Salvador's sovereign act of self-determination.

There are grounds for confidence that the elections can be conducted honestly and fairly. An electoral commission has been established under the chairmanship of an independent civilian of unquestioned integrity. The Armed Forces have been enjoined from taking part in the elections and from being present in the polling places. Observers have been invited to be present during the campaign until the vote is counted, from democratic governments and from such international bodies as the Organization of American States, the European Parliament and the United Nations as well as concerned non-governmental organizations. The curfew has been lifted, and we have urged that the State of Siege be lifted during the electoral campaign so as to permit full freedom of assembly, speech and political activity, including full access to the media. We are concerned that the 3-man electoral commission is too narrowly based to insure maximum confidence in the process and participation in the election, and urge its expansion.

(3) Effective agrarian reform and fair and honest balloting will make a major contribution to alleviating economic misery and injustice as well as violence and terror. But the armed forces must address immediately and directly the issue of violence and abuses of authority within their own ranks and take responsibility for setting an example of consideration for the rights of its citizens. The Government must curb the excesses of their own forces and take steps to reconstitute the badly faltering judicial system.

(4) In virtually every quarter, the necessity for continued or increased economic aid was voiced. Our committee urges in the strongest terms the implementation of a substantial economic aid program to help revitalize El Salvador's enfeebled economy, with priority on the land reform program. We call upon church groups, relief agencies and such non-governmental organizations as CARE and the International Rescue Committee to make special efforts to bring assistance to the displaced persons within the country and to those who are refugees abroad.

Convinced, that a military solution to the conflict is not possible without enormous cost in human life and at the expense of those democratic values we seek to defend, we urge a halt to arms shipments from all quarters. We recommend that the United States government propose a cessation of all military aid from all sources under international supervision and control. If that proves impossible, we support the widespread view of religious and civic leaders outside of the government that U.S. military aid must continue as long as Cuban, Soviet and other military aid is being supplied to the guerrillas.

The United States should insist that weapons supplied for defense against the guerrilla aggression must not and cannot be used in violation of human rights against the citizens of El Salvador.

We conclude by emphasizing our hope that a democratic middle way may emerge in El Salvador. We note that it is in the power of the armed personnel on both the left and right to create major violent disturbances before the elections that will impair them. These extremists will then draw upon themselves the condemnation of all supporters of democracy.

PARTICIPANTS IN STUDY/MISSION TO EL SALVADOR, DECEMBER 4 TO 13, 1981

Co-chairman:

Clark Kerr, Chairman, The Land Council; President Emeritus, University of California, (Berkeley, California).

Ambassador Angier Biddle Duke, Chairman, National Committee on American Foreign Policy: former Ambassador to El Salvador (New York).

Other participants:

Rev. Ernest Bartell, Professor of Economics, Notre Dame University; Executive Director, Kellogg Institute on International Studies (South Bend, Indiana).

Orville Freeman, President, Business International; Former Governor of Minnesota; former Secretary of Agriculture (New York).

Rev. Ira Gallaway, Pastor, United Methodist Church, Peoria, Illinois.

Rabbi Arthur Schneier, Park East Synagogue, New York; Chairman, Appeal of Conscience Foundation.

Mary N. Temple, Executive Director, The Land Council (New York).●

NOMINATION OF DAVID L. RUSSELL TO BE U.S. DISTRICT JUDGE

● Mr. NICKLES. Mr. President, it is my honor today to introduce to the Senate, David L. Russell, who has been nominated by President Reagan for a U.S. district judgeship in my State of Oklahoma.

I have known Mr. Russell for several years. He is an outstanding individual, a

very strong conservative, and is greatly respected by the legal community.

His knowledge of the law, judicial temperament, and sincere personal integrity make him an excellent Presidential nominee for this extremely important position.

Mr. Russell has an exemplary background of service to our country. From 1973 to 1975 he was chief legislative assistant to U.S. Senator Dewey Bartlett from Oklahoma.

From 1975 to 1977 he was the U.S. Attorney for the western district of Oklahoma—a position he was reappointed to this year by President Reagan.

Mr. President, earlier this year a nine-member, bipartisan committee of outstanding Oklahomans conducted a statewide search for candidates for Federal judge. That committee found a number of Oklahomans who meet the qualifications for Federal judge. After many personal interviews, Mr. Russell was recommended to me by the committee, and I wholeheartedly concur with their recommendation.●

DEPARTMENT OF DEFENSE APPROPRIATIONS—CONFERENCE REPORT

● Mr. ARMSTRONG. Mr. President, for the most part, I am pleased with defense appropriations conference report, and with the provisions in it relating to pay and benefits for our service men and women. I am especially pleased that Senator STEVENS and the other Senate conferees were able to get the House to recede from what I consider to be indefensible positions with regard to permanent change of station (PCS) moves, foreign duty pay, a cost-of-living allowance for single servicemen stationed overseas, and establishment of a more substantial basic allowance for subsistence (BAS) for career enlisted personnel. It is clear that the Senate conferees more than held their own, and they are to be commended for it.

I must express deep regret, however, that the Senate conferees receded to the House position on the issue of equalization of the payment of per diem to officers and enlisted personnel.

The issue of per diem pay involve only a small amount of money—about $33 million—but, in my view, it involves a principle of great importance.

Per diem is normally paid when members of the Armed Forces are transferred away from their home duty stations on a temporary basis. For many years, there has been a basic injustice in the way per diem regulations were written. When an officer goes on temporary duty, he continues to draw his basic allowance for subsistence (BAS). All officers receive BAS each month. BAS is paid to enlisted personnel only when they do not have access to a Government mess. The vast majority of enlisted personnel who receive BAS are married.

An officer who goes on temporary duty is entitled to draw both his BAS and per diem. But, until this year, enlisted personnel eligible for BAS had their per diem subtracted from their BAS.

This was in my view, unfair. The Senate first took action to remove this inequity in November of 1979 when it added to the Defense Officer Personnel Management Act an amendment I offered to permit enlisted personnel, as well as officers, to draw both BAS and per diem when on temporary duty. Regrettably, this provision was dropped in conference. However, the defense authorization bill Congress approved earlier this year did contain a provision providing for equalization of per diem pay.

This justice has, however, been short lived. No sooner had the full Congress voted to equalize payment of per diem than the Defense Appropriations Subcommittee of the House of Representatives voted to delete the funds required to pay for this overdue reform.

The language in the House Appropriations bill would limit enlisted per diem to either the food portion of per diem or the basic allowance for subsistence, whichever is greater. This is not quite as bad as the status quo ante, but it is bad enough. Enlisted personnel will be treated differently from officers, and differently from other Federal employees, who do not have their per diem pay subtracted from their salaries when they are sent on temporary duty away from their customary places of work.

As I noted above, our Senate conferees felt they had to accede to this position in order to preserve what arguably are more important military personnel programs which were also savaged in the House version of the defense appropriations bill. I regret that this happened, but I understand the delicate tradeoffs and the difficult judgments that have to be made in conference.

But I want to make it clear, Mr. President, that this is the last word that will be said on the issue of equalization of per diem pay. At the appropriate time in the appropriations process next year, I intend to offer an amendment to fully fund the provisions of Public Laws 96–513 and 97–60, which provide statutory authority for equalization of per diem pay.

Again, I want to congratulate the Senator from Alaska, Senator STEVENS, and the other Senate members of the conference committee for the yeoman service they have performed for our men and women in uniform. Perhaps next year our House colleagues will share their enlightenment about all the needs of our military personnel.●

PROBLEMS AND POSSIBILITIES FACING AGRICULTURE DURING THE 1980's

● Mr. GRASSLEY. Mr. President, last week, Mr. John W. Megown, president of Megown & Associates of Marion, Iowa, and past chairman of the Iowa Agriculture Promotion Board of the Iowa Development Commission, spoke before the 1981 Convention of the Iowa Dairy Associations. The topic of his speech centered upon the problems and possibilities facing agriculture during the 1980's.

I have known Mr. Megown for some time and say without reservation that this gentleman has pursued a very distinguished career in agriculturally-related fields and is a highly qualified expert on agriculture issue, among other matters. In this light, I am taking the liberty of inserting into the CONGRESSIONAL RECORD the content of Mr. Megown's speech. I believe that this speech is of considerable informational value and that all of my colleagues would benefit if they took a few moments to read it.

PROBLEMS AND POSSIBILITIES FACING AGRICULTURE DURING THE 80'S

(By John W. Megown)

It's a pleasure being here at the 1981 Iowa Dairy Convention. I want to thank you for inviting me and giving me this opportunity of providing you with some food for thought.

Normally at this point in my speeches, I extend my best wishes for a successful meeting in my capacity as Chairman of the Iowa Agricultural Promotion Board. Since I retired from that position a little over a month ago, I am now pleased to do this as a private citizen.

When Joan Stock asked me to give this speech, I was delighted, because for the first time in many years I would be speaking in a capacity other than as either a State official or as a radio commentator.

Speaking of being a radio commentator, I have to tell you about how that strange odyssey began.

Many of you probably know Mark Oppold, formerly the Farm Editor with WMT–Radio and TV in Cedar Rapids.

Early in 1978, Mark got the bright idea that I should do a weekly radio commentary about agriculture and food issues. I declined the invitation, but by April, he had talked me into trying it. So, at 7:25 a.m. one Sunday morning, I went on the air on WMT–Radio with a commentary entitled, "Bureaucrats Are Listening."

Little did either of us realize what we were starting. By the summer of 1980, the "Food for Thought" show was being broadcast by over 700 stations in the U.S. and Canada. The coverage area was from western Montana to the Atlantic coast, and from the Mexican border up into Canada—with millions of listeners.

Because of doing this syndicated radio show, for thirty-two months I had a unique vantage point to observe what was happening to America's farmers—the good and the bad.

I was able to observe very closely all of the events and the key people affecting our Nation's largest and most productive industry—agriculture.

I was able to interview many of those people, like Ag Secretary Bob Bergland, other top USDA officials, many members of Congress, leading scientists, farm leaders, and even some consumer activists. I am sorry to say that I never was able to interview Carol Tucker Foreman, because she seemed to deftly avoid such an encounter.

With each broadcast, I tried to set the record straight about a current agricultural or food issue. During those turbulent times, I zeroed in on a host of controversial topics, like: the many problems being caused by overregulation of agriculture; the attempts to ban antibiotics and drugs in feeds, as well as agricultural chemicals; the decline in agricultural production research; problems involving agricultural financing; inheritance taxes; the future of the family farms; the banning of whole milk in the school lunch program; and the one I talked about the most—the great nitrite boondoggle.

Those thirty-two months, when we were doing the radio shows, were some of the most turbulent and topsy-turvy times for America's farmers.

It was a rare experience and a privilege to be able to observe first-hand the events and people of this era, and to be able to comment on that unique period in our Nation's history.

Some of the problems that I commented on are no longer burning issues, like overregulation and the nitrite issue, but some are still lurking around, and others are appearing, as we move deeper into the '80s.

Speaking of the nitrite issue, this should be remembered as a classic case of some Federal bureaucrats becoming completely carried away with their authority, and hurting American agriculture unnecessarily.

The USDA's ridiculous regulation on the use of nitrite in bacon cost the livestock industry over $5 million. The direct cost to taxpayers for USDA enforcement of the 1978 regulation has been almost $1 million.

The positive effect of the nitrite fiasco is that America's farmers learned how to defend themselves against unreasonable regulations. They learned to work together and to communicate the facts to Congress and the public. If they had not done this, the pork industry would have been virtually annihilated.

As we move further into the decade of the '80s, some other problem areas are becoming more evident, like these: The erosion of our soil; the energy cost-supply situation; the negative effects of high interest rates; higher and higher production costs; the lack of sufficient cash flow for many farmers; the decline in total number of farms; the declining proportion of the medium-size family farms; the great difficulties faced by young people trying to get into farming; the constant attacks by social and dietary activists—the worst of these being the farm animal welfare issue, or as some call it, the animal rights issue.

All of these problems will constitute developing threats to the traditional American farm family on the American family farm.

The '80s will definitely be a time of unparalleled challenge—even peril—for America's farmers.

A young lady from near Iowa City by the name of Mary Wall won the 1981 Iowa Farm Bureau essay contest. Here's what Mary Wall had to say about the present decade: "The '80s are a decade of challenges, challenges to find alternative energy sources, fight inflation and obtain world peace. The '80s present noteworthy challenges for agriculture. We must feed the increasing population, make a profit and yet not lose or destroy the soil for future generations."

In that single paragraph Mary spelled out very clearly what the '80s are all about for America's farmers.

The total number of farms will decline significantly by the year 1990, from 2.48 million in 1978 to only 2.09 million in 1990. There will be a large proportion of small farms, an ever-increasing proportion or large farms, and a declining proportion of medium-size farms.

It was on the medium-size farm—the family farm—that this country was built.

For your information, the medium-size farm has a gross income in the range of $20,000 to $99,999.

Apparently not everyone feels that an ever-increasing proportion of large farms and a declining proportion of medium-size farms is bad.

The Chicago Tribune magazine of May 17, 1981, contained a cover story about AG Secretary John Block. Here's a paragraph from that story: "Block wants more big farms, more exports, more (Government-financed) research for more technological development that will allow (fewer) farmers to produce more food and fiber and sell them at higher prices."

By the way, did you know that the USDA now predicts that almost two-thirds of agriculture production will come from the largest 50,000 farms by the year 2000? Just think about that for a moment!

Yes, things are changing rapidly down on the family farm, and many of the changes are making it harder for farmers to prosper and even to survive—and much harder for young people to get started in farming.

A USDA study says that "the number of new farmers under 35 years of age will shrink from 475,000 from 1964–74 down to 284,000 from 1994–2004, a 40 percent drop in numbers."

Earlier this year, Vernie Glasson, director of national affairs, American Farm Bureau Federation, told a House sub-committee that "the backbone of U.S. agriculture—the farms that depend solely on income from sales of commodities—is now substantially threatened by inflation and failure of national monetary and fiscal policies."

Mary Wall, in her essay, had this to say about the survival of the family farm, "Preserving the family farm is a problem that has been getting more and more attention. Higher production costs are driving some of the family farms out. Family farms are what this country was brought up on and their importance shouldn't be overlooked. . . ."

It would now appear that survival will be the overriding challenge of the '80s. All other issues and problems will relate directly to the farmer's ability to survive.

Production costs will continue their escalating spiral. Prices paid for gasoline, diesel fuel, fertilizer, agricultural chemicals and other input items will keep on going higher and higher.

The price of fuel has doubled in two years. Fertilizer is up 7.4 percent since 1980. Cost of growing corn in eastern Iowa was up 17 percent over the last year.

Warren Melles, a Northrup King vice president, recently looked back over the last seven years at what has been happening in agriculture. Here's what he found:

The wholesale price of diesel fuel rose 370 percent. A $1,500 fuel bill seven years ago now runs $5,500.

Country bankers charged about 12 percent interest on production borrowing in January of 1974. Seven years later it was about 17 percent—a 42 percent jump.

If a farmer needed $25,000 in working capital to plant in 1974, he needed at least $50,000 this year. So besides needing twice as much money farmers had to pay 42 percent more for it.

Corn sold for $2.62 per bushel in January 1974. The price was only $3.25 7 years later. Soybeans rose from $5.92 per bushel to $7.29. Just for those two crops, prices increased by a meager 23 percent.

Here's a footnote to this: in December of 1981, corn is selling at only about $2.50 per bushel and soybeans are about $6.30 per bushel.

American industry averages a return of about 16 percent on investment. But the average U.S. farmer ekes out a living with an average return of about 3.6 percent.

Iowa net farm income in 1980 was at the lowest level in 39 years, according to Iowa AG Secretary Bob Lounsberry. Net farm income was only $4,659 per farm. He said, ". . . inflation and the cost of production have hurt us badly."

The 1980 income figure compares with $15,831 in 1978 and $19,068 per farm in 1973.

There can be no doubt that farmers must implement production practices that will help to moderate cost increases.

Minimum tillage and no-till practices represent possible solutions, and, at the same time, help to slow down soil erosion.

The use of alternative energy resources, like alcohol made from grain, should help to reduce costs—and also reduce dependence on the profit-hungry oil companies.

Another key part of survival, and hopefully prosperity, will relate to how a farmer does business.

I heard a speaker the other day say, "No longer can farmers afford to buy everything retail and sell almost everything wholesale."

There's sure a lot of food for thought in that statement!

Outside forces have long had, and still have, a great influence on how the individual farmer operates and how successful he will be.

During the '80s, farmers are going to have to find ways to gain more control of their individual operations, and become much less dependent on outside business and governmental involvement.

They are going to have to become much more marketing and promotion oriented.

Farmers will need to find new ways of generating a more constant positive cash flow.

New and innovative methods for financing farm improvements and production costs must be developed, and soon!

Hopefully, the needed changes will come and will help to sustain many of the medium-size farm operations.

I feel that American agriculture is at a turning point. I also feel that America's farmers are going to be able to develop their own creative solutions to many of the problems that exist, without excessive interference from the Federal Government.

My final radio commentary, broadcast the last week of 1980, was entitled, "An Era of Great Possibilities."

I talked about how I felt there would be less governmental interference from Washington during the '80s, and that despite the many challenges, America's farmers will be able to turn their problems into possibilities, and that they will take full advantage of these possibilities.

Dr. Robert Schuller says that every problem is another opportunity, and that every adversity hides a possibility. He also says, "today's accomplishments were yesterday's impossibilities."

Since there is no shortage of problems, there will be many possibilities and opportunities during the '80s.

Time doesn't allow me to go into detail about each and every one of the various problem areas.

One that I was specifically asked to discuss is the farm animal welfare issue. So, that I will do.

I first heard of this in October of 1980, and did a radio commentary about it in December of 1980.

In about a year's time, this issue has moved off the back burner and is one of the hottest and most sensitive issues of this decade. It has already built up a full head of steam.

Professional "social activists" have merged themselves into the farm animal welfare movement, and under the banner of animal rights are attacking almost every ill they can think of and attributing them to today's modern agriculture. Experienced operatives from the civil rights, peace, femenist and other progressive movements are providing training for the welfarists.

James Mason, the author of "animal factories,' in an article in Vegetarian Times, said that more and more kinds of direct action—"glimmerings of guerrilla warfare"—are going to be seen on behalf of animals.

Dr. Stan Curtis of the University of Illinois says, "the people involved in this movement are undoubtedly well-intentioned people. But these people are utterly naive about modern animal production. They've already taken to recommending revolts."

Here are some of the things the farm animal welfare groups are protesting: the way market animals are transported and slaughtered: the way sows are confined to farrowing crates; caging and debeaking of chickens

in egg laying and broiler production: tail docking; castration; clipping needle teeth; dehorning; ear notching; "souped-up" cattle rations; the lack of adequate veterinary care for sick animals by farmers; routine drug use; confinement on full concrete slatted floors; rearing of dairy replacements in narrow pens, etc.

The most vigorous protests have been aired over veal production by dairymen.

Some farmers and agri-businessmen might find it more comfortable to ignore this issue, in hopes it will go away. I can assure you that it will definitely not go away.

Here are some examples of what's been happening:

The Humane Society of the United States has been distributing a curriculum guide, which is said to be heavily oriented toward vegetarianism and teaches that farm animals have "inalienable rights" the guide is being used in classrooms in the U.S. and Canada at the preschool and kindergarten level, and continuing through the sixth grade.

A nationwide telethon via cable to raise funds for animal welfare and wildlife preservation is now being planned for early 1982. This is to be a 36-hour marathon production involving cable systems servicing 20 million households.

The USDA plans to spend $380,000 to determine if confinement conditions lead to stress in farm animals.

Ohio Congressman Ron Motti introduced a piece of legislation in Congress calling for a "farm animal advisory council" to look into intensive livestock practices. The other part of the bill is said to require labeling of food indicating whether it came from animals raised humanely.

The ABC television network has twice broadcast its 20/20 segment on animal rights.

U.S. News & World Report carried a story entitled, "Now It's Civil Rights for Animals."

It is easy to see that it is high time that people involved in agriculture begin to get ready for handling the animal welfare issue.

If the welfarists have their way it will prove to be very costly for both farmers and food buyers.

It is up to each of us aggies to become better informed about this issue, and for all of us to work together to keep the welfarists honest as to the scientific basis for their concerns. much as we did with the over-zealous USDA bureaucrats with the nitrite problem.

That's enough about that problem! Let's move on to another big one—the farm energy situation. This is one that seems to offer some good possibilities and opportunities.

You will remember a few minutes ago when I quoted Warren Melles about the price of diesel fuel going up a whopping 370 percent in just seven years.

Farmers all over the midwest are starting to produce some of their own fuel requirements in the form of alcohol made from grain.

In addition to the development of on-farm stills, existing industrial stills are being expanded and upgraded, and new ones are being built. Several are in the planning stage to be built in Iowa in 1982. Some of them will be owned by groups of farmers.

Whoa there! I'm getting ahead of myself with this story.

Just agout a year ago, while attending a reception in Washington, D.C., I met a midwesterner involved with on-farm alternative energy production.

This chance encounter led me to become deeply involved in this new industry as a marketing/nutrition/financial consultant.

As chairman of the Iowa agriculture promotion board, I had previously been involved in designing and conducting the nation's first gasohol marketing research project back in 1978.

In June of 1978, the agricultural division of the IDC and the Iowa corn promotion board launched a 3-month study to evaluate if people would buy gasohol, and if so, why.

For your information, gasohol is a mixture of 10 percent 200-proof ethyl alcohol and 90 percent unleaded gasoline.

Some of us Iowa Aggies felt that, in addition to reducing our reliance on gasoline and diesel fuel, the production of alcohol from grain and using it as a fuel extender would provide an additional market for our crops here in Iowa.

We had a difficult time finding five service stations in Iowa that were willing to be the first to offer gasohol.

Questionnaires were used to determine why people bought gasohol, and more importantly, why they continued to purchase it. Telephone interviews were also used.

The buyer reactions were extremely positive. Most users made some reference to improved mileage. They also mentioned less ping and less dieseling, and also easier starting. This wasn't a surprise, since alcohol is an octane booster—as the oil companies know, so well.

The study was completed on September 15, 1978, and the final report was issued on October 16 by Governor Bob Ray.

The final results were highly favorable, and quickly attracted the attention of oil companies, gasoline distributors and service station operators.

By mid-January of 1979, the original five stations had been joined by almost 200 others. Today, about half of Iowa's stations offer gasohol, more, by far, than any other state. Iowa has one-third of all gasohol sales in the country.

This has been good for Iowa's agricultural-based economy. In October of this year, gasohol sales in Iowa reached an all-time high of 17 million gallons, a 10 percent increase over a year earlier.

Since the gasohol program started in Iowa in 1978, 361 million gallons have been sold, using 14 million bushels of corn.

One good reason for all of us supporting the use of alcohol as a fuel extender is that it can reduce our imports of crude oil. Eliot Janeway, the economist, pointed out "that just 4 billion gallons of alcohol would displace 28 billion, or 667 million barrels, of crude oil per year." At $35 per barrel, a 28-billion gallon reduction would knock $23.3 billion off our nation's oil import bill, which in 1979 reached over $60 billion, or $270 per person.

I pointed out in an editorial in the Waterloo Courier on August 25, 1981, that "the marketing of gasohol is just the first small step in the process of developing the infant U.S. alcohol fuel industry—an industry that is only about three years old."

I pointed out that all-alcohol cars are being imported into this country from Brazil and that Ford Motor Company is testing an all-alcohol car. The U.S. Postal Service is also testing all-alcohol delivery vehicles.

A service station in Wisconsin and one in Arkansas now offers only alcohol, and the nation's first auto dealership selling only all-alcohol cars is opening in Wisconsin.

At the same time, individual farmers, large trucking companies and some industrial firms have been installing conversion kits in diesel units to use 100- or 120-proof alcohol simultaneously with diesel fuel. This reduces costs and increases power.

Conversion kits are also available for gasoline-powered passenger cars and trucks, which allow them to run on 50 percent gasoline and 50 percent 100-proof alcohol—injected separately.

Here are the present alcohol-usage alternatives: gasohol containing 10 percent 200-proof alcohol; or all-alcohol cars using 160-proof alcohol; or conversion kits utilizing 100- or 120-proof alcohol.

I think that it's great that all of this is finally happening!

Back in 1929, Henry Ford predicted no shortage of fuel for the internal combustion engines of the future. "We can get fuel from fruit," Ford said, "from sumac by the roadside, or applies, weeds, sawdust, almost anything. There is fuel in every bit of vegetable matter that can be fermented. There is enough alcohol in one year's yield of an acre of potatoes to drive the machinery necesssary to cultivate that field for a hundred years."

I personally, would rather see America's farmers controlling our energy supplies than those people who have done so for so long.

A famous American said, "gasoline was never much higher. But here you have a business that is in the hands of a few men, and they see that the price is kept up. It's not regulated by supply and demand. It's regulated by manipulation."

Will Rogers said that early in the 1930s. Things sure don't change much when it comes to energy, do they?

Ladies and gentlemen, I believe that the use of U.S.-produced alcohol as a replacement for a significant portion of our nation's petroleum requirements offers one of the best agricultural possibilities of the '80's.

We Aggies cannot afford to let this opportunity be sidetracked by some vested interests, as it was in the early '30s.

Today, America's farmers stand at a precipice. It has taken them over 200 years to reach this precipice, but I believe that they are now prepared to fly, winging the nation up with them as they meet the challanges of the '80s.

I hope that this has provided each of you with some food for thought. Thank you for listening.●

1982: NATIONAL YEAR OF DISABLED PERSONS

● Mr. RIEGLE. Mr. President, I wish to thank the members of the Judiciary Committee for taking such prompt action on Senate Joint Resolution 134, introduced by Senator ARMSTRONG and myself, to designate 1982 as the National Year of Disabled Persons. Our resolution will continue the principal objectives originally set forth by the General Assembly of the United Nations for this year's International Year of Disabled Persons, and will continue on a national level for another year an important focus on the problems facing the 35 million disabled Americans each day.

I offered this resolution with the anticipation that the U.S. Council for the International Year of Disabled Persons will build on the momentum established in 1981 and find private sources of funding for their activities in support of the National Year of Disabled Persons. It is my intention that there be no expenditure of Federal funds to support the National Year of Disabled Persons. In these times of severe budgetary constraints, the areas of research and direct services must be our first priorities.

It is my hope that the U.S. council will direct their efforts toward raising community awareness and initiating community action on behalf of disabled citizens. Valuable exchanges on the grassroots level will allow us to develop new answers and new initiatives to improve the lives of our handicapped citizens.●

PRESIDENTIAL IMPOUNDMENT AND THE BUDGET PROCESS

● Mr. ARMSTRONG. Mr. President, DAN QUAYLE has been an active member of the Budget Committee in pushing for long-overdue reform of the budget process. His thoughtful proposals for reform have ranged over the entire gamut of necessary changes—from multiyear budgeting to improvement of Presidential powers.

Senator QUAYLE recently wrote an article concerning Presidential impoundment and the budget process. Because of the importance of this matter, I call the attention of my colleagues to the piece which appeared in "The Journal of The Institute For Socioeconomic Studies." DAN's basic premise is one that I enthusiastically agree with: We need to give the President the management tools he needs to get these massive deficits under control. Otherwise, we face economic disaster.

I welcome Senator QUAYLE's initiatives and look to him as a strong ally in the fight for fiscal integrity that we must win.

The article referred to follows:

PRESIDENTIAL IMPOUNDMENT AND THE BUDGET PROCESS

(By Dan Quayle)

Washington whimsy dating from the Great Society era has it that the Federal budget should operate like an adding machine—without the subtract button. Certainly, over the past 20 years, as Federal budgets have grown exponentially, there has been widespread support in the House and the Senate for assuring that there not be an operable subtraction button. On those rare occasions when the White House complained of the defect, impassioned speeches of derision volleyed back from the halls of Congress.

Now, we have a President who has asked for—and received—huge reductions, rescissions, and deferrals in an effort to reverse the spending which produced cumulative deficits of $315 billion during the 1970s.

President Reagan's success in no way demonstrates, however, that Congress has foresworn its belief that it is "better to add than subtract." Congress went along with the President in the early summer, but in August was reminded what side its bread is buttered on. During the recess, senators and representatives met with constituents. The complaints from special interest groups about the budget cuts were amplified many times over because of the natural law of the Congress which states "thy constituency will support budget increases, not budget decreases."

OUT OF BALANCE

The last ten years have witnessed a substantial attack on presidential powers by Congress largely in reaction to real and imagined excesses of the Nixon administration. Two major pieces of legislation were passed in the early 1970s which clearly were designed to involve the Congress directly in areas which had previously been regarded as subjects for presidential management and decision-making.

The War Powers Act for the first time required the President to inform the Congress of his decision to use U.S. military power in emergency situations, subject to congressional disapproval.

The Budget Impoundment and Control Act for the first time required the President to inform Congress of his decision to withhold the expenditure of funds from appropriated programs, also subject to congressional disapproval.

The Act provides for congressional control over two types of presidential impoundment: (1) Rescissions—when appropriations lapse before being spent, and (2) Deferrals—when expenditures are delayed. For a rescission to stand, the law required that Congress vote its concurrence. Otherwise, the rescission was automatically disapproved. Deferrals were allowed to stand unless Congress voted to disapprove.

THE FEDERAL SPENDING PROCESS

The continuing Federal argument over the power to spend money is as old as the Constitution and involves many of the same points in dispute as a family discussion following repeated attempts to balance the joint checking account.

Congress, in Article I, Section 8, is clearly provided with the power to collect taxes, to pay the debts and provide for the common defense and general welfare. At the same time, the Constitution vests executive power in the President who is given the responsibility to see that the laws are faithfully executed (Article II, Section 3).

If Congress merely appropriated large lump sums of money and handed them over to the President for his decision as to how they should be spent, there would not be much significance to the legislative process. Congress would have given up its primary power and responsibility. On the other hand, if Congress dedicated on a line-by-line basis exactly how all monies should be spent, the istrator with no longer really be Chief Executive. He would be a clerk or administrator with no discretion or choice in policymaking—a National City Manager.

Obviously, the framers never intended either branch to supplant the other completely. They established a government of separation of powers, with internal checks and balances. Tensions over spending decisions were to be expected, and those expectations have not been disappointed.

The ensuing history of the appropriations and budget processes reveals this historic tension with one branch dominating, then the other recovering its power and tipping the balance the other way. In some periods, the issues have been over domestic spending. In other, military or foreign policy matters have been in contention. Today, with the national debt over $1 trillion, and annual deficits between $40 and $60 billion (or more), we face tensions over both domestic and defense spending. The underlying budget issues, however, still can be found in the constitutional tension between Congress and the President over the spending power.

PRESIDENTIAL IMPOUNDMENTS

Presidents, from the days of George Washington, considered appropriations permissive rather than mandatory. Funds were routinely impounded (not spent) whenever appropriations exceeded expenditures. Thomas Jefferson withheld $50,000 in 1802 from funds which were to be used to buy gunboats. Jefferson contended that the Louisiana Purchase had made the Mississippi more peaceful and that the expenditure was no longer necessary. His decision was temporary. He bought the gunboats the following year. Moreover, as another reflection of the prevailing thinking, Jefferson routinely returned unexpended balances in a contingency fund to the Treasury.

Both Jefferson and James Madison believed that the President, in an emergency, had the right to transcend the appropriation laws of Congress. In fact, from 1809 to the Civil War, appropriations of public money permitted the intermingling of funds among various departments. Congressional supervision of government spending practices was so lax in this period that the President could legally and easily shift funds from department to department and program to program as he saw fit.

After the Civil War, however, several bills were passed which established the Congress' power to appropriate line item provisions. Over the next 50 years, such laws became more and more detailed. Congress specified which activities were to be carried out, the number and sort of personnel to be employed to do the work and the amounts which could be spent for required materials and supplies. Congress spent days debating clerks' salaries.

By 1917 and the entry of the United States into World War I, it had become apparent that the legislative branch could no longer specify appropriations in such detail. During the period of U.S. involvement in the hostilities, Congress dispensed with line item grants. Although the general purposes to which the authorized funds were to be put were described, the President was given the responsibility to distribute the money among specific accounts.

Finally, in the Budget and Accounting Act of 1921, the Congress established the General Accounting Office to help oversee government expenditures. Thereafter, the budget grew dramatically and constantly, but the number of line item accounts appropriated by Congress gradually declined. Congress gave up specifying how money should be spent. It contended itself with writing programs and restrictions into appropriations bills. Budget decisions in specific terms shifted to the Executive Branch.

The past 100 years has seen major transformations of the budget process. In 1876, the Federal budget of $265 million contained far more lines than our current $700 billion budget. A single appropriation bill in 1876 providing about $200,000 for West Point included about 40 accounts. Today's $180 billion defense budget is subdivided into only about 50 appropriation accounts.

RECENT IMPOUNDMENT PRACTICES

With the New Deal, in the early 1930's presidential power over spending decisions began to grow substantially. As a closely correlated event, presidential impoundment of funds became a perennial source of friction between the executive and legislative branches. Franklin Roosevelt held back appropriated funds from public works projects. Harry Truman held back funds for veterans' hospitals and for the Air Force. John Kennedy withheld funds from the B–70 bomber. President Nixon carried the impoundment power further, using it to withhold highway funds, water and sewer grants, and various urban programs. The current law is the Congress' reaction to Nixon's use of the impoundment power to refuse to spend funds for programs which he did not like, even though they had been authorized and appropriated by Congress.

Over the last several years, the use of the impoundment power under the Budget Act has appeared to be declining. President Ford asked for approximately $7 billion in recissions in 1975 and 1976 of which Congress accepted about $500 million—or 7 percent.

In the four years of the Carter administration, the President asked for recissions totaling about $5 billion. Congress approved some $2.6 billion (52 percent). However, President Reagan, in a period of budget crisis, has requested $16.5 billion in rescissions (of which $1.1 billion were later withdrawn). Congress has accepted $11.7 billion, which is 71 percent of the requests.

Over the life of the Budget Act, the value of deferrals has exceeded the dollar value of rescissions, but deferrals are not really savings inasmuch as they must be spent during the fiscal year.

The Reagan administration scored an outstanding political coup in the early summer of 1981 in its devastatingly skilled and unprecedented manipulation of Congress' budget reconciliation process. Over $35 billion were saved, with Congress barely able to draw its breath before the money was

whisked away. Awed chroniclers will tell of this for years to come. But, whatever the President's popularity, the feat is unlikely ever to be performed again. There is no reasonable expectation that he can again use the budget reconciliation program to force-feed Congress' acceptance of major budget cuts.

HAVE THE IMPOUNDMENT PROVISIONS WORKED?

In 1977, the GAO issued a report reviewing the Impoundment and Control Act after two years in operation. The GAO found that while the executive branch had generally complied with the language and spirit of the Act, it had initiated a small number of impoundments that had either not been reported or been reported so late as to frustrate the Act's intentions.

The GAO made a number of recommendations. It specifically noted the heavy burden of paper work caused by requiring that all withholdings of budget authority, regardless of reason, be reported. It recommended that routine impoundments under the Antideficiency Act not be reported at all so that the Congress would have the time to give proper consideration to the more important policy-based impoundments. The GAO also recommended several changes with respect to the definition of terms and time periods in the Act.

Very few conflicts over impoundment have spilled over into the courts since passage of the Budget Act. However, as the GAO report pointed out, the problems involved with the paperwork, as well as the continued delays in reporting impoundments, remain to be addressed.

Under the Carter administration, it often took many weeks for an agency's withholding of funds to work its way through the bureaucracy, the Office of Management and Budget, and the White House. Executive inefficiency was exacerbated by congressional footdragging. Congress often waited until the last minute before informing the administration of its intentions with respect to some rescissions. Some, in fact, were approved after the 45-day limit had expired.

BUDGET CRISIS OF THE 1980'S
UNCONTROLLABLE SPENDING

This year the national debt has climbed to over $1 trillion. In 1961, just 20 years ago, total Federal outlays for all programs amounted to less than $100 billion—the amount we will have to pay this year in interest on the national debt. The last time the Federal budget showed a surplus was in 1969. Increased deficits and spending have become automatic, are out of control, and have caused our present budget crisis.

Approximately three-quarters of U.S. budget expenditures are classified as relatively uncontrollable under existing law. That means that if Congress passes no new laws for the fiscal year, approximatley $571 billion dollars will be spent automatically with very little congressional scrutiny. Senator Pete V. Domenici (R. N.M.), chairman of the Senate Budget Committee on which I serve, states that even though the administration and the Congress managed earlier this year to make extraordinary cuts in program appropriations, the budget—due to the "uncontrollables"—is presently soaring at an annual rate of 16 percent.

Under our current system, the budget committees are spending targets, the authorizing committees establish policies and goals of specific legislation, and the appropriations committees determine the outlays. The resulting maze of subcommittees defies the effective overview of the congressional leadership. Hundreds of millions—indeed billions—of dollars can be siphoned off by interest groups far-removed from the glare of public inspection. The only effective safeguard is to return the power to the President to fine-tune the Congress decisions.

CONSTITUENCY PRESSURE ON CONGRESS

While a reform of the impoundment procedure is required, and a new partnership with the executive branch must be achieved, Congress should not be absolved of its own responsibility to establish a mechanism for dealing with those enormous entitlement programs. Nevertheless, it is apparent that the political pressures are such that Congress will not take on Social Security, veterans benefits, Medicare, Medicaid, Food Stamps, or any of the other entitlement programs.

These programs affect people—specifically poor people—and the Congress is not going to take on that constituency or suffer the adverse publicity which would assuredly accompany such actions.

However, it is incumbent upon the nation to find an operable formula for controlling the "uncontrollable" entitlement programs. Their growth over recent years has astounded official Washington and stands at vastly higher levels than ever anticipated. Thus, in the ten years between 1969 and 1979 outlays for Social Security and Railroad Retirement increased almost 400 percent, from $28.3 billion to $108 billion. Similarly, spending for Medicare and Medicaid increased from $8.9 billion in 1969 to an estimated $42.1 billion in 1979—almost 500 percent.

Spending in other areas of the budget have increased much less rapidly. National defense outlays increased from $79.4 billion in 1969 to $117.7 billion in 1979—an increase of about 48 percent, approximately one-third the rate at which the cost-of-living index has gone up over the period.

Increases for Social Security/Railroad Retirement and Medicare/Medicaid were consistent over these ten years. Every year, except 1978, showed at least a 10 percent increase for Social Security/Railroad Retirement. One year (1973) showed a 21.9 percent increase and two years (1971 and 1975) showed increases of over 18 percent. The percentage increases for Medicare/Medicaid were even higher. Although in one year (1973) the increase was held to 5.2 percent, in three other years (1974–1976) increases were more than 20 percent. Overall, in seven of the ten years, increases in spending of more than 15 percent were registered for Medicare/Medicaid.

This sharply contrasts with spending figures for national defense. These registered a net decrease for three of the ten years (1970, 1971 and 1973). Only 1978 showed an increase in spending of over 10 percent.

The steady increases in Social Security/Railroad Retirement outlays brought total spending in 1979 to the point where it nearly equalled the amount spent for national defense. In contrast, in 1969 spending for national defense was more than double the amount spent for these programs. Similarly, payments for Medicare/Medicaid increased from a little over 10 percent of the defense budget in 1969 to more than a third of defense spending in 1979.

The public appears to give strong support for enhanced presidential responsibility in controlling spending. The Gallup Poll in October of this year reported that 64 percent favored granting the President the power to "veto some items in a bill without vetoing the entire bill." Such a capability would be comparable to the "item veto power granted to governors of more than half the states. Mr. Reagan has, in fact, wistfully noted the superior level of authority vested in governors, relative to that which the flushed-with-success Congress of the early 1970s has left to the President. Nonetheless, the White House is not advocating a move toward an item veto. Some observers hold that such would necessarily entail a Constitutional amendment.

What does appear to be attainable is a reform of the impoundment provisions of the Budget Act. A number of members of Congress have begun to examine means of reasserting such control, particularly over entitlement spending. While there certainly remains some tension between the legislative and executive branches, it has become clear that both will have to work together to restore the nation's fiscal health.

The six years that the Budget Act has been in operation has been a period dominated by sharp tensions between President and Congress. It has become clear that procedures must be reassessed, including the impoundment powers of the President.

CONTROLLED IMPOUNDMENT

Some members have suggested that the President be given impoundment authority, but subject to certain limitations. The suggested limitations include:

Prohibition against a withholding of more than 10 percent from any one program.

A congressional veto requiring the vote of both Houses of Congress on any impoundment action within 45 or 90 days of that action.

Limitation of the authority to one year only.

Prohibition against the elimination of any program in its entirety.

A trigger mechanism that would require the President to confirm that spending is running at a rate which will exceed the ceiling set in the Budget Resolution.

A dollar-amount ceiling that will prohibit the President from exercising impoundment to reduce spending by more than $15 billion during the course of the fiscal year.

The first two proposals certainly merit serious consideration. Prohibition against more than a 10 percent withholding from any one program would go far in assuring that a President could not thwart the policy decisions of Congress through impoundment action. The programs as established by Congress would be protected to at least 90 percent of the appropriated funding levels.

The second proposal permitting a congressional veto of an impoundment action would effectively reverse the procedure with respect to rescissions in the current Budget Act. Today, Congress must approve presidential rescissions or they are automatically disapproved. This proposal would reverse the assumptions—the rescissions would take effect unless disapproved by the Congress.

Adoption of this proposal whereby Congress would vote to overturn presidential impoundments, would do away with a great deal of paperwork and would enhance the President's technical ability to manage the budget. Congress could devote its time to the debate of major legislation without being swamped by petty administrative details.

In considering amendments to the Budget Act, it should be remembered that presidential powers of impoundment are not unconstitutional, but are as old as the Republic and wholly necessary to the normal operations of the government. While it remains essential that Congress retain control over the power to legislate and appropriate, the President must be permitted to administer the executive branch as efficiently as possible. He should be allowed to do so without swamping Congress with paperwork on routine administrative decisions. No member of Congress has advocated that the legislative branch shrink from considering its normal business. No one has proposed turning all the spending powers over to the President.

However, experience with the Budget Act over its first few years of operation have demonstrated that the Act, and its impoundment provisions, can be improved. In times such as these, with mounting budget deficits and rapid, if temporary, shifts in the major economic indicators, we would be

foolish to saddle both the President and Congress with messy procedures that we know are not working well. It is our responsibility to see that both the President and Congress make and carry out decisions as efficiently as possible and in the public interest.

Improving the President's ability to withhold spending under strict congressional control procedures would certainly enhance the government's ability to respond to budget crises when they occur. Such an improvement in ability to act effectively would be in the interest of the Congress, of the President, and of the people.●

H.R. 1465—STATE AND LOCAL GOVERNMENT COST ESTIMATE ACT OF 1981

● Mr. PRYOR. Mr. President, I would like to commend my distinguished colleague from Tennessee, Senator SASSER, for introducing and bringing to the floor legislation, S. 43, to require the Congressional Budget Office to prepare State and local government cost estimates for every significant bill reported by committees of the House or Senate.

H.R. 1465, which is a companion to S. 43, will not only help Congress as it goes about the task of intelligently considering legislation, but it will also help State and local governments themselves, since factors of costs which these governments will have to bear will have already been considered.

Mr. President, as a cosponsor of S. 43, I support this bill to strengthen the legislative process. Simply stated, an informed congressional decision is a better congressional decision.●

SUBSTANTIVE IDB LEGISLATION NEXT SESSION

● Mr. DOLE. Mr. President, I understand that several Senators are very concerned whether, when the Finance Committee considers substantive IDB reform, we will address the question of multiple lot or composite bonds—the type of bond affected by Revenue Ruling 81–216. I wish to assure those Senators that we will address the questions raised by 81–216. It is clear from the great concern raised by that ruling that any IDB reform legislation that still includes any per issue limitations ought to include a definition of the words "issue."

I hope this assurance will reassure those Senators concerned about Revenue Ruling 81–216.●

S. 1131—THE DELINQUENT PAYMENTS ACT

● Mr. PRYOR. Mr. President, I am a cosponsor of S. 1131, the Delinquent Payments Act of 1981. I support this legislation because I believe that debts of the Government to businesses must be paid on time. This bill mandates that payment be made by the Government within 30 days after an invoice is received. If such payment is not made within the specified period of time, the legislation calls for computation and payment of interest.

The General Accounting Office has reported that more than 40 percent of all invoices submitted to Government pay centers are not paid within 30 days. This is a shocking and unacceptable statistic which highlights the inefficient payment practices of the Government.

This bill is crucial to the business sector of our Nation. It is especially crucial to small businesses, the lifeblood of our economy, which do not have the means to carry their obligations over long periods of time until the Government sees fit to honor its obligations.

I have spoken with owners of small businesses in Arkansas. Unfortunately, many of them tell me the same thing: They cannot afford to do business with the Federal Government because of its slow payment procedures. Many small businesses have stopped soliciting Government contracts. This affects not only small businesses, which benefit from promptly paid contracts with the Government, but it also affects the Government itself, and therefore the taxpayers, since a lack of competition for Government contracts tends to produce more expensive products and service.

Mr. President, I would only close by saying I believe in this legislation, not only in its purpose, but in its commonsense approach. It represents an important step in the right direction for the Federal Government.●

STATUS OF THE INVESTIGATION ON OIL AND GAS THEFTS ON INDIAN AND FEDERAL LANDS

● Mr. COHEN. Mr. President, I would like to refer to an article in the RECORD that appeared in Friday's Washington Post.

This article recounts the tentative conclusions of the Commission on Fiscal Accountability of the Nation's Energy Resources regarding its investigation into the monitoring of oil and gas leases on Federal and Indian lands.

The Commission was in Washington last week to hold 2 days of hearings on this subject before preparing its final recommendations on how to address the widespread existence of conditions on both Federal and Indian oil and gas leases which constitute an open invitation to theft and how to improve the royalty accounting procedures used by the U.S. Geological Survey on the production from those leases.

Mr. President, the Indian Affairs Committee has been looking into the problems on Indian oil and gas leases for about a year. In that time, the committee found an extraordinary disparity between the mandate of the U.S. Geological Survey, which is to insure the integrity of the Indian oil and gas leases, and the resources which the USGS had at its disposal. Our study also revealed a distressing lack of training for USGS personnel who are charged with examining the leases and, in fact, in many instances, found that those people were entirely unfamiliar with the rules which governed the leases they were supposed to protect.

The committee also found that these problems were not confined to Indian lands. On the contrary, it found that in all probability the problem is much worse on public lands.

I wish to commend Secretary of the Interior Watt for his initiative in forming an independent commission to investigate the oil and gas problem and to make recommendations on how to deal with it. The Commission on the Fiscal Accountability of the Nation's Energy Resources is the result of that conversation.

Since that time, we have followed the progress of the Commission while pursuing our own examination of the issue. We look forward to the Commission's report and hope to work with those other Senate committees which have an interest in it to insure that the Commission's recommendations are given the most thorough scrutiny.

In closing, Mr. President, I would like to point out that the Indian Affairs Committee's consideration of the status of oil and gas lease protections on Indian lands has been a model of bipartisan cooperation.

I ask that the article to which I referred earlier be printed in the RECORD.

The article follows:

MILLIONS HELD LOST ON OIL LEASE ROYALTIES

(By Mary Thornton)

Federal and state governments and American Indian tribes are losing hundreds of millions of dollars in oil and gas royalties a year because companies regularly underreport what they take from public and Indian lands they lease.

In addition, security is so lax at many leased sites that large quantities of oil and gas are regularly stolen.

Those are two findings of a U.S. commission that will soon recommend major changes in the way the Interior Department administers oil and gas leases, and in the penalties that can be invoked against companies that violate the leasing rules.

David Linowes, chairman of the Commission on Fiscal Accountability of the Nation's Energy Resources, set up last July 27, says that the system is in "terrible disarray" and that the oil industry "won't even recognize that there's a problem."

Linowes expects to issue a final report by the end of January.

Testimony from the General Accounting Office has indicated that governments and Indian tribes are losing as much as 10 percent of their rightful royalties. That was estimated to be $650 million this year.

One difficulty, Linowes said, appears to be that Interior's U.S. Geological Survey, the administering agency, has historically not questioned production reports submitted by oil companies.

"They have some of the finest scientists in the world," he said. "They do an outstanding job of looking after our natural resources. But this is a fiscal responsibility they're not really trained for. What's happened is that you have a billion dollar business being run by scientists with not more than a dozen people with any training in accounting. And for the most part, they've been hired in the past several months."

Testimony has indicated that in the past there has been no attempt by the agency to match the documentation from the removal of oil or gas with the final sales slips the companies submit for royalty purposes. Examination of the documentation by the commission produced evidence of major underpayments.

Company officials testified uniformly that the discrepancies were due to errors, but Linowes said, "I haven't seen one overpayment. If mistakes are being made, and they're solely mistakes, there should be an occasional instance of an overpayment."

On site security, Linowes said, "We have no handle on how much is being stolen, but we've been told that as soon as it gets dark, the trucks begin running through the oil fields like it's midtown city," he said. "If they see the feds coming, they shut off the valve and get onto a state road [where federal law enforcement authorities have no jurisdiction]. They find the cracks."

USGS has 47 inspectors to police 18,000 lease sites.

H. P. Walter, a member of the USGS quality assurance team, testified this week that "the job is impossible. I don't think the U.S. Army could do it. There are thousands of these things . . . There's no way in God's world that any task force of any reasonable size can do any more than show the flag.

"We have a very valuable commodity just out there lying on the ground. It's like putting a $5,000 bill on the ground and putting a rock on top of it," he said. "There's nothing in the world to keep a crook from driving up and stealing that oil. . . . There are crooks in every business, and in this one the payoff is great." ●

COMMENDING NEW SENATORS ON LABOR AND HUMAN RESOURCES COMMITTEE

● Mr. HATCH. Mr. President, at the close of this first session of the 97th Congress, I would like to pay tribute to the 16 Republican Senators for whom this session of the Senate has been the first. And as chairman of the Labor and Human Resources Committee of this respected body, I would particularly like to commend those new Senators who have served with me on the committee this past year. Of these five Senators—Senators QUAYLE, HAWKINS, NICKLES, DENTON, and EAST—four are chairmen of subcommittees with critical legislative responsibilities and all have made important legislative contributions; contributions which represent in great part the legislative successes of this Congress.

Mr. President, the Committee on Labor and Human Resources is as extensive in breadth of jurisdiction as any other committee of the Senate. Legislation from the committee touches the lives of every American. Members of this committee are charged with overseeing programs that involve the Government in prenatal and neonatal care of infants and mothers; we oversee Federal efforts to improve the quality of education of our youth through high school, and Federal efforts to assist college and other secondary students earn advanced educations.

We work to help the handicapped and disabled lead fulfilling lives. We deal with vocational education and job training for workers entering the job market for the first time, or reentering the market. We are concerned with the safety and health of workers on the job. We provide the framework upon which pension plans are built for retired workers. Our committee is currently involved in efforts to improve services to the aged who are unable to lead a fully active life, and to provide income assistance to those who are unable to meet inflated costs of home heating in winter. We also work with the ways in which these many programs interact to affect families, which consist of Americans from very young to very old.

With the added leadership of these five new Senators, this committee has opened new frontiers in the 97th Congress first session, in almost all of these fields. Our efforts during the novel budget reconciliation process this past summer have literally restructured the Federal-State and Federal-local government relationships, passing major responsibilities for the health and well-being of Americans to those levels of government closest to the people who need the services. Not coincidentally this committee made a milestone effort to control and reduce runaway Federal spending, while at the same time preserving critical services for those people who have no other source of aid in times of great need.

This committee was charged by the Senate to make almost 25 percent of the total budget savings required over the next 4 fiscal years. And we met that target, due in large part to the efforts of these new Senators as subcommittee chairmen.

At the same time we have worked to make many of these programs work better, and often at a reduced cost. Congressional oversight is considered a very serious responsibility by this committee and by Senator HAWKINS in particular. We created this year a subcommittee under her leadership dedicated solely to investigations and oversight, and we have conducted in all subcommittees and the full committee thorough oversight proceedings on several Federal agencies. Our concerns are that those employed by the Government recognize fully their responsibilities to their fellow citizens to spend public moneys with great care and consideration.

Members of the committee represent an extremely wide divergence of political thought, but to the credit of these young Senators we have been able to work effectively together under very trying circumstances, and much of the legislation we have reported out reflects the great care these new colleagues have exercised in looking out for their constituents and all other Americans.

Mr. President, it is with great pleasure that I briefly report on the achievements of these new members serving on the Committee on Labor and Human Resources. They have worked hard and have a legislative record that reflects that work. And it is good legislative work. I am confident that we can build on these achievements in the next session, and do even greater service to those Americans who have entrusted these offices to these new Senators and to all of us.

Mr. Chairman, I am going to detail some of the work of the four freshmen Senators who chair subcommittees of the Committee on Labor and Human Resources, but first I would like to pay homage to the very able assistance we have had from Senator EAST, who does not chair a subcommittee, but who has been an active and forceful participant in our committee deliberations. On several occasions the outcome of an important issue has been decided in our committee by one vote. While many Senators in a similar situation always participate by proxy, Senator EAST has chosen instead to invest the time himself to familiarize himself with the issues, participate in committee debates and vote in person. I do not exaggerate when I say that much of the heart of this Congress efforts to reduce Federal spending would not have been possible without exactly that effort from the Senator from North Carolina. His one vote in this committee has always been cast for the good, not only of his constituents in North Carolina, but also for the good of this Nation and I thank him for it.

I also have the privilege of serving with Senator EAST on the Committee on the Judiciary, where he has been active enough for several Senators, so I know the time he invests with us is precious.

I am very proud to have DAN QUAYLE serve with me on the Committee on Labor and Human Resources. Having first served with distinction in the House of Representatives, Senator QUAYLE has devoted the same energy to solving the problems now confronting the U.S. Senate. These are, Mr. President, problems which cannot wait for Senators to have what some might think is the proper seasoning. These are problems which have to be addressed now. And as chairman, Senator QUAYLE, to his credit, has wasted no time in leading the Employment and Productivity Subcommittee in the business of reviewing current laws in these areas and developing some blueprints for further action.

First, Senator QUAYLE saved the CETA youth employment and training programs, title IV–A, from premature merger with other CETA components. Youth unemployment is one of the most serious problems we have in our country today and it was an important contribution of Senator QUAYLE that he introduced S. 648 to extend these youth programs for one additional year. Believing that all of CETA's programs should be evaluated concurrently and not piecemeal, the Senator from Indiana guided this legislation through the Senate, encouraged prompt action in the House of Representatives, and persuaded the administration to consider the youth programs in the context of CETA's reauthorization. President Reagan signed this bill into law in June. Not only did this action insure the continuation of CETA youth training projects through the end of the fiscal year, it also provided our committee with a comprehensive picture of CETA's mission, accomplishments and failures. Congress cannot look at an employment and training policy apart from the impact of that policy on youth.

Second, Senator QUAYLE shepherded budget recommendations through the committee for both fiscal year 1981 and fiscal year 1982 which were fully compatible with the committee's reconciliation instructions for the employment and training components of budget function 500. Total savings exceeded $5.6 billion. Further, Mr. President, his subcommittee did not merely slash away at the total authorization level; rather, meaningful changes were brought in the current law which provided much of the savings and therefore minimized the adverse impact of budget cuts on existing

programs. Among these innovations were a 20-percent transferability which could be made by State Governors between titles, a reduction from 12 to 10.5 percent of the Governors' discretionary fund, and some changes in the coverage required of the employment services. I would again express my appreciation to my colleague from Indiana for his constructive approach to reconciliation.

While it was necessary for us to differ on the ultimate form of the various block grant proposals, which were passed by the Labor and Human Resources Committee, it should be noted for the record that Senator QUAYLE was an active participant in that debate and even provided the committee with substitutes to consider. This clearly illustrates the commitment of Senator QUAYLE to thorough consideration of the issues and alternatives facing the committee and the Congress as a whole. Along the same lines, DAN QUAYLE probably has one of the best committee attendance records in the Senate, a record of preparation and participation which could be a goal for some of the rest of us. I would hope that the press would praise such effort on the part of any Member of the House or Senate.

Third, Senator QUAYLE knows the necessity of authorizing a new Federal employment and training policy before the end of fiscal year 1982 and for the Labor and Human Resources Committee to report a measure before the May 15 budget deadline. Obviously, good legislation cannot be produced instantly. It should not even be considered formally by the subcommittee or full committee before it has been exposed to the exhaustive public scrutiny required by the democratic process for such key legislation. It is commendable and fortuitous that Senator QUAYLE has begun the process of reauthorization early. We cannot procrastinate on an issue this large and complex, or an issue so critical to so many unemployed Americans.

The Employment and Productivity Subcommittee began in June with hearings to discuss the Federal role in employment and training policies and how the Federal Government should best relate to State and local governments and community organizations in the future. A total of 6 days of hearings were held. Two additional hearings were held jointly with the Education, Arts, and Humanities Subcommittee, chaired by our senior colleague from Vermont, Senator STAFFORD, on the linkage of CETA and vocational education programs. This exercise is indicative of Senator QUAYLE's willingness to cooperate with other Senators to accomplish the policy changes so essential for the economic recovery of our Nation and for the increased standard of living for individuals.

As we approach the end of the first session of the 97th Congress, the proposal Senator QUAYLE has developed has already been public for over a month. It has been subject to suggestions, kudos, and criticism, from service providers, State and local governments, business and labor, client groups, and the administration. The accumulated input will help pave the way for the achievement of a bipartisan piece of legislation and enactment of an effective and workable employment and training program. Senator QUAYLE's enthusiastic and tireless efforts toward this objective ought to be applauded as an excellent example of leadership.

Mr. President, all of us who have worked with large organizations know how institutions very quickly lose sight of the problem which they were created to resolve—that is, they lose sight of their mission. And it does not take a wizard of organizational behavior to know that organizations must renew their missions periodically if they are to maintain their vitality. This is true especially in the private sector, where competition forces constant scrutiny of direction. If a business slacks off in trying to build a better mousetrap, a strong reminder will be provided by the ads of its competitors. Of serious concern to Republicans in recent years is how to provide for the constant renewal of governmental institutions where there is no competition for the service for which they were created to provide.

Fortunately our constitutional system of government does provide our Government agencies with a mechanism to review their missions, reexamine their goals, objectives, work program and budget in relation to that mission and to demonstrate their stewardships to the American public—congressional oversight. Unfortunately, few agencies have enjoyed an opportunity for self-renewal. Indeed, they often see congressional oversight as at least an inconvenience if not an outright invasion of their domain. But neither has Congress always assumed its responsibility to demand accountability from our public institutions. At times the attitudes have been to not upset the special interest groups and bureaucrats whose self-survival instincts are to protect their turf—right or wrong.

We have seen congressional committees skim over their reviews of agencies without asking critical questions with the attitude of "Let's see what we gave them this year and increase it 20 percent because they cannot get their work done for lack of funds." It is much easier to be "nice" and be liked than to ask the hard questions crucial in accountability and efficiency. This becomes the critical and valuable part of congressional oversight responsibilities, for it is here Congress can be of service to an agency in renewing its mission and giving its leadership new vitality.

Congressional oversight can serve as the point where Federal agencies come before Congress and report to the public how effectively they have carried out their congressional mandate. The agency has the opportunity to recommend to Congress why changes under current national conditions rather than when it was originally established.

Through oversight hearings, the public would be well served. Aside from informing it how its tax dollars are being used, the agency can report progress in solving the problems for which it was established. If agencies are aware that thorough oversight responsibilities will be carried out by Congress, they will be more careful in carrying out their mandate and assume greater responsibility for management of the agency.

At the beginning of the 97th Congress, the committee took the unprecedented step of creating a Subcommittee on Investigations and General Oversight. Under the able chairmanship of Senator HAWKINS, this subcommittee has pioneered a successful program of responsible congressional oversight. Her efforts represent to me the modern day "checks and balances" our constitutional authors envisioned for our separate branches of Government.

As chairman of this subcommittee, Senator HAWKINS has engaged in legislative activities which include the full breadth of Labor Committee jurisdiction.

During the first 10 months of the 97th Congress the Subcommittee on Investigations and General Oversight has initiated inquiries into several areas of governmental operation that fall under the jurisdiction of the Committee on Labor and Human Resources.

NATIONAL WAR ON CANCER

On May 21, 1981, the subcommittee conducted hearings to examine the progress made by the National Cancer Institute toward the treatment and cure of cancer. The subcommittee's investigation disclosed a problem in the Institute's ability to successfully inform and educate the community physicians and hospitals in the most recent development in research and treatment. The testimony revealed that 85 percent of the cancer patients in this country are treated at the community and local level. The critical appraisal of the Institute's ability to disseminate information and scientific research was echoed by community physicians from cancer treatment centers across the country.

Also questioned in the May 21 hearing was the National Cancer Institute's failure to report kidney failure among several patients receiving the cancer drug methyl-CCNU to the Food and Drug Administration. The reporting of such adverse drug reactions has been the focus of the subcommittee's continuing investigation of the national cancer program. Additional hearings on this subject are scheduled.

At the conclusion of the hearing, Chairman HAWKINS called on Health and Human Services Secretary Richard Schweiker to develop a special study commission to recommend improvements in the transfer of research and treatment breakthrough to community hospitals and physicians. Secretary Schweiker responded by naming a Committee on Community Oncology and Technology Transfer. This committee met first in July of this year and continues to meet on a regular basis. The subcommittee will continue to monitor the progress of the study commission and to work with the Secretary to insure that all cancer patients in this country have the benefit of the most advanced treatments.

EMPLOYMENT AND TRAINING PROGRAMS

On August 7, 1981, the subcommittee targeted the Comprehensive Employment and Training Administration programs and practices in the State of Florida. At an Orlando field hearing investigators and auditors from the Federal, State and

local levels disclosed incidents of wrongdoing and fraud in the expenditures of Federal CETA dollars. Testimony disclosed CETA funds being paid to a psychologist who had no degree in psychology and whose address was determined to be a vacant lot; thousands of dollars in loans to various individuals in the programs which were never paid back; one organization director who received a salary under his real name from one source of funding and was simultaneously receiving a salary as a clerk-typist under an assumed name; and the purchase of hundreds of thousands of dollars of farm equipment that was never located.

Additional testimony revealed several incidents of abuse of program funds. Witnesses related examples of self-dealing between funded CETA corporations and private companies actually established by the same individuals who were in control of Federal CETA funds. The subcommittee was assured that proper controls and reviews are now in place to prevent this wrongdoing from reoccurring in the future.

OCCUPATIONAL SAFETY AND HEALTH

On September 23, 1981, the subcommittee focused its attention on the practices and procedures of the Occupational Health and Safety Administration.

In a joint hearing with the Subcommittee on Labor, Assistant Secretary Thorne G. Auchter presented his plans and proposals for the administration of OSHA. Assistant Secretary Auchter was able to address specific concerns of business and labor and to report to the Congress the directions for Occupational Safety and Health under the new administration. The subcommittee also heard testimony from concerned officials representing a variety of business, labor, and industry sectors.

MISSING CHILDREN

On October 6, 1981, the Subcommittee conducted a formal inquiry into the problem of missing children in America. Dramatic evidence of the extent of this problem and its impact on those involved was received in the form of testimony from parents actually affected by this tragedy. The subcommittee was impressed by the obvious impact and devastation felt by the family of a missing child.

Additional testimony was received from two separate local law enforcement agencies who have been effectively dealing with the problem. They explained to the subcommittee the techniques and tools that they employ to locate missing children in their community. Finally, testimony was received from the information director for a nationwide citizen action group dedicated to the recovery and safe return of missing children. All of the witnesses spoke in dramatic terms of the need for a national clearinghouse of information on missing persons and a similar system to track and identify the remains of deceased individuals. Legislation to initiate these programs, authored by Senator HAWKINS of Florida, is currently before the Juvenile Justice Subcommittee of the Judiciary Committee.

ADDITIONAL AREAS OF INQUIRY

In addition to the subject areas discussed above, the subcommittee also initiated specific inquiries into the practices of the Equal Employment Opportunity Commission, the paperwork involved in the education of handicapped children, and the Food and Drug Administration.

At this point I ask that an article authored by Senator HAWKINS on cancer research be entered into the RECORD the article follows:

CANCER RESEARCH: THE NEED FOR A WATCHDOG

(By Senator PAULA HAWKINS)

Cancer is a scary word, one that conjures up dread and uncertainty. We hear one day that scientists have discovered a new drug that holds real promise of curing one type of cancer or another. The next day, we hear that 1 in 3 Americans will contract cancer before age 74, and that 1 in 6 Americans will die of the disease.

Amid these conflicting and confusing reports, we ask ourselves where do we stand in this war against cancer? Who are the generals, what is their strategy, and are they making any headway against this fearsome enemy?

It is, I believe, the responsibility of Congress to review these questions and attempt to determine the answers. The war against cancer is a national project, funded by tax dollars, directed by public officials.

As Chairman of the Senate Labor Subcommittee on Investigations and General Oversight, I made oversight of the National Cancer Institute (NCI) the first priority of my subcommittee. For the past eight months, this subcommittee has conducted an extensive investigation into the policies, procedures and practices of the NCI with the aim of identifying program deficiencies and finding ways to correct them. The inquiry also involved the Food and Drug Administration (FDA), sister agency and regulator of the NCI.

The subcommittee has held three sets of hearings, beginning last May. The first hearing addressed the need for more efficient dispersal of information from cancer research centers to doctors out in the field. What we discovered is that the lines of communication are weak at best. At the recommendation of the Subcommittee, Richard Schweiker, Secretary of the Department of Health and Human Services, established a Committee on Community Oncology and Technology Transfer to explore ways to strengthen the communications network between researchers and family doctors.

The following two hearings, held early in November, concentrated on the NCI's experimental drug development program and on the role of the FDA as regulator of that program. Those hearings revealed serious deficiencies on the part of both the NCI and the FDA, including the following:

1. The NCI has failed to ensure that its clinical investigators—the people who actually administer the experimental drugs to patients—are abiding by the regulations and are promptly informing other physicians of hazardous side effects of experimental drugs. It was determined that the NCI could not even identify all of its clinical field investigators.

2. The NCI repeatedly failed to comply with FDA reporting regulations, has an inconsistent record of reporting adverse drug reactions to the FDA, and has tested experimental drugs on patients without a treatment plan approved as required by both the NCI and the FDA. In addition, the NCI in some instances has failed to submit complete and updated drug data to the FDA. In one case, an NCI monitor learned about an unapproved anti-cancer drug test only by chancing across an article in a medical journal.

3. The FDA has shown a reluctance to vigorously regulate the NCI, in some cases observing violations of regulations without forcing any corrective action.

The testimony of FDA officials brought these deficiencies into sharp focus. As one scientist put it, "The NCI has little inclination to be regulated, and the FDA has little inclination to regulate."

Experimental anti-cancer drugs can save lives, but misuse of the same drugs can kill patients. Lax management of the national cancer program can lead us up blind alleys to frustration and despair. The purpose of these oversight hearings is to target and correct the administrative problems hampering our efforts to find a cure for cancer. There is much still to be accomplished, but we are making progress. For example:

When Secretary Schweiker was made aware of the subcommittee's findings, he set up a special task force to review the deficiencies discovered. This task force is scheduled to report to the Secretary and the Subcommittee in December.

Dr. Vincent DeVita, NCI Director, admitted at the most recent hearing that his agency has been "remiss" in reporting adverse drug reactions. He assured the panel that in the future, his agency would err on the side of education instead of jeopardizing patient safety.

Dr. Charles Moertel, Commissioner of the Committee on Community Oncology and Technology, gave a progress report to the subcommittee. He said the situation is improving, and rural communities already are beginning to benefit from increased information on cancer treatment methods.

The programs of the National Cancer Institute have given life and hope to many, many cancer victims. Its research programs are needed and must continue. But the management flaws we have discovered are eroding the public's confidence in the NCI and could impede our progress in the war against cancer.

We must restore public confidence in the National Cancer Institute, and we must ensure that this agency is proceeding in the proper direction under proper leadership. This is the task of Congress, and the NCI and the FDA are on official notice that we will continue our oversight function until Congress is satisfied that these problems have been overcome.

Mr. HATCH. Mr. President, few Senators have faced the challenge which confronted the distinguished Senator from Oklahoma (Mr. NICKLES) upon election to the Senate for the first time. Senator NICKLES assumed chairmanship of the Labor Subcommittee. Anyone who has exposure to our Federal labor laws knows what a highly technical and diverse area of law this is. Thus the subcommittee has responsibility over wage standards of our Nation's workers, the safety and health of the workplace, the employment practices of employers, the pension rights of retirees, and the compensation and medical benefits which should be afforded to workers who suffer job-related injuries. These subjects constitute the complex matrix on which the economic well-being of our country must function and depend upon. Needless the say, our labor laws are most often highly-charged emotional issues. Legislating in this area thus becomes a demanding and difficult exercise, with the forging of consensus on issues an all but an impossible task.

It is in this atmosphere that Senator NICKLES has quickly and effectively taken a strong leadership role. One need only review the record of the Labor Subcommittee during this first session to see pervasive evidence of this. Within the

first 3 months, the subcommittee under Senator NICKLES direction considered a diversity of issues. On March 10, hearings were held on legislation, S. 398, to amend the Walsh-Healey Act to permit contractors to adopt a 10-hour day, 4-day workweek.

On March 12, the Senator convened hearings on the Mine Safety and Health Act of 1977. In particular, the subcommittee considered two bills, S. 351 and S. 496 which would have reallocated enforcement responsibility for health and safety in the Nation's mines by the Mine Safety and Health Administration. The first bill would transfer that responsibility from MSHA to OSHA with respect to the surface mining of sand, gravel, and stone. The second bill would effectuate the same transfer with respect to the activities of independent contractors engaged in construction at a mine-site. Later in March, the subcommittee moved from the issue of health and safety to the issue of minimum wage. Two hearings were held on proposals to enact a youth differential, as a means to reduce unemployment among young workers.

Senator NICKLES has also helped to bring the issue of repeal of Davis-Bacon to the forefront. Two long and thorough days of hearings were held in April on the act and its proven inflationary impact. Subsequently, the Senator introduced S. 1505, to repeal the act. At the same time, the Senator has sought to reform the act by increasing substantially the present $2,000 coverage threshold and by codifying some of the administration's proposed regulatory revisions.

Beginning last summer with extensive hearings and culminating in October with a markup and reporting of legislation from the subcommittee to the full committee, Senator NICKLES launched an ambitious campaign to reform the Longshoremen's and Harbor Workers' Compensation Act. This act provides compensation and medical benefits for workers who sustain work-related injuries in maritime employment. As a result of amendments passed in 1972, the program has become a veritable nightmare of exorbitant and incalculable costs. It is with much anticipation that I look forward to working with Senator NICKLES to continue the hard work of moving this legislation, S. 1182, through the legislative process.

As one can see already from the above, the Senator has undertaken an ambitious agenda on a wide variety of subjects. But he has not been content to stop there. He has taken decisive action to reform the complex statute which regulates our Nation's private pensions—the Employee Retirement Income Security Act, ERISA. The experience under the act since 1974 has demonstrated that it is fraught with difficulties, both administrat vely and substantively.

The voluminous reporting and recordkeeping requirements have been found burdensome and of limited utility. The Federal administration of the law, which is split between the Department of Labor and the Treasury Department, has resulted in confused, inconsistent, and often ineffective enforcement. Senator NICKLES has helped lead the efforts to enact comprehensive reforms of ERISA. He cosponsored S. 1541, an omnibus reform bill. And in November he convened 3 days of very extensive hearings on the bill, with further hearings scheduled for early next year.

Just this last week, Senator NICKLES played a crucial and integral role which led to the enactment of major legislation to reform the black lung benefits program. Within a week after I introduced legislation to amend the Black Lung Benefits Act, S. 1922, the Senator convened hearings on the bill, during which he conducted a probing examination of the program and its history. Then today, 2 days after these hearings, he participated in floor debates leading to passage of the legislation in the Senate. Subsequently this measure passed the House and is on its way to the President.

Finally, I think we can look ahead briefly to see that next year will probably be another ambitious year for this freshman Senator. One area which has received scant attention in previous years by this committee is labor racketeering. Just as the Senator from Oklahoma is committed to reforming the many socioeconomic programs under this committee's jurisdiction, eliminating the fraud, waste and abuse, he is deeply interested in ferreting out the corruption that can pervade sectors of organized labor. And he seeks to accomplish this by improving the legislation now on the books dealing with this evil.

The Senator has cosponsored a bill to enact a Labor Racketeering Act of 1981, to increase the penalties for violations of the Taft-Hartley Act and to provide for immediate suspension of convicted persons from union office. Knowing the Senator as I do, I believe that we can look forward to prompt action of this bill shortly after the convening of the second session of the 97th Congress.

The above of course has been a brief review. But I think that it indicates the breadth of issues which Senator NICKLES has quickly immersed himself. And people with knowledge and expertise in these areas readily will acknowledge that these subjects are ones where wise men must carefully tread. Legislative reform, of the comprehensive type sought by my distinguished colleague, does not come quickly or easily. Thus it is unfair, and indeed reflects much ignorance, for anyone to criticize the accomplishments of the Labor subcommittee based on how many bills may or may not have been enacted in the first session of this Congress.

Many of the Federal laws have suffered under years, indeed decades, of congressional neglect. Many have not received balanced and objective scrutiny. Without such proper review it is impossible and irresponsible to achieve legislative change. I for one can attest to the earnest commitment of the Senator from Oklahoma to develop a rational agenda of labor reform. And I think that the record which he has made over this last year is an outstanding testimony to his commitment, his leadership, and his courage to leap into what many regard as a lion's den of Federal legislation.

Having never held a public office prior to my election to the Senate. I empathize with the difficulties of many of our new Senators in meeting the sometimes artificial expectations of many "seasoned" political observers. At the same time I hold in admiration their mature abilities to translate the needs of this country into responsible legislation.

Among our newly elected Senators, perhaps none deserves greater admiration for giving serious attention to his legislative responsibilities than Senator DENTON. As chairman of the Subcommittee on Aging, Family and Human Services, he has shown great concern for the health of America's families and great compassion for our Nation's elderly. Senator DENTON has exhibited a level of legislative activity unparalleled to any first-year Senator in recent Congresses.

Under the chairmanship of Senator DENTON, the subcommittee held 11 days of hearings and prepared 8 legislative proposals, 7 of which were enacted through the vehicle of the 1981 Omnibus Budget Reconciliation Act: Domestic Volunteer Services Act, Child Abuse Prevention and Adoption Opportunities, Community Services block grant, Low-Income Energy Assistance block grant, Adolescent Family Life Act, Head Start Act, and the Native American program. The remaining piece of legislation—the Older Americans Act—was recently approved by the Senate. During the reconciliation process, savings of over $500 million in fiscal year 1982 and over $1 billion in fiscal year 1983 were achieved in programs under the jurisdiction of the subcommittee.

Last month, as Senator DENTON cleared the last hurdle in the long legislative process—a successful Senate vote—on an important legislative measure, the Older Americans Act, he received just praise from Senator HOWARD BAKER, our distinguished majority leader. Senator BAKER said:

> I believe I am correct in saying that this is the first major bill he has managed on behalf of the majority. I want to observe that he did it with extreme competence and skill that suggested that he has a great future on this floor. . . . I express the appreciation, I am sure, of every member to the Senator from Alabama for his fairness and impartiality, but mostly for his effectiveness in managing this piece of legislation.

And having worked closely with Senator DENTON these past months, I, too, am confident his future portends great things.

In addition to this recent, critical legislative success of Senator DENTON, his activities throughout this Congress have directly contributed to the success of President Reagan's program. As a subcommittee chairman both his legislative work and hearings have formed an important basis of the Labor and Human Resources Committee.

CHILD ABUSE PREVENTION AND TREATMENT AND ADOPTION REFORM

As part of the Omnibus Budget Reconciliation Act, the Congress made provisions for child abuse prevention and treatment and adoption reform activities. An amendment offered by subcommittee chairman Senator JEREMIAH DENTON, provided that $7 million be made

available for grants to States for child abuse programs, and $12 million be included in a discretionary program for a National Center for Child Abuse and Neglect and Adoption Opportunities, for activities which require a national focus. The conferees agreed with this proposal, with the further provision that the adoption opportunities activities should be funded at a minimum of $2 million from the discretionary fund, and that the Secretary would continue to operate the National Center on Child Abuse.

COMMUNITY SERVICES BLOCK GRANT

A proposal for a community services block grant was included in the Omnibus Budget Reconciliation Act of 1981. This block grant authorizes funding for the next 5 years at $389,375,000 for each year. The legislation provides that each State must submit an application as required by the Secretary of Health and Human Services in order to receive funds. In addition, a discretionary authority for the Secretary of HHS makes provisions for certain activities including special emphasis programs for technical assistance and training programs in rural housing and community facilities development, programs designed to promote economic self-sufficiency, assistance for migrants and seasonal farmworkers, and national or regional programs for low-income youth. The Community Services Administration was terminated by this legislation, and a new Office of Community Services was established in the Department of Health and Human Services.

NATIVE AMERICANS PROGRAM

S. 1088, the Native American Act, was introduced in the Senate on April 30, 1981, by Senator JEREMIAH DENTON. With some simple modifications to increase tribal participation in the administration of the program, the bill provided for a 2-year extension of the existing program. Because this bill proposed a free-standing native American program, separate from the Economic Opportunity Act, it was referred to the Select Committee on Indian Affairs. At the request of the chairman of the Select Committee on Indian Affairs, the Subcommittee on Aging, Family and Human Services included a 2-year extension of the current program in the Omnibus Budget Reconciliation Act.

DOMESTIC VOLUNTEER SERVICES ACT

S. 1087, the Domestic Volunteer Service Act Amendments of 1981, was incorporated into Public Law 97–35, the Omnibus Budget Reconciliation Act of 1981. This legislation reauthorized the programs under ACTION, the Federal agency for volunteer service, through fiscal year 1983. It eliminated the set-aside for the university year for action program, freeing up funds to be used for the National Center for Service Learning and demonstration projects in community service.

ADOLESCENT FAMILY LIFE ACT

S. 1090, the Adolescent Family Life Act was incorporated into Public Law 97–35, the Omnibus Budget Reconciliation Act of 1981. The act authorizes a 3-year program of services and research in the area of adolescent sexual activity, including pregnancy. Grants for services would target two adolescent groups. First, pregnant teenagers and their parents could benefit from a wide range of services, such as pre- and post-natal care, infant daycare, parenting skills, vocational education and job training. For this group, adoption would also be presented as a positive option for pregnant girls, along with parenthood.

Current Federal programs simply do not do enough to encourage counseling and referral to adoption services, particularly for very young teens. Second, through education and outreach, grantees could also help adolescent boys and girls and their parents realize the consequences of premarital sexual activity and encourage those teens to refrain from premarital sexual relations. For all services, grantees must involve parents and the community—through religious, charitable and voluntary groups—and in most instances of services to unemancipated minors, parental notification and consent are mandated. Services are targeted to teenagers under the age of seventeen. Finally, the research section focuses on the consequences of premarital adolescent sexual relations, with particular attention to operations research to determine what services or combination of services best work to achieve the objectives of the program.

LOW-INCOME HOME ENERGY ASSISTANCE BLOCK GRANT

As passed in the Omnibus Budget Reconciliation Act of 1981, the low-income home energy assistance block grant is authorized for the next 3 years at $1,875,000,000 for each year. For the first time, this program has a multiyear authorization. This will promote stability and consistency, as well as eliminate waste, in a program which has been plagued by annual revisions and uncertainty as to a continued Federal commitment. Furthermore, the Federal Government is prohibited from issuing regulations to instruct the States how to run their respective programs.

States are required to submit an application for funds to the Secretary of Health and Human Services. As part of the application, the State must make certain assurances and include a plan detailing how these assurances would be carried out. However, the Secretary is not authorized to approve or disapprove any State's application.

HEAD START ACT

The Congress enacted legislation to reauthorize the Head Start program as part of the Omnibus Budget Reconciliation Act. Head Start has an authorization level of $950,000,000 for fiscal year 1982, $1,007,000,000 for fiscal year 1983, and $1,058,357,000 for fiscal year 1984.

A new formula for the distribution of funds is provided. Thirteen percent of the funds would be placed in a Secretary's reserve with the remaining 87 percent distributed to the States with two-thirds based on the number of children age 0–5, who live with families with incomes below the poverty line, and one-third based on the number of children aged 0–18 on whose behalf aid to families with dependent children (AFDC) benefits are paid. This formula serves two purposes.

First, it more adequately targets the children who are intended to be served by the Head Start program. Second, the percentage by which funding to the States is increased under the bill, is more equitable than in current law. Under the new formula, all of the States, except for three, Alaska, Arizona, and Mississippi, receive an increase between 10 and 20 percent, which is more comparable to the overall authorization increase, whereas under current law, the majority of States fall either below 10 percent or above 20 percent.

Another notable change is that provisions of the Davis-Bacon Act have been dropped from the Head Start reauthorization. Davis-Bacon is currently part of 77 Federal programs. The Head Start reauthorization is the first of these programs to have Davis-Bacon eliminated from it.

OVERSIGHT OF HEAD START

On March 10, 1981, the Subcommittee on Aging, Family and Human Services held a hearing on the Head Start program. This hearing formed the basis for reauthorization legislation, which was subsequently introduced, and then included in the Omnibus Budget Reconciliation Act.

LEGISLATION TO EXTEND THE OLDER AMERICANS ACT

On March 17, 1981, the subcommittee held an oversight hearing on the programs authorized by the Older Americans Act—social services, senior centers, congregate and home-delivered meals, community service employment, et cetera. Witnesses discussed the implementation of the 1978 amendments to the Older Americans Act and issues concerning the 1981 amendments to the act, which were soon to be introduced.

LOW-INCOME ENERGY ASSISTANCE

On March 24, 1981, the Subcommittee on Aging, Family and Human Services conducted a hearing on the low-income energy assistance block grant. Witnesses included the Under Secretary of Health and Human Services, two U.S. Senators, three Governors, and a representative from the National Council of Senior Citizens. Subsequent to this hearing, legislation to reauthorize this program was introduced and later included in reconciliation.

OVERSIGHT OF FAMILY PLANNING, TITLE X OF THE PUBLIC HEALTH SERVICES ACT, PART I

On March 31, 1981, the subcommittee, in conjunction with the full committee, held the first of a series of hearings on the problem of adolescent sexual activity. The purpose of this hearing was to look at the services portion of the title X family planning program. Witnesses discussed findings by the General Accounting Office regarding inappropriate and ineffective services provided by certain title X grantees, the role of the Federal Government in birth control, and the impact title X has on adolescents in terms of increased sexual activity, unwanted pregnancy, illegitimate births, and other social indicators. This hearing provided the basis for legislation authorizing the Adolescent Family Life Act.

OVERSIGHT OF THE DOMESTIC VOLUNTEER SERVICE ACT OF 1981

On April 9, 1981, the subcommittee held an oversight hearing on the programs authorized by the Domestic Volunteer Service Act (VISTA), National Center for Service Learning, citizen participation demonstrations, Foster Grandparent program, Senior Companion program, and the retired senior volunteer program. Witnesses discussed issues concerning the 1981 amendments to the act, which were soon to be introduced.

OVERSIGHT ON COMMUNITY SERVICES ADMINISTRATION, CHILD ABUSE PREVENTION AND TREATMENT OF ADOPTION OPPORTUNITIES, AND NATIVE AMERICANS PROGRAM ACT

On April 23, 1981, the Subcommittee on Aging, Family and Human Services conducted a hearing on the administration's proposals for the Community Services Administration, the Native American Programs Act, child abuse prevention and treatment and adoption reform, and related issues. Testimony was received from representatives of the administration, State and local government, GAO, interest groups, and various service providers.

This hearing provided the background for development of the community services block grant, provisions for child abuse prevention and adoption reform, and Native Americans program, which were later included in the Omnibus Budget Reconciliation Act.

OVERSIGHT OF FAMILY PLANNING, TITLE X OF THE PUBLIC HEALTH SERVICES ACT, PART II

On June 23, 1981, the subcommittee held the second hearing on the problems of adolescent sexual activity. This hearing continued the oversight of the title X, family planning services program. Witnesses discussed types of birth control, other than drugs or devices, the history and development of the title X program, and the plans of the administration with regard to its future.

ADOPTION IN THE UNTED STATES

On July 23, 1981, the subcommittee held the third hearing on the problems of adolescent sexual activity. The purpose of this hearing was threefold: To discuss the ways that the Government and society can promote adoption as a positive option for unmarried pregnant adolescents; to discuss ways in which minorities can be encouraged to adopt minority children; and to discuss legislative proposals to establish a Federal, computerized adoption registry that would help reunite adult adoptees and their biological parents.

FIGHTING POVERTY: PRIVATE INITIATIVE AND PUBLIC ASSISTANCE

On August 25, 1981, the subcommittee held a field hearing to examine Federal programs designed to prevent or ameliorate poverty—programs which are recognized as being highly successful, as well as those programs which are recognized as needing improvement. In addition, witnesses discussed the contribution of business and private charitable organizations to solving the problems of unemployment and poverty.

PRIMARY INTERVENTION IN SOCIETAL PROBLEMS: THE ROLE OF THE FAMILY

On September 17, 1981, the Subcommittee on Aging, Family and Human Services conducted the second in a series of hearings addressing the problem of poverty and social welfare policy. Witnesses at this hearing discussed research into how public policy influences primary support groups, particularly the family. In addition, some witnesses presented initiatives undertaken by the private sector in addressing the needs of individuals and families in the context of the community. Additional hearings on social welfare are planned for the next session of the 97th Congress.

OVERSIGHT HEARING ON TITLE X: SEX EDUCATION CURRICULA GUIDES

On September 28, 1981, the subcommittee held the fourth hearing on the problems of adolescent sexual activity. This hearing focused on material produced under title X of the Public Health Service Act on family life and sex education. This material was distributed to three mental health professionals, who critiqued it on the basis of educational merit; appropriateness for the designated age groups; psychological implications; and overall quality of both content and design. The witnesses raised questions as to the appropriateness and quality of some of the materials and suggested alternative approaches to provide family life and sex education.

Mr. President, after listening to these impressive lists of activities and achievements, I think you can see why I tend to think rather highly of the "current crop" of freshmen Senators as a whole. And the thing I find encouraging about this is that what I have just reviewed is just a small part of the activities of the five freshmen who are members of the Senate Committee on Labor and Human Resources—I have listed only the activities from this one committee. As I mentioned of Senator EAST earlier, these five Senators are very active on their other committees, too.

Let me say this: During my previous 4 years in this august body it has frequently been very difficult as a Member of the minority. I consider it a great pleasure to have these great Senators to contribute to the ideals which I for so long have held so dear.●

PRESIDENT REAGAN'S CHALLENGE TO PRIVATE BUSINESS

● Mr. DOMENICI. Mr. President, on October 5 President Reagan spoke here in Washington to the National Alliance of Business. The President said some important things about the need for private businesses to help open doors of opportunity for people who have special problems in obtaining employment or who need a helping hand in order to cope with problems such as poverty, broken homes, crime, and natural disasters. The President challenged business leaders to step up their efforts to respond to human needs.

The President's speech recognizes that reductions which are now underway in Federal programs will cause real problems for some people who now need help. I commend the President for challenging private businesses to help fill gaps left by reductions in Government programs. If the other institutions in our society and individual Americans discharge their responsibilities to help others, there will be far fewer hardships as a result of reductions in Federal programs. Providing employment opportunities for people on the margin of the labor market is particularly important. We look to private business for these opportunities because most jobs are created in the private sector.

Moreover, our Nation's recent experience with subsidized public service jobs was disappointing and the public jobs part of the CETA program has now been terminated. To encourage the private sector to hire people who formerly held CETA jobs, as well as other hard-to-employ people, I offered an amendment which became part of the Omnibus Revenue Act of 1981, extending the targeted jobs tax credit for an additional year and making former CETA workers eligible for it.

The credit offsets up to $3,000 of a qualified employee's wages in the first year on a new job and up to another $1,500 if he continues working at that same job a second year. Other provisions in my amendment were designed to strengthen the administration of this credit by the Labor Department and remove some of the complications of prior law. The targeted jobs tax credit is now a workable and powerful incentive for American's private business to heed the President's call to action.

I want also to commend President Reagan for creating a Presidential Task Force on Private Sector Initiatives. This task force is to be comprised of 35 leaders from the business world and from private charitable organizations. Under the chairmanship of William Verity, chairman of the board of Armco Steel, the task force will, to use the President's words, "promote private sector leadership and responsibility for solving public needs and * * * recommended ways of fostering greater public or private partnerships."

I have a great deal of hope that the task force will help launch a new wave of efforts to expand opportunities for all and improve services to meet human needs. I commend the President for his very thoughtful address to the National Alliance of Business. I am confident that the President's address will be the first of many steps to strengthen the public or private partnership of which the President speaks.

I am pleased that the President has challenged the private sector to help improve our society. and I commend his remarks to other Members and to all who read the CONGRESSIONAL RECORD. I shall ask that the President's speech to the National Alliance of Business be printed in the RECORD at the conclusion of my remarks.

William Raspberry, the distinguished columnist, discussed the President's speech in an October 26 column. I shall ask that his column be printed in the RECORD at the conclusion of my remarks.

Finally, I would like to bring to the attention of the Senate an important analysis of public and private roles in providing community services.

This paper was prepared by R. Scott Fosler, vice president of the Committee for Economic Development (CED). CED

is an organization of business leaders working to strengthen the basic systems in our society. The ideas presented in this paper would provide a constructive start in implementing the concepts outlined in the President's October 5 speech.

I ask that the President's remarks to the National Alliance for Business, Mr. Raspberry's column and Mr. Fosler's paper be printed in the RECORD.

The material follows:

REMARKS OF THE PRESIDENT TO THE NATIONAL ALLIANCE OF BUSINESS

The PRESIDENT. Thank you very much for a very warm welcome. Your organization is concerned with jobs. I heard of a fellow who had been unemployed for a long time and a few days ago he found a job at a china warehouse. He had only worked there a couple of days when he smashed a large oriental vase. The boss told him in no uncertain terms that the money would be deducted from his wages every week until the vase was paid for. And the fellow asked, "How much did it cost?" He told him $300. And the fellow cheered and said, "At last, I've found steady work." (Laughter.)

Seriously, I'm aware that the National Alliance of Business was formed to reduce the despair of unemployment—to provide opportunities where they would otherwise not exist. You've set for yourselves a noble and necessary goal. You know that a job at four dollars an hour is priceless in terms of the self-respect it can buy.

Many people today are economically trapped in Welfare. They'd like nothing better than to be out in the work-a-day world with the rest of us. Independence and self-sufficiency is what they want. They aren't lazy or unwilling to work. They just don't know how to free themselves from that Welfare security blanket.

After we undertook our Welfare reforms in California, I received a letter from a woman with several children who had been on Aid to Dependent Children. She wrote that she had become so dependent on the Welfare check that she even turned down offers of marriage. She just could not give up that security blanket that it represented. But she said that she'd always known that it couldn't go on—couldn't last forever. So when our reforms began, she just assumed that the time had come and that somehow she would be off Welfare. So she took her children and the $600 she had saved from her, as she put it, so-called "poverty" and went to Alaska where she had relatives and she was writing the letter now not to complain about our reforms but to tell me that she had a good job and that working now had given her a great deal of self-respect, for which she thanked me, and then one line that I'll never forget—she said, "It sure beats daytime television." (Laughter.) Our economic program is designed for the very purpose of creating jobs. As I said on Labor Day, let us make our goal in this program very clear—jobs, jobs, jobs, and more jobs. And what is more, our program will reduce inflation so the wages from these jobs will not decrease in earning power.

Part of that economic package also includes budget cuts. Now, some of these cuts will pinch which upsets those who believe the less fortunate deserve more than the basic subsistence which the governmental safety net programs provide. The fact is, I agree. More can be done. More should be done. But doing more doesn't mean to simply spend more. The size of the federal budget is not an appropriate barometer of social conscience or charitable concern.

Economic problems or not, isn't it time to take a fresh look at the way we provide social services? Not just because they cost so much and waste so much, but because too many of them just don't work.

Even if the federal government had all the money it wished to spend on social programs, would we still want to spend it the way we have in the past? In all my years as governor, and now as President, I have never found an agency, a program, a piece of legislation or a budget that was adequate to meet the total needs of human beings. Something is missing from such an equation. I believe that something is private initiative and community involvement—the kind the NAB exemplifies.

There is a legitimate role for government, but we mustn't forget before the idea got around that government was the principal vehicle of social change. It was understood that the real source of our progress as a people was the private sector. The private sector still offers creative, less expensive, and more efficient alternatives to solving our social problems. Now, we're not advocating private initiatives and voluntary activities as a half-hearted replacement for budget cuts. We advocate them because they're right in their own regard. They're a part of what we can proudly call "the American personality."

The role of voluntarism and individual initiative has been misunderstood. Federal loan guarantees will not be restored by charity alone nor will we replace the Department of Health and Human Services. Voluntarism is a means of delivering social services more effectively and of preserving our individual freedoms. John F. Kennedy knew this when he said: "Only by doing the work ourselves, by giving generously out of our own pockets, can we hope in the long run to maintain the authority of the people over the state, to insure that the people remain the master, the state, the servant. Every time that we try to lift a problem from our own shoulders and shift that problem to the hands of the government, to the same extent we are sacrificing the liberties of the people."

There are hard-headed, no-nonsense measures by which the private sector can meet those needs of society that the government has not, cannot or will never be able to fill. Volunteer activities and philanthropy play a role as well as economic incentives and investment opportunities. To be certain we're talking about America's deep spirit of generosity, but we're also talking about a buck for business if it helps to solve our social ills.

With the same energy that Franklin Roosevelt sought government solutions to problems, we will seek private solutions. The challenge before us is to find ways once again to unleash the independent spirit of the people and their communities. That energy will accomplish far, far more than government programs ever could. What federalism is to the public sector, voluntarism and private initiative are to the private sector. This country is bursting with ideas and creativity, but a government run by central decree has no way to respond.

Having been a governor, Franklin Roosevelt knew something of the dangers of overcentralization. In a message to the Congress, he wrote, "Continued dependence upon relief (it hadn't yet been given the name welfare) induces a spiritual and moral disintegration fundamentally destructive to the national fibre. To dole out relief in this way is to administer a narcotic, a subtle destroyer of the human spirit . . . The federal government must and shall quit this business of relief."

What exactly is voluntarism? I guess Gary Cooper did about the best job describing it in the movie "Mr. Deeds Goes to Town."

"From what I can see," he said, "no matter what system of government we have, there will always be leaders and always be followers. It's like the road out in front of my house. It's on a steep hill. And every day I watch the cars climbing up. Some go lickety-split up that hill on high—some have to shift into second—and some sputter and shake and slip back to the bottom again. Same cars—same gasoline—yet some make it and some don't. And I say the fellow who can make the hill on high should stop once in a while and help those who can't."

Over our history, Americans have always extended their hands in gestures of assistance. They helped build a neighbor's barn when it burned down, and then formed a volunteer fire department so it wouldn't burn down again. They harvested the next fellow's crop when he was injured or ill and they raised school funds at quilting bees and church socials. They took for granted that neighbor would care for neighbor.

When the City of Chicago was leveled by fire, urban renewal programs didn't exist; the people simply got together and rebuilt Chicago. The great French observer of America, de Tocqueville, wrote, "Whenever at the head of some new undertaking you see the government in France, or a man of rank in England, in the United States you will be sure to find an association (of individuals)."

The association of Americans has done so much and is so rich in variety. Churches once looked after their own members and during the Depression the Mormon Church undertook its own welfare plan based on the work ethnic—a plan that is still successful today. With no disrespect intended one can't help but wonder if government welfare would exist at all, if our churches had at that same time—all of them, picked up that task. Before World War I, the Rockefeller and Carnegie foundations together spent twice as much as the government for education and social services—simply because there was a need. The National Foundation for Infantile Paralysis set out to conquer polio with dimes . . . and did it. In a fitting symbol of America, our own Statue of Liberty was built with the nickels and dimes of French schoolchildren and the contributions of their parents.

We all know countless stories of individual and personal generosity. There was an incident in Los Angeles a couple of years ago involving a man named Jose Salcido whose wife had died of cancer, leaving him both father and mother of 13 children. In an accident only the Lord can explain, one day the brakes on his truck did not hold and he was crushed against a brick wall as he walked in front of the vehicle. The children who had lost their mother now had lost their father. But they were not orphaned by their neighbors or even complete strangers who immediately began collecting contributions. The parish church started a drive. Finally a fund was set up at the bank and a committee was formed of citizens to take care of it. They also discovered how kind the people of this land can be.

One letter accompanying a check said it all. "This is for the children of Jose Salcido. It is for them to know there are always others who care; that despite personal tragedy, the world is not always the dark place it seems to be; that their father would have wanted for them to go on with courage and strength, and still open hearts."

I know there are cynics who dismiss the notion of Americans helping other Americans. They say that I speak of an America that never was and never can be. They believe voluntarism is a mushy idea and the product of mushy thinking. They say that our society today is too complex or that we're trying to repeal the 20th century. Well, the cynics who say these things have been so busy increasing Washington's power that they've lost sight of America. Have they forgotten the great national efforts before there ever was a thing called "foreign aid"? The

American people organized to help Japan in the great earthquake, famine in India, bundles for Britain. The spirit is not dead.

I wish the cynics would visit David and Falaka Fattah in Philadelphia. I don't know whether I pronounced their name right, but the Fattahs decided to put their hearts and minds into reducing the gang violence in West Philadelphia, which killed up to 40 persons a year in the early 1970s. They were instrumental in negotiating a city-wide peace treaty among gangs that reduced the number of deaths from 40 to about 1 a year.

This one couple did something that all the social welfare and law enforcement agencies together had been unable to accomplish. They replaced the gang structure with a family structure. They actually took a gang of 16 into their home. Their House of Umoja has helped more than 500 boys now develop into self-sufficient and productive young men. And today they are establishing what might be called an urban Boys Town.

I wish the doubters would visit Detroit where a few years ago hundreds of children awaiting adoption were in the foster care system. Potential black parents were judged by arbitrary income standards and not whether they could offer a warm, loving, secure family to a homeless child.

But a community group called Homes for Black Children challenged the adoption practices of the local agencies with astounding results. In its first year, Homes for Black Children placed more kids in permanent homes than all 13 of the traditional placement agencies combined. There is the DeBolt family in California that began adopting only children who were grievously handicapped, at one time, 19 in their home.

I wish the cynics would call on New York City, the New York City Partnership, an association of 100 business and civic leaders, which this past summer found jobs for about 14,000 disadvantaged youths, the majority of whom would not have otherwise found jobs.

Talk to the Honeywell people who are training prison inmates in computer programming. Those inmates who reach an employable skill level before leaving prison have a recidivism rate of less than 3 percent, compared to a national rate estimated at 70 percent.

Or look at the marvelous work McDonald's is doing with it's Ronald McDonald Houses. These are places, homes really, usually near children's hospitals where families can stay while their children are treated for serious diseases. Currently 28 homes are opened and another 32 are in some stage of development. Since the homes are funded mainly by the local McDonald operators and the staff is all volunteer, no tax money is spent.

The cynics should ask the Fattahs if the spirit is dead. They should ask the families who have been helped by the McDonald Houses and the Homes for Black Children if the spirit is dead. They should ask the disadvantaged New York youths who have summer jobs or the prison inmates who are developing skills for the outside world. Why can't the skeptics see the spirit is there where it has always been, inside individual Americans?

Individual Americans like Father Bruce Ritter. Father Ritter's Covenant House in the heart of Times Square offers youths who are runaway or exploited a sanctuary from the pressures of modern life and an escape from those who would prey on them. With the help of 200 part-time and 65 full-time volunteers, Father Ritter last year aided nearly 12,000 youths.

Perhaps the doubters should consider how empty and gray our society would be right now if there were no such thing as volunteer activity. Erma Bombeck, that witty woman who appears in our newspapers, once wrote a more sober article on what it would be like if the volunteers all set sail for another country. And if you don't mind, let me read a part of what she said:

"The hospital was quiet as I passed it. Rooms were void of books, flowers and voices. The children's wing held no clowns . . . no laughter. The reception desk was vacant.

"The Home for the Aged was like a tomb. The blind listened for a voice that never came. The infirm were imprisoned by wheels on a chair that never moved. Food grew cold on trays that would never reach the mouths of the hungry.

"All the social agencies had closed their doors, unable to implement their programs of scouting, recreation, drug control, Big Sisters, Big Brothers, YW, YM, the retarded, the crippled, the lonely, and the abandoned.

"The health agencies had a sign in the window. 'Cures for cancer, muscular dystrophy, birth defects, multiple sclerosis, emphysema, sickle cell anemia, kidney disorders, heart diseases, have been cancelled due to lack of interest.'

"The schools were strangely quiet with no field trips, no volunteer aids on the playground or in the classroom . . . as were the colleges where scholarships and financial support were no more.

"The flowers on church altars withered and died. Children in day nurseries lifted their arms but there was no one to hold them in love."

Her article told a very much unrecognized truth—volunteer cuts would be much more disruptive to the nation than federal budget cuts. Because they are so important, this administration seeks to elevate voluntary action and private initiative to the recognition they deserve. We seek to increase their influence on our daily lives and their roles in meeting our social needs. For too long the American people have been told they are relieved of responsibility for helping their fellow man because government has taken over the job.

We seek to provide as much support for voluntarism without federalizing as possible. Today, I am announcing the creation of a Presidential Task Force on Private Sector Initiatives, comprised of 35 leaders from corporations, foundations, and voluntary and religious organizations. Its purpose will be to promote private sector leadership and responsibility for solving public needs and to recommend ways of fostering greater public/private partnerships.

I have asked Bill Verity, the Chairman of Armco Steel, to chair the task force and act as my personal representative in expanding private sector initiatives and in recognizing outstanding examples of corporate and community efforts.

I'm instructing the Cabinet to review agency procedures and regulations and identify barriers to private sector involvement. We want to deregulate community service. For example, mothers and grandmothers have been taking care of children for thousands of years without special college training. Why is it that certain states prohibit anyone without a college degree in early childhood education from operating a day-care facility?

I'm also asking the Cabinet to develop pump priming and seed money programs that offer incentives for private sector investment. In addition, the Cabinet will provide technical knowledge to develop private incentives. Furthermore, existing programs will be examined to determine those which could be more productively carried out in the private sector.

Voluntarism is an essential part of our plan to give the government back to the people. I believe the people are anxious for this responsibility. I believe they want to be enlisted in this cause. We have an unprecedented opportunity in America in the days ahead to build on our past traditions and the raw resources within our people. We can show the world how to construct a social system more humane, more compassionate, and more effective in meeting its members' needs than any ever known.

After I spoke of voluntarism several days ago, I received this mailgram. "At a breakfast this morning, 35 chief executive officers of the largest employers and financial institutions of San Antonio met and committed to: 1) support of you and your commitment of returning the responsibility of support of many worthy, previously federally funded programs to the local level; 2) committing themselves individually and corporately to do more in being a part of continuing or establishing that society net of services each community needs; 3) as a first step, committing to achieving a minimum 20 percent increase in our local United Way campaign which represents 60 agencies included within that safety net. And finally, committing themselves that the programs supported are needed and efficiently and effectively administered. You have our support." And it was signed by Harold E. O'Kelley, Chairman of the Board and President of Datapoint Corporation, Tom Turner, Sr., Chairman of the Board and President of Sigmor Corporation, Dr. Robert V. West, Jr. Chairman of the Board of Tesoro Petroleum Corporation and H. B. Zachry, Sr., Chairman of the Board of the H. B. Zachry Company.

And just this weekend, I received a letter from the insurance industry promising to undertake new budget initiatives to reduce unemployment, especially among minority youths. The insurance companies plan to direct their financial resources which are in the hundreds of billions of dollars as we know to further this goal. They also plan these programs affecting basic human needs.

The private sector can address the tough social problems of special concern to minority Americans and I believe that we will soon see a torrent of private initiatives that will astound the advocates of big government. The efforts of you at this conference also show what can be done when concerned people in businesses join in partnership with government. You are a model of future action and I'm calling upon you today to help in the cause to enlarge the social responsibility of our citizens. The spirit that built this country still dwells in our people. They want to help. We only need to ask them. All of us, and particularly we who are parents have worried about whether the youth of today have absorbed some of the traditions with which we are so indoctrinated. A few years ago in Newport Beach, California, there were some lovely beachfront homes that were threatened by an abnormally high tide and storm generated heavy surf—in danger of being totally undermined and destroyed. And all through the day in the cold winter night, and it does get cold in California at night, sometimes in the daytime, the volunteers worked filling and piling sandbags in an effort to save these homes. Local TV stations, aware of the drama of the situation covered the struggle and went down there in the night to see what was happening and catch the damage being done and so forth.

And it was about 2:00 a.m. when one newscaster grabbed a young fellow in his teens, attired only in wet trunks, even at that hour. He'd been working all day and all that night—one of several hundred of his age group. And in answer to the questions—no, he didn't live in one of those homes they were trying to save. Yes, he was cold and tired. And the newscaster finally wanted to know, well, why was he and his friends doing this. And he stopped for a minute and then he answered and the answer was so poignant and tells us something so true about ourselves that it should be printed on a billboard. He said, "Well, I guess it's the first time we ever felt like we were needed."

Americans are needed. They're needed to keep this country true to tradition of volun-

tarism that has served us so well. And they're needed to keep America true to her values. In the days following World War II when a war ravaged world could have slipped back into the Dark Ages, Pope Pius XII said the American people have a genius for great and unselfish deeds. Into the hands of America God has placed an afflicted mankind. Let those words be true of us today. Let us go forth from this conference and say to the people: Join us in helping Americans help each other.

And I assure you, I'm not standing here passing this off to you as solely your task and the government will wash its hands of it. We intend a partnership in which we'll be working as hard as we can with you to bring this about. Thank you and God bless you. (Applause.)

[From the Washington Post, Oct. 26, 1981]

IN THE SPIRIT OF BARN-RAISING

(By William Raspberry)

In large unremarked speech before the National Alliance of Business, President Reagan recently laid out his view that government is not only a poor substitute for private charity, but often gets in the way of the ability of people to help themselves and each other.

It was not a budget speech, calculated to justify the administration's slashing of social programs. It was a philosophical statement, designed to restore charity's good name.

The president's immediate concern was to support the efforts of private businesses in several U.S. cities in increasing job and job-training opportunities for idle youths. But his remarks covered the gamut of social-service programs from day-care and adoption services to crime prevention.

"In all my years as governor, and now as president," he said Oct. 5, "I have never found an agency, a program, a piece of legislation . . . or a budget . . . that was adequate to meet the total needs of human beings. Something is missing from such an equation. I believe that something is private initiative and community involvement.

"Economic problems or not, isn't it time to take a fresh look at the way we provide social services? Not just because they cost so much and waste so much, but because too many of them just don't work. Even if the federal government had all the money it wished to spend on social programs, would we still want to spend it the way we have in the past?"

As examples of the old, ineffectual ways of delivering services, he mentioned welfare that so often traps its recipients in their dependency; tax-supported relief efforts that, through their impersonality, manage to offend both donor and recipient, and government regulations that, in the name of protecting against abuse, make it impossible for local citizens to furnish the help they are both willing and able to provide.

He made clear his belief that government must continue to play a role in helping the helpless. "Federal loan guarantees will not be restored by wealthy people dancing till dawn at charity balls," he said. "Nor will we replace the Department of Health and Human Services with the Junior League."

But he believes we have lost an essential element of the American spirit—the spirit epitomized by the community barn-raising efforts of earlier times—through our near-total reliance on government-sponsored aid.

"There is a legitimate role for government," he said, "but we must not forget that before the idea got around that government was the principal vehicle of social change, it was understood that the real source of our progress as a people was the private sector. The private sector still offers creative, less expensive and more efficient alternatives for solving our social problems."

He ticked off a number of private programs that have outperformed their government-sponsored rivals: the House of Umoja in Philadelphia, which has managed to reduce teen-gang killings from 40 a year in the 1970s to only one a year; the Detroit effort, known as Homes for Black Children, that in its first year placed more children in permanent homes than all 13 of the city's traditional placement agencies combined; the Ronald McDonald Houses that provide quarters so parents can be near their hospitalized children; the New York City Partnership, an association of 100 business and civic leaders that has found jobs for some 14,000 disadvantaged youths; the Honeywell project that, by providing job-training for inmates, has reduced their recidivism rate from an estimated 70 percent to less than 3 percent.

"Voluntarism," Reagan said, "is an essential part of our plan to give the government back to the people. I believe the people are anxious for this responsibility. I believe they want to be enlisted in this cause."

Any reporter who has ever written of a destitute family, or a shoeless child, or a lonely, malnourished old woman, can verify that the urge to be helpful is there. But, particularly in the cities, people find it more and more difficult to be helpful in ways that are personally satisfying. If a neighbor's house burns down, their response is immediate and generous. But if the jobless teen-ager or the lonely woman or the student in need of tutorial help lives across town, they may never hear of the need. Even indirect involvement—giving money to community groups that are close to the problems—is far more satisfying than assistance paid for through taxes.

The problem is to provide a connection between those in need and those prepared to help. Reagan proposes to do it by developing "pump-priming and seed-money programs" and by offering technical assistance where needed.

And by getting government out of the way—the "deregulation" of community service, he calls it.

"Mothers and grandmothers have been taking care of children for thousands of years without special college training," he said. "Why is it certain states prohibit anyone without a college degree in early childhood education from operating a day-care facility?"

PUBLIC AND PRIVATE ROLES IN PROVIDING COMMUNITY SERVICES *

(By Scott Fosler)

Basic community services have become expensive and complicated, even for once simple functions. People used to burn, bury, or throw their trash away. Today we manufacture specialized vehicles in which to collect our voluminous waste, use computers to map out the routes of collection, and construct elaborate and costly landfills or technologically sophisticated, if not always practical, plants in which to dispose of it or transform it into a usable form. Other basic functions are even more costly and complicated: housing, health, transportation, public safety, education, social services, water supply and sewage disposal, and energy.

None of these is an exclusively government service. Each involves government, business, nonprofit organizations, traditional social institutions, and individuals simultaneously performing tasks that are dependent on one another. In transportation, for example, private auto manufacturers produce cars, government public works agencies construct roads, private oil companies provide gasoline, motorists operate their own vehicles, private companies operate buses and taxis, government traffic engineering and police departments manage traffic, government or quasi-public agencies operate train, subway, and bus lines, private companies insure vehicles and their operators, and both private and government organizations provide places to park.

The question facing us today is whether such service systems are properly structured and managed. Is the distribution of tasks among the various public and private entities appropriate to their abilities? Do they have the incentive to perform their tasks well and as inexpensively as possible? Do the relationships among the various organizations and individuals promote efficient and effective interaction?

CONFRONTING THE CONVENTIONAL WISDOM

Addressing these questions is complicated by popular biases as to the appropriate roles of the so-called public sector and private sector. There is still a strong belief in the United States that profit-making firms do the "important" things, and government's role is to be supportive and facilitative. An equally strong if contradictory view is that there are certain services so critical that they should be performed by government because they are too important to be left to the whim of the marketplace.

The conventional wisdom also equates public services with government. The terms have become synonymous. Of course, a public service need not be operated by a government agency. But over the past decades people have come to assume that if a service is "public," it should be operated by government.

For example, "public safety" is typically assumed to be the responsibility of the police departments. But a police department plays only a small role in keeping the public safe from crime. Lawmakers, prosecutors, judges, and correctional officers probably have greater influence on criminal behavior than the police. And even the total effect of these government officials, while important, is partial.

Crime is closely associated with youth unemployment, social attitudes and habits (immediate gratification; drug use), social institutions (family, religion, neighborhood associations), and crime opportunity (the availability of things to steal), none of which is controlled directly by the government criminal justice system as a whole, let alone the police department.

Another bias that frustrates the sorting out of responsibilities is an excessive reliance on specialization. We have learned, perhaps too well, that complicated problems can be tackled when distinguishable tasks are assigned to specialists, both people and organizations. For all of its benefits, specialization also creates problems.

In a world where costs are frequently unassociated with results, it is not uncommon for specialization to develop for its own sake, because it is possible or because of the benefit to the specialist, and not necessarily because it is useful.

And even when it is useful, coordinating and integrating specialized people and organizations frequently requires specialists skilled in such matters. It is said only half facetiously that in medicine the patient is the last generalist. The same could be said of the household and the individual confronted with a dizzying array of service organizations and professionals, both public and private, required to provide what used to be simple life functions.

In seeking ways of providing community services more effectively and efficiently, we need to account for these biases. We need to acknowledge the importance of government, and not attribute to the private sector a mystical penchant for inevitably doing important things efficiently. We need equally to challenge the conventional wisdom that cer-

* This paper draws in part upon research for a study of public-private partnership by the Committee for Economic Development, and in part on the author's experience in local government. The views expressed herein, however, are those of the author and not necessarily of CED.

tain functions are inherently public services and that they therefore should be directly provided by government. And we need to guard against the pitfall of unproductive specialization, while determining means of integrating useful specializations so that they can benefit people.

There are four categories of options for improving community services: improve the management of government agencies; enhance the private role; structure services to provide greater incentive and opportunity for performance; and consider approaches that do not require high levels of formally operated services.

IMPROVING MANAGEMENT OF GOVERNMENT AGENCIES

The first option is to improve the management of those services that government now provides, and is likely to continue to provide. While this is neither a novel nor exciting proposal, it is the most urgent, the most likely to produce results, and it will continue to be important no matter how successful the more interesting and unorthodox public service options may turn out to be. Governments at all levels are large, complex, and important, and they will continue to be so. Management in all its phases—planning, decision making, financing, implementing, and evaluating—will be a top priority.

ENHANCING THE PRIVATE ROLE

The second option is to enhance the private role in the provision of community services. Several approaches here hold promise.

Contracting

There is a wealth of information and experience on contracting government services to private firms in such areas as refuse collection, solid waste disposal, snow and leaf removal, road maintenance, and food services. While there are limits to what public functions can be successfully contracted, and potential pitfalls if suitable contractors are not available or if project monitoring is inadequate, local governments have only begun to tap the potential. Successful contracting requires careful selection of what is to be contracted and professional management in writing requests-for-proposals, select contractors, negotiating contracts, and monitoring performance.

In some instances, overhead operations previously performed in house are being contracted. For example, under contract with Gainesville, Florida, ARA Services, Inc., assumed complete responsibility for running Gainesville's two garages and fleet of motor vehicles. All positions except that of project managers were filled with former city employees. The fiscal 1981 budget of $1,211,000 was 11 percent below the projected fiscal year 1979 budget for Gainesville's in-house program.

In other instances, whole services are contracted or awarded by franchise to a private firm. The case of the Rural/Metro Fire Department, Inc., a private, profit-making company providing fire services to Scottsdale, Arizona, is widely known. Less well known is the Danish firm, Falck, which provides fire, rescue, and motor vehicle breakdown services to 271 of the 279 municipalities and to one million families in Denmark. Falck is a profit-making firm that operates with 3,300 permanent and 1,200 part-time employees, 132 stations, 400 fire trucks, 1,000 ambulances, and specialized equipment for coastal and air rescue, and diving and haulage operations.[1] Both Rural/Metro and Falck have reputations for high quality service and reasonable cost. Rural/Metro's costs are roughly half the national average per capita cost for fire services in the United States. Efficiencies are achieved principally through the use of fewer but highly trained personnel (including part-time employees), and innovative, economical use of equipment. In both companies, incentive for performance derives from a tradition of professionalism and the knowledge that government could choose to take over the service.

Self-help

A second way to enhance the private role is to facilitate and encourage those private organizations and individuals that attempt to provide for themselves what before had been presumed to be a responsibility of government. Numerous self-help groups have been organized throughout the country to promote or directly provide housing, commercial development, training and job opportunities, counseling services, public safety, day care, and numerous other services. Such organizations include community development corporations such as the Bedford-Stuyvesant Corporation in Brooklyn; cooperatives such as Jubilee Housing in Washington, D.C.; community development credit unions such as those supported by the National Center for Urban Ethnic Affairs in Washington, D.C.; community investment trusts such as the Zion Nonprofit Charitable Trust in Philadelphia; and a variety of other locally based organizations such as the Michigan Avenue Community Organization in Detroit.

Such organizations build upon the ability and motivation of people in the community to address their own needs. They combine the direct operation of services and the investment of privately secured funds with advocacy in pressing for complementary government services and negotiating with businesses in the pursuit of community goals.

Corporate public involvement

Corporate philanthropy has averaged about 1 percent of pretax net income in recent years. This amounted to $2.5 billion in 1980, or only about 5 percent of all private charitable giving. The Economic Recovery Tax Act of 1981 will probably have a mixed impact on corporate giving. On the one hand, it raises the maximum deductible corporate contribution from 5 to 10 percent of pretax net income. On the other hand, it substantially reduces corporate tax rates and overall tax liability, thereby increasing the real cost of corporate contributions.

It remains to be seen whether corporations will raise their levels of giving despite the reduced tax advantage in doing so. There are some encouraging signs, such as the effort by corporations in some cities to emulate the Five Percent Club of Minnesota, a group of 48 corporations in the Twin Cities that give the maximum 5 percent deductible contribution. While lower overall tax burdens and increased presure for giving may encourage some corporations to raise their levels of giving despite the reduced tax advantage, such inclinations may be dampened by the slowdown in the economy which has already caused companies in especially hard-hit industries to drastically cut their contributions.

While the level of corporate financial giving is important, it is only one of several resources corporations can employ to address community needs. There are numerous examples of corporations loaning executive, technical, and analytic personnel to both government and non-profit organizations. Corporate facilities similary can be loaned or rented at below cost. And the numerous business decisions made by firms in hiring, procurement, the investment of funds, and especially in the location of facilities, can be consciously geared to benefit the community. Control Data, for example, is well known for its experimental attempts to locate profit-making businesses in low-income neighborhoods, and to provide such services to employees as day care for children and personal, educational, financial, and legal counseling.

Equally important as the level of corporate public involvement is the effectiveness of decisions on how to use corporate resources. Many corporations are paying greater attention to assessing community needs, identifying appropriate means of meeting them, providing assistance in monitoring implementation, and evaluating results.

Foundations and nonprofit organizations

A similar movement to use resources more effectively has been underway among foundations and nonprofit organizations, especially since the prospect for revenues is not encouraging in the nonprofit sector.

Changes in the tax code that free foundations from a requirement to contribute at least 5 percent of their total assets annually may be beneficial to the health of foundations in the long run, but could reduce grants in the critical period just ahead.

More significantly, the long-term downward trend in real private giving may well be accelerated by changes in the 1981 Tax Act, thereby depressing the principal source of donations to nonprofit organizations. The revenue picture for nonprofits is all the bleaker since about 20 percent of the Federal budget cuts in education, welfare, health, and the arts will be at the expense of nonprofit organizations.

Lester Salamon of the Urban Institute estimates that the tax changes will reduce private individual giving to nonprofits by $18.3 billion over the period 1981–84, while President Reagan's March, 1981 budget would reduce Federal grants to nonprofit organizations by about $27 billion over the same period.[2]

Whatever the magnitude, it is likely that the nonprofit sector will sustain a revenue loss that, without compensating action, could seriously impair its ability to provide services. The revenue constraints, plus the likely acceleration in demand for the services of nonprofit organizations, increases the urgency of nonprofit organizations improving their management both to assure that scarce resources are used well and to be able to attract funds from donors who will and should require greater assurance that their money is being well used.

Among the encouraging developments in the nonprofit sector is the emergence of intermediary organizations skilled in targeting resources and providing assistance to promising nonprofit and self-help groups. An example is the Local Initiatives Support Corporation which was created in 1979 and jointly funded by the Ford Foundation and six major corporations "to help strengthen and expand the capacity of independent, community-based development organizations to improve the physical and economic conditions of their communities."

LISC has provided loans and technical assistance to 80 community-based development organizations across the country, while its resources have grown from its original $10 million to $25 million, all from private sources.

Improved coprotection

A fifth approach involving the private sector is to improve the way in which government, business, nonprofit organizations, self-help groups, traditional social institutions, and individuals interact in providing services or otherwise meeting needs. A simple example is residential refuse collection: efforts by residents to separate recyclable materials

[1] Frazier, Mark, "Private Alternatives to Public Services," *Transatlantic Perspectives*, July, 1981.

[2] Salamon, Lester, M., "The Reagan Economic Recovery Program and the Nonprofit Sector: An Overview," unpublished paper, The Urban Institute, Washington, D.C., October, 1981.

or carry trash cans to the curb can reduce the cost of collection and disposal.

More complex interaction occurs in the social services. Better and less costly health care depends heavily on how well individuals take care of themselves and use their judgment in the selection and use of professional medical services. Yet individual choice is limited by prevailing health care structures. Success with health maintenance organizations (HMOs) and private emergency clinics suggests there is opportunity for incentive structures that place greater emphasis on preventive care and/or where profitability is tied more directly to success in controlling costs, with less reliance on third-party payment.

Education is a similarly complex process involving the individual and his or her family, schools and universities, religious institutions, media, training institutions, and business. The gap between school and work in providing graduates with skills appropriate to available jobs is of growing concern to American industry.

Crime, joblessness, and malaise among youth are chronic problems that have seemed invulnerable to conventional social service and criminal justice approaches. In fact, there is evidence that some conventional approaches not only are ineffective but may exacerbate the problems they are supposed to alleviate. The House of Umoja in Philadelphia is an example of residents in a community taking action themselves to address the problem of youth crime. In providing a home for youth gang members, the founder of the organization, Sister Falaka Fattah, stated that she intended to provide an "extended family" to compensate for the "massive disruptions in family life caused by black migration to the North."[3]

STRUCTURING SERVICES FOR PERFORMANCE

Private firms are not inherently more efficient than government agencies. Efficiencies or higher quality services are attributable to clearly identifiable practices such as good management, appropriately trained personnel, and effective use of equipment and material, which are also available to government. The private sector does not have a monopoly on such practices, but it is more likely to have the incentive to use them.

Private firms also have certain advantages over government agencies in their freedom to choose business objectives that are profitable while shunning those that are not, and in their flexibility to choose the most economical scale of operation. Most government services theoretically benefit the community as a whole and thus are financed by general taxes. The scale of government services, meanwhile, must account for the geographical reach of the political jurisdiction which raises the taxes to finance them.

Nonetheless, while these differences between the public and private sectors are apparent, they are not so definitive or precise as is widely believed. It is possible to structure certain government service responsibilities in such a way as to take advantage of private sector features that promote efficiency and performance without neglecting other government goals such as equity and political accountability. Three such features applicable to some government services are linking the cost and value of services through consumer purchases; competition that permits unsatisfied customers to take their business elsewhere; and appropriate scale of operations that permits economies associated with both largeness and smallness.

[3] Testimony by Sister Falaka Fattah, Founder-Chief Administrative Officer, House of Umoja, before a Forum on Alternatives to Public Service Delivery, U.S. Senate Subcommittee on Intergovernmental Relations, Washington, D.C., July 28–30, 1981.

User fees

The price charged by a firm is its stated measure of the value of its product in the marketplace. Customers decide whether the value they will receive from the product is worth the price; if they choose to buy they pay the entire cost. Firms that make what no one will buy, charge what no one will pay, or price too low to cover costs will soon go out of business. The key here, of course, is that the customer is both the sole purchaser and the sole consumer of the product, and so can compare what he pays with what he gets. In most government services, by contrast, the purchaser is usually the government while the consumer is usually a citizen.

Financing public services through a user charge or fee based on the benefit received can promote greater attention to comparing cost and value, since the service recipient is also the purchaser. Individuals, households, organizations, or identifiable groups of citizens that benefit from a government service could be required to pay directly and specifically for the cost of producing that benefit. This not only promotes efficiency and performance, but also provides an equitable way of raising revenue. To the extent the benefit derived to the public as a whole, the government would pay the cost from general revenues.

Thus, the service recipent would not necessarily pay the full cost of the service, but rather the difference between the full cost and that portion of the cost attributable to the benefit accruing to the community as a whole, which would roughly correspond to cost of providing the benefit that accrues to the recipient.

Such calculations are relatively simple for such services as water supply, sewage disposal, refuse collection and disposal, and certain recreation services. And in fact user charges are regularly employed to finance such services. The calculation is more difficult for such services as public transportation, which typically is financed by a combination of fares and subsidies, theoretically reflecting the distribution of benefits respectively to the rider and to the public as a whole.

In practice, mass transit fares are influenced by an array of factors that have little to do with a precise calculation of public and private benefits. The principal competitor to public bus or rail transit is the automobile, which is heavily subsidized through tax financed road construction and maintenance and artificially low parking rates which may be employer, government, or merchant supported.

Thus, the consumer weighs the transit fare against the out-of-pocket cost of operating his automobile in choosing his mode of transportation, but the cost of each will be heavily conditioned by the amount of subsidy to each mode. Governments responsible for determining the amount of the subsidies are with few exceptions poorly organized to consider the relative impact of transit and automobile subsidies on commuting habits.

Fiscal pressures have prompted local governments to turn to user charges and fees as an alternate source of revenue. However, they are still underutilized because of political resistance by service recipients, who naturally prefer free or subsidized service; administrative opposition from service bureaucracies, which fear the accountability or loss of clients; and inadequate accounting procedures, which fail to isolate service costs and benefits.

The only legitimate reason for underutilization is the concern that fees would deprive low-income residents of needed public services, or otherwise compel them to pay a burdensome cost. However, measures can be taken to assure that no one is denied basic services by providing vouchers or direct subsidies, or by permitting deferral of payment (e.g., charges levied against property could be delayed until the property is sold) for those unable to pay the charge.

Competition

Establishing a closer link between the cost and value of services will not by itself produce incentive for greater efficiency or higher quality. In the market economy we rely upon competition to provide this incentive: the unsatisfied customer can take his or her business elsewhere. Having two or more providers of a single service is hailed as the key to efficiency in the private sector; it is simultaneously scorned as the clearest example of waste in the public sector.

To be sure, for certain services the incentive that derives from having competitive providers will not produce efficiencies sufficient to compensate for the high cost of maintaining duplicative operations, especially when heavy capital investment is required. Such generally private sector functions as telephone service, electrical production, gas supply, and cable television typically are granted monopoly status principally because of the high cost that would be required to build and operate duplicative distribution networks.

• • • • •

Smaller size can also increase flexibility in determining how the service should be provided. A contract might be awarded to a private firm on a competitive basis or negotiated with another government; a consortium might be established to provide the service through a joint agency or by contracting with a private organization; or the jurisdiction may decide to provide the service directly.

Whether the provider is a government or a private firm, the knowledge that the option is available to enlist another provider if performance flags can be an effective incentive. Smaller size also permits responsible officials as to service quality and cost.

Smaller districts take several forms:

Single-purpose neighborhood associations established to provide one or more specific services for a fee, such as the neighborhood in St. Paul that had previously contracted with numerous refuse haulers on a house-by-house basis and switched to a collection contract with a single hauler.

Deed-based homeowners associations in which membership is automatically passed on with ownership of the home in order to avoid the problem of "free riders" who benefit from locally provided services but do not pay for them. The Community Associations Institute estimated the number of such associations, which charge their members an annual fee to provide such services as street maintenance, park upkeep, leaf removal, and snow removal, increased from 600 in 1965 to more than 20,000 in 1980.[4]

Special taxing districts that are chartered by state governments to provide one or more services for which they can levy a tax on their residents.

Incorporated municipalities that provide a range of services to a restricted neighborhood, even though they are located within a larger urban area served by a full-service urban county government.

Condominium associations that charge a fee to individual unit owners for the operation and maintenance of common elements.

Self-help organizations, such as community development corporations and others discussed previously.

Such districts provide a range of maintenance-type services such as street, curb, and sidewalk construction and maintenance; snow removal; leaf collection; refuse collection; and maintenance of public trees, shrubs, parks, and gardens.

[4] See Frazier, Mark, "Privatizing the City," *Policy Review*, Spring, 1980.

Some also provide police patrol, recreational services, water supply, sewage disposal, and storm water management. Some, such as municipalities and self-help organizations, provide a still richer mix of services.

Such districts facilitate the organization of people with a common interest in providing a quality or cost of service that they could not get from the private sector, the public sector, or through their own labor. They are, in essence, a type of "mini-government," formally so in the case of the municipalities and special taxing districts.

As such they have a governing body which not only serves the purpose of raising revenues and seeing to the provision of services, but can also represent its constituents' common interests outside its physical jurisdiction and function as a political institution to pursue common interests and resolve disputes internally.

ALTERNATIVES TO SERVICES

The first three options to conventional community services involve shifting responsibilities for services and improving services. A fourth option is to provide no service at all, but rather to meet the presumed need for service in some other way, or to rethink the nature of the need itself.

Local governments have a range of tools available for pursuing objectives short of establishing or expanding service agencies. These tools include leadership and advocacy; support for public participation, volunteerism and self-help efforts; law and regulation; tax policy and financial tools; and administrative changes.[5]

Many local governments have become preoccupied with the financial and management problems of maintaining service agencies to the exclusion of considering how these other tools might be used more effectively.[6] Pressures of time, politics, and tradition prevent serious consideration of two fundamental questions of governance for any given issue: one is whether to do anything at all, and the other is the best way to do it. Two examples serve to illustrate:

Drug abuse among teenagers is a problem in Montgomery County as it is in many communities. Two years ago, when the most recent in a long progression of requests for appropriations to set up a new program to deal with the problem came before the Council, some of us questioned what effect it would have, and how it related to existing programs. We already had a bewildering array of educational, therapeutic, counseling, and other kinds of programs, and it was not clear what this new effort would add.

Instead of approving the appropriation, we decided to reexamine existing programs. Two conclusions were reached. One was that there was already an abundance of government resources addressing the problem that should be more effectively coordinated.

The other was that there was a limit to what government could do; drug abuse among teenagers is fundamentally a problem of behavior that requires the attention of the family and the community.

Among the more promising approaches to involving the family was the "parent peer group," an informal association of parents whose children socialize together. By meeting periodically and keeping in touch, parents can compare notes on appropriate standards for their children, learn first hand whether "everybody is doing it," keep tabs on the whereabouts of their children, and learn the facts and experience of drug use.

One such parent peer group which calls itself PRIDE, was especially successful and enthusiastic, and has since helped to start or assist about forty other similar groups.

SUMMARY

Fiscal pressures on local government, intensified by Federal budget reductions, are prompting a search for alternative means of service delivery, and experimentation with ideas that have been discussed for many years. Recent experience demonstrates that there are, indeed, more effective and efficient ways of providing services. The most important of these is simply better management.

However, there is also a greater role to be played by business, nonprofit organizations, self-help groups, traditional social institutions, households, and individuals. To take full advantage of these opportunities will require structuring services to provide greater incentive and appropriate scale of operation.

There is also a need to rethink the assumptions underlying conventional service approaches and to seek alternatives that do not require high levels of formal service operations.●

[5] SRI, International has undertaken a series of studies examining the various tools of local governance, which it categorizes as "nonservice approaches" to distinguish them from direct service operation by government. See, for example, *Rediscovering Governance: Using Nonservice Approaches to Address Neighborhood Problems—A Guide for Local Officials*, SRI, International, Menlo Park, California, 1980.

[6] The Citizens League of St. Paul-Minneapolis explored many of the ideas related to such approaches in *Enlarging Our Capacity to Adapt*, Report of the Committee on Issues of the 80s, Citizens League, Minneapolis, Minnesota, August 27, 1980.

THE HELSINKI COMMISSION IN 1981

● Mr. DOLE. Mr. President, the year 1981 has been a year of significant activity for the Helsinki Commission. I would like to place in the RECORD at this point a description of the Commission's work this year.

The Commission was created in 1976 as an independent agency to monitor and encourage compliance with the 1975 Helsinki Conference on Security and Cooperation in Europe (CSCE). It continued to undertake a wide variety of activities to fulfill that mandate during 1981.

The primary focus of Commission activity during the past year was on the Madrid CSCE review conference which began in November 1980 to review implementation by all 35 signatory countries of the military security, economic, scientific, humanitarian, and other goals of the Helsinki Final Act. The Commission both contributed to the formulation of U.S. policy for the Madrid meeting and played an important and active role as members of the U.S. delegation to the Madrid conference. Commission Chairman FASCELL and Cochairman DOLE are Vice Chairmen of the Madrid delegation and Commission Staff Director Oliver is delegation Deputy Chairman. The Commission has also been active in planning for and staffing official U.S. delegations to other meetings linked to the CSCE process, especially experts meetings at the Economic Commission for Europe on international trade and energy issues.

Commission hearings during the past year have provided an important source of information on the state of the Helsinki Final Act implementation, particularly in the human rights area. Human rights, including religious and ethnic rights and family reunification, were subjects of two hearings specifically commemorating the fifth anniversary of the Ukrainian Helsinki Monitoring Group and on religious and national dissent in Lithuania. The Commission also held the first review of the Soviet invasion of Afghanistan as a violation of international law and the Helsinki Final Act. As a result the Commission has been able to provide a regular flow of reports and information to the Congress, press, and public on human rights and other issues involving the Helsinki Final Act implementation, including a comprehensive review of U.S. implementation of the Final Act.

The Commission has had a unique role in policy formulation and coordination on CSCE; during the past year, Commissioners and staff held extensive meetings with officials of the executive branch to review CSCE policy issues. Ambassador Kampelman, the chairman of the U.S. delegation to the review meeting met with Chairman FASCELL and Cochairman DOLE on numerous occasions to review progress at the Madrid meeting and discuss future policy direction.

During the year the Commission also maintained close contact with numerous nongovernmental organizations throughout the country having a strong interest in CSCE, including the U.S. Helsinki Watch, the National Conference on Soviet Jewry, the Union of Councils for Soviet Jews and various religious and ethnic organizations. The Commission staff kept these groups informed on a regular basis concerning the negotiations at the Madrid meeting through periodic updates in the Commission's biweekly CSCE Digest.●

REPORT TO THE LEADERSHIP ON THE HATFIELD/HAWKINS DELEGATION TO NEW ZEALAND, AUSTRALIA, AND THE PEOPLE'S REPUBLIC OF CHINA

● Mr. BAKER. Mr. President, I have long believed that the country is well served by the opportunity for Members of the Senate to visit foreign countries, familiarize themselves with the interests and perspectives of those countries and exchange views with foreign government and political officials.

For that reason, I asked two of our distinguished colleagues, Senators HATFIELD and HAWKINS, to travel to New Zealand, Australia, and the People's Republic of China. This delegation, led by Senator HATFIELD, made the trip during the period of August 17 through 27, and held discussions on a broad range of issues of interest to the United States.

In the form of a report to me, the delegation has reported its findings and the essence of its conversations with government leaders in those three countries. I believe the report an excellent recounting of their trip and a thorough discussion of issues of immediate concern to the United States.

I ask therefore, Mr. President, that that report of the Hatfield/Hawkins delegation be printed in the RECORD and I invite the attention of my colleagues to it.

By separate means, I have also provided a copy to the Secretary of State.

The report follows:

REPORT OF THE SENATE LEADERSHIP DELEGATION VISIT TO NEW ZEALAND, AUSTRALIA, AND THE PEOPLE'S REPUBLIC OF CHINA

NEW ZEALAND

After an early evening arrival in Wellington August 16 and a briefing by Ambassador Browne and his staff, Senator Hawkins and I went to see Prime Minister Muldoon at 9:00 A.M. on Monday, August 17. I presented him with your letter and the letter from the President and he expressed his gratitude for your remarks. I opened the discussion by stressing the U.S. global commitment to our friends and allies and the desire of this Administration to have frank and open consultations before the fact on all major issues. I stressed also the partnership in this Administration between the President and the Congress and the mutually reinforcing way that we interact on both domestic and foreign affairs. Senator Hawkins and I told the Prime Minister that we were deeply aware of the special economic concerns of New Zealand and its dependence on agricultural markets.

The Prime Minister mentioned that there had been recent meetings with Ambassador Brock on those issues and that he hoped those discussions would provide some relief to New Zealand. At the time, the New Zealand Government had not decided on accepting Ambassador Brock's proposals. Only following our meeting with New Zealand Cabinet leaders, convened that morning, were the U.S. proposals discussed and approved. Prime Minister Muldoon appreciated our understanding of New Zealand's problems and mentioned that the past three years had marked the beginning of a turnaround for the New Zealand economy with a real net improvement in the balance of payments. While not yet fully into the black, he noted that New Zealand's exports had risen some 40 percent and that imports had been cut by some 12 percent in the same three-year period. He also stated that Wellington's plans to develop their energy resources over the next decade should further assist the country's efforts to improve its world market position.

Our discussion then turned to international issues, and the Prime Minister described what he saw as New Zealand's role in the South Pacific, the home of eleven independent island nations of varying size and spread from the equator to the South Pole. To my question about problems he saw in the area, Prime Minister Muldoon stated that a year ago the situation in Vanuatu had been of some concern because of difficulties in the beginning stages of the country's independence and because some unscrupulous businessmen had been promoting schemes there. Fortunately, this had calmed down. He did not foresee New Caledonia's independence engendering this sort of problem, if indeed independence actually is supported there.

In spite of a general lack of enthusiasm for the Soviets in the region, he indicated that the Soviets were making a great effort to establish a presence. In this regard, he mentioned also Soviet interest in krill protein research being conducted at an Australian laboratory in Tasmania which would bring Soviet vessels into the Pacific more often. The Prime Minister emphasized that we should not become complacent about the potential for Soviet activities and, since the nations in the region were all democracies, new election results could bring changes in government attitudes toward a Soviet presence.

Economic development assistance remains the key to New Zealand efforts in the area and Wellington authorities are working to convince Japan and European nations to contribute more aid. The communication/transport problems in the region are monumental and the Prime Minister pointed out that in the nation of Tuvalu—population 7,000—one of the islands is about 1,000 miles from the others. New Zealand is working with the nations in the region to develop a ship transport service that will be cooperative for all and thereby justify the creation of regular service to the islands.

I stressed to the Prime Minister that New Zealand's influence went well beyond the South Pacific and that its efforts in support of the nations of Southeast Asia was also important, particularly the defense arrangements with Singapore. I expressed our conviction that New Zealand's inclusion in the list of acceptable countries for the Sinai Peacekeeping Force was further evidence of the international regard for New Zealand's contributions and urged favorable consideration of this request.

He noted that there was some opposition to the peacekeeping force because of trade concerns, pointing out that Iran and Iraq now buy as much from New Zealand as the British and that lamb exports were very important there. The Prime Minister did not feel that the peacekeeping force issue would be one in which the public would take a strong stand unless the issue clearly would affect the lamb and beef producers. He did state, however, that the opposition Labor Party leaders wanted to prohibit New Zealand's participation unless there was a UN mandate for the force.

After the meeting with the Prime Minister, Senator Hawkins and I joined in a wide-ranging discussion with Brian Talboys, Minister of Foreign Affairs and Minister of International Trade; David MacIntyre, Minister of Agriculture and Deputy Prime Minister; W. F. Birch, Minister of Energy; and H. C. Templeton, Minister of Taxation and Customs, and Deputy Minister of Finance. Foreign Minister Talboys, who is retiring this year, initiated the discussions by asserting that New Zealand was deeply interested in American statements supporting free trade, since his own country depended almost completely on access to international markets. He commented that New Zealand does not store any surplus commodities and, like the auto manufacturers, produces to sell.

I told him that the mood in Washington was changed and that there was a sense of urgency here that transcended partisan ranks; it was vital to all to get the American economy back on track. I emphasized that the Reagan Administration was approaching this problem—lowering inflation and increasing employment—with the conviction that we needed less regulation and stifling of economic forces and that this was consonant with the principles of free trade. I pointed out that the Administration's signal on casein—by putting the matter of its effect on the U.S. domestic market up for investigation—was indicative of our sensitivity to New Zealand's interests. Senator Hawkins explained the difficulties of handling this issue in the Agricultural Committee and how local interests affected the President's efforts to cut back on subsidies in the agricultural sector.

Minister MacIntyre returned to the casein issue to note that the rapid growth of New Zealand exports in this area was largely due to the increased number of uses for the product. He regretted that it had become a target of the protectionists, pointing out how New Zealand had withdrawn protection from its own tobacco industry, which could not effectively compete with the U.S., as an example of how he hoped we would react on casein. Senator Hawkins again pointed out how important it is to gear agricultural production more and more to an international market and that we needed to keep the food issue on our minds because of projections of major food shortages in the world by the 1990s.

Brian Talboys then brought up New Zealand's concerns about U.S. anti-trust laws and the question of extraterritorial application of U.S. laws. He stressed New Zealand's fears that the Senate Judiciary Committee review, particularly as it involves shipping cases, would impact negatively on New Zealand and that his Government believed that this matter should be decided through bilateral negotiations and not in the U.S. courts. He asked that we convey his concerns on this issue to you and other Senate leaders and I agreed to do so. I did, however, seek to reassure him that the review which we are undertaking is based on our desire to free up our industry from the restrictions which make it less competitive. I noted that Senator Thurmond and others in the Administration are looking to reducing the regulations, not imposing new ones. Minister Talboys expressed his delight by this course of review.

We discussed briefly New Zealand's energy problems, where, for example, their costs have increased sixteen fold since 1973 because they are still 90 percent dependent on foreign oil. Conversion of natural gas to oil, being undertaken jointly with Mobil, will help to reduce this dependency by one-third and New Zealand is working to free up some of its coal deposits for export use.

On the foreign affairs side, Minister Templeton pointed out that New Zealand was concerned about its economic status. Now after a decade of budget deficits, he said, they were unable to do more internationally, even though they wanted to. And, at least among the South Pacific nations, there was an expectation that the New Zealanders would do more to help them. The Ministers also noted for New Zealand to make a contribution of any sort, it had to sell its products, which were largely agricultural—72 percent of all of New Zealand's funds come from that sector—and this meant stiff competition.

I explained that we were sensitive to New Zealand's needs and that we were also aware of the positive contributions that Muldoon Government had been making in the region and elsewhere. I again made the pitch for consideration of participation in the Sinai Force. I also stressed to the Ministers that we wanted to have full and open exchanges with them and that we hoped they would understand that the U.S. too has its problems. I mentioned, for example, that we are going into a trillion dollar deficit and that it required 15 percent of our budget just to service the debt.

I told them that our defense expenditures also amounted to $1.4 trillion with $30 billion to maintain our troops. All of this, I said, meant that the U.S. was facing tremendous difficulties which others must understand when we tell them of our inability to respond as fully as they would like. Minister Talboys expressed his appreciation for this explanation, noting that the image of U.S. infallibility and unlimited capabilities was held by most nations and that it was necessary to scale down expectations and work more closely together on all issues.

We followed this meeting with the leaders of the Government with a brief session with leaders of the opposition Labor Party. The group of Labor leaders, headed by Deputy Leader David Lange, included Trevor Young, an old friend of mine, Ronald Bailey, Fraser Coleman and Frank O'Flynn. Here again there was a not unexpected interest in the U.S. position on free trade and restrictions on the free operation of the market place. Casein came up once more and we explained the basic reason for the President's decision to seek an investigation of the effects of casein imports as a means of defusing separate Congressional action on this matter.

We also discussed subsidies and the Administration's goals to reduce them. Senator

Hawkins pointed out that the removal of subsidies for rice had resulted in unprecedented profitable marketing for rice growers and that this could just as well be extended to others. We stressed, however, that while the goal was to reduce subsidies, we could not be certain that this could be accomplished, certainly not definitively, as Ambassador Brock had proposed, by 1983. We also explained that on the industrial side, many labor unions and small manufacturers favored restrictions and tariffs on imports, but that the Administration favored negotiations in the marketplace to affect changes.

Turning to foreign policy interests, we engaged in a detailed exchange on the Labor Party's views of ANZUS and why they believed that it should be modified. I told them that ANZUS, as an association of long-time friends, was one of the Administration's top priorities in foreign affairs. I said that New Zealand played a key role in the South Pacific and could continue to play an international role through the Sinai Force. I stressed that this peacekeeping role would enhance New Zealand's image in the Pacific as well, since this seemed to be the area of greatest concern to the New Zealanders. Furthermore, I tried to stress that we were all involved in an interdependent way, looking out for common interests.

David Lange was the most outspoken on this issue and argued that the Labor Party had strong views. They favored a nuclear free zone in the South Pacific and did not want any nuclear-armed ship visits. He expressed some interest in the arrangements which Australia has with us for "veto" over certain types of stops by nuclear-armed craft, but I think that this was largely a misinterpretation of the U.S.-Australian agreement on this subject.

Lange stressed that the Labor Party saw the alliance as one strictly limited to the Pacific, and that it should not be extended to the Indian Ocean or globally. He stated that many of the younger members of his party wanted to terminate the alliance. He opined that it would be better if ANZUS concerned itself with regional South Pacific issues and that it looked to brokering the problems of the region. He argued that we were all like elephants dealing with mice, the nations of the South Pacific, and that it would be better to engage them in constructive dialogue, if for no other reason than to prevent Soviet encroachments.

Trevor Young chimed in to emphasize the Soviet efforts to obtain fishing rights from Tonga in return for constructing an airport. He cited the activity of Soviet submarines close to New Zealand. In sum, the opposition believed that it was necessary to make ANZUS more than just a military alliance.

In response, I noted that there was never any prohibition in the ANZUS context from carrying on discussions related to non-military issues. Furthermore, by remaining active in ANZUS, the New Zealanders gained more weight and authority in carrying on their bilateral dealings with the nations of the South Pacific. I concurred that the Labor Party often got bad press here about its desire to question the ANZUS alliance and that I was relieved to hear that the Party by and large favored its continuation.

Lange stressed that the Labor Party's position was not based on any negative feelings toward the United States, though he did indicate some questioning of our role by younger members of the Party. He indicated that his party could not be elected campaigning on an anti-American platform. Trevor stressed that there were far too many positive images of the United States left from the war and positive images based on tourism and communications between the two countries which affected the younger generation as well.

We also discussed U.S. policy toward American Samoa. The Labor Party leaders were critical of U.S. handouts to the island which they believed created a welfare state and dependency atmosphere inappropriate and offensive to the independent nations in the region. I stressed that U.S. intentions in American Samoa would largely be guided by the wishes of the population as they had been in the Trust Territory and Guam but that the Reagan Administration had not yet focused directly on the issue. It seems to me, however, that this is one issue which we should look into, particularly since during a refueling stop in American Samoa we had a chance to drive around and see some of the island. Though we have made a number of governmental reforms there, including the election of a Governor and the presence of a Samoan representative in Congress, the economic progress is not very encouraging.

We also discussed the relationship between the Labor Party in New Zealand and its namesakes in London and Canberra. The Party leaders stated that there was very little in the way of direct communication and a great deal of difference in the organizations themselves and their roles in the government. They noted that there is no equivalent to the "Socialist International" for Labor Parties in the three countries though they do all participate in this larger organization of free society socialist parties. New Zealand's Labor Party does have organic relations with the labor movement in the country but very little interaction compared to Britain, where 85 percent of the party funding is from the labor movement, but it is only 5 percent in New Zealand. One got the distinct impression that there was a great deal of national identity and independence involved which prevented closer relationships on an international scale.

We concluded our morning meetings with New Zealand Government officials by meeting with Sir Frank Holmes, Chairman of the quasi-governmental New Zealand Planning Council and one of his councillors, Mr. Graham Ansell. We had a long, involved briefing on the Council's history and its activities which appear to be largely advisory. They have existed to date without creating any firm blueprints for action. In a way, their attitudes are similar to our own. They are suggesting that there be less governmental control or direction to the economy. They see government as trying to present some guidelines for short- to medium-term development and growth through commissions like their own.

We discussed several specific issues pertaining to resource development. I asked, for example, about how they have inventoried resources and whether there had been any consideration by the Council of where the country's resources would come from in the future as developing countries sought to control and use more of their own resources. I noted in this regard that we had differences with the New Zealanders on the wisdom of the seabed mining segments of the Law of the Sea treaty and queried whether this had been looked into by the Council.

To its credit, the Planning Council has been active in working on balance of payments problems and on marketing assistance for New Zealand products, focusing on areas where New Zealand already has a comparative advantage and on the stimulation of tourism. Sir Frank indicated that the Council was concerned with keeping down the number of restrictions and widening access to markets. Senator Hawkins questioned whether or not this didn't give New Zealand producers an unfair advantage over those in countries who did not have direct government backing. The answers were not entirely satisfactory since it did appear that some of the backing given by the Council and by the government might appropriately be called export subsidies or at least supports.

AUSTRALIA

On our first morning in Sydney (August 19), we met for breakfast with several of the leaders of the American Chamber of Commerce to discuss their concerns about U.S. policy. They were quite blunt in their presentations, pointing out several areas where they felt government policies and practice inhibited their competitiveness abroad. They explained, for example, that Export-Import Bank funding restrictions were going to injure materially our competitiveness in Australia where some $50 billion worth of major projects are scheduled to be funded in the next few years. They stressed that Ex-Im funding should not be cut back if we hope to have U.S. companies competitive in this area as well as worldwide.

The AmCham representatives also urged that we re-examine the Foreign Corrupt Practices Act, pointing out that many companies turn down business opportunities in bribe-prone countries and many foreign companies refuse to do business with Americans because of the confusing aspects of the law. The Chamber supports the revisions currently before the Congress in S. 708 introduced by Senator Chafee and correspondingly by Congressman Rinaldo (H.R. 2530). I think we ought to look closely at this issue.

The AmCham representatives argued strongly for the reopening of the American Consulate in Brisbane which was closed last year by the Carter Administration. They mentioned that Queensland province, where Brisbane is located, is the home of 40 percent of U.S. investment and pointed out that the State Department was reluctant to close this post last year but did it for budgetary reasons.

As in the case of the New Zealand officials, the AmCham representatives were concerned about the extra-territorial nature of U.S. laws where our policies were causing resentment among the Australians. The result of our policy is an Australian Government decision to permit Australian companies to recover any losses in U.S. courts by taking reciprocal action in Australian courts against American companies. The end result is obviously a lot of bad will and litigation which will affect our activities abroad even more.

As we discussed these issues, I explained that the priority of the Administration and the Congress during the first few months of our term had been to get the economic recovery and budget issues taken care of first and that we would then begin to focus on other areas with more despatch. I noted the Chafee bill is being considered and that we will likely be able to move it forward. I told them the antitrust issue remained under review but we had no clear signals from the White House on how it would be handled. Similarly, on the extra-territoriality issue, I said we were going to have to look at the matter closely since some areas, like overseas meat inspection regulations, were clearly beneficial.

The AmCham representatives also asked that we raise with the Treasury Department their concerns about the Foreign Investment Review Board and its rules on investment. They explained that Australia is about to consider opening up opportunities for foreign banks but that the U.S. banks have a problem in operations abroad because of the FIRB rules. They noted that there are between 15 and 20 U.S. banks already in Australia but that they have only limited functions because they cannot grant reciprocal rights to Australian banks in the U.S.

When we arrived in Canberra, we went straight to the Parliament House to observe their weekly question period with the Government Ministers. It was an interesting dis-

play of their parliamentary system and you'd be glad you don't have to try and deal with the kind of unruliness which they apparently face all the time. If you haven't had the opportunity to view this procedure, you should do so the next time you get an opportunity to visit Australia.

In a subsequent conversation with Sir Billy Snedden, the Speaker of the House, we discussed Party discipline and regulations and Sir Billy explained that a committee of one hundred persons selected Liberal Party candidates for elections.

This committee served as the only check against members defecting on floor votes since the Liberal Party had no disciplinary measures on the floor. Those who defected on floor votes could be sure not to be recommended for subsequent sponsorship by the Party though this would not prevent them from running as independents. The Labor Party on the other hand has a strict rule and it expelled members from the Party if they defected on floor votes.

We had a similar informal conversation with Sir Billy's counterpart in the Senate, Senator Harold Young, who as the recent choice of his Party had become the President of the Senate. He faced and controlled a similar debate. For the floor questioning in the Senate, individual Senators stood in as "surrogate Ministers" for the question period, taking much the same heat as their Ministerial colleagues in the House.

In the afternoon, Senator Hawkins and I called on Prime Minister Fraser and presented your letter and the letter from President Reagan. He was deeply appreciative and told us how much he enjoyed the opportunity to meet with the President and others during his recent visit. We went back and forth on a number of issues and he strongly applauded our actions against the Libyan planes in the Mediterranean.

I talked with him about the Sinai Peacekeeping Force and he sketched for me the way that his Government was looking at the issue. Speaking generally on the Middle East, the Prime Minister asserted that only the U.S. could act decisively there, and urged that we seek more often to moderate Israeli policies, particularly on the West Bank settlements issue. Fraser argued that we could not dismiss the Palestinians and their rights and regretted that we were all not farsighted enough to have pressed this problem to solution thirty years ago before it became the kind of open festering wound it is today. Prime Minister Fraser also thought we should be doing more to get the Europeans involved in the peace-keeping operation. I told him that we too were hopeful of a positive European response and that I thought the State Department was going to continue to work on this matter.

As we were leaving, Senator Hawkins raised the question of our closing of the Brisbane Consulate and the Prime Minister stated that he would be pleased if it could be reopened since so much of U.S. business activity is centered there.

Our short meeting with the Prime Minister was followed by a session with Defense Minister Killen with whom we discussed similar issues. He too approved of our actions in Libya but was concerned about where it would lead and the type of action that Qadhafi might take in retaliation, particularly against the U.S. citizens still living there. He argued that the Sinai force was a difficult problem for the Australians and that it would be particularly helpful if the British and Canadians were also involved. Killen also opined that only the U.S. could face down the Soviets in the Middle East.

I told him that we were willing to work for a solution of Middle East problems. But, I said we had difficulty accepting the idea that Arafat could be the leading speaker for the Palestinians. We then turned to a brief discussion of the recent decision on enhanced radiation weapons. He basically supported the decision since he felt the U.S. and others had been too complacent in taking détente at face value thereby allowing the Soviets to make major advances on the arms front. Minister Killen was concerned that there was going to be a major propaganda campaign against enhanced radiation weapons and hoped that we could successfully counter it. Again as we were leaving, Senator Hawkins raised the Brisbane issue and Killen, who comes from the Queensland area, fully supported our reopening the consulate.

Our next discussion with Australian leaders came with Bill Hayden, the leader of the opposition Labor Party. I questioned him hard on the image that the Labor Party has in the United States as being basically unfriendly to U.S. interests. Hayden said he thought this was unjustified and professed that his Party would still be supportive of many U.S. policies, suggesting only it might take a "more independent" view on some issues.

Without saying it clearly, he suggested the Liberals were just mouthing American positions on most topics. He used as an example the different views of the Liberals and the Labor Party on defense issues. Hayden stated that the Liberals believe the U.S. will always be around and could be counted on to back up the Australians. The Labor Party, on the other hand, argues that the U.S. and Australia could, in some situations, have competing interests. He also stated that the Labor Party would not be spending its money on aircraft carriers but would concentrate on more practical military expenditures, though he did not specify what he had in mind.

I asked specifically whether the Labor Party would maintain the alliance. Hayden responded positively expressing surprise that anyone would question this matter. He asserted that the images of the United States among Labor Party members had improved but that there had been a great deal of concern during the Vietnam War and also because many people saw the U.S. deeply involved in Australian affairs. Hayden cited some strange tales of CIA involvement in Australian affairs, but when asked by the Ambassador, conceded that he had seen no evidence to contradict the categoric U.S. denial of any such involvement.

Mr. Hayden also indicated that if he were Prime Minister there would have to be a reconsideration of some of our defense arrangements with the Australians, particularly regarding U.S. installations there. He said that should he as Prime Minister discover facts about U.S. operations that were contrary to what he had been told as leader of the opposition, then he would have to reconsider his entire attitude toward the facilities. Hayden also indicated he might be coming to the U.S. for a visit around the middle of next year and I urged him to see us so we could have further discussions at that time.

After our dinner with the Speaker of the House and the President of the Senate. Senator Hawkins and I met with Chairman Roger Shipton and eight members of the Joint Committee on Foreign Affairs and Defense to respond to their questions on U.S. policies. We began by giving them a brief overview of our positions and of the important role we saw for ANZUS as well as the collegial aspects of our consultations on regional and global issues. I pointed to Ambassador Nesen as the symbol of our regard for the Australians, noting his close personal relationship with the president. Senator Hawkins presented her views on the importance of agriculture in world affairs and discussed our efforts to remove subsidies from agricultural production.

Responding to a question on how the U.S. saw problems in the region, I stated that we had been focusing largely on domestic issues in the first six months of the new Congress and that we had had little time to look at this region so far. I expressed our intention to rely heavily on the views of the leading nations in the region, Australia and New Zealand, and pointed to President Reagan's appointment of Ambassadors Nesen and Browne, his personal friends, as examples of our concern.

Senator Seiber inquired about the Administration's policies toward South Africa indicating his own preference for the Carter Administration's human rights emphasis there. I told him my own view that regardless of what the United States did, we would be criticized as interventionists for nonaction as well as action. I told him that Carter's human rights policy, while well-intentioned, was doomed to fail because it was unilateral and that we could not go around trying to clone others into models of the U.S. I pointed out that this Administration was not going to abandon human rights but rather seek to move it into multilateral fora.

I then turned the tables and asked the Senators and Representatives to let me have their thoughts on the peacekeeping force. I got a wide range of answers from the official Liberal Party line, that they had yet to decide while the Laborites had decided against it, to some strong questioning about our overall cooperative role. Members of both parties, however, did express concern about how the peacekeeping force would be used, explaining that they were still not clear about the circumstances involved. The Labor Party representatives stated that they believed Australia should participate only if the UN mandate was clearly granted since they felt a non-bipartisan approach to the commitment was necessary. Not unexpectedly the Laborites quickly mentioned the possibility of retaliation against Australian products in the region.

Others were more stark, portraying the Middle East as outside Australia's strategic area of interest and saying Canberra had limited capabilities which ought to be better husbanded. On a geopolitical bent, they argued that the Sinai Peacekeeping Force was likely to heighten big power presence and possible confrontation in the Middle East. Our most ardent supporter among the group argued that when the U.S. pulled out of Vietnam the ensuing vacuum brought increased Soviet presence in the region which all opposed. He then said that if the U.S. and others were convinced that it was important to get the Sinai force going then Australia should support it fully.

Another argued that we could not divorce the Sinai issue from the Palestinian question and thought that we had to exercise more restraints on Prime Minister Begin, particularly to obtain his commitment to solve the Palestine problem. He said that Australia could probably participate in the force or provide logistics support but that these other problems would have to be addressed, preferably beforehand.

For my own part, I noted that the U.S. had served as a trigger for the Camp David process and that we were committed to helping achieve the solution that would bring peace to the area. I explained that in the process the machinery proposed to implement the Sinai element of the accord called for an international/multilateral response. I argued that this meant that Australia's role was significant, particularly since both sides had indicated that Australia was an acceptable participant. I expressed satisfaction with the role that Australia had played elsewhere, noted the authenticity of their concerns about the region and its effects on Australian interests, and hoped that their debates and

discussions would lead them to join in. I explained that we were going to continue to press for progress in the search for a comprehensive peace in the region.

I also noted the limitations on our ability to perform as the sole leader of the free world because of our debt and resource problems and told them we are going to require more help from them and our other friends and allies in the future. This frank exchange was one of the most productive we had throughout our travel and I believe we made some real headway on the Sinai issue and on Australian understanding of our interest in genuine partnership.

CHINA

After an 8:00 P.M. arrival in China on Saturday evening August 22 and an exhilarating tour of the Great Wall and the Ming Tombs Sunday morning, we met with our Chinese host, Ambassador Hao Deqing, President of the Chinese People's Institute for Foreign Affairs. We chatted briefly about our delegation's visit and Ambassador Hao mentioned that the last three U.S. Presidents had all come to China and that China would welcome President Reagan. He asked for our assessment of U.S.-China relations and I told him that I thought that prospects for our relations were bright because expanding trade and commerce were building foundations for friendship.

I noted the desire of our political leaders to strengthen this friendship and that President Reagan, as President Carter, Ford and Nixon before him, had indicated that we wished to be friendly, a position shared equally by the Chinese leaders. Most importantly, I stressed that our two peoples want to get on with the development and growth of our nations and wanted our children to grow up in an atmosphere of peace, harmony and friendship, all of which would contribute to a bright future for our two nations. I explained that this optimism, however, did not overlook that we had differences and problems and that we had to be realistic about them.

In response, Ambassador Hao described U.S.-Chinese friendship as an unstoppable tide. He noted that the bridge between the U.S. and China created by Nixon and by Mao and Chou on the Chinese side had been possible because of the international situation and that our relationship is not an ordinary one but strategic in nature. Because these relations have an overall bearing on the fate of the world, he said, it's all the more important that our relations be continuously strengthened.

Launching into the political context of his message, Ambassador Hao indicated that the terms of relations set down at the time of normalization should be the basis for the future expansion of our relations and that he hoped we would do nothing or say nothing contrary to affect them. He commented that beginning last year the Chinese people had heard "some noises" which would be harmful to the relations between our two countries and the Chinese people were not happy to hear this. By "noise," he said he meant that some people were saying things or also trying to do things not in conformity with the principles set down at the time of the establishment of relations.

The Chinese people were practical people, and, therefore, they hoped that it would be corrected and that there would be no more such "noise" and it would permit the two to work together for common purposes. He noted that some people also thought that our relations could go back to the period of the early 1970s or even earlier but that he personally did not think this was going to be terrible or that everything would break up over that decision. Summing up this somewhat elliptical remark, he concluded that the hoped that relations could continue to improve but that if they changed for the worse it would not be unbearable for China.

He responded positively to my question as to the clarification of Reagan Administration policy during Secretary Haig's visit, indicating that perceptions of each other had been better understood. On my questions of how he thought relations could be improved, he returned to his earlier theme asserting that the positive version of doing nothing harmful to the relationship was to have actions match one's words and that the Chinese would be looking for concrete demonstrations of American friendship and understanding.

Senator Hawkins noted her concern with agricultural issues and her hope that U.S.-China agricultural ties would continue. I noted that we had some problems with some of our West Coast wheat shipments because of smut infestation and that I hoped we could talk about the technical problems while we were there. Hao noted that this was a matter for the technicians and scientists to work out and that he couldn't personally help with that issue. He said he thought our agricultural ties were quite good and was sure that they were mutually beneficial.

The next morning, we had breakfast with a Foreign Ministry group headed by Vice Foreign Minister Zhang Wenjin and I gave Mr. Zhang your letter for the Foreign Minister. Since he offered us the opportunity to discuss any issue we wanted, I raised the question of Taiwan's future and this became our major topic for the entire breakfast period. In my opening remarks, I expressed an interest in Chinese views on the practicality of Taiwan assuming the cast of Hong Kong as an entrepot for commerce and financial dealings with China, assuming of course that some arrangements were being worked out between China and Taiwan at the same time. Zhang argued that the two situations were fundamentally different and, while China had permitted the resolution of the colonial status of Hong Kong to be deferred, it was not a situation that bore repeating, i.e., as separate administration of Chinese territory.

He gave a long historical description of how Hong Kong had been taken by the British and how the U.S. had protected Chiang Kai-shek and prevented Taiwan from being liberated. He agreed that there would be negotiations with Taiwan about the nature of reunification but denied that there could be any acceptance of Taiwan as a separate political entity. He stressed that there could only be one central authority but that Taiwan could maintain its own way of life, its social system and have trade and commercial contacts with the outside world. China's goal was also to enhance the interchange within the country and for Taiwan to help contribute to the common objectives. With this in mind, the Chinese, he said, have offered many opportunities for contacts in order to provide a peaceful way to establish integration but these have all been rejected by Taiwan, a position he claims is not supported by the people on Taiwan.

Returning to the question of Hong Kong, Minister Zhang stated that Hong Kong too eventually would return to the mainland. He stated they were not anxious for this at present. When I suggested the current status of Hong Kong brought benefits to China, Zhang stated its return to the mainland would also benefit both sides and China would still let investors play their role and wouldn't alter their interests.

After he said he was prepared to have investors play a similar continuing role in Taiwan, I asked about amnesty and immunities for members of the government and military forces there. Zhang stated that on minor points such as these there could be the greatest accommodation. As long as there is an acknowledgment of unity and Beijing's pre-eminent role, those in the military and in the local government could remain in their positions. He stressed that too many people in the United States fail to have a wide perspective, ignore that there had been previous periods of cooperation between the two groups and disregard that Taiwan had been totally recalcitrant in response to China's offers to communicate. He hoped that the U.S. would respect the will of the Chinese people and understand and sympathize with this desire to accomplish reunification of the country.

Charge Freeman interjected a question about whether Beijing would entertain permitting the armed forces on Taiwan to resupply their forces at the current levels and whether this could include supplies from foreign sources. Vice Minister Zhang stated that China, as a matter of principle, would not disarm the forces on Taiwan but questions about the size of the military and about weapons supply would have to be decided first by negotiations and, in the latter case by decision of the central authorities, i.e., in Beijing. He indicated, however, that even this could be agreed upon through talks between the two groups. Zhang dismissed my question about any differences in the opinion of the Chinese leadership on Taiwan who came from the mainland and those native Taiwanese by saying that they were of course all Chinese and that only a small handful had any thoughts about independence. He stated that there was no future for such position and the people on Taiwan realized it, arguing further that the Soviet Union would view independence activities as a development which would be profitably exploited.

Zhang then waxed eloquent about the importance and future of our bilateral relationship but did not hesitate to indicate that its development and growth was dependent on our taking friendly positions on the Taiwan issue. Senator Hawkins asked about his views on Japanese self-defense roles and the Vice Minister declared that, in spite of Southeast Asian concerns about Japanese rearmament and its effects there, he believed that Japan was not a threat to China. He said Japan was a major target of Moscow and therefore that it should be doing more for its own defense.

Charge Freeman brought up one final question on Taiwan asking that if Taiwan can keep in practice after reunification what it has now and only give up a bit of its prestige as an independent entity, how were the Chinese going to give them positive incentives to give up this prestige. Minister Zhang replayed his argument that the crucial principle was that there is only one China. Since reunification was the goal of all Chinese both in Taiwan and the mainland, the prestige question, as all others, could be handled in the context of reunification talks.

An hour after breakfast, we had the opportunity to meet with Vice Premier Bo Yibo who also commented about the possibility of President Reagan's visiting China next year. Bo had been here himself last year and would like to come again, but admitted that Premier Zhao would be the determining factor on any future travel for him. We discussed a number of issues related to China's development goals and how the U.S. and other investors could be involved. We also inquired about the recent flooding in Sichuan and its effects on agricultural production. Since all the questions were presented in advance of his response, we had what amounted to a long monologue on China's economic problems and goals. He identified China as being in a period of economic readjustment which should run to the middle of this decade and

he hoped that this would be followed by a period of strong advances. China's focus, as ours, is on control of inflation and getting rid of deficits as well as a shift away from a bias toward heavy industry and whole plant additions to one which emphasized agricultural growth and light industry development.

He identified proper management of investment as another goal and spoke of utilizing the large scale savings of the Chinese people as well as foreign capital to provide the impetus for their development programs. He indicated that there had been some progress in controlling inflation and that growth rates for the economy were still in the 3–5 percent range. He indicated that by 1985 they were hoping to raise this to 5–7 percent.

Apparently for the first time in his talks with foreigners, Bo interjected a mention of the levels of foreign investment, saying that the Chinese were looking for about 10 percent from foreign sources. He indicated foreign investment could go as high as 15–20 percent of total investment in China's development. He noted the Beijing government has already received about $30 billion in loans from other countries and financial institutions and that they were concerned about debt servicing with today's high interest rates. He stated that China was also still involved in prioritizing projects so it was not certain how they would be using the money.

Bo indicated that the U.S. could participate through direct investment, continuation of the trade and commercial connections which already exist, and through joint ventures, mentioning in this latter context China's plans for development of potential oil reserves in the South China Sea.

Efforts on exploration would be commencing soon, with China planning to open bids on zones in November or December. For other projects, he mentioned a large strip coal mine in Shanxi province and a hydroelectric plant for Sichuan. Technology and machine building capabilities were also high on China's priority list.

Vice Premier Bo pointed out the imbalance in our trade figures and urged the U.S. to buy more from China. He stated that China was rich in metals and was prepared to sell more non-ferrous metals to the U.S. as well as to engage in arrangements with U.S. companies to produce items for U.S. manufacturers. He felt that our two nations' strengths—the U.S. in technology and equipment and China with cheap labor and resources—made for a natural cooperation but he too saw the question of Taiwan intruding into our relationship. He refused to go into great detail on the question, saying that it had been fully discussed with Secretary Haig who surely had reported it to Congress. He did say, however, that he believed that the convergence of our nations' views far outweighed the differences and he believed that if we approached the sensitive and serious question of Taiwan in these terms we would be able to resolve any difficulties.

The Vice Premier admitted the floods in Sichuan had been serious but indicated that relief work was proceeding satisfactorily. I mentioned our similar interests in ending the problem of too much red ink on the ledger and mentioned your thoughts about coming to China next year. Bo urged that you do come, noting that he had met you on his trip last year and that he wished to send you his greetings and those of Prime Minister Zhao who, he stated, would certainly also welcome you to China.

This ended our formal meetings during the trip, although Senate staff personnel also saw some representatives of the National People's Congress (NPC) to suggest arrangements for an NPC delegation to come here next year.●

AMERICAN PUBLIC WORKS ASSOCIATION'S 1981 INTERNATIONAL PUBLIC WORKS CONGRESS AND EQUIPMENT SHOW

● Mr. RANDOLPH. Mr. President, my colleague Senator MURKOWSKI and I were invited to participate in APWA's Public Works Congress in Atlanta by jointly chairing a program concerned with "public works, jobs, and economic recovery."

Regrettably, an important vote was scheduled to take place at the time we were unable to join the panel of experts to discuss the sigificance of public works investments in building a better future. At my encouragement, APWA executive director Robert D. Bugher proceeded with the program.

Fortunately, I found it possible to depart for Atlanta later that day and was privileged to be with hundreds of public works men and women from throughout our country at their evening banquet. Over 5,000 public works professionals attended the APWA Annual Congress, and the association's equipment show was the largest ever.

I commended the association for the variety and depth of the program that was arranged for the 1981 Public Works Congress. I also shared my concern about the declining investment in public facilities that has taken place in recent years. We have failed to keep pace with growing needs for transportation, sewer and water facilities, waste disposal, and the other elements of infrastructure that contribute to sound economies and healthy communities.

A reliable study report indicates that total investments in public works by Federal, State and local governments declined by two-thirds , in constant dollars over a recent 10-year period. The same study reported that between one-half and two-thirds of our Nation's communities are unable to support modernized development until major new investments are made in their basic facilities.

Public works are too often mistakenly considered unnecessary "pork barrel" projects. When opportunities are sought to slash budgets, funds for these basic necessities are often the first targets.

In this era when we look for ways to revitalize our economy, we must look to new investments in public facilities if we are to be successful.

This year, there has been great concern with cutting the cost of Government. I, like my colleagues, do not believe in excessive and unnecessary spending. But in trimming the total size of the Federal Government, the already inadequate allocation of funds for public works is being reduced even further. For example. programs under the jurisdiction of the Committee on Environment and Public Works are among those to be cut. The sewage treatment construction program is being slashed by more than one-half. Authorizations for the Economic Development Administration are one-quarter of last year's level. The highway program has experienced little if any growth in recent years.

I concluded my informal remarks to APWA's membership by saying:

The message I bring you is that we cannot continue to have our public works investments decline further. The capable and committed members of this organization are on the firing line of providing services to our communities. I hope that you will join me in careful examination of this situation. I hope we can work together to bring a new public awareness of the importance of public works as we develop a rational and orderly system for providing public works investments . . . as we build a better future.

Mr. President, the panel of experts who spoke at the meeting on the subject of "public works, jobs, and economic recovery" were as follows:

Mr. Jerome R. Butler, Jr., commissioner of public works, Chicago, Ill.; Mr. Henry B. Schechter, deputy director, department of economic research, AFL–CIO, Washington, D.C.; Mr. James E. Peterson, executive director, national council for urban economic development, Washington, D.C.; and Mr. James L. Martin, public works director of Fresno, Calif., and a member of APWA's board of directors, chaired the meeting in the unavoidable absence of Senator MURKOWSKI and myself.●

POLISH SOLIDARITY

● Mr. LUGAR. Mr. President, the National Confederation of American Ethnic Groups sent to the President a resolution on Poland. The resolution expresses the views of a number of Polish-American groups, as well as those of other American ethnic groups. I submit the resolution for the RECORD:

The resolution follows:

RESOLUTION

Whereas, the Polish workers and farmers have voluntarily organized themselves into Solidarity and Rural Solidarity, two independent trade unions in Poland;

Whereas, their organizations were legally approved by the Polish Government;

Whereas, the indeterminate suspension of all civil liberties constitutes a grave violation of the Final Act of the Conference on Security and Cooperation in Europe of 1975 by the military regime in Poland;

Whereas, the Soviet Union, through its various ultimatums to the Polish Government and the Polish Communist Party, practically ordered the crackdown by martial law, thereby seriously infringing upon the sovereignty of Poland by threatening "fraternal military assistance" in case of Polish noncompliance;

Whereas, the leadership of Solidarity and Rural Solidarity is now under arrest;

Whereas, many thousand workers, intellectuals, students and farmers have been arrested;

Whereas, death and serious injuries have taken a grim toll among the striking workers who are being forced at bayonet point to return to work;

Whereas, resistance by strike still contin-

ues against the brutal acts of the military regime;

Whereas, martial law cut virtually all communications of Poland with the outside world;

Be it, therefore, resolved, That the National Confederation of American Ethnic Groups, Inc., representing 17 American heritage groups of European, Asian and Caribbean descent, solemnly protests the measures taken by the Polish military regime. The NCAEG also calls upon the Government of the United States of America and other Western powers to consider implementation of the following steps in their relationship with the Polish Government and the government of the U.S.S.R., keeping the interests of the people of Poland in mind:

1. Strong and unequivocal protests against the brutal acts of the military regime regarding the leaders and members of Solidarity and the regime's violations of the human and civil rights of Polish citizens.

2. Immediate demand for the release of the detainees within the shortest time frame and in the meantime permission to be given to the relatives of the detainees to provide them with food and winter clothing as most of them are detained in open air camps.

3. Early enactment of substantial economic reforms, patterned perhaps along the lines of the Hungarian New Economic Mechanism in order to render Poland competitive on the world market.

4. Continuation of humanitarian food assistance as long as there is a reasonable chance that the food will reach the needy people.

5. Pledge of further economic assistance and our support for Polish debt rescheduling requests provided the above steps are taken by the military regime in Poland. Otherwise, full use of our economic financial leverage to bring about an end to martial law and the restoration of civil liberties, including the release of the detainees.

6. Pursuing President Reagan's statement that the Soviet Union is ultimately responsible for the martial law and the crackdown, we urge implementation of specific punitive measures against the U.S.S.R., including, but not exclusively, a suspension of the Madrid talks on CSCE, the Geneva talks on nuclear theater weapons, recall of our ambassador from Moscow and reinstitution of the partial grain embargo and strict prohibition of high technology sales to the Soviet Union.

The National Confederation of American Ethnic Groups, Inc. supports President Reagan in his denunciation of the Soviet Union and the Polish military regime for violations of the human and civil rights of the Polish people and trusts that the Administration will consider and implement the above proposals of the N.C.A.E.G.●

DEMOCRATIC STRATEGY COUNCIL POSITION PAPERS

● Mr. BAUCUS. Mr. President, the chairman of the Democratic National Committee, Charles T. Manatt, recently organized the Democratic Strategy Council. The council is composed of leading officials from every level of government, from every region of this country and from every faction in the Democratic coalition. It was created to harness the collective intellectual and political energies the Democrats need to meet the challenges of the 1980's. The Democratic Strategy Council held its organizational meeting in Baltimore, Md. on October 17, 1981. The discussions represented a constructive first step toward the development of the Democratic Party's response to the issues confronting all of us today. I recommend the following papers delivered at the council's organizational meeting to my colleagues, and I ask they be printed in the RECORD.

The papers follow:

REMARKS BY JOHN NAISBITT

I want to deal with the larger context in which these talks are taking place. Whatever you do—individually or as a political party—you are going to do in a larger context, and that context is changing dramatically.

You can't know about the future of the Democratic Party by just thinking about the Democratic Party. You can't know about the future of politics by just thinking about politics.

In our work we measure how society's behavior is changing, changes I will be describing to you. Some of what I say will be very threatening to you. It is going to upset many of you, largely because you are afraid of what is happening.

We do live in turbulent times. It is during such times that people join cults and fundamentalist religious groups. They need structure as they are being buffeted about by change; they need something to hold on to. The degree to which people join such groups is almost an index to the depth of change occurring. Some people during these turbulent times hold onto the past. That is why we see so many waves of nostalgia, old movies coming back, retrospectives of all kinds.

We are also an incredibly event-oriented society. Helped by our friends in the media, we just seem to move from one event to another, little noticing the process going on underneath. It is describing that process that I want to deal with today.

It can also be said that we are living in the "time of the parenthesis," the time between eras, that time of a great shifting from an old era to a new era—for our society and for politics.

During this period of shifting from one era to the next we will see dramatic changes in our institutions. Look at what is happening to banks. Banks got caught between inflation and electronics. They woke up one morning to discover that everybody else was in the banking business, and paying three times more for money than banks could. Unless banks reconceptualize what business they are in, they are going to be out of business. We are going to see many bank mergers in the months ahead, and many bank failures. When I was young, banks failing meant the end of the world. Today it just means that banks are failing. Bank services will be amply supplied by others.

And so it is with political parties, and labor unions, and corporations, and all other instrumentalities of our society: unless we reconceptualize what business we are in, we are going to be out of business.

Anwar Sadat said, "He who cannot change the very fabric of his thought will never be able to change reality." That is my text for today and I want to work with you to change the "very fabric" of your thought.

Our work and what I have to say to you today rests on a systematic monitoring of local events and behavior in the United States. What is happening in America is what is happening locally. Despite the conceits of those of us who live in Washington, D.C. and New York, things don't start there. They start in San Diego and Denver, and Tampa, and Hartford, and in Seattle. Every day we do what is called a "content analysis" of hundreds of local newspapers from every corner of this society. We are not interested in newspapers, but in the local events they record. By systematically analyzing local events and the behavior of people in their communities, we see and record the new societal patterns that are emerging.

Today, I will discuss with you four of those emerging new patterns, the political implications of which I leave for you to decide.

The first is the restructuring of this society from an industrial society to an information society. There has been a great deal of talk about this over the years, so much so that we haven't noticed that we are already there. We are no longer an industrial society.

The most dramatic way to illustrate how quickly we have shifted to an information society is to look at the changing character of our jobs. The final impact of this change will be more profound than the nineteenth century shift from an agricultural to an industrial society. In 1950, 65 percent of the U.S. work force was engaged in industrial occupations. Since 1950, that 65 percent has dropped to 27 percent—a dramatic change. (In 1900, 35 percent of the work force was engaged in industry.) In 1950, about 17 percent of the work force was in information jobs (those involved with creating, processing, and distributing information)—today that figure is up to 58 percent. That group includes people in publishing, in education, and the media. It also includes the less obvious—those of us in banking, the stock market, insurance, and government. To a large extent, we are what we do. Thus, when most of us work in information jobs, that shapes our society. About two years ago, the number-one occupation in the United States became clerk, replacing laborer, which replaced farmer.

The mass instrumentalities that were created in consonance with the industrial society are out of tune with the times. Just as in 1800 the fact that 90 percent of us in the labor force were farmers dictated the societal arrangements of the day, the fact that most of us were in industrial occupations until recently dictated the arrangements of the mass industrial society—which are now out of tune with the information society. Take, for example, labor unions. In 1950, at the height of the mass industrial society, 32 percent of the work force in this country was unionized. That figure has been sliding downward ever since; last year, it reached 19 percent and is still falling—irreversibly. National political parties also had their heyday during the mass industrial society. Today, they exist in name only.

One of the most important things to notice about this shift is that the strategic resource in the industrial society was capital; the strategic resource in the post-industrial information society is knowledge and data. The latter are not only renewable, but self-generating, and are uniquely tailored to the encouragement of small, entrepreneurial enterprises. Because the strategic resource is now what is in our heads, rather than what is in our pockets, access to the system is much easier.

Access to the economic system is much easier when the strategic resource is knowledge rather than capital and what one would expect to happen is happening. There has been an explosion of entrepreneurial activity in the United States. The figures are stunning. At the height of the industrial society in 1950, we were creating new companies at the rate of 93,000 a year. Today we are creating new firms at the rate of more than 600,000 annually, mostly information companies. If large institutions are to survive, they will have to restructure to encourage entrepreneurial activity internally.

When there is such a basic restructuring of a society, the traditional groupings of goods and services no longer work. That is why the economists have served us so poorly lately. Their judgments are rooted in the old industrial society indexes. We need new concepts and new data if we are to under-

stand what is going on today, let alone understand what might go on tomorrow.

Now, this restructuring from an industrial society to an information society is not itself happening in a vacuum. It is part of a larger, literally global context, and that is partly why it is irreversible. Which leads to the second pattern in the restructuring of America: from a national economy to part of an integrated global economy.

We are, for the first time, becoming part of an integrated, interdependent world economy, because of instantaneously shared information. We have wiped out the "information float." Sir Arthur Clarke said that two inventions accounted for America's swift economic growth: the telegraph (later the telephone) and the railroads. Similarly, the two great inventions that are now making us an economic global village are the jet airplane and the communication satellite. Consequently, the world is in the process of redistributing labor and production. We are re-sorting out who makes what. As part of this process, the developed countries are deindustrializing.

The United States and the rest of the industrialized nations are on their way to losing their dominant positions in steel, automobiles, textiles, apparel, shoes, and appliances. Even Japan, whose productivity rate now serves as the model for the rest of the world, is getting out of the steel and the shipbuilding business. She knows that South Korea will outdo her in steel and that Brazil, Spain, and Poland will soon be making ships better and cheaper. The Third World is taking up many of the old tasks. By the year 2000, the Third World will produce as much as 30 percent of the world's manufactured goods.

In the truly integrated world economy, no country will dominate the way the United States did economically and militarily following World War II. A handful of countries will share the major role. Since 1960, the United States' share of the export pie has dropped dramatically—from 18 percent to 12 percent. Experience teaches that this bodes ill. The United Kingdom managed, in only a couple of generations, to transform herself from the world's wealthiest society to a relatively poor member of the Common Market by growing only one percent less than France, Germany, and the United States.

Last year, Japan became the number-one automobile manufacturer by more than 2 million cars. Earlier, Japan passed the United States as the leading steel-maker. In fact, Japan has become the world's leading industrial power. Because all the developed countries are now moving away from the old industrial tasks, Japan is the new world champion in a declining sport.

We developed nations are probably going to kill ourselves competing over steel and cars, when we should be moving into new areas. That is why the Chrysler bailout was so important. That bailout was a big step down the path of turning the U.S. automobile industry into an employment program, just as Britain turned its automobile (and steel) manufacturing into an employment program. We have to view Chrysler and the other automobile companies in a world context. Consider: In the world automobile market we are reaching saturation; it will soon be a replacement market. Eighty-six countries now have automobile assembly plants. Japan takes 13 manhours to build a car (nine hours with robots; the United States takes 30 manhours. Ford Motors' sales were surpassed by imports in 1979, with the latter constituting 20 percent of car sales in the United States. In the bellwether state of California, imports made up 50 percent of sales last year. It has been part of the conceit of the U.S. automobile companies that they never diversified. They thought they would go on forever. Now, even Henry Ford is getting out while the getting's good.

Not many automobile companies are going to survive. We are already in the process of creating trans-national automobile companies through mergers and cooperative agreements. This will be the first industry to globalize, and will serve as a model for other industries. The thirty automobile companies that are now operating on an international scale will, by the end of the 1980's, be reduced to as few as seven or eight companies, or alliances of companies.

We now have two economies in America, one falling and one rising. We have a group of sunset industries and a group of sunrise industries. We are experiencing a new phenomenon: some sections of the country are in prosperity and other sections are in depression. The economists have averaged them out to spell recession.

Yesterday is over. We have to look to the new technological adventures: electronics (which will by the end of the decade succeed automobiles as the world's largest enterprise), bio-industry, alternative sources of energy, and mining the seabeds, among others. We have to work out policies (or at least let the marketplace do it) to ease the transition from the old to the new.

The third pattern is the restructuring of America from a centralized society to a decentralized society, and this has been underway for more than a decade.

The three major centralizing events in our history were the Great Depression, World War II, and the impact of industrialization. We are now receding from these influences as we decentralize and diversify, and as we shift from an industrial to an information society. For the first time in the nation's history, the power is shifting not only from the president to the Congress, but—less noticeably—from the Congress to the states and localities.

We have no national urban policy today because the old "top-down master plan" is completely out of tune with the times. The only national urban policy that would be in tune with the times is one that would respond to local initiatives. It is inappropriate, for example, to ask "Are we going to save our cities?" We are going to save some of our cities. We are not going to save others. We are going to save some parts of cities and not other parts, and it is all going to turn on local initiative. We have to look at these things from the bottom up, not the top down.

If you want to know what bottom-up is, look at Poland. That profoundly bottom-up political movement has just about taken over. What is happening in Poland is the most important thing happening in the world. I recently talked with some members of Solidarity and they know they are in the cross-hairs of history. They know that one hundred years from now, people will say that the end of state communism began in Poland. In the meantime, the Soviet Union, as the Economist recently pointed out, is in danger of becoming the first country in the world entirely surrounded by hostile communist countries. Power coming from the bottom-up, as it is in Poland, is what is happening in one degree or another in all the developed countries of the world.

The political process provides another illustration of decentralization. We are participating in the political process in this country more and more at the state and local level. While national voter turnout continues to decline, the turnout for local initiatives and local referenda is going up—as high as 90 percent last year. In the November 1980 election at least one referendum measure was on the ballot in forty-two states and over 200 were voted on in all. In 1978, Proposition 13 had, in my view, a lot more to do with the initiative trend than with taxes.

Congress is becoming an increasingly obsolete institution. Its members and their ever-enlarging staffs spend more and more of their time on smaller tasks—running errands for constituents and special-interest groups. The states, however, have continued to grow in political assertiveness over the last decade or so. Most have moved from two-year to four-year gubernatorial terms, and from short legislative sessions that met every other year to longer legislative sessions every year. The mischief is shifting from Washington to the states.

In America, the general-purpose, "umbrella" instrumentalities are folding everywhere. The great general-interest magazines, Life, Look, and the Saturday Evening Post, with their 10 million circulation, all folded. In their place, 300 special-interest magazines were created, almost all of which are still being published. We now have 4,000 special-interest magazines and only a few general-interest magazines.

The centralized national television networks—ABC, CBS, and NBC—are the Life, Look, and Post of the 80s. The tremendous array of cable technologies is helping to promote a long downward slide of the national networks. The array of cable options is analogous to the special-interest magazines. Then there are all the new networks—the Spanish-language network, the older people's network, the black networks, the all-sports networks, the all-news network. There are two children's networks, not to mention the gavel-to-gavel coverage of the House of Representatives. (Does that make three children's networks?) My own guess is that by the end of the 1980s, ABC, CBS, and NBC will have half the audiences they enjoy today. It should come as no surprise that the networks themselves are getting more involved with the new technologies and with their programming—to insure their future existence.

A year ago two big labor unions, the meat cutters and the retail clerks, merged to form a huge union—for survival. That's the sunset effect: the sun becomes largest just before it goes under. We haven't noticed it, but there have been fifty mergers of labor unions in the last eight years. The decline of labor unions will continue, unless unions reconceptualize a new role in this changing society.

The analogue is also instructive in connection with leadership. In the United States, we have all noticed a death of dealership. We have no great captains of industry any more, no great university presidents, no great leaders in the arts, in civil rights, in labor, or in politics. There is no absence of ambition or talent on the part of those who would be leaders. We don't have any great leaders any more because we followers are not creating them. Followers create leaders—not the reverse—and we followers are not conferring leadership as we did in the past. We are now creating leaders with much more limited mandates; closer to us and on much narrower bands. In the old Taoist model of leadership, "Find a parade and get in front of it," we who would be leaders in America are finding much smaller parades—and many more of them.

The fourth basic restructuring is from North to South. We have read endless articles about the Sun Belt versus the Frost Belt. But the shift to the South has not been sufficiently underscored. The last census revealed that for the first time in our history, there are more people living in the South than are living in the North. During the seventies, a stunning 86 percent of the growth in this country occurred in the South, while such city-symbols of northern industrialism as Chicago, Cleveland, and Pittsburgh were losing up to 26 percent of their populations.

With the de-industrialization going on in the Midwest and Northeast as we move to an information society, the restructuring of American from North to South is irreversible in our lifetimes.

The old New York-to-Chicago economic, financial corridor is being replaced by a new Los Angeles-Houston corridor, and among those cities that are the real growth cities and cities of great opportunity, most are in the South.

Now, I want to say some things about The Law of the Situation, which asks the question, "What business are you really in?"

The Law of the Situation was invented in 1904 by the first management consultant in the United States—Mary Parker Follett. Mary Parker Follett had a windowshade company as a client. She very carefully explained to her client that it would be a good idea if it reconceptualized itself as being in the light control business, thereby liberating it from its narrow purpose. Ever since that time, companies have been asking themselves what business they are really in.

Important for our discussion today is the idea that when the situation changes, we have to reconceptualize what business we are in. Because most of my clients are corporations, my examples are drawn from the business world, but the lessons apply to all institutions.

We now all know that the railroads should have known they were in the transportation business and not just the railroad business. General Electric now says it is in the business of creating businesses as it globalizes and decentralizes. Xerox has announced it is no longer in the copying business but now in the office automation business, although currently this constitutes only 5 percent of its sales.

Banks I've mentioned. Insurance companies, with the death of the thirty-year fixed rate loan, must reconceptualize what business they are in, or they will be out of business.

Anwar Sadat reconceptualized—changed "the very fabric of his thought"—what business Egypt was in—from the war business to the peace business—and changed the world.

When the situation changes, we have to reconceptualize what we are up to: but there are companies, and cities, and institutions in this country that are dinasours waiting for the weather to change. The weather is not going to change. The very ground beneath us is what is shifting.

I hear many Democrats saying that one way or another it is all going to come down on Ronald Reagan, and that all they have to do is be ready to pick up the pieces. That is the road to disaster.

Yesterday is over.

The Democratic Party—if it is to survive—must reconceptualize what it is.

And labor unions—if they are not to continue their dramatic decline—must reconceptualize what their role in our society is to be.

And the Republicans haven't figured it out either. Unless they reconceptualize, they won't survive.

Building on Mary Parker Follett, let me say that The Law of the Situation is that when the situation changes, you have to reconceptualize what business you are in, or what business it would be useful for you to think you are in—or you will be out of business.

And further, when the situation is changing constantly, as it is today, the process of reconceptualizing what business you are in is in itself a constant process.

I now want to summarize by listing ways in which this country is undergoing a basic restructuring. I will mention the four I have already dealt with and many more. They all add up to a dramatically changing society in which your leadership will be tested.

It is a great dynamic, in which each step influences all other steps, but on balance America is restructuring:

From	To
An industrial society	an information society.
A centralized society	a decentralized society.
North	South.
A national economy	part of an integrated global economy.
Forced technology	High tech/high touch.
Either/or	multiple-option.
Physics	biology.
Economies of scale	appropriate scale.
A managerial society	an entrepreneurial society.
Left brain	right brain.
Institutional medicine	personal responsibility.
Sickness-orientation	wellness-orientation.
Hierarchies	networking.
Representative democracy	participatory democracy.
Short term	long term.
Printing	telecommunications.
Broadcasting	narrowcasting.
Department-chain stores	boutiques.
Family as basic unit	individual as basic unit.
Party politics	issue politics.
Machismo society	androgynous society.
Non-renewable resources	renewable resources.
Quantitative information	qualitative knowledge.
Myth of the melting pot	celebration of cultural diversity.
Material productivity	knowledge productivity.
Hired labor	contract labor.
Institutional help	self-help.
Left vs. right politics	a politics of the radical center.
Conquerors of nature	partnership with nature.
Vertical society	horizontal society.
Top-down society	bottom-up society.

Yes, we are living in the "time of the parenthesis", the time between eras. The time of the parenthesis is a great and yeasty time, a time of great change and great uncertainty (and we must make uncertainty our friend), and it is a time as great opportunity.

In stable eras, everything has a name and everything knows its place—and we can leverage very little. But in the time of the parenthesis, we have extraordinary leverage and influence—individually, politically, and institutionally, if we get a clear sense, a clear conception, a clear vision of the road ahead.

My God, what a fantastic time to be alive.

THE TREND REPORT

(By John Naisbitt)

John Naisbitt has published The Trend Report, a quarterly summary of the emerging trends in the United States, since 1973, when it was first issued. He has served as Senior Vice President of the research firm Yankelovich, Skelly and White, and as Chairman of the Board of the Center for Policy Process in Washington. He was Chairman and President of Urban Research Corporation in Chicago for seven years. The Naisbitt Group assists companies in identifying trends that impact on their business and in managing adaptive change.

He served as John W. Gardner's special assistant when Mr. Gardner was Secretary of HEW. Prior to that, he was for two years assistant to the then U.S. Commissioner of Education, Francis Keppel. Mr. Naisbitt has served as assistant to the Chairman of the Commission of Presidential Scholars, Dr. Milton Eisenhower. He has also served as an executive with IBM and Eastman Kodak Company (he has a total of 20 years of business experience). His studies at Harvard, Utah, and Cornell were in political science.

He served in the U.S. Marine Corps and is the author of Unfit for Service, a review of the draft and of the history of basic education in the military, and Right On! A Documentary of Student Protest. His new book, The Restructuring of America, will be published next year.

He is a director of the CBS Group of Houston, one of the country's leading architecture/engineering firms, and the Public Director of The American Institute of Architects.

Among his clients are United Technologies, General Motors, Atlantic Richfield, AT&T, Honeywell, Ogilvy and Mather, Merrill Lynch, Aetna, and General Electric.

He is the 1980 recipient of the Benjamin Y. Morrison Award and Lectureship (the two most recent recipients were Barbara Ward and Rene Dubos).

EVENING SESSION, OPENING REMARKS, DEMOCRATIC NATIONAL STRATEGY COUNCIL

When I look around this great assemblage of Democratic Senators, Governors, Mayors, State Legislators, County Officials and Party leaders, I am reminded of President Kennedy's words on another occasion.

Never has such an array of talent and genius been assembled in one room—with the possible exception of when Thomas Jefferson dined alone.

I welcome you to our inaugural meeting of the Democratic National Strategy Council.

If any one wants to know what is the future of the Democratic Party, let them come to this Strategy Council this weekend—or visit your Democratic colleagues in the Congress, State Houses, City Halls and legislatures—you are the future of our Democratic Party and it is a future I look forward to with pride.

We meet as representatives of the oldest political party in the world in a nation badly in need of our leadership.

The policies of the Reagan Administration have proven even worse than we feared and no American can take comfort in that fact.

We live in a two party system and it is part of our national strength. But this is a radical Administration, far out of the mainstream of either national Party's recent history.

This Administration has enacted the most radical, far-reaching tax cuts in American history and—a set of economic policies that threaten massive deficits for years to come, record interest rates, and, now, a possible recession—all in the name of economic recovery.

This Administration has adopted budget cuts and program transfers so extreme they threaten a crisis in the ability of state and local government to perform—and massive pressure on state and local taxes—all in the name of preserving federalism.

This is the first Administration, Republican or Democratic, in more than three decades to reject America's bi-partisan commitment to control the nuclear arms race—which threatens mankind's final war—all in the name of increasing America's security.

This is the first Administration in my lifetime, Democrat or Republican, that has attempted to shut organized labor out of our national dialogue.

And this is the first Administration in my memory that is so radically anti-environment that even the oil companies could not keep up with the Secretary of Interior's plans to put our off shore oil out to lease.

Richard Nixon's attorney general once warned the American people to watch what we do and not what we say. Unfortunately, that advice is all too apt for the Reagan Administration, too.

This Administration says it wants to reduce the intrusion of government on our lives, but thinks that government should

control a women's reproductive process and dictate what our children should pray in school.

This Administration says it believes in self-reliance and just enacted policies that will drive thousands of the working poor back on to welfare rolls.

This administration says it will protect Israel's security and now wants to sell the latest command and control technology, missiles, and long range jet fuel tanks to a self-proclaimed enemy of Israel.

We are told that the Republicans are the Party of ideas, but there are no new ideas emanating from the Reagan White House today.

The only ideas we see are very old, very tired, very narrow, and very wrong.

We see the policies of Calvin Coolidge redressed in modern packaging and given a new name. But trickle-down economics, by any other name, is still a policy that takes the most from those who have the least and rewards the wealthy and the powerful.

In foreign policy, we see little more than old-fashioned sabre rattling and willful blindness to the urgent global challenges that confront mankind in the last quarter of the 20th century.

I believe that this Administration's policies will cause great suffering among our people and undermine America's respect and leadership around the world. But I take no comfort in those calamities as an American, or a Democrat.

Nor can our Party be content with an electoral strategy hinged on this Administration's failures. For such a strategy, even if it should return us to office, offers no foundation to govern or to lead.

The proverbs say that "Where there is no vision the people perish". That is true for political parties, as well.

The Democratic Party will earn our opportunity, as we have in the past, by offering a positive vision of the future and a program of action leading the way.

Robert Kennedy posed our challenge well. He said:

"In this century, the Democratic Party has never been invested with power on the basis of a program which promised to keep things as they were. We have won when we pledged to meet the new challenges of each succeeding year.

"We have triumphed, not in spite of controversy, but because of it; not because we avoided problems, but because we faced them. We have won, not because we bent and diluted our principles, but because we have stood fast to the ideals which represent the most noble and generous portion of the American spirit."

Our world has changed dramatically, both at home and abroad, in recent years.

Now, as in the past, the Democrats must meet a new generation of challenges with open eyes and fresh ideas. Now, as in the past, we will meet those challenges holding fast to those enduring values of justice and decency for which the Democratic Party has always stood.

We will face the challenge of restoring America's productivity and competitive edge in a new global economy. For we know that an expanding, productive American economy, with stable prices, and, assured energy, is the surest engine of social progress and increased opportunity for all Americans and the fundamental pillar of our national security.

We will confront a host of new problems in America from the cost of our health care to the quality of our Education; from the surival of small business to the safety of our citizens; from our dependence on foreign oil to our lagging productivity; from the size of our government to the size of our deficit; from the erosion of our farm land to the preservation of our water, and many more.

We will undertake a great national debate about the role of government at all levels . . . and how to make it a responsive instrument to serve our peoples needs.

We will confront the challenges of the unfinished agenda of civil rights to ensure equal rights in law become equal opportunities in fact and that all our citizens . . . minorities and women have their fair chance to learn and grow and to lead productive lives. We will pass the Voting Rights Act; and then we will pass the ERA.

And we Democrats will continue to insist that America confront—not just Soviet expansionism, which we must do, but also the common, global enemies of mankind: world hunger, overpopulation, impoverishment, and ignorance—which form the breeding grounds for instability and the enemies of democracy.

We will insist that America continue its role of leadership as the champion of freedom and mankind's human rights. And we will insist—because our generation of Americans has no higher obligation to the next—that our nation continue to lead in the struggle for peace and to hold back the terrible momentum of the nuclear arms race.

We will not resolve these and other urgent challenges facing America today in the 24 hours we will meet together here. But we have begun a process in the Democratic Party—not just in this Strategy Council—but all across this land.

From the Congress to the County Court, we Democrats are coming together in seminars, task forces, discussions, and debates to ask the hard questions about where America and our Party must go. We will think and re-think; we will learn from each other, and from our mistakes in the past.

What we will refuse to do is to abandon our principles or repudiate our history. Nor will we take the cynical way out in a time of austerity, as this Administration has done, and make war on those who live at the margins of our society or cut our dreams to fit the changing fashions of the day.

We want to be healers—not dividers; builders—not a Republican wrecking crew. We want to move all of America forward together, not divide and isolate the most vulnerable in our midst.

We are proud of our history of accomplishment in the Democratic Party, from Social Security to the Camp David peace. And whatever the problems of over-regulation and red tape—and they are real—we doubt that either a middle income American family in Miami who turned a dream into a thriving small business under Democratic policies; or a steelworker in Chicago who is shielded from carcinogens under the Occupational Health and Safety Act; or a 70-year old Black American from Mississippi who voted for the first time in his life in 1965; or a college graduate from the barrio in Los Angeles who borrowed a federal loan to go to school; believes, with Ronald Reagan, that the only problem in America is to get government off our backs.

We do not believe that every problem in America can be solved by government. But if Ronald Reagan had been in office when the Baltimore inner harbor was built, we would be meeting on a parking lot tonight in an aging city port, instead of this showcase to public-private cooperation for economic development.

In the end, we Democrats will place our faith in the American people and the values and hopes that we share.

This nation remains progressive. compassionate, pragmatic, and humane. We Democrats will continue to speak to those values in the months and years to come—and to confront the new challenges of each succeeding year. And it is our commitment to fight for those values—and to meet those challenges—that will restore the Democratic Party to the leadership of America again.

Thank you very much.

OCTOBER 17, 1981.

DEAR DEMOCRATIC STRATEGY COUNCIL MEMBER: Attached is a copy of a discussion draft on Democratic economic policy. Recognizing that it needs a lot of work, our hope is that it will serve as one framework for discussion over the next several months.

This draft grew out of discussion among many Congressional Democrats that began earlier this year when the Democratic Caucus in the House developed a state of economic principles. This short piece was widely disseminated and is also available in Baltimore today.

The fundamental principles of our party have not changed. We continue to favor a growing economy. We acknowledge that we cannot afford to pay for expansion with greater inflation. That is why we focus on the critical import of improving our savings rate and productivity. We must create jobs for all who are able to work in a dynamic economy where rising wages are not constantly eroded by the inflationary spiral. We must rebuild our competitiveness in the arena of international trade.

The draft deals in suggestions, not prescription. It is our hope that it will encourage debate and help create a clear Democratic economic strategy. A firmer set of recommendations is anticipated early next year.

Getting our economy back on the right track will not prove an easy process. It is our hope that this draft will provide a common starting point for all Democrats and accelerate the creation of an agreed-upon strategy.

TIMOTHY E. WIRTH.
RICHARD A. GEPHARDT.

DRAFT STATEMENT

EXPLORING NEW APPROACHES TO ECONOMIC DEVELOPMENT

America cannot solve the complex problems of the 1980's with the simplistic economic nostrums of the 1920's.

In the post-war period, America's economy, and the world's, have undergone changes as profound as those that transformed our Nation from an agrarian economy in the 19th century to a manufacturing power in the 20th.

New centers of resources and power have emerged around the world: trading nations of Japan and southeast Asia; OPEC with its petrodollars and stranglehold over world energy supplies; a revitalized western European economic community and Eurocurrency market; strategically important mineral-rich, developing nations and new industrial giants like Brazil.

Increasingly, America's economic future is tied to others in a global economy of multi-national corporations, new forms of money, and electronic transfers of funds that cross national boundaries. Our level of imports and exports increased ten-fold in the last decade. Today one American job in seven depends directly on our exports.

Changes bring new challenges. Once the undisputed master of world trade, America is under challenge in developing markets around the world by technologically advanced, aggressive trading nations from Asia to Latin America. Yet our productivity, personal savings, and capital investment are lagging behind our principal competitors.

At home, we have witnessed changes equally profound. Nearly 90 percent of the new jobs created in the last 10 years were in the service industry. Two-thirds of the American workforce today is engaged in offering services of some kind rather than producing manufactured goods. That percentage is growing. More than 50 percent of our gross national product is now derived

from the development, storage, processing, and dissemination of information.

We also face demographic changes, with profound implications for future economic growth. The Baby Boom and the massive influx of women into our workforce is slowing down. In the future, we will see fewer new workers entering our economy and more workers staying longer, thus bringing new challenges of training and re-training to the fore.

At the same time, unemployment among minorities is at a record high, betraying the promise of equal opportunity. Hundreds of thousands of unemployed minority youths are threatening to become a permanent underclass.

Underlying all of these changes in our economy is a condition traditional economic theory said could not occur—persistent stagflation the combination of both high inflation and unemployment that has sapped our economic vitality for more than a decade, robbing millions of Americans of the opportunity for productive work, security, and hope in the future.

The only genuinely new approach offered by the Republican Party today is the fundamental contradiction between its fiscal and monetary policy. This Administration coupled deep, across-the-board tax cuts, aimed at generating high levels of growth, with tight monetary targets and high interest rates which reduce the capacity of our economy to grow. What is gained by fiscal stimulus is denied by monetary restraint and thoroughly confused by defense and energy policy. But as if in an economic shell game, the Reagan Administration proclaims with a straight face targets of 13 percent nominal economic growth side-by-side with monetary targets of 3½ to 6 percent—seemingly oblivious to this fundamental contradiction.

We can expect that the Administration will increasingly substitute exhortations of faith for economic policy, and in the coming months will step up the rhetoric of blame, pointing the finger at scapegoats—the Congress and even Wall Street—when its economic policies fail. But even if all its policies were to work, the Administration is heading us toward an economic era whose time has passed.

The Democratic Party cannot shrink from the responsibility to lead. A dynamic, expanding American economy, with stable prices, remains the surest engine of social progress and increased opportunity for all our people and the fundamental guarantor of American national security and strength.

In the 1930's, the Democratic Party led our nation in meeting the challenge of worldwide economic depression and collapse. Franklin Roosevelt's leadership ushered in a generation of growth, prosperity, and increased security in America unmatched in world history. The Democratic Party must meet the new challenges of our economic age today with equal boldness, innovation, creativity, and leadership.

Our challenge is not just to relieve the symptoms of our current economic difficulties—double-digit interest rates, high inflation, and widespread joblessness—as important as those goals are. We must rebuild and re-invigorate America's productive capacity. We must foster a technological revolution in every sector of our economy, from the new high-tech growth industries to our aging industrial base. We must restore America's competitive edge around the world and reassert American economic leadership.

CONSENSUS POLITICS: BUSINESS, LABOR, AND GOVERNMENT

Nearly every industrialized democracy, including our principal trading partners and competitors, has inaugurated new patterns of cooperation among business, labor, and government to marshal the national resources and investment behind increased productivity, economic development, and growth. This Administration's policies are setting such an effort back by a generation, poisoning labor-business relations, and for the first time in 50 years, barring organized labor from a meaningful role in our national dialogue.

Clearly, America must move beyond old antagonism to a new era of cooperation among business, labor, and government—from the shop floor to national development projects—in the interest of national growth. We must learn from, encourage, and build upon successful developments in new labor-management cooperation. And we must confirm that, in the coming decades, there is a significant public role in the development of all of our economic resources. The government has a major role to play—this role must be carefully thought through, defined and constructed.

A consensus-based approach can harness the resources and unique contributions of all sectors in our society: the capital investment of business; the enormous resources of pension funds; the role of government; a commitment by business and labor to restrain inflationary costs and contract settlements; and a balanced commitment to maintain environmental health and safety standards.

FOSTERING A TECHNOLOGICAL REVOLUTION TO INCREASE PRODUCTIVITY

A technological revolution will take place in the next two decades as certainly as the industrial revolution occurred during the 18th and 19th centuries. We want to speed its arrival and harness its potential.

We must assure that resources flow into the new, rapidly expanding industries of the future in which America retains an international competitive lead—computers, telecommunications, agriculture, photovoltaics, health research, and bio-technology. And we must encourage the application of new technology to America's aging industrial base.

We will only achieve those goals by careful targeting of our tax and economic policies. A Democratic alternative must reward research and development, risk-taking by small business, industrial productivity and investment, and discourage non-productive speculation.

The new information and idea-intensive high-tech and service industries provide increasing numbers of new jobs for American workers and must continue to outdistance their competitors, who are posing an increasing challenge especially in the burgeoning international marketplace. To a large extent our future economic growth depends upon our attention to this sector.

To accelerate the pace of innovation in these growth industries the tax code should encourage greater investment in high technology and information industries. We must address the special difficulties these industries face in forming capital investment because of enormous risks and the lack of compensating incentives.

At a minimum, perverse tax incentives that steer capital into less productive investments must be neutralized. Real capital formation, rather than incentives for mergers, will better reflect the present trends toward innovation, decentralization, productivity and job creation.

Because small business plays such a critical role in promoting innovation, high technology, and new ideas and jobs, we must develop special incentives to assist small business to acquire necessary capital.

The remainder of this century brings the challenges of modernizing our industrial capacity in an information age, and competing with increasingly aggressive foreign businesses. We must respond with a concerted national effort to retool our industrial base, and transfer the fruits of the technological revolution to our basic manufacturing industries. We must encourage the strong trend toward the export of our national "thoughtware" to the world, just as we have encouraged the export of manufactured products in the past.

Today, most of American industry operates on a base of capital stock designed for a period of cheap energy that will never return. This reality dictates that we cannot ignore the advances made in alternative energy strategies. A balanced national energy program, including solar, conservation, and other alternatives is imperative for our national economy as well as for our international security.

PROMOTING BASIC RESEARCH AND DEVELOPMENT

To restore America's competitive edge and to promote the productivity gains essential for economic growth and lower inflation, we must support sharply increased research and development. American ingenuity and innovation have always spearheaded American economic leadership; in the future world economy, this leadership will be even more important.

Managers of industry must look beyond their quarterly balance sheets; labor leaders must embrace technological change in return for a more productive, full-employment economy; government must expand its leading role as a catalyst for basic research and development.

Our government's past investments in science, in the space program, and in basic physical and bio-medical research have helped propel America's high technology industry to world leadership. To reduce this commitment now, as the Republican Administration has done, when these investments hold the key to our future economic growth, is simply irresponsible.

THE WORK FORCE IN A CHANGING NATIONAL ECONOMY

The Department of Labor reports that the United States dropped from 2nd to 7th in the measured "skill endowment" of our workers. At a time when other nations maintain continuing commitments to train and develop their work force, this Administration's answer to job displacement is to reduce incentives for the working poor, slash programs for training, and starve national institutions of higher education.

An economy changing as radically and as rapidly as ours must pioneer new ways to train and retrain American workers. Tax credits and other incentives should be used to encourage management, labor and communities to train existing work forces to master new employment opportunities. The evidence is clear that there is no dearth of new business starts in the United States. What is needed is a concerted effort to combine these with retrained work forces and existing infrastructures of schools, hospitals, transportation, and other expensive public services.

ATTACKING STRUCTURAL UNEMPLOYMENT

While we dedicate our energies and efforts towards workers in transition, we must also reaffirm our commitment to remove the barriers which have set apart far too many Americans—particularly minority youths—from any role in a productive work force. Hundreds of thousands of young people in our nation have never held a job.

Many of these young people cannot read and write at all. Unless this pattern is reversed, we can anticipate increasing public disillusionment with our education system, and increased costs to the economy. Reform now, harnessing the resources and commitment of business, labor, and government, must be part of a national commitment to basic skill training. The imperatives of the

future will not tolerate neglect of our nation's young.

INVESTING IN PHYSICAL CAPITAL

The physical infrastructure of our nation is rapidly deteriorating. For example, one in five bridges needs to be replaced; more than one-half the nation's roads are in disrepair; America is losing billions of dollars in coal exports because of massive bottlenecks in our harbors and ports. In these times of austerity, difficult decisions have to be made as to what investments are made at what levels of government and what should be made privately.

PROMOTING FISCAL DISCIPLINE

Clearly, no strategy for restoring America's competitive edge abroad and revitalizing productivity at home can be successful unless it controls the inflationary spiral that has crippled our economy. The most important immediate signal government can send to financial markets about its seriousness to control inflation is fiscal discipline. A helpful set of guidelines was outlined by the House Democratic Caucus in its statement of April 8, 1981.

Fiscal and tax policy should be coordinated with a clear understanding of the implications for the deficit. The Administration's Kemp-Roth tax bill threatens massive deficits, record interest rates, and continuing inflationary pressures.

Tax policy must be fair. Tax reduction should be targeted to those most injured by inflation and coming payroll tax increases, and toward our broader national economic goals: greater savings, greater equity, and economic growth.

ATTACKING INFLATION AT ITS ROOTS

Restrictive monetary policy cannot be tolerated as the country's only anti-inflation program. We cannot assume that fortunate weather and depressed world oil prices will continue to discourage price hikes. And we cannot depend on sharply increased defense expenditures to order a rapidly changing world economy.

A serious assault on inflation must attack the inflationary spiral at its roots: our declining productivity, the escalating wage-price spiral, and our massive dependence on foreign oil.

In today's discussion, we have augmented the dialogue concerning the inevitable trends driving our economy. As outlined above, it is imperative that we explore a variety of new strategies to re-invigorate American productivity and restore our nation's competitive edge abroad.

The wage-price spiral, spurred by fears of continuing inflation, feeds on itself and feeds the fires of inflation. It becomes a self-fulfilling prophecy as wages chase rising prices and prices rise to reflect the increased labor costs. Increased productivity is the long-range answer to keeping inflation under control, but we must address as well the incentives in our system that encourage prices and wages to escalate out of control. As the House Democratic Caucus said in its statement of Economic Principles, "Our nation needs an incomes policy: a flexible set of methods for combatting inflationary wage and price trends." Here again we can apply the needed template of consensus government.

Such a policy can only be devised with the cooperation of business, labor, and government. This Administration has so poisoned relations with organized labor that its leaders resigned from the Council on Productivity and called for a protest on Solidarity Day. We need to again explore the potential of equitable and effective incomes policies. And obviously such exploration will occur only under Democratic leadership.

Finally, only a resident of another planet could fail to see the effects of foreign oil pricing decisions on America's inflation rate this past decade. This Nation cannot remain dangerously dependent on foreign oil for decades to come without risking all of its prospects for economic recovery on the future of an unstable, volatile part of the world.

This administration seems bent on systemically dismantling all of the incentives for energy conservation and production of alternative fuels that a Democratic President and Congress enacted over the last four years. A serious program to reduce inflation must include a serious program to reduce dependence on OPEC oil. The Democratic Party must continue to support a balanced energy program to help achieve these goals.

UPHOLDING AMERICA'S VALUES

No American economic program—any more than a foreign policy—can long endure without the support and trust of the American people. And no program will win that trust that betrays the values on which America is based.

In every period of national challenge in our history, the American people have been willing to sacrifice—so long as they understood that sacrifice would be fairly shared. This Administration has drawn a safety net for the most privileged and powerful in American society, while middle-income families, the needy, older citizens, minorities, children from poorer homes, have all fallen through. We must continue to defend those most in need and insist that sacrifice be shared equitably.

This Nation can meet the challenge of national recovery without losing its values. We can, and we must, maintain the momentum of increased opportunity for minorities and women. Equal rights is no threat to economic growth; it's a 200-year-old promise of the American Constitution. We can, and we must, maintain the standards of a decent society to those who need our assistance and our aid. We need not turn away from the noblest impulses in our national character. We need not be hard-hearted to be hard-nosed.

Finally, we must not permit America to become divided into separate and unequal societies. Our enduring strength has been our unity, and only as one people, united in common cause, can we restore America's economic strength.

OPENING STATEMENT OF LYNN CUTLER

The enduring strength of American democracy has been our federal system of government, advocated by the first Democrat, Thomas Jefferson. And the special strength of our federal system has been its flexibility, its capacity to adapt, grow, and change with changing times.

For much of this century, the term "states' rights" was synonymous with reaction, with denial of Constitutional liberties, and mal-apportioned legislatures.

In response to the Great Depression, the federal government, under Democratic leadership, moved into the vacuum of leadership left by local government and the states to assert the urgent needs of national recovery. In subsequent decades, the federal government moved to enforce basic and equal rights long denied minority Americans and women; foster improved education; combat hunger and malnutrition; improve our citizens' health; build our national transportation network; safeguard consumers in the marketplace; and preserve our national heritage.

Around the world, a newly emergent American nation moved to safeguard democracy, first against totalitarian aggression and later against the threats of Soviet imperialism. America assumed the responsibilities of a world power in the course of 50 years, and our national defense mushroomed accordingly, as did our national responsibility for peace and arms control.

We Democrats are proud to have led the nation to so much of that progress—from Social Security to the Voting Rights Act; from the Wagner Act to the Marshall Plan; from the Test Ban Treaty to the Clean Air Act. Through Democratic leadership, our citizens became more prosperous, better educated, more healthy, and more free.

In recent years, a revolution has occurred in state and local government, as well, often led by able Democrats. State and local government is the fastest growing, and often the most dynamic level of government today. Many of the most creative efforts and most responsive services are being pioneered by state and local officials and employees in tandem with the leadership of their communities. The inner harbor development where we meet today is a showcase of progress and a testament to the foresight and leadership of public and private local leaders and creative federal economic development programs.

With the assumption of new responsibility by the federal government also came increased federal involvement in state and local government, much of it creative and responsive, some stultifying and oppressive. More than 500 federal grant programs have brought federal regulation into local programs of every kind from libraries to fire protection, to street maintenance and the local symphony.

Today, there is no challenge more important to the Democratic Party than to engage in a great national debate about the future of our federal system of government in the last quarter of this century. And leading this debate are some of our most talented and thoughtful Democratic elected officials.

As Governor Bruce Babbit recently said:

"It is not enough to advocate such generalities as trimming waste, cutting across the board, or budget balancing. To be taken seriously, we must have the courage to launch a great national debate about the role of the federal government. Should the federal government build highways, finance elementary and secondary education. Subsidize the arts?"

The nation's Governors recently proposed that the states assume full responsibility for primary and secondary education while the federal government takes over, in exchange, responsibility for funding a basic income security program, namely Medicaid.

Whether this proposal is the right one—or others should take its place—there is no doubt that the time has come for just that national debate. And the Democratic Party is the only Party with the commitment to make that debate genuine.

For we Democrats believe in our true federalism, and want to strengthen state and local government, unlike the Reagan Administration and the Republican Party today.

In the name of federalism, the Reagan Administration is making war on state and local government today. For President Reagan, and David Stockman "block grants" are now a tactical weapon to cut the budget of program after program and deputize the nation's state and local officials to hand out the bad news.

The Reagan Administration talks about budget saving to hide budget shifting—they talk about fiscal conservatism but they are giving us fiscal confusion. They talk about federalism—but they are giving states and local communities the federal squeeze play.

The Administration admits that this year's 25 percent block grant reductions are merely the entering wedge in a scheme to shrink and then eliminate federal support for the social services included in the block grants.

State and local taxes will go up next year—and property and sales taxes will lead the

rise—as a direct result of the politics and policies of this Administration.

Rail, bus, and subway fares will rise as much as 50 percent around the nation and public transportation will nearly disappear in smaller cities.

This Administration's policies will pit senior citizens and children in need of education, the sick and the handicapped, the unemployed and the impoverished against each other in a desperate scramble for diminished resources, with the arena our state legislators, and state and local officials, the unfortunate referees.

It isn't federalism to throw program after program upon the states and then deny the states the funds to pay the bill. It isn't federalism to put intolerable pressure on property taxes, local sales taxes, and the state income tax and then tell the American people that tax cutting is the key to economic growth.

And it isn't federalism to ram through the Congress far-reaching reductions and changes in corporate income tax, depreciation schedules, and personal tax rates that will reduce by tens of billions of dollars the revenues of more than 40 states as well whose tax laws are directly coupled to federal standards, without consultation with a single Governor or Mayor or County official about the impact or a single vote in a single state legislature.

To date, President Reagan has set no discernible limits to his agenda for closing down the federal government and handing back programs to the States. His strong opinions about State responsibilities do not seem to be balanced by any thoughts about federal responsibilities. We are beginning to sense that the Republicans have no philosophy about federalism at all. Indeed, if President Reagan believes the federal government has any roll beyond raising armies and minting our coins, we have yet to hear what it is.

We Democrats have a different philosophy of government. We are neither wedded to large central government nor decentralization for its own sake. What we reject outright is the mindless abdication of federal responsibilities. And we believe federalism must be a two-way street.

Clearly more freedom and flexibility should flow to our states and local governments, but so must the federal government assume national responsibilities. Our test is a pragmatic one. We believe government should serve our people's needs, with respect and efficiency.

As Democrats we commit ourselves to engage in that national debate about the role of the federal government, and our local and state governments. And we commit ourselves, as well, to resist the unfair pressures on state and local taxes brought on by the fiscal shell game of this Administration. We will fight for true federalism and resist this Administration's assault on state and local government.

For too many years, we have witnessed public cynicism and private doubt about the purposes of government. For too many years too many Americans have voted "No Confidence" by staying home on election day.

We will not heal that crisis of confidence under the leadership of a President who uses the word "government" as if he were uttering an epithet. Nor will we reaffirm our faith as a people in our common public purpose led by a Party committed only to private greed.

We Democrats will reaffirm faith in our democracy by making government deserving of public confidence. And in so doing we will serve, not government, but a free people and the strength of our democracy.

U.S. Economic Policy and Outlook

(By Walter W. Heller and George L. Perry)

Threading one's way through the crosswinds in today's economy and the contradictions in national economic policy is a trying task. The contrasts between Sunbelt and Frostbelt, between sickly housing and auto industries and robust defense and computer industries, between a tax-slashing federal government and tax-boosting state-local governments, between a disenchanted financial community and a hopeful business community—these give the forecaster pause on any sweeping generalizations.

Then mix into the forecasting brew a Reagan economic policy that continues to suffer from the inner conflicts we analyzed in this Letter last March: conflicts between rosy promises and hard reality; between an expansionary fiscal policy and a repressive monetary policy; between investment-stimulating tax cuts and investment-stifling interest rates; between the hope that tax cuts will boost private saving and the actuality that they will generate huge federal deficits, that is, public dissaving.

Small wonder that divergence rather than convergence is the order of the day in economic forecasts. Among the 44 economic forecasters surveyed in October by Eggert Economic Enterprises, 7 expect real GNP growth in 1982 (year-over-year) of 3½ percent or more; 8, between 2½ percent and 3½ percent; 18, between 1½ and 2½ percent; and 11, at or below 1½ percent. Our reading of the outlook puts us in league with those at the lower end of the scale.

RECESSION

In our view, the U.S. economy is now sliding—or being pushed—into recession. The Federal Reserve's tight monetarist policy, in spite of some letup in recent weeks, has imposed increasingly severe strains on the economy. For some time, the resulting economic malady was pretty well quarantined. The major victims were autos, housing, and the thrift industry, with small business, farmers, and state-local governments also impacted. But now, the contagion appears to be spreading into other sectors through reduced orders for suppliers, rising unemployment and a shrinking workweek, keener competition from abroad, and declining export prospects.

We do not believe that these forces will readily reverse themselves. Until the second-stage 10 percent tax cut takes hold in mid-1982, we foresee continued recession, or at best, sluggishness. Indeed, coming on the heels of a sustained period of miserably slow growth, poor productivity performance, and painfully high interest rates, the weak economic outlook brings with it a measurable risk of financial failures and business bankruptcies that could deepen the recession. We do not regard this as a probability unless an unrelenting Federal Reserve keeps interest rates in the stratosphere. But one cannot rule out the possibility.

It is worth reminding ourselves that in an effort to cool inflation, the economy has been kept under wraps for nearly three years. Real GNP in the first half of 1982 will be little higher than it was at the beginning of 1979. Industrial production will not have regained the peak that it reached in the first quarter of 1979. Future economic analysts will look back on the 1979–81 period as one of arrested development in the U.S. economy.

The recession we are now entering will exact heavy costs while conferring some benefits. A weak economy will reduce interest rates and help slow inflation in the near term, even as it expands the budget deficit well beyond official projections. More importantly, it will raise unemployment, lower profits, and delay investment. And while relieving the financial squeeze of higher interest rates on many firms and industries, it will substitute the squeeze of lower cash flows.

Before probing some of these implications of a weakening economy, one should perhaps examine the components of that weakness, sector-by-sector:

Housing: Only twice in the past 35 years have housing starts fallen as low as August's 937,000 units. The dismal prospect is for a further decline, with little prospect of a prompt recovery. Only a small percentage of the net short-term funds brought into banks and thrifts by the misnamed "All-Savers Certificates" will find its way into long-term mortgages.

Plant and equipment: Recent surveys show an essentially flat trend in real investment in plant and equipment. But if, as we expect, weak sales prospects are added to the restraints of high borrowing costs and low equity prices, some decline in real capital spending is in the cards for 1982.

Inventories: Though high interest rates have kept business inventory holdings at moderate levels, they are still vulnerable to disappointing sales and orders. The brisk $21 billion annual rate of inventory accumulation in the second quarter of this year will turn into some liquidation of stocks in coming months.

Consumption: Consumer spending has held up surprisingly well in the face of a sputtering economy. But recent weakness in retail sales, "sticker shock" in auto showrooms, big losses in the stock and bond markets, and record interest rates on installment debt are taking their toll on consumer spending. For the next two quarters or so, these factors are likely to outweigh both the rather healthy liquid-asset position of consumers and the $17 billion boost to incomes resulting from the first phase of the 1981 tax cut.

Net exports: Soaring U.S. interest rates, while strengthening our international current account and the dollar, are weakening our net export position. A strong dollar makes U.S. exports less competitive. At the same time, our high interest rates force restrictive policies on our trading partners, thus accounting in significant part for their stagnant economies. And the heavy financing burden on less developed economies also reduces their ability to buy from us. The net result: a substantial decline in our net exports will contribute to overall weakness in the economy.

Government: Here again, we see economic cross-currents. Federal purchases of goods and services, dominated by rapidly rising defense outlays, will go against the tide of economic weakness. But the sharp cuts in federal transfer programs will hit both individuals and state-local governments. Reflecting reduced grants-in-aid and a flagging economy, state-local spending will fall (after adjusting for inflation) and taxes will rise.

The interaction of these forces is initiating a moderate decline in the current quarter that will extend into the first half of next year, with the following effects:

Unemployment is likely to reach 8¼ percent in the first half of 1982, a point above its August level and nearly 2½ points above its rate in 1979.

After-tax profits, which are now running more than 10 percent below year-earlier levels, will continue their poor performance well into 1982.

The long-awaited resumption of respectable growth in productivity and business capital spending will be postponed once again.

MONETARY POLICY AND FINANCIAL RISKS

If the economy now weakens as we expect, all the M's, all the monetary aggregates,

should grow more slowly. This would allow the Federal Reserve to loosen its grip. But the connection between money supply and the level of economic activity is neither direct nor immediate. The Fed may find itself with lots of room for discretion, even within its monetarist targets. If its actions to provide reserves are timid or if money supply grows fast enough to restrain Fed action in the face of a sluggish or a sliding economy, interest rates could stay chokingly high. This would worsen the financial squeeze and risk a deeper slump in 1982.

In other words, the economic damage from today's sky-high interest rates goes well beyond their stifling effect on the credit-sensitive sectors of the economy already cited. Their direct effect in undermining the profitability and weakening the balance sheets of business borrowers must also be weighed in the balance. The impact on thrift institutions is quite evident to the naked eye. But in the non-financial sector, the impacts are uneven and often hidden. They depend in good part on the tax status of the borrower. Business and individuals subject to high marginal rates have an automatic shield against the full-impact of high interest costs. But for business firms with little or no profits, for small firms in low tax brackets, and for the farming community, high interest rates weigh very heavily.

This uneven impact makes it hard to quantify the financial risks we confront. But the longer rates stay high or the longer and deeper any recession becomes—and worse yet, if high rates and serious recession coincide—the greater the stresses and strains will become and the greater the risks of business failures that will do economy-wide damage.

A credit crunch in the 1974–75 sense of credit sources suddenly drying up is not in the cards. Banks and other financial institutions have much broader access to loanable funds today than in the mid-seventies. But overborrowing is more widespread today. And the grinding impact of 15 percent to 25 percent interest costs is simply unprecedented even after adjusting for inflation.

Carrying old 7 percent and 8 percent mortgages at new high borrowing rates is leaching away about 1 percent a month of the net worth of savings and loans.

Data Resources, Inc., estimates that debt service is absorbing 47 percent of corporate cash flow today, just a shade under the postwar record of 48 percent in the 1973–75 recession.

Business bankruptcies in 1981 have been running more than 30 percent above a year ago.

Paradoxically, a clear-cut but brief recession might provide more interest rate relief than prolonged sluggishness. The greatest risks might develop in an economy that stagnates and keeps business in purgatory without giving the Fed a clear-cut signal to ease. Especially under the relentless prodding of monetarists, the Fed has leaned over backwards not to appear to relax too soon. In the weeks and months ahead, the danger is more likely to be that of relaxing too late, of over-staying the policy of credit restraint. Secretary of the Treasury Regan put it well when he said recently that in a flat period "which ultimately may be called a recession," the Fed "has to be very careful not to undershoot its targets."

THE BUDGET DEFICIT IN RECESSION

The focus of most budgetary attention and apprehension in recent weeks has been on the huge deficits—$75 to $100 billion a year, as estimated by both conservative and liberal observers—that loom ahead in 1984–86 as Mr. Reagan's tax cuts and defense buildup swamp his budget cuts. Those who have long cried wolf about "crowding out" will at last be right, with a vengeance, as the Treasury elbows aside private borrowers in an expanding economy. Stock and bond markets have given up hundreds of billions of dollars in asset values in expressing their conviction that (a) further budget cuts won't appreciably narrow these great budget gaps and (b) the Fed will have to step in with ever-tighter money.

Our immediate emphasis is on a different kind of deficit in 1982—a cyclical deficit bloated not by excessive tax cuts but by recession, a deficit that won't crowd out private borrowers in a slack economy, a deficit that will therefore be consistent with some relief from high interest rates.

On optimistic economic assumptions as to 1982 growth and inflation, the White House projects a fiscal 1982 deficit of $43 billion (or $60 billion before further budget tightening), while the Congressional Budget Office (CBO) foresees a $65 billion deficit (before budget tightening). But if the recession we foresee materializes, it will add over $30 billion to these deficits, as is shown in the table below.

BUDGET OUTLOOK FOR 1982

[In billions of dollars]

	Reagan budget, Sept. 24 revision [1]		CBO estimate, Sept. 10 revision [2]	
	As presented	With recession	As presented	With recession
Outlays	709	715	721	721
Revenues	666	640	656	630
Deficit (−)	43	75	65	97

[1] Assumes enactment of proposed $13 billion of added budget cuts and $3 billion of added revenues. Without the adjustments, outlays would be $722 billion; revenues, $663 billion; and the deficit, $60 billion.

[2] Does not include Reagan budget-tightening proposals and assumes lower GNP growth and higher inflation, defense outlays, and interest rates than in the Reagan budget.

The economic weakness we anticipate would cut federal revenues by some $26 billion. It would also boost unemployment compensation and other income-support programs while reducing federal interest payments, for a net spending increase of $6 billion.

Although budget forecasts at this distance are subject to large errors, and the Administration's latest proposals may get a cool reception in Congress, a recession deficit between $75 and $97 billion, as shown in the table, seems more likely than the deficit of $43 billion projected by the White House.

As already suggested, a deficit magnified by recession is a very different fiscal animal than an equally large deficit at higher levels of economic activity. Financing it will absorb funds that have been released by the slowdown in private activity. It will thus be consistent with lower interest rates and some easing of credit policy.

But as economic slump or sloth expands the deficit, one hopes that policymakers will not react perversely by calling for still bigger budget cuts for 1982. This exercise in futility would shrink private purchasing power even more and thus worsen a recession. The right prescription would be just the reverse: If recession throws the economy for a loss, suspend budget-cutting and tax-tightening until economic skies brighten later in 1982. Then go at it with renewed zeal.

A BRIGHTER INFLATION OUTLOOK

The most heartening factor in the economic outlook—one that will have a moderating impact on both recession and high interest rates—is the significant ebbing of inflation in 1981–82. The complex of forces at work to ease inflationary pressures is impressive:

Energy: A combination of conscious conservation measures, unconscionable OPEC price increases, domestic oil price decontrol, and a world-wide economic slowdown has so curbed the world's appetite for oil that prices, corrected for inflation, are not likely to rise further in 1982.

Food: Bumper crops in spite of drought in spring and medflies in summer, coupled with surprisingly strong supplies of meat, have held food prices in check in 1981. They hold out the promise of continued moderation in food price increases in 1982.

Housing: Relentlessly tough monetary policy has played a major role in curbing the price spiral in housing. Because many sellers camouflage price cuts by financing sales at below-market interest rates, some of this weakness has not been reflected in the price indexes. But the weakness is there and will continue until receding interest rates, followed by economic expansion, bring new life to the housing market. Meanwhile, softness in housing prices and some trimming of mortgage interest rates will help restrain the consumer price index.

Import prices: High interest rates, a sluggish economy, and the stronger dollar in 1981 have cheapened imports and intensified competition from abroad. This impact will continue well into 1982.

Commodity prices: The combination of soaring U.S. interest rates and a stagnating world economy has brought commodity prices down, and no sharp rebound is yet in sight.

For the most part, the foregoing favorable price developments fall in the category of "special factors" and could eventually turn against us. But this is unlikely to happen in 1982. That brings us to face-to-face with a more fundamental question: Will this easing of consumer prices, coupled with softness in the economy, translate into a material improvement in the underlying or hardcore inflation rate? The portents for easing of this hardcore rate, anchored mainly in wage costs, are quite favorable:

The average hourly earnings index, which provides a measure of wage trends in the whole private non-farm economy, has risen at less than an 8 percent annual rate in the past six months.

In the face of a sluggish economy and extended slack in the overall labor market, a number of hard-pressed firms and industries have already gained wage concessions, thus reducing costs and facilitating slower price increases.

Though such heavy hitters as the Teamsters and the auto workers are coming to bat, they won't be hitting as heavily as in the past. The lead-off hitters will be the Teamsters who, weakened by high unemployment and competition of non-union truckers since deregulation, are ready to make concessions and give their employers some local options.

CONCLUSION

As we look beyond 1982, what are the long-term prospects for Reaganomics? The failure to deliver on its promise of strong growth in 1982 will facilitate progress on the inflation front and provide some relief from high interest rates. This easing of inflation and interest rates, coupled with the potent fiscal stimulus of the 10 percent tax cut next July and rising defense activity, will reignite expansion in the second half of 1982. Then, as economic expansion brings the economy back towards high employment, the danger is that fiscal and monetary policy will again be on a collision course. Fiscal stimulus, high deficits, and economic expansion will once again be confronted with monetary restriction and high interest rates.

The period of recession or continued stagnation in the next several months can serve

as a "window of opportunity" for the Reagan Administration to come to terms with itself about the unresolved contradictions in its current policies. Huge tax cuts and defense boots have ruptured the federal budget, and within the bounds of human decency and political feasibility, no program of budget cuts alone can fix it.

By coupling with prudent budget cuts a courageous program of tax increases—either by a partial rollback of the prodigious 1981 tax cuts or by a combination of loophole closing, energy taxes, user charges, and higher liquor and tobacco levies—the Administration and Congress could bring the federal deficit under control and permit the Fed to bring interest rates under control. If this program of coordinated and moderate monetary-fiscal restraint were coupled with appeals by a popular president for wage-price restraint (perhaps backed by tax incentives, the prospects for the mid-eighties could be vastly improved.●

REPORT TO THE PEOPLE OF MISSISSIPPI FOR 1981

● Mr. STENNIS. Mr. President, we are approaching the end of the 1981 session of the Congress. It has been my practice over the years to make a special report to the people of the State of Mississippi at the end of each session. The purpose of this report is to give an account of the important matters which Congress has considered and on which I have worked this year. I will concentrate on matters which I think may be of special interest to Mississippians.

First, I want to express my deep and abiding thanks to the people of my State for the trust and confidence they have placed in me as their Senator. I appreciate very much the outstanding manner in which they have given me advice, assistance, encouragement, and support over the years.

I am proud of the unity of purpose and action which has been shown by the entire Mississippi congressional delegation in all instances where the interests of Mississippi are concerned. I express sincere appreciation to each of the other members of the Mississippi delegation for their fine cooperation, assistance, and teamwork in legislative matters of mutual interest and concern.

My office staff, though small, has worked hard and effectively. I appreciate their skill, diligence, loyalty, and support. The committee staffs with whom I have worked also have my thanks and appreciation for the outstanding assistance and cooperation they have given me throughout the year.

My special appreciation goes to my colleagues in the Senate from other States. Their cooperation, courtesy, and assistance have been very important factors in my understanding the issues and achieving many of the legislative goals which benefit Mississippi and its citizens and the Nation as a whole.

It will become apparent from the rest of this report that 1981 was an exceptional year so far as the Congress of the United States is concerned. It was an extremely busy and demanding year with the attention of the Congress being focused primarily on fiscal, budgetary, and tax considerations. It is obvious even now that much remains to be done in these fields, and that in 1982 the Congress will be even more deeply involved with the same issues and problems with which we have wrestled in 1981.

As I look back at the year 1981, I am, of course, not completely satisfied with what was accomplished. This is especially true in the economic field. Despite almost constant attention to economic and fiscal problems, a balanced budget seems at this time to be as far off as ever. However, I have dedicated myself to the goal of achieving a balanced budget, and I will continue to work unceasingly toward that end. I believe it is absolutely essential to the fiscal and financial welfare of this Nation.

While progress has been made in controlling inflation, unemployment has risen significantly. In addition, we are now in the midst of a recession which retards economic growth and hampers the achievement of our economic goals. These matters are discussed in more detail in the report which follows.

There are reasons to be gratified for what 1981 has brought Americans. We still enjoy a very high standard of living. Our farmers have produced food in amounts which are adequate to supply our needs and also to feed millions of others in the world who would otherwise face starvation. There is reasons to hope that our economy, although now slowed and burdened with a recession, will resume its growth, productivity, and stability. I am hopeful that this will result in renewed and increased prosperity.

Several domestic problems demand attention and remedial action if they are to be solved. We also face many problems in the international field.

I emphasize at this point, that in our relations with other nations, we must react calmly, reasonably, predictably, and consistently to events on the world scene, particularly to those events we cannot control entirely. For our actions and reactions to be credible abroad, we must have adequate military strength, and both our friends and our potential enemies must realize and accept this as a fact. We must make it clear that we have no aggressive intention and equally clear that we will not condone aggression by others. In foreign affairs, we must speak with one voice as a Nation—firmly, clearly, confidently, and with a high degree of reliability and perdictability. If we do this we can continue to contribute greatly to peace and stability among the nations of the world.

In reviewing 1981, as in every year, we find both pluses and minuses. I will concentrate on the positive accomplishments during the year and the outlook for the future. This is particularly true of those matters to which I have the privilege of making a contribution. However, matters which did not have such positive results cannot be overlooked, and these will also be discussed in this report. As has been true in past years, I will focus in this report on matters that I believe will be of particular interest to my fellow Mississippians.

Mr. President, I ask that the reports presented herewith, which discuss a substantial amount of my work in the Senate in 1981 be printed in the RECORD.

The reports follow:

ECONOMY

Earlier in the year, the economy had begun a slow recovery from the impact of the 1980 recession. In addition, President Reagan's comprehensive and sweeping economic program generated a great deal of optimism at and after the time of his inauguration about the future course of the economy.

Unfortunately, however, the economic optimism was not matched by the economic results. In the late summer and early fall, the economy began to decline, and it is now conceded that we are in the midst of another recession. Hopefully this recession will be short and shallow, and we will begin to recover from it by the spring or summer of 1982.

As a result of the recession, the Nation's unemployment rate surged to a six-year high of 8.4 percent in November, and the number of unemployed jumped to 9 million. The 8.4 percentage rate was the highest level of unemployment since 1975 when the economy was beginning to struggle back from the worst recession since the Great Depression of the 1930s. The importance of unemployment in the federal economic situation is indicated by the fact that the Congressional Budget Office estimates that a one percent increase in unemployment has an adverse and negative impact on federal finances of about $25 billion. This consists of $16 billion in lost tax revenues and $9 billion in increased unemployment outlays.

In January, the Administration spokesmen were predicting a 5 percent real rate of growth for 1982. In July they lowered that to 3.4 percent. Now they are talking about a real growth of 1 to 2 percent. However, many private economists assert that we will be lucky to get any real growth at all in fiscal year 1982. This is important because a high rate of growth helps the economy and assists in balancing the budget by reducing expenses for unemployment compensation and welfare and by producing more revenue at the same tax rate.

On the brighter side, and perhaps partially as a result of the current recession, inflation has now declined to the equivalent of an annual rate of about 10 percent. At one point during 1980, inflation escalated at the equivalent of an annual rate of 18 percent.

Although the prime interest rate has declined from the record 21.5 percent reached in more detail in a later portion of this report.

It should be added that the Administration remains firm in its prediction that President Reagan's economic program will result in a strong recovery by mid-1982, and that this will result in a prosperous and growing economy and a low inflation rate beginning in 1983. However, there appears to be increasing skepticism on just how quickly the economy will recover and how rapidly unemployment will come down from its present high level.

HIGH INTEREST RATES

High interest rates are having an extremely serious and harmful effect on the economy. The high level and volatility of interest rates have taken a heavy toll on the nation's economic confidence. Interest rates have bounced from a high of 19½% in the spring of 1980, to a low of 11% in August of that year, and then by December of 1980 the prime rate had returned to 21½%. Interest rates have been very high for all of 1981 and the resultant harmful effects have set the economy into a recession. Interest rates now appear to be falling slightly due to generally depressed economic conditions. The economy has

turned down very sharply, and unemployment is at peak levels.

Interest rates have been particularly hard on the housing industry. The housing industry, which includes the builders and manufacturers of home appliances and furnishings, forest products and all the building components that go into housing, have experienced more than 35 months of continuous recession which far exceeds the previous serious downturn in the 27-month stretch recorded in the 1954–1957 recession. Mortgage interest rates are at a record high and have receded very little even during this recission. High interest rates have effectively shut down the home building industry.

The nation's automobile and agricultural industries, which are also credit sensitive, have been subjected to depression-like conditions for well over two years now. The serious economic conditions in these industries is spreading to every sector of our economy and at the end of this year this economic sickness has widened to other sectors and deepened into a severe recession.

Certainly we cannot allow these conditions or these high interest rates to continue any longer without something being done to arrest the economic decline or the entire economy will suffer serious and lasting harm. In this regard, I believe that we need a short term program to lead the economy out of this recession. In the past housing has always been a good vehicle for turning our economy around. I believe that a short term emergency economic recovery package that will stimulate housing and employment should be the top priority of the President and the Congress.

I am working on various proposals and I hope to come forth with a program which in my judgment will moderate this recession, lower home mortgage interest rates and restore employment. It is my intention that this program should be anti-recessionary without promoting inflation. Recently I met with the President's Council of Economic Advisers and discussed the need for a program. It is my hope that the President will support emergency legislation. High interest rates must be brought down or I fear that the entire Reagan program for economic recovery will fail.

In the long term, I have already asked the President and the Congress to consider the establishment of a special blue ribbon National Commission on Interest Rates to look at our economy and our financial institutions to determine if there are ways which interest rates can be held to stable and moderate levels. I feel very strongly that there are many new elements in our economy which are not clearly understood. These elements should be studied and recommendations should be made will lead towards lasting economic stability. This past year I introduced legislation, S. 1598, to establish this Interest Rate Commission, and it is my hope that the Commission will be established and I will continue to work to this end.

EXPENDITURE REDUCTIONS

Prior to and after his inauguration, President Reagan recommended unprecedented reductions in federal spending during fiscal years 1981, 1982, 1983, and 1984. After several months of difficult, prolonged, and determined work, the Congress responded to the President's recommendations by enacting the Omnibus Budget Reconciliation Act of 1981.

This bill achieved real savings and represented an effort by the Congress to continue and expand its control over federal expenditures. Great credit is due to all members of the Congress who had a part in this effort, particularly to the chairmen and ranking members of the House and Senate subcommittees who brought forth the legislation resulting in the savings.

The President's economic program as approved by the Congress would cut federal outlays by $36.5 billion in fiscal year 1982, $47 billion in fiscal year 1983, and $55.8 billion in fiscal year 1984. These, of course, are very substantial amounts.

However, as is discussed in greater detail in another portion of this report, it appears that the spending cuts made thus far are not sufficient to bring about a balanced budget by the target date of 1984. The indications at this time are that the President will ask for additional expenditure cuts of around $40 billion in fiscal year 1983.

Because of the very difficult financial situation which the federal government is in and because of the clear and absolute necessity to reduce federal expenditures substantially, I generally supported the President's economic program, although I did not vote for all of the spending reductions which he recommended. However, in looking forward to the future, I wish to make it very clear that I will not vote to abolish any worthwhile program which is designed to help the aged, the handicapped, the sick, the needy, and others who cannot help themselves.

BALANCED BUDGET CONSTITUTIONAL AMENDMENT

In another part of this report, I have discussed the strenuous efforts which the Congress has made in 1981 to reduce expenditures and move toward a balanced budget and the fact that these have not yet yielded a positive result. These events have only served to reenforce my conviction that our fiscal problems can most surely be cured by a constitutional amendment which would require the government to end deficit financing and operate on the basis of a balanced budget.

I introduced such an amendment this year as I have in the past. This amendment is clear and simple. If expenditures exceed revenues in any year, then an income tax surtax would have to be levied for the following calendar year to balance the budget. This would be done by a simple mathematical computation and no discretion on the part of either the Congress or the President would be involved.

We passed the Budget Control Act in 1974 but it has not been sufficient to control and prevent continued federal deficit spending. It is clear to me that the discipline of a constitutional amendment is required. Complete and utter disaster can occur if we follow the same fiscal course we have followed for the last 30 years and if we fail to bring federal spending under control.

There are two principles which are particularly important in connection with such an amendment. The first is that a constitutional amendment will provide a built-in shield against the excessive demands of one pressure group after another for continued and increased appropriations of federal funds. The second and more important principle is that the taxpayer would have protection from the growing demands of special interest groups that exert their pressure on Members of Congress for a continuation of and increases in benefits that are established in the law in the form of what is referred to as "entitlements."

I believe that it is essential that we move quickly toward the adoption of a constitutional amendment. I have often said that our governmental and economic systems cannot endure permanently unless we get our economic house in order, bring expenditures under control, and move toward a balanced budget just as quickly as possible.

INCOME AND ESTATE TAX REDUCTION

An integral part of the President's recommended economic program was a substantial reduction in taxes. The Congress responded to this by passing the Economic Recovery Tax Act of 1981 on August 13. This was the first major federal income tax reduction since the Revenue Act of 1978, and it dramatically cuts individual income tax rates over a three-year period and liberalizes and simplifies depreciation write-offs for business. Individual income tax rates were cut 5 percent across the board beginning October 1, 1981 and will be cut by an additional 10 percent on July 1, 1982 and by a final 10 percent on July 1, 1983. This results in a cumulative reduction of 23 percent.

In addition to a reduction in the income tax, the new law increases the exemption from gift and estate taxes from $175,000 under the present law to $225,000 in 1982, $275,000 in 1983, $325,000 in 1984, $400,000 in 1985, $500,000 in 1986, and $600,000 in 1987 and subsequent years. In addition, under the new law, all gifts to a spouse and all property received outright by a surviving spouse is received free of gift and estate taxes. It can be seen that, except in the case of very large estates, the inheritance tax is virtually repealed.

The tax reductions in the bill total $37.6 billion in 1982, $92.7 billion in 1983, and $150 billion in 1984. These tax reductions were passed in response to the President's recommendation on the premise and in the hopes that they would stimulate the economy and increase economic growth. Thus far, however, this has not been the result. The economic trend is down and not up. While there is hope that the President's program will have the desired effect in 1982 and subsequent years, there is increasing skepticism about this. I, of course, hope very strongly that the President's expectations prove to be sound.

Finally, it should be said that, notwithstanding the current recession and the darkened economic picture, the President has made it clear that at least at this time he has no intention of seeking a rollback in either the individual or corporate tax decreases which I have discussed.

DEFICIT SPENDING

Our governmental and economic systems cannot endure indefinitely with national fiscal policies that pile deficits upon huge deficits and debt upon huge debt. We must make every effort to get the economy in hand and balance the budget. A few figures will illustrate how essential this is.

The federal government has run a budget deficit in 19 of the past 20 years and in 42 of the past 50 years. Deficit spending has continued in good times and bad.

The first $100 billion federal budget in our history occurred in fiscal year 1963. Just 20 years later, in fiscal 1982, the budget is over $700 billion and is still rising despite our efforts to reduce spending.

At the end of 1970, the total national debt was $383 billion. Now, just 11 years later, it is over one trillion dollars. In fiscal 1982 alone the estimated interest to be paid on the national debt is about $120 billion. This is more than the entire federal budget in fiscal year 1963.

Let me outline briefly what has occurred from a budgetary standpoint this year. President Reagan's first budget revisions sent to the Congress in March projected a deficit of $45 billion in fiscal 1982, $22.9 billion in fiscal 1983, and a balanced budget in fiscal 1984.

In the First Concurrent Budget Resolution adopted on May 21, 1981, the projections were for a deficit of $37.5 billion in fiscal 1982, $19 billion in fiscal 1983, and again a balanced budget in fiscal 1984.

These rosy projections faded very quickly. The Second Budget Resolution recites that

current budget projections are for large deficits in the range of $76 billion to $92 billion in fiscal 1982; $96 billion to $136 billion in 1983; and $103 billion to $165 billion in fiscal 1984.

Even worse, Administration working papers assume that, without new spending cuts or tax increases, the federal deficit will reach $109 billion in fiscal 1982; $152 billion in fiscal 1983; and $165 billion in fiscal 1984. The goal of a balanced budget in fiscal 1984, looking at the facts realistically, is clearly beyond reach.

The eroding budget picture is difficult to explain. It evolved, not because of Congress' failure to act, but despite an historic series of actions by the Congress in cutting spending and taxes. It would appear that either the assumptions on which the projections were based lacked validity or that there were rather drastic changes in fiscal and economic matters since early this year.

In any event, we must not despair. We must attain fiscal and financial stability and I remain dedicated to that goal.

WINDFALL PROFIT TAX AMENDMENTS

I recognize the economic importance of the oil and gas industry to Mississippi. This industry has always had my support. This is especially true of small independent producers and royalty owners. Therefore, I am gratified by the amendments to the Windfall Profit Tax Act made by the Economic Recovery Tax Act of 1981. Two of these are of special importance to Mississippi. These are:

1. In 1981, the exemption from the windfall profit tax for such qualified royalty owners (either individuals or a family farm corporation) is increased from $1,000 to $2,500. From 1982 through 1984, such qualified royalty owners will be entitled to an exemption for the first two barrels a day of royalty production. In 1985 and thereafter, the exemption will rise to three barrels a day.

2. Small independent producers are also helped. Stripper wells (those producing ten barrels a day or less) will be entirely exempt from the windfall profit tax beginning in 1983.

In addition, the windfall profit tax on all newly discovered oil will be lowered in stages from 30 percent to 15 percent by 1986.

GENERAL REVENUE SHARING

In my 1980 Report to the People, I pointed out that there was pending legislation which would extend and revise the general revenue sharing program to provide for annual $4.6 billion funding to be distributed to local governments. This legislation was finally passed and is now in effect. Under the law, local governments are entitled to receive their share of this $4.6 billion annual funding through fiscal year 1983.

The law also provided for a discretionary appropriation of $1.3 billion in general revenue sharing funds for the states. These funds have not been appropriated and no appropriation for the states is anticipated.

In recent months, concern has been expressed both in the newspapers and in governmental circles that an effort will be made by the Administration to reduce or terminate the general revenue sharing program for local governments. No request has been made to the Congress that this be done, and I see no reason at this time to expect any such action. As a matter of fact, the President has said that he did not propose to reduce the local government revenue sharing program unless and until other revenue was provided to cover the loss of these funds.

FEDERAL FUNDING OF ABORTIONS

For a number of years the Congress has placed statutory restrictions on the use of federal funds for the purpose of abortions. I have consistently and strongly supported these restrictions and will continue to do so. Since 1979 the Congress has provided that federal funds should not be used to perform abortions except where the life of the mother was endangered if a fetus were carried to term and except for medical procedures necessary for the victims of rape or incest when such rape or incest was promptly reported.

Although the appropriation for the Department of Health and Human Services, which administers these funds, will not be approved before the Congress adjourns, substantially similar limitations on federal funding of abortions are contained in the Continuing Resolution providing temporary appropriations for the Department of Health and Human Services for fiscal year 1982. If and when the Department's regular appropriation bill is enacted, it is fairly certain that the restriction will also be contained in that bill. They will have my support.

NUCLEAR WASTE PROGRAM

I have followed and have been legislatively involved in the nuclear program for many years and believe that the nation has a responsibility to ensure the safe disposition of nuclear waste.

It is my belief that the nuclear waste storage problem can be resolved by selecting a single test site, in a remote, uninhabited or sparsely populated area which our scientific community believes to be absolutely safe. I urge a single test site because until it can be proven by extensive testing that nuclear waste can be stored safely, public anxiety will be justifiably high. By focusing on a single demonstration site and locating it as far away from populated areas as possible, public concern will be reduced. There are already many remote sites which our scientists believe are good, safe candidates for further testing. I have faith that a single site would demonstrate to the American people that our scientific community has the technology and capability to safely store nuclear waste and would thereby reduce the fear which many people have genuinely expressed.

I am absolutely opposed to the continuation of geologic study and testing in populated areas. The Department of Energy National Survey Program should be immediately discontinued in populated areas. In this regard, I have requested the Nuclear Regulatory Commission to consider population density and proximity to population in the technical criteria which they have responsibility for developing for the purpose of granting a license to operate such a facility.

Additionally, I have urged the responsible Senate committees to consider population in the drafting of legislation in the area of nuclear waste disposal. I was pleased this year to learn that this recommendation concerning population factors has been included in the Senate Energy Committee's bill, S. 1662, Nuclear Waste Policy, which was reported this past year but has not been considered by the full Senate. When the National Nuclear Waste Policy is considered by the Senate, I will ask my colleagues to join me in insuring that the policy established by the Congress will assure that we dispose of nuclear material in a manner which absolutely protects the health and safety of the nuclear workers and will not unduly risk the people in the area of storage or in any stage of the process.

As we develop our nuclear policy it is my hope that every consideration should be given to the national security aspect of the nuclear program. It is in our national interests for the federal government to maintain tight control and strict accounting for nuclear materials—the spent fuel from nuclear power plants should be accounted for as closely as any of the military materials. Further, it is my opinion that nuclear materials should be used to their full economic value. The spent fuel from our commercial nuclear power plants contain useful products which can be extracted. Certainly I would urge that the policy would only include the permanent storage of those materials which have no economic value.

Finally, from my experience, a solution to the nuclear storage issues will require strong leadership, accompanied by careful consideration for the public concerns. Every effort must be made to inform the public and prove that we have the know-how to safely store nuclear waste.

ENERGY LEGISLATION

The past decade has been marked by energy supply interruptions and sharp increases in energy prices. As a nation we have become painfully aware that our economic well-being is tied to maintaining an adequate supply of energy for industrial production and transportation. The OPEC embargo in 1973 and the unprecedented oil price increases shocked the nation and the Congress into taking emergency action to insure the security of the nation's future energy supply.

As a member and former Chairman of the Appropriations Subcommittee which had jurisdiction over much of the government's energy programs, I have been closely involved with the development of a strategy and policies for achieving adequate energy supplies and stabilizing future energy prices. The first element of this strategy was the establishment of the Department of Energy to focus the various efforts within the government under one department head for the purpose of coordinating and giving top priority to achieving energy independence. Secondly, we have placed into law the means for creating a petroleum reserve as insurance against and unexpected interruption of imported oil. Thirdly, we have taken action to encourage the domestic production of petroleum by decontrolling crude oil prices and finally, legislative actions were taken to encourage conservation to develop alternative energy sources.

It is my belief that we are on the right track and are beginning to make substantial progress. The decline in domestic petroleum production has been stopped. Oil imports have been reduced from 50 percent of our consumption to just more than one-third. Work has begun to produce useful fuels from our enormous domestic reserves of oil shale, coal and lignite. New technologies are being developed to utilize these abundant resources to produce synthetic gaseous and liquid fuels for our future industrial and transportation needs. Our nuclear power effort has continued and there is a renewed effort to fully develop the technology to safely use this abundant domestic energy resource as a major source of the nation's future electric power needs.

During President Reagan's campaign he stated that he intended to do away with the Department of Energy. Soon after he was elected, I visited with the President and expressed the opinion that he should change his mind about the energy program. I urged him to keep the focus of the energy effort in the Department of Energy, which I think would be in the best long term interest of the United States.

The energy problems of the 1970's have not disappeared. We still import a substantial amount of our energy from a troubled and politically unstable area of the world and at any time we could suddenly find ourselves in a desperate position for petroleum. We have been up and down the ladder on the energy issue several times since I have been a member of the Senate, and it is my belief that we should not allow ourselves to be lulled into thinking that our energy future

is secure. I believe it should be a continuing top priority of the President to continue an effective energy supply effort.

Of special interest to Mississippi is the development of our abundant lignite resources. Mississippi ranks second only to Texas in total tonnage of lignite resources. If the estimated 5 billion tons of Mississippi lignite were recovered it could provide 240 years of the current energy used by the states' electric utilities. I will continue to urge the development of technology which will permit utilization of this resource.

Mississippi is already contributing in the development of new technologies for efficient and safe burning of the fossil fuels with an internationally recognized Magnetohydrodynamics (MHD) program at Mississippi State University. Mississippi has many of its citizens and industries engaged in research and the demonstration of new technologies. Work in alcohol production from waste is proceeding very well. The state's conservation program is paying big dividends and more energy efficient and solar assisted homes and buildings have been constructed.

I will support and continue to urge these initiatives and others which will provide the nation with a diverse, safe and abundant supply of energy for centuries to come.

AGRICULTURE AND THE NEW FARM BILL

1981 has not been a very encouraging year for the farmers of our nation. Although many crops have been reported as setting records in production, there have been factors which have caused farmers to receive much less for their production than in past years compared to the amount they spent for production.

Inflation has continued to dig deep into the payments farmers receive for their products and the price of almost every commodity is lower than it has been in many years. When the problem of excessively high interest rates is added to these other problems, the good fortune of a bumper crop is more than cancelled out. Unfortunately, the bottom line has been that it is costing more money for farmers to raise a crop and many have not been able to make a profit.

The Senate Export Caucus, of which I am a member, has held meetings and has been working with Agriculture Secretary John Block and United States Trade Representative Bill Brock to provide a better export market for our farm products. I have personally communicated with Secretary Block, urging him to use all the tools Congress has provided him to increase our sales abroad. As the foreign demand for our agricultural products increases, the competition for these products at home will increase, raising the prices to a level at which farmers can afford to continue to produce. I have assured Secretary Block that he has my full cooperation in this endeavor and I will continue to lend my support toward this effort in 1982.

In last year's Report to the People of Mississippi, I stated that a new farm bill was to be enacted in 1981 and that I would push for one which would treat farmers fairly and equitably and make it possible for farming to be more profitable. Although I am not satisfied with the 1981 Farm Bill, I do feel that it is the best of all the alternatives before us which could have been enacted.

The 1981 Farm Bill provides price support programs for cotton, dairy, grain, peanuts, soybeans, sugar, and wool. It also includes provision for an improved food stamp program, foreign agricultural assistance, and agricultural research and conservation.

For upland cotton, the basic program will be continued for four years with the minimum loan rate set at 55 cents per pound. The loan rate is computed as the lower of 85 percent of the U.S. spot market average price or 90 percent of the Northern Europe average price. The target price is set at the higher of 120 percent of the loan rate or for the 1982 crop 71 cents per pound; for the 1983 crop 76 cents per pound; for the 1984 crop 81 cents per pound; and for the 1985 crop 86 cents per pound.

The basic program for rice will be continued through 1985 with the loan rate set at 75 percent of the target price. Target prices (per hundredweight) are set at $10.85 for 1982, $11.40 for 1983, $11.90 for 1984, and $12.40 for 1985.

The loan rate for soybeans is set at 75 percent of the simple average price received by farmers for each of the preceding five years (excluding the high and low years). The minimum loan rate is $5.02 per bushel.

Authorization of the food stamp program will be extended for one year, through September 30, 1982. The fiscal year 1982 spending ceiling is set at $11.3 billion. The adjustment of the thrifty food plan to reflect cost-of-living changes scheduled for April 1, 1982, is delayed until October 1, 1982. A variety of other provisions will tighten work requirements, authorize workfare programs, enhance program management, and address problems of fraud and abuse.

FORESTRY

The forests of Mississippi have been and continue to be one of her greatest resources. Forestry is now the largest income-producing agricultural product in the state.

It is not difficult for the small land owner to become involved in forestry since forestry requires little initial investment. The trees are supplied by nature, and man need simply to provide the land and the management. The latest figures that have been presented to me show that private, non-industrial ownership accounts for 72 percent of the total state forest lands.

The demand for these private, non-industrial forest products will be greatly increased in the future as the need for wood products is expected to double in the next 50 years. The steps Congress has taken this year and in the years ahead will have an important effect on the future of this valuable resource.

Two programs will have a particularly important impact on the future of forestry: The Forestry Incentive Program and the McIntire-Stennis Program. As a member of the Appropriations Committee and the Appropriations Subcommittee for Agriculture and Related Agencies, I had the opportunity again this year to help provide essential funds to support these forestry programs.

In 1962, I sponsored the Cooperative Forestry Research Act which established a forestry research program at our Nation's land grant universities. This McIntire-Stennis program authorizes research carried out by graduate students, working under professionally qualified supervision. It is financed on a cost sharing basis, part by the Federal funds and half or more from State or private industry. In 1981 this program was federally funded at $10,774,000 of which approximately $335,000 in research was done in Mississippi.

The Forestry Incentives Act, which I sponsored, became law in August, 1973. This act provides cost sharing of 75 percent by the Federal government for site preparation, planting seedlings and for timber stand improvement. Congress appropriated $12.5 million for the Forestry Incentives Program in 1981 and Mississippi received about $232,000. This money was used to plant new seedlings and improve timber stands on 20,900 acres in our state. Since 1973, $7,145,700 in federal funds have been invested in reforestation in Mississippi under this program.

TENNESSEE-TOMBIGBEE WATERWAY

In a major step toward completion of the Tennessee-Tombigbee Waterway, Congress appropriated $189 million for FY 1982 construction in the Energy and Water Development Appropriations Act. By the end of September 1982, the waterway will be over two-thirds complete. As of October 1, nearly $1.47 billion of the estimated cost of $1.8 billion has been committed. All of the major work is under contract. At the end of Fiscal Year 1982, which ends September 30, 1982, eight of the ten locks and dams will be virtually complete. The fight to insure funding for the Tennessee-Tombigbee Waterway project was difficult and hard-fought. An amendment to delete funding for the waterway from the FY 1982 Appropriations Bill was introduced by Senator Percy of Illinois. The amendment would have brought the ongoing construction to a halt. The amendment failed 48 to 46. Following the conference with the House, the President signed the appropriations bill on December 4, 1981, approving $189 million for FY 1982 construction.

LITIGATION

The U.S. Fifth Circuit Court of Appeals issued its ruling on July 13, 1981 on the plaintiff's appeal of the dismissal of the remaining counts of the lawsuit. This ruling (a) found that the Corps should have prepared a supplemental environmental impact statement on the post-1971 project changes and directed a summary judgment for the plaintiffs on this issue; (b) upheld the District Court's judgment that no environmental impact statement is yet required on any future improvements on the Black Warrior-Tombigbee Waterway; (c) upheld the lower court's judgment on the challenge to the cost-benefit ratio; and (d) allowed the plaintiff L&N Railroad to secure judicial review of the sufficiency of nonfederal assurances for the project.

The Fifth Circuit opinion included a directive for a partial injunction stopping work on the post-1971 changes, specifically construction or letting of new contracts on the chain-of-lakes segment and cutoffs of the Tombigbee River Channel. Defendant Intervenors, Tennessee-Tombigbee Waterway Development Authority, the Tombigbee River Valley Water Management District, and the State of Alabama, filed a request that the court reconsider several aspects of its decision, and particularly, the ordering of an injunction. In response to the intervenor's petition, the Appeals Court issued an order to the District Court allowing the court to determine the consequences of an injunction to both the parties and to the public before such an injunction need issue. A status conference with Judge Keady and all parties was held on September 2, 1981.

As a result of this conference, Judge Keady issued an order granting summary judgment to plaintiffs on the claims that a supplement to the environmental impact statement is required and that a 3¼ percent interest rate is no longer appropriate. The order also established June 1, 1982 as the date by which the supplement must be filed. (The draft supplement to the EIS has been furnished to the agencies and public for review and comment. All comments must be received by January 15, 1982. The final supplement, which will address all comments, must be filed with the Court by June 1, 1982.)

The judge also deferred any hearing while the parties endeavored to reach agreement as to whether such a hearing would be necessary. In this regard, the parties met on September 22-23 and again on October 13 in an effort to seek an agreement. While nothing was settled, it was agreed by both parties to continue to seek resolution of the issues. Efforts will be made by both parties to decide as soon as possible whether a settlement can be reached. Extensive efforts, involving attorneys representing all parties, have been underway during the latter weeks of November 1981 and early December. Attorneys are scheduled to meet December 15 for final agreement efforts. If an agreement is not

reached, a hearing before the Court will be required.

FUTURE

It is anticipated that the Tennessee-Tombigbee Waterway will continue to be challenged. The opponents of the waterway, who appear to be gravely concerned that the waterway will offer serious competition to the railways, are pursuing a nationwide lobbying effort against the waterway.

I believe that the economic merits of the waterway will prevail and the waterway will be completed on schedule.

MITIGATION

The Wildlife Mitigation Study for the Tennessee-Tombigbee Waterway began in 1974 and is set up in three phases as follows: Phase I—documentation of wildlife losses by the Fish and Wildlife Service, utilizing their Habitat Evaluation Procedures; Phase II—development of alternatives including a traditional analysis; Phase III—prepare Detailed Project Report and submit report through channels to Congress for approval and authorization.

The Fish and Wildlife Service has now submitted their recommendation to the Corps of Engineers. Public meetings were held in April, 1981. Phase II of the study was completed in June 1981. Phase III will not be completed until 1982 due to the need to concentrate on the court-ordered supplemental environmental impact statement. I have expressed my opinion to the Corps that no further lands be purchased for the project but that mitigation be provided by intensive management of lands already purchased.

WATER RESOURCE PROJECTS

I am glad to report that in general our water projects in Mississippi are making good progress, not as fast, of course, as I and most would like. I continue to believe that the investment of tax dollars in water projects is among the wisest investments we make. These projects that provide low cost, efficient transportation, protect our homes, businesses and farms from the ravages of floods, provide clean, economical electrical power and provide water for drinking and irrigation, promote economic growth and provide a better way of life for the whole country.

I am pleased that again the water resources appropriation bill for 1982 was the first of 13 bills to make its way through the system and be signed into law. I think this reflects the bi-partisan spirit on this item in both Houses and their belief in the worth of these projects. While water projects took their fair share of cuts, and properly so, in the drive to cut back spending in 1982, I am optimistic that with improvement in the economy, we can once again push on to complete these vitally needed projects.

I remain dissatisfied that the Congress still has not passed a new water project authorization bill since 1976. Such projects as Gulfport, Greenville and Vicksburg Harbor expansions have already been studied and found justified. Such ongoing studies as Pascagoula Harbor, the flooding problems in Jackson and other areas on the Pearl, Sowashee Creek and in the Yazoo basin will no doubt produce additional justified projects.

A key factor in the failure to get an authorization bill is the issue of user fees for navigation projects. Without getting into all the arguments about this matter, I want to state that I am unalterably opposed to these proposals. A policy that has served this country so well for 150 years should not be changed without long and careful study. The contention that these waterways are just a subsidy for barge operations and shippers is simply not correct.

I will be working closely with like-minded Senators next year toward getting an authorization bill passed into law.

Appropriations for Mississippi projects 1981

For studies:	
Mississippi Sound and Adjacent areas	$300,000
Pascagoula River Basin	123,000
Pascagoula Harbor	305,000
Pearl River Basin	825,000
Sowashee Creek	144,000
Yazoo River Navigation	600,000
Mississippi and Louisiana Estuarine area	350,000
Yazoo River Basin	800,000
Tennessee Tombigbee Corridor Study	1,646,000
Wold and Loosahatchie River and Nonconnah Creek, Mississippi and Tennessee	140,000
Horn Lake and Tributaries	40,000
For eningeering and construction:	
Tennessee Tombigbee Waterway	189,000,000
Tombigbee River and Tributaries	800,000
Yazoo River-Belzoni Bridge	2,800,000
Big Sunflower River	5,635,000
Greenwood	137,000
Grenada Lake	2,237,000
Yazoo Basin Main Stem	1,442,000
Sardis Lake	758,000
Streambank erosion control	500,000
Tributaries of the Yazoo	2,881,000
Ascalimore-Tippo and Opossum Bayous	4,363,000
Upper Yazoo projects	5,600,000
Yazoo backwater	2,057,000
Operation and maintenance of constructed projects	32,043,000

NATCHEZ TRACE PARKWAY

I am pleased that construction of the Natchez Trace Parkway is continuing to move forward. Even in the face of severe overall cutbacks, the administration saw fit to recommend, and the Congress agreed to provide $12 million for 1982 construction. This construction will provide a continuous parkway from Jackson, Mississippi, north to near Columbia, Tennessee, a distance of over 300 miles. I am hopeful that when the economy strengthens, we can increase the funding for this project so as to complete it in a reasonable time and start receiving the full benefit of a continuous parkway from Natchez, Mississippi to Nashville, Tennessee.

INTERNATIONAL SITUATION

A major focus of our national security commitments this year continued to be the Middle East and Persian Gulf region. The United States, and our Western allies, are still vitally interested in the uninterrupted flow of oil from that region. However, a number of situations continue to generate justifiable concerns. The Soviets remain in Afghanistan. Libyan activities in the area, and elsewhere, do not contribute to stability. The Iran-Iraq war continues, albeit at a seeming stalemate, and a tenuous cease fire exists in Lebanon. Finally, the untimely and unfortunate death of President Anwar Sadat of Egypt has removed one of the primary promoters of peace in the region. President Mubarak, his successor, is to be commended for committing himself to pursuing his predecessor's policies, especially with respect to the Camp David peace accords.

The United States cannot be the world's policeman. But in view of our crucial stake in the Middle East and the high potential for continued conflict, our military forces must be prepared for any contingency in that part of the world. The efforts initiated last year to man and equip a rapid deployment force that could be moved quickly to protect American interests are continued in this year's defense budget. Furthermore, there are additional funds for fuel and spare parts to ensure greater readiness of our military forces. Finally, the approval of the sale of airborne radar and control aircraft to Saudi Arabia eventually will mean long-term U.S. access to important information critical to defense of the region.

Europe has also been the focus of our attention this year. The situation in Poland has to be watched closely. I believe that the Soviet Union would be foolish and reckless to intervene in Poland, but their record of restraint in such situations is not a good one. There also has been considerable debate in our own camp about the eventual emplacement of nuclear armed cruise missiles and Pershing II missiles in Germany, Italy, Belgium, the Netherlands and Britain. These allies are obviously concerned about whether such emplacements could make nuclear war—even on a limited plane—more likely.

Such concerns have been expressed in numerous public demonstrations against more nuclear weapons in Europe. I think we all understand the feelings of the good citizens of those nations. But the way to reduce our nuclear weapon stockpile is not by unilateral disarmament. This will not impress the Soviets, who have engaged in a rapid buildup of nuclear arms targeted against Europe. Rather, we must pursue equitable and verifiable arms reduction agreements. The President's proposal to trade planned U.S. deployments in Europe for elimination of Soviet missiles oriented toward Europe is a first step in the direction of concluding such an agreement.

AWACS SALE

The Armed Services Committee played an integral role in consideration of the sale of airborne warning and control aircraft and other equipment to the Kingdom of Saudi Arabia. The Committee held four days of hearings, listening to seven different witnesses from the Departments of Defense and State, the Central Intelligence Community and the public. The Committee filed a detailed report, supported by a majority of its members, to recommend approval of the sale.

The key question in this debate was whether the national interests of the United States would be served by the sale. After considering closely all the facts, I felt the interests of our country would not be served by blocking the sale. The Senate voted 52–48 not to block the sale.

Our economic interests in the Persian Gulf remain extremely important. Our country still needs the oil we obtain from that region. So do many of our allies. Therefore, it is important that the oil fields remain secure from attack. This equipment will help improve that security.

The security of Israel is not endangered by the sale. Israel has a superior air force—in capability and numbers—to the forces of Saudi Arabia. The use of the radar planes will be defensive, to watch for attacks on the oil fields. Conditions on the sale will see to that and will help secure the American technology which the planes incorporate.

Finally, all the facts considered, the President is the person in charge of our relations with other nations. That is not to say that the Congress has no constitutional or other responsibilities in this area. But I felt—as did a number of my Senate colleagues—that depriving the President of the ability to conclude this sale would only undermine his image as a leader in the eyes of the rest of the world. Disapproval could have weakened his ability to conduct our foreign relations and, therefore, would not have been in the best interests of the United States.

DEFENSE BUDGET AND DEFENSE SPENDING

The new Administration proposed substantial increases in spending for defense this year, initially calling for defense appropriations of over $226 billion. This was to be part of a $1.5 trillion, 5-year program of defense spending. The increases requested eventu-

ally were scaled down a bit, but the defense budget this year will be the largest in that Department's history—well over $200 billion. The increases in defense spending are necessary to meet fully our security requirements. But we must find ways to get more real military muscle out of the defense dollar.

Inflation, the everrising cost of maintaining an all-volunteer force, and the almost exploding costs of individual weapons systems are taking a heavy toll in the real strength this defense budget will produce. I have always been for a frugal, make-do, practical approach to military programs. Now, more than ever, there must be frugality. We must search out and slice away at any waste, extravagance or fraud so that the military establishment is lean, trim and in fighting shape. Without such efforts and relaxation of inflation, there may not be enough money to pay for all the programs authorized in this year's budget. Thus it will require careful management attention by the executive branch to bring this program—the weapons, supplies, and manpower—into reality.

Frugality is essential for another reason—the public support of the military and the military budget will evaporate quickly if our military forces do not show real improvement without damaging the health of our economy. Without a clear demonstration of frugality in our defense spending, there will be great and justifiable pressure to restrain the defense budget. Thus, the Defense Department and the Congress must ensure that we get the most for every defense dollar we spend.

DEFENSE AUTHORIZATION AND APPROPRIATION BILLS

I have served on the Armed Services Committee continuously since 1951, for the last 12 years as Chairman. Although I relinquished the Chairman's role in 1981, my interest and level of participation in the Committee's activities has in no way diminished. As Ranking Minority Member of the Committee, I have an excellent relationship with the new Chairman, Senator Tower. Coupled with my similar Ranking position on the Defense Appropriation Subcommittee, I intend to continue to be closely involved in the formulation of defense policy in the Senate.

The major activity of the Armed Services Committee remains the annual defense authorization bill. This is a massive piece of legislation which covers the entire spectrum of defense programs and systems, beginning with research and development, through procurement of all the various weapons and equipment to the final carying out of the programs by the military and civilian personnel who are authorized and paid by this legislation. To give an idea of the scope of this bill, there are 841 individual line items in research and development and 362 in the procurement accounts along with a large number of items in the personnel accounts, each requiring a decision by the members of the Committee. This year, for the first time, the Committee also authorized funds for fuel, spare parts and other items necessary to operate and maintain our military equipment and facilities. This meant an additional 413 line items for the Committee to consider.

A total of 57 committee or subcommittee hearings were held on this bill, compiling a seven-volume record totalling 4,385 pages. The full Committee met over a four-day period just to draft the bill. The bill approved by the Armed Services Committee totalled $51.7 billion in authority for procurement of aircraft, naval vessels and other military equipment. An additional $84.5 billion was authorized for research and development, operation and maintenance of military equipment and facilities and civil defense efforts. The total of $136.5 billion was $30 million over the President's budget request.

It was my job and privilege to manage the bill on the floor for the Democratic side of the Senate. The Senate debated the bill for three days, and there were votes on 17 amendments. The bill was passed by a vote of 92-1.

The bill was then considered in a lengthy conference between the members of the House and Senate Armed Services Committees to work out the 335 differences in the defense authorization bills of the two Houses. The conference was lengthier than usual because the President decided, in October, to reduce some of his original budget requests. Nevertheless, after 11 meetings, a final bill totalling $130.7 billion, the largest defense authorization bill in the nation's history, was signed into law by the President.

Major procurement highlights of this bill include 26 new ships for the Navy, continued funding for reactivation of the battleship *New Jersey*, 489 aircraft and helicopters, 720 tanks and 600 fighting vehicle systems. Money also was authorized for almost 30,000 missiles of different kinds for the Army, Navy and Air Force. Funding was also authorized for the B-1 bomber and the MX missile system.

Last year's initiative with respect to development of a highly promising class of smaller and less costly carriers was continued in the bill. There was $10 million in the bill for this project. The bill also included $15 million to continue preliminary design of a new amphibious assault ship, which would have a broader range of capabilities than our existing amphibious ships. Both of these initiatives are essential to our future ability to project our forces.

The largest portion of the funds authorized in the bill—$62.1 billion—went for operations and maintenance of our military equipment and facilities. Many of the items included in this figure are unglamorous and non-visible. But adequate spare parts and fuel for steaming and flying are critical elements of preparing and ensuring that our forces are ready to fight. Therefore, I applaud the greater attention being paid to these military readiness items.

The Defense Appropriation bill generally has continued, with a few exceptions, the programs and policies outlined in the authorization bill. In some programs, the Appropriation Committee concluded that even greater levels of spending were necessary.

Enactment of these authorization and appropriation bills should send a clear message to those around the world who would doubt our willingness to pay the price of a strong defense. But this money must be spent wisely and efficiently, with frugality. Adherence to that principle is essential to maintaining the American people's confidence in and support for our defense programs.

STRATEGIC ARMS PROGRAMS AND AGREEMENTS

A major focal point of the debate over this year's defense budget has been the direction of our strategic arms programs, which serve as the main deterrent to any Soviet attack.

The new Administration spent nearly nine months reviewing our strategic forces before President Reagan announced—on October 2, 1981—a new comprehensive program for modernizing those forces. The President's program dealt with five elements of our strategic forces.

Improvements in strategic communications and control systems.

Modernization of the strategic bomber force by procuring an updated version of the B-1 bomber.

Development and deployment of the Trident II, a new submarine-launched missile.

A plan to improve the strength and accuracy of our land-based missile force, and to reduce their vulnerability, with the MX missile.

Improvements in our strategic defenses.

All parts of this program are important. But those affecting our bomber and land-based ICBM forces received the most attention during the debates in the Senate, in which I was an active participant.

The Congress has recognized the need for a new strategic bomber and a new intercontinental ballistic missile a number of times in recent years. We need these new weapons to keep our strategic forces strong, capable of deterring our enemies. Substantial sums have already been expended on the MX and B-1 in furtherance of this need.

The Senate deliberations on the B-1 and MX this year keyed on two areas. First, there was the question of whether a force of 100 B-1 bombers is a prudent investment of our defense dollars in light of the projected cost, future capability against Soviet defenses and the potential alternatives available (e.g., the so-called Stealth bomber).

After careful consideration of all the pertinent facts, I concluded that we should go forward with the B-1, on which we had already invested $4.5 billion for research. It is a necessary interim step, while we perfect the more advanced Stealth technology. The B-1 will be a major improvement over the capabilities of our existing strategic bomber force. And the executive branch has promised to take stringent steps to fulfill its commitment on the cost of the B-1. The Congress agreed that we should press forward with the B-1 and authorized $2.4 billion for its development and production.

Second, there was the question of the best way to deploy or base the MX missile. Again, there is no issue of whether we need the MX missile itself. That we do is the view of a majority of the Congress, which this year authorized nearly $2 billion for development of the MX. However, the MX ultimately should be based in a fashion which best solves the problem that the missile was intended to counter—the increasing vulnerability of our land based strategic forces. Until that basing system is determined, I believe we must proceed with an interim system. It is an important demonstration of our resolve to the Soviets. And it may contribute to efforts to control the growth of nuclear arms.

I firmly believe that it is vital for the United States to continue efforts to limit all nuclear arms. I spoke out on this issue in the Senate again this year. The Strategic Arms Limitation accords previously negotiated have been a start, but unfortunately they did not achieve major reductions in nuclear weaponry. I wholeheartedly support the negotiations on nuclear weapons located in Europe which commenced in Geneva, Switzerland on November 30, 1981. Hopefully, those talks will be the prelude to further negotiations leading to an equitable verifiable treaty reducing the level of strategic nuclear weapons.

NAVY SHIPBUILDING PROGRAMS

The Navy shipbuilding program for 1982 contains several major programs that are of particular interest to me. First is the initial funding for a new class of air capable amphibious assault ship designated the LHD-X. This new ship will draw heavily from our experience with the LHA in that it will be approximately the same size and to a large extent be similar in design. The major changes from the LHA will be modifications to accept the newest amphibious assault boats and a ski-jump ramp for launching V/STOL aircraft. The Fiscal Year 1982 Defense budget contains $60 million to start the LHDX with full funding to come in Fiscal

Year 1984. It is anticipated that Ingalls Shipbuilding in Pascagoula will be awarded the design contract for this new ship.

The 1982 Defense bill continues the very successful CG–47 Aegis cruiser program. The bill provides funds for three more ships of this program bringing the total authorized to date to six. Progress on the first three being built at Ingalls shipyard in Pascagoula is very good with the first one launched last April. One of the ships in the FY 1982 bill will be built at a yard other than Ingalls as the Navy expands its shipbuilding base for this type of ship as it moves towards start of construction on the DDGX a new class of guided missile destroyer. The bill provides $101 million for development of the DDGX with the first ship expected to be funded in FY 1984. The DDGX program will involve more than 50 ships, more than twice the size of the CG–47 program. Ingalls' experience with the CG–47 program will put it in a good position to be one of the primary yards for building the DDGX.

MILITARY MANPOWER ISSUES

This year the Congress has approved almost four and one half billion dollars in additional pay and benefits for our military personnel. Instead of providing across-the-board pay raises for everyone in the military, the bill for the first time provided graduated pay raises for our enlisted personnel ranging from 10 percent to 17 percent. This "targeting" concept was initiated by the Senate, and it represents an important step for two reasons: First, it gives higher pay raises to our senior noncommissioned officers, whose skills and years of experience are really the backbone of our military structure; and second, the bill begins to correct some of the distortions in the pay between junior and senior enlisted personnel that have been caused by the all volunteer force concept.

I supported this bill, but not without serious reservations. Despite the large cost of these increased benefits—over $26 billion over the next five years—the bill will not resolve the underlying inadequacies of our country's military preparedness that result from our reliance on a volunteer source of military manpower.

We must insure that we continue to pay our military personnel adequately and that military pay enhances the good order and discipline of the Services, but military pay is no answer to the fundamental flaws in our present manpower system. No amount of military pay is going to convince the Russians we have a strong military manpower preparedness. No amount of money is going to convince our allies, many of whom already have selective service, to shoulder more of the burden of defense. No amount of military pay is going to instill tough discipline, dedication to duty, and the old military values of sacrifice. And no amount of military pay is going to ensure adequate quality and representativeness in our military forces.

President Reagan is to be commended for providing the leadership to improve our military preparedness. The substantial increases he has proposed in defense spending have been largely supported by the Congress. But there can be no buildup in real military strength without a buildup in military manpower, and this country just cannot build up its military manpower under the present volunteer force concept. Only by returning to some sort of fair and equitable form of selective service can we begin to get our military manpower situation on a firm footing.

The continuation of registration of our young men under the Military Selective Service Act is critically important to our defense capability. Peacetime registration is the only mechanism which will allow for the speedy delivery of the inductees that would be needed in a national emergency. It clearly demonstrates this Nation's commitment to be ready to mobilize in time of crisis.

Finally, we must continue to work to rekindle a spirit of patriotism about military service. We need quality people with the skills, knowhow, discipline, and dedication to maintain a fighting force second to none.

NATIONAL GUARD AND RESERVES

The Reserve components, especially the Army National Guard, are vital elements of the United States overall military force structure. Indeed, the Army National Guard represents some 46 percent of the total ground combat power of the United States Army, as measured by the number of combat division brigades and battalions. It includes 57 percent of the infantry battalions, 50 percent of the artillery battalions and 43 percent of the armored battalions of our ground forces. But many of these Guard units are short some of the total equipment they are authorized in wartime.

Because of the critical importance of the Reserves, I am convinced that we need a real plan to put more modern and up-to-date equipment in the hands of these forces. Over the past several years Congress has focused on providing added funds for Guard and Reserve aircraft. This year the Congress has also provided the downpayment on a $400 million plan that I suggested to improve the equipment situation in the Army National Guard. This first step—which is an increment of $50 million in additional procurement funds—will be used to obtain certain types of military equipment (e.g. artillery pieces, vehicles and weapons carriers) which the Army National Guard leaders have determined best meets the current needs and priorities of the Army Guard. This equipment will be allocated to those Army National Guard units which currently are the best manned. In future years, I intend to press for the fulfillment of this plan for the Army National Guard.

I also believe that Congress needs to be kept continually abreast of the existing and future equipment needs of the major elements of our Reserve components. Therefore, I proposed—and Congress has approved—an annual review of the equipment inventory and needs of our Reserve components—information which will be vital to effective congressional decision-making on equipping our Reserve units.

MILITARY CONSTRUCTION EFFORTS IN MISSISSIPPI

Currently, there are 14 different military installations in the State of Mississippi, representing a capital investment of some $830 million. These installations employ 28,000 full-time military and civilian federal employees. Many more Defense Department dollars flow into Mississippi communities as a result of contracts awarded by these installations to local businesses.

The Mississippi Army Ammunition plant is near completion. Some $454 million will have been spent on design, construction and proveout of this facility, which is scheduled to produce its first artillery rounds in 1983. In addition to construction employment to build the facility, the ammunition plant will create 1,000 to 1,500 new jobs in the area.

Almost $21.3 million has now been approved by the House and Senate Appropriations Committees for projects at seven different Mississippi military installations for this year. Major projects include $6.2 million for a base civil engineer complex at Keesler Air Force Base in Biloxi, $5.9 million for an oceanographic sciences research laboratory at the Naval Ocean Research and Development Activity in Bay St. Louis and $2.6 million for a maintenance shop at the Naval Air Station near Meridian.

The military installations in Mississippi for which money was appropriated for fiscal year 1982 follow. Those marked with an asterisk denote the projects which I was instrumental in adding to the bill.

Mississippi military construction

NAVY	
Bay St. Louis, Ocean Sciences Laboratory	$5,900,000
Gulfport:	
Child Care Center	680,000
Training Facility	280,000
Meridian Maintenance Shop	*2,600,000
AIR FORCE	
Columbus Air Force Base, Equipment Shop	510,000
Keesler Air Force Base:	
Computer Training Facility	950,000
Alter Computer Facility	220,000
Alter Electrical Distribution System	1,330,000
Base Engineer Complex	*6,200,000
AIR NATIONAL GUARD	
Key Field, Warehouse	2,410,000
ARMY NATIONAL GUARD	
Camp Shelby, Aircraft Parking Ramp	*195,000
Total	21,275,000

COMMITTEE WORK

In addition to the specific matters discussed in this report, I have important committee assignments which involve other legislative functions and activities. In addition to representing our states in legislative matters, each United States Senator has a definite role and responsibility with respect to legislation dealing with matters of national importance.

I am very fortunate to be a member of both the Appropriations and Armed Services Committees, and I am the ranking minority member on Armed Services. These two committees are among the most important committees in the Senate, and, particularly in 1981, have been greatly involved in the more important legislative matters and problems which have come before the Congress.

The Committee on Armed Services deals with all military matters involving our preparedness and readiness, the protection of the American people and our way of life, and the security of the Free World. As the former chairman, I have been intimately involved for many years in important national security and policy matters. The subjects with which this Committee deals are very broad and absolutely vital to the security and survival of this Nation. The details of the activities of the Armed Services Committee are discussed in other portions of this report.

I also value greatly my assignment to the Senate Committee on Appropriations. This gives me an across-the-board opportunity to participate in the appropriation and allocation of funds to specific programs and projects while they are still in the formulation stage. Many of these programs and projects, of course, are of direct importance to Mississippi, and I am always interested in protecting our State's legitimate interest in appropriation matters. I am a member of five Appropriation Committee subcommittees, and have been chairman of the Subcommittee on Defense and am now the ranking minority member of that Subcommittee. In addition to the Subcommittee on Defense, I serve on the Subcommittees on Agriculture, Energy and Water Development, Housing and Urban Affairs, and Transportation and Related Agencies. Each of these subcommittees has jurisdiction which directly affects important aspects of government and the overall welfare of the country. Obviously the control of the purse strings is very important.

Membership on the committees also gives me the opportunity to serve on conference committees which resolve the important differences between the House and Senate military and appropriation bills. The decisions of these conferences are very important in determining the content and substance of the bills that are finally enacted into law.

APPRECIATION TO THE NEWS MEDIA

The Mississippi news media has done its usual fine job during the past year in informing the people of Mississippi on Congressional issues which affect them. Many of the issues which have been before Congress during the past session have been highly complicated and difficult to fully comprehend. Representatives of Mississippi newspapers, radio stations and television stations have diligently applied themselves to their tasks and have done an excellent job in bringing before the public the facts pertinent to the issues.

The good service provided by the Mississippi news media aids greatly in carrying out the responsibilities of public service. I am personally grateful for their integrity and high standards of fairness. I want to take this opportunity to thank all members of the Mississippi news media for the assistance they have provided me personally in discharging my duties in the Senate, and for the tremendous service they continue to provide the people of Mississippi.

CONCLUSION

I have tried in this report to direct my remarks to important subjects which I thought would be of particular interest to the people of Mississippi. There are other matters that affect the people of Mississippi and the Nation as a whole that could be discussed. Space does not permit me to cover all of them.

However, I want the people of Mississippi to know that all matters of importance to Mississippi and the Nation have had my personal and direct interest and attention. This is particularly true of those matters which my fellow Mississippians have written or spoken to me about. I shall follow this same course in the future.

Before concluding this report, I want to look briefly ahead. We enter 1982 with many problems which have yet to be solved. At the same time, however, I see many opportunities for achievement and advancement.

The economy, the depression, high interest rates, and unemployment are among the major problems confronting this country today. I look to the future with hope and with optimism and with the thorough conviction that we will find a way to solve these problems and bring them under control.

I am pleased that the rate of inflation has shown a significant decline. But it is still too high. I have always believed that excessive government spending and exorbitant national debt contribute to inflation. We must continue the efforts to obtain a balanced budget without any letup. We have had a steady diet of annual deficit far too long.

Let me emphasize in closing that I believe that the coming year will present both challenges and opportunities. The opportunities will be great if we can set the proper course and make a determined effort to solve the problems. I need the suggestions and constructive criticism of the people of Mississippi. With their continued support, confidence, and cooperation, I dedicate myself wholeheartedly to working with them for a better and brighter future.●

THE TOXIC SUBSTANCES CONTROL ACT REAUTHORIZATION

● Mr. BAUCUS. Mr. President, I am pleased to note the passage of the conference agreement reached on S. 1211, a bill to reauthorize the Toxic Substances Control Act. Working with my colleague, Senator GORTON, the chairman of the Subcommittee on Toxic Substances and Environmental Oversight, I was pleased to have a hand in shaping this legislation.

Our review of the Toxic Substances Control Act indicated that substantive amendments to the act were not warranted at this time. The Environmental Protection Agency has much work to do toward fully implementing the act as it now exists. Congressional intervention accordingly seems premature.

This was a sentiment which was concurred with by the full Environment and Public Works Committee and, as a result, a straightforward reauthorization measure was reported out of committee earlier this year.

Similar measures were passed by both the House and the Senate. As a result, the task before the conference committee was to resolve differences in the amount authorized to support the program, as well as to determine the period of time for which the act is to be reauthorized. The provisions of the House and Senate bills and the conference agreement which was reached are summarized as follows:

Authorization period:

Senate, fiscal year 1982.

House, fiscal year 1982 and fiscal year 1983.

Conference agreement, fiscal year 1982 and fiscal year 1983.

Authorization level:

Senate, $59,646,000 for fiscal year 1982.

House, $62,000,000 for each fiscal year 1982 and fiscal year 1983.

Conference agreement, $58,646,000 for fiscal year 1982; $62,000,000 for fiscal year 1983.

State grant authorization:

Senate, no provision.

House, $1,500,000 for each fiscal year 1982 and fiscal year 1983.

Conference agreement, $1,500,000 for each fiscal year 1982 and fiscal year 1983.

This compromise reflects the Administration's March request for the program. It also represents a cooperative effort on the part of the House and Senate conferees to continue the program in a realistic and responsible fashion.

While I am pleased that this measure has received Congressional approval, I wish to assure my colleagues that our efforts do not stop here. We must monitor the Environmental Protection Agency's progress carefully to ensure that they fulfill the mandates of the Toxic Substances Control Act.●

GEORGETOWN UNIVERSITY'S PUBLIC MEETING ON REFUGEES

● Mr. KENNEDY. Mr. President, some weeks ago Georgetown University's Center for Immigration Policy and Refugee Assistance held a public meeting on refugee admissions to the United States—to provide a forum for a broad spectrum of views on the continuing resettlement needs of refugees around the world.

I commend the center and its director, Father Harold Bradley, for the leadership they have shown in support of humane programs for refugees, and for being an important catalyst for public discussion of the many refugee problems we and other countries face today.

Mr. President, I would like to share with my colleagues and the readers of the RECORD, a general summary of the public meeting held at Georgetown last September. This summary was prepared by Julia Taft, former director of the Inter-Agency Task Force on Refugees and an extraordinarily dedicated and informed person involved with refugee issues. I ask that it be printed at this point in the RECORD.

The summary follows:

GENERAL SUMMARY: PUBLIC MEETING ON REFUGEE ADMISSIONS

One is always at a great disadvantage summarizing a session for those who have attended it. There are no consensus opinions on many of these issues, and I want this to be a fair representation of the thoughts that have been expressed here today.

To begin with I would like to express my appreciation to Georgetown's Center for Immigration Policy and Refugee Assistance since they were the catalyst for this forum, a forum which I have found very stimulating. I would particularly like to thank Father Bradley for asking me to chair this session and for issuing all of the invitations for you to attend, and you for your generous contributions in terms of your ideas. I would also like to thank those who worked to mobilize the support and staff assistance from the students. And I thank Avon Products who I understand has been a major contributor to this event.

Although we talk about these policies here in Washington in terms of their impact on our own country, it has been quite clear that this is a world-wide situation of economic and political import and that these crises do not seem to be disappearing. They are increasing and we must seek as many imaginative ways as possible to provide advice to the federal and local governments, as well as the international community, on how to cope with them.

For all of you who came, I hope you will not feel any frustration or think that as you leave your ideas will be put in the circular file. This subject presents us with a real challenge and all of us have an obligation to make sure that our ideas and concerns are not just kept in this room. No single individual, no federal coordinator, no congressional committee, will be able to engage the kind of concern, advocacy and public awareness ideally desirable at all levels of the public and private sector. I think we should not try to get off the hook by saying that as soon as there is a refugee coordinator, he or she will in fact do it all. Everyone here has an obligation regardless of whether they are "pro-refugee" or "anti-refugee", to look within their own contacts and their own communities and ask how they can be the best advocate possible for what they believe.

In summation, a major theme with which we began was the international component and the linkage of international refugee issues to American foreign policy. It is in the interest of the United States, not only for humanitarian reasons but also for our own strategic and political concerns, to ensure that there is stability throughout the world and that masses of people are not migrating precipitously from country to country. To the extent possible, the United States must take into account the kinds of concerns that our policy implementation might have on migration or the creation of refugee situations. The impression conveyed has been that foreign policy was often made in a vacuum and that refugees were an afterthought. The hope would be that there would be a way to inject this component into foreign policy considerations at the outset, not only in terms of our

overall foreign policy, but also for our international economic strategies and our aid to the developing world. Ideally our policy would include a refugee or human impact component as part of the nature of foreign assistance, of World Bank assistance, and as components of our trade and investment policies. With whatever leverage we have in the international economic arena we should try to stabilize governments and economies, reducing some of the push factors that may exist.

As we all know, the political and economic linkage in most countries is so deep that if there are economic dislocations, they may ultimately lead to political dislocations. So it is in the interest of the United States to ensure stability abroad by factoring in a refugee or humanitarian component.

Several people expressed the belief that refugees could be resettled more often in other developing countries through more creative planning.

Many of the eloquent refugees here today have reminded us that in fact, refugees do not like to be refugees. They do not volunteer to be refugees. Situations around them create their need to become refugees, and all things being equal, they would like to go back home. For this reason, the international community and our foreign policy, to the extent possible, should focus on repatriation efforts and stabilization efforts enabling refugees to return home. When the United States becomes a country of first asylum, as has been the case with the Cubans and Haitians of the past year, we found that precious little international assistance was offered us as a country of first asylum. There should be ways through which the UNHCR recognizes that the United States is not always the ultimate recipient of all refugees and that, in fact, they should help us. That has led us to another point.

From the refugee pool existing throughout the world, the American people must understand, a very small number actually come to the United States. Many are allowed to stay in their host country safely, some are allowed to go back home, and certainly resettlement in a third country is the least desirable option. We must recognize the fact that there are many refugees who are being accepted for admission by countries other than the United States.

Following on the international and foreign policy considerations, the group discussed the definition of a refugee and the linkage between refugee admissions and immigrant quotas. We were reminded that the definition that is currently in the Refugee Act of 1980 is from the UN Convention on Protocol on Refugees, which was the product of many agonizing years of development within the United Nations community. It was a major coup to get this definition adopted into our own statutory authority. The problem lies not so much in the definition in the statute but rather in the application of individual refugees to that definition. The biggest problem here appears to be whether a refugee is an economic refugee or a political refugee, and the confusion in the use of these terms. We were reminded that the term "economic migrant" was coined by the Germans before the second World War, and actually was used to justify a policy of not admitting Jews.

Several participants said that the change in the character of the flow of refugees may be a change in the perception by the individual refugee of why he or she left their home, rather than a change in the problem that prompted the exodus in the first place. There were those who suggested that, regardless of what we use as a definition, the total number of refugees should be part of our total immigration ceiling. You set a ceiling, and then you set a priority for those whom you wish to admit, whether or not they are refugees. You have a total ceiling, and if I reflect correctly what was said, perhaps the first priority for admission generally in the U.S. would be people suffering political and economic persecution. They would have the right either to enter the U.S. or to go some place else. Thirdly, people whose motivations were purely economic would have to stand in line and take a number with others coming under the same heading. It is my understanding that this is not unlike the current situation even with regard to the number of refugees that we have right now. Refugees are usually brought in after those people who were suffering life threatening situations. But we ought also to consider what categories and what priority each category should have for refugees admitted, whether or not we tie refugee numbers to a total immigration ceiling or not. There is some feeling that we ought to have priorities in any case.

The question of whether or not a refugee is fleeing persecution or is afraid to return for fear of persecution raised the question of what persecution is. A point was made by a couple of participants that voluntary departures may be actually in a category of "anticipatory refugees." In other words, the situation in Poland was identified as one example where people able to leave Poland now are afraid that if they were to stay in Poland things would get worse, so they are anticipating a crisis. If they prove to be right and things do get worse, then they are lucky to be alive; if the situation does not worsen, then perhaps they can go back home. One approach recommended in cases where people were not quite refugees but might in the future be considered as such, would be to allow those people, or some groups of those people, to be admitted to the U.S. under extended voluntary departure status. If the situation were to improve they could return but would not then actually be allowed to stay permanently as refugees in the United States.

On the question of the characteristics of refugees, our consensus is that refugees are not long-term dependent populations. They were survivors before they left, they should be survivors once they get here. However, the current statistics about dependency complicate this claim. As we all have heard today, about 70 percent of the case load of people who have been in the United States three years or less are actually receiving some sort of assistance. Whether this creates a dependency syndrome is conjectural. The needs that refugees have are often related to mental health. General health, the language and job placement also are severe problems. It didn't come out in this afternoon's session as much as this morning's, but housing is an absolutely critical need. In terms of placement policy, if we've agreed to admit refugees we have got to make sure that there's a place for them to live. This is obviously something to recommend for federal consideration because housing is an area where there is no reimbursement component.

The issue of federal responsibility was primarily focused on the reimbursement question. How much are the Feds going to pay if they let all of these people in? One very interesting recommendation was that the federal government control illegal immigration so that it would not become confused with the issue of who is and who is not a refugee: one of the biggest public awareness problems we face. Are we in the public's mind linking refugees, undocumented aliens, legal immigrants, etc., into one pot rather than recognizing the distinctions and the public policy reasons that we do not admit certan groups? The fact that the refugee resettlement process over the past several years has included many groups that heretofore were not involved in resettlement has really complicated the service delivery issue.

Before 1960 there were a handful of voluntary agencies and relatives who basically did the resettlement of refugees in this country. But the federal responsibility and the federal funding have grown to such a degree, as have the numbers involved, that we now have a network out there, albeit a loose network. It is a network of people, many of whom are knowledgeable, but many of whom are also confused, at state and local government levels, in private agencies, alongside individuals, sponsors, voluntary agencies who are all saying "Who is responsible for what?" One of the most important things needed to handle this problem is to try and come up with a delineation that we can all live with as to who is responsible for what at the federal, state and local government levels, as to what the voluntary, private sector and corporate world should each be responsible for. Refugees must be very much a part of the team making the decision on what is going to happen to them.

Under the heading of state and local governmental impact, it is very clear that a few counties are receiving the majority of the refugee influx. Forty counties have 60 percent of the Indochinese refugee population. This overburdening is also seen in Dade County, Florida, with the Cuban refugees. We are not talking about an admissions problem with refugees in gross numbers. What we are talking about is the distribution and the impact on certain communities, and the challenge for public policy people to organize their services to target those areas where there is the greatest need. Again, this requires a great amount of coordination and a lot of data which are not available. There was a brief discussion about the validity of "front-end loading" services, by which I mean trying to concentrate key social services early on in the resettlement experience, before the refugees have a chance to become dependent. The goal of "front-end loading" is to give them their language, their training and their job skills and get them out into the workforce as soon as possible. There was some debate as to whether that time period should be one year or three years as is stipulated in the current Act. Regardless of what magic number one would find, the principal issue remains that if we are to provide services in one year but they are not in place we don't have a good policy. It is a question of matching your services with your clientele. If you reduce the number of years for reimbursement of services and then the services aren't there, what you end up doing is dumping the refugees on communities and requiring these local communities to fill the gap. This creates quite a backlash and has very negative impact as we have seen in various areas.

There were those who felt that refugee benefits should be much more austere. We didn't hear anything to the contrary, but there are those, I am sure, who probably feel that since these people are basically not dependent populations they should be allowed to have as much transferability of skills as possible before they really enter into the job market. There is always the basic question of how expensive can a program be, and how much money can actually be allocated for a target population such as refugees. The challenge is to look at what we have, know we're not going to get a lot more and search for ways to reorganize. We need to pinpoint who can do what best to make sure that the amount of money that is available can be used as creatively as possible.

Although we've brought in refugees for 200 years, there is a challenge offered us now through the broad degree of governmental participation within the refugee field. We ought not to lose any chance for creativity. Let's not get stagnant, let's find ways to tap the resources in this room and throughout the communities in the country. Let's accept this challenge to find models that work

for refugees, rather than repeat past mistakes we have made with our own population.

The final summary must include the questions "Where do we go from here?" and "What alternatives do we have?" Several people, myself included, have pleaded for a federal focal point for coordination of refugee problems. But I don't think that is the sole solution. It has been very difficult over the past several months to find out who is in charge of what, and who to go to for what kinds of problems. I think that once there is a focal point in government people must make sure that they have access to it. That means the refugees must take the initiative and be in touch with people who are concerned about restrictiveness in policy. They must act on an equal footing with everybody else. They must get up there and explain what their concerns are about overpopulation, etc.

One of the basic challenges of the refugee issue is how to educate the majority of Americans about who refugees are, why we take them, and why we don't take some of them, and what is happening in the world that creates refugees. We must try to make sure that people don't develop the biased viewpoint that a refugee is anybody who speaks a foreign language who happens to be on welfare in my community. On recommendation to be included both in this summary and in whatever report comes out, is to have a national advisory council with representatives from national organizations, state and local governments, elected officials and leaders in the private sector to come up with improved placement policies and coordination. This could be a communications tool to involve people with public policy concerns. Again, the question of how to identify the roles and responsibilities of the various actors involved is a critical need, and there is the hope that within the next few months or year this can be negotiated across the board.

The idea of cluster placements as an alternative approach was identified by a number of people as a new model for refugee resettlement which would reduce secondary migration while providing core services to groups of refugees in a community environment with the refugees themselves bearing a great deal of the responsibility for their own successful resettlement.

There is no question that there must be expanded involvement by the private sector, and there is some dismay that in an administration that is a strong advocate of the private sector and volunteerism, this has not been picked up as a possible approach to the expanding refugee field. Additional forums such as this should be held in other places around the country, particularly in impacted areas. At the very least, people getting to know each other in a local area helps them to work out their own problems. Unfortunately, many communities around the country do have local forums, but their recommendations seldom are elevated to the national policy level, and their innovations seldom are replicated by others due to a lack of communication. Leadership training for the refugees is another area that was identified as something that should be looked to in the future, in which we would actually fund refugee groups to help themselves and their colleagues.

I may have left out many things at this point, but I have a sense from today's sessions that while there are problems in the systems, there are a lot of ideas and creativity that need to be forwarded. I would recommend that not only the sessions and discussions from this afternoon, but the summaries presented this morning would be very helpful to go over with some of the Congressional staff, with some of the public interest groups and agencies, as well as with the State Department and HHS, in order to share with them these ideas and generate some follow-up to this meeting.

In closing I would like to say how delighted I am that there have been so many refugees here. A comment was made earlier about whether there is a burn-out of compassion. I think for those people who are close to and involved in the issue, what keeps them going is knowing that there are some clients out there who are making it, who are feeling good about their success and helping people help themselves. We must avoid programs hindering that initiative, and we must be extremely careful about the kind of commitment and concerns that have been expressed here today. All of this really makes us thankful that we ourselves have not had to flee our country and that we can offer help to those who do.

I think it is very clear that we can keep a balanced and serious program, but we must always be vigilant and concerned so as not to spread ourselves too thinly and to involve enough people in the dialogue to maintain a balanced view. Because there are people in this world for whom resettlement in the U.S. is not the best alternative, and we must look for other solutions internationally, bearing in mind that this is not just our problem, it has worldwide repercussions demanding cooperation in order to help the millions of people who will resettle in other countries.●

ORDER OF BUSINESS

Mr. HEFLIN. May I inquire of the majority leader who, I understand, is about to suggest a recess subject to call, whether this recess is dependent upon the action of the House in completing action on the farm bill?

Mr. BAKER. Yes. It is the present intention of the leadership to let the Senate remain in recess until we have some word on House action on the farm bill. There might be other matters that will require the attention of the Senate, but I know of no others at this time.

Mr. President, I think we are very close indeed to that much wished for moment for adjournment sine die. There may be other matters that can be transacted at this moment. However, I know of no further business that can be disposed of by the Senate.

RECESS SUBJECT TO THE CALL OF THE CHAIR

Mr. BAKER. I ask unanimous consent that the Senate now stand in recess subject to the call of the Chair.

There being no objection, the Senate, at 8:57 p.m., recessed subject to the call of the Chair; whereupon at 9:59 p.m. the Senate reassembled when called to order by the Presiding Officer (Mr. RUDMAN).

Mr. BAKER. Mr. President, I thank the Chair. I think in a moment we will be ready to conclude the activities of this session of the Senate. While those who must participate in that are arriving on the floor I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, there are certain matters that can be taken care of, I believe, by unanimous consent. I think the distinguished Senator from Massachusetts (Mr. TSONGAS) has a resolution that has been cleared on this side. I have no objection if he wishes to proceed at this time.

The PRESIDING OFFICER. The Senator from Massachusetts.

INTERNAL EXILE AND TREATMENT BY THE GOVERNMENT OF THE SOVIET UNION OF ANDREI SAKHAROV AND HIS WIFE, YELENA BONNER

Mr. TSONGAS. Mr. President, I send a concurrent resolution to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will state the concurrent resolution by title.

The legislative clerk read as follows:

A concurrent resolution (S. Con. Res. 58) expressing the sense of the Congress with respect to the continued internal exile and treatment by the Government of the Soviet Union of Andrei Sakharov and his wife, Yelena Bonner.

The PRESIDING OFFICER. Is there objection to the immediate consideration of the concurrent resolution?

There being no objection, the Senate proceeded to consider the concurrent resolution.

Mr. TSONGAS. Mr. President, as the Senate knows, the Soviet Union, 3 days ago, decided to let Andrei Sakharov's daughter-in-law emigrate from the Soviet Union. That has gotten a great deal of press. However, Andrei Sakharov and his wife, Yelena Bonner, are still in Gorki and still in forced exile.

This resolution calls upon the Soviet Union to end the exile of Andrei Sakharov, one of the leading scientists of our time and probably at this point the leading, in the Soviet Union, symbol of the Helsinki accords and the fight for individual freedom in that nation.

Mr. President, 693 days ago, Andrei Sakharov, a distinguished Soviet physicist and champion of human rights, was forcibly and without trial internally exiled to the city of Gorki. Since then, all the world has watched as the Soviet Union has tried in vain to break his spirit and intimidate his family.

All of us in this Chamber are heartened and thankful that the Soviet Union has conceded to grant Liza Alexseyeva, Andrei Sakharov's daughter-in-law, permission to emigrate to the United States so that she may join her husband, Alexey Semyonov. The humane gesture ended the most recent aspect of the Sakharov tragedy—the hunger strike that nearly took the life of Dr. Sakharov and his wife, Yelena Bonner. My colleagues in both the Senate and the House should take great pride in their recent efforts that contributed to the resolution of the hunger strike. The bipartisan concern they demonstrated in this affair stimulated a spirit of brotherhood and understanding that spanned this Nation and the world.

While we find joy in the fact that the health of Dr. Sakharov and his wife has been sustained, the tragedy continues. This Congress, this Nation and all peace loving people of the world cannot rest until the Soviet Government revokes the internal exile of Dr. Sakharov.

The conditions of Dr. Sakharov's exile are cruel and demeaning. In the nearly 2 years he has been confined to Gorki, Dr. Sakharov has endured continued harassment from the KGB, isolation from visitors, unannounced searches of his apartment, and severe restrictions on his scholarly activities.

Mr. President, I offer this resolution as a testament to the free spirit and courage of this champion of human rights whose only crime is his refusal to be silenced. The Soviets must realize that their efforts to silence him can never be successful. I can think of no better epilog to this tragedy than for the Soviets to allow Dr. Sakharov and his wife to freely choose their place of residence.

Mr. President, I ask unanimous consent that Senators PERCY, DODD, MOYNIHAN, JACKSON, RIEGLE, and BOSCHWITZ be added as cosponsors of this resolution.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JEPSEN. Will the Senator yield?

Mr. TSONGAS. Yes.

Mr. JEPSEN. Would the Senator please include me as a cosponsor of the resolution?

Mr. TSONGAS. Mr. President, I ask unanimous consent that Senator JEPSEN be added as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MOYNIHAN. Mr. President, I would simply like to make two points with respect to the resolution now before the Senate, which urges the Soviet Union to release the heroic Andrei Sakharov from his internal exile.

The first is that this is an absolutely essential declaration. We have now received word from the Soviet Union that Dr. Sakharov has completed his hunger strike, that he has in fact been successful in his strike and has secured the release of his daughter-in-law, Lisa Alekseyeva, from the Soviet Union. She will soon, we now believe, be permitted to emigrate to the United States to join her husband, Dr. Sakharov's son, Alexey Semyonov.

Sakharov and his wife, Elena Bonner, however, remain confined to the isolated city of Gorki, where the distinguished Nobel laureate is unable to continue either the scientific work for which he first gained world reknown or the very important work he has done to defend and advance the cause of human freedom and democratic liberties in the Soviet Union.

I believe that expressions of support for Dr. Sakharov's strike, which came from throughout the free world during the 17 days of his fast, and which were preceeded in large measure by the adoption of a resolution in support of the strike adopted in the Senate of the United States, were important and influential in the decision by Soviet authorities to yield to Andrei Sakharov.

It is vital now to demonstrate that we were not interested merely in the fine point of the Soviet Union's own laws, and the more important point of its international commitments, but were in fact determined to enforce the broader principles of freedom of expression and freedom of movement by individuals. Members of this body will surely want to support the pending resolution.

Americans are firmly in support of Dr. Sakharov's right to live, to study, to teach, wherever he may wish to do so—and as the resolution states, the Universal Declaration of Human Rights asserts that "everyone has the right to freedom of movement and residence within the borders of each state"

The Senate believes in this right, intends to support it, advocate its application, for Dr. Sakharov and his family and also for the thousands of Soviet dissidents, and millions of Soviet citizens who desire a better life than they are permitted under the totalitarian rulers who dominate that country.

This resolution speaks directly to the situation of Andrei Sakharov, who was described by the Nobel Committee as the "conscience of mankind." Its message is much broader. It is important that we make this point now and I am accordingly proud to be a cosponsor of the resolution which does so.

The second point I want to make relates to the principal author of the resolution, the distinguished junior Senator from Massachusetts (Mr. TSONGAS). I wish to commend him for his outstanding initiative today. His perception of the fundamental importance of this issue, and his work in persuading the Senate to act on this forceful and eloquent resolution, speak for themselves. I would simply like to conclude by offering my thanks and my congratulations to him.

The PRESIDING OFFICER. The question is on agreeing to the concurrent resolution.

The concurrent resolution (S. Con. Res. 58) was considered and agreed to.

The preamble was agreed to.

The concurrent resolution, with its preamble, reads as follows:

S. CON. RES. 58

Whereas Article 12 of the International Covenant of Civil and Political Rights explicitly states that "Everyone lawfully within the territory of a state shall, within that territory, have the right to liberty of movement and freedom to choose his residence";

Whereas Article 13 of the Universal Declaration of Human Rights explicitly states that "Everyone has the right to freedom of movement and residence within the borders of each state";

Whereas the Government of the Soviet Union has signed the Final Act of the Conference on Security and Cooperation in Europe, is a party to the Universal Declaration of Human Rights, and has ratified the International Covenant on Civil and Political Rights;

Whereas Nobel Laureate Andrei Dimitriyevich Sakharov has been an undaunted leader of the human rights movement in the Union of Soviet Socialist Republics and has courageously spearheaded efforts to secure the most basic of human rights for the citizens of the Soviet Union.

Whereas Andrei Sakharov was forcibly and without trial exiled to the city of Gorki in the Soviet Union last year for his outspoken and eloquent dissent against the systematic violation of basic human rights by the Government of the Soviet Union;

Whereas Andrei Sakharov and his wife, Yelena Bonner, recently ended a 17-day hunger strike after the Government of the Soviet Union decided to allow Yelizaveta Alekseyeva to join her husband, Alexey Semyonov, in the United States; and

Whereas Andrei Sakharov's internal exile is a clear and flagrant violation of the Universal Declaration of Human Rights, the International Covenant on Civil and Political Rights, and the Final Act of the Conference on Security and Cooperation in Europe: Now, therefore, be it

Resolved by the Senate (the House of Representatives concurring), That it is the sense of the Congress that in accordance with the Final Act of the Conference on Security and Cooperation in Europe, the Universal Declaration of Human Rights, and the International Covenant on Civil and Political Rights, the Government of the Union of Soviet Socialist Republics should release Andrei Sakharov from internal exile immediately and should allow him and his wife, Yelena Bonner, to freely choose their place of residence.

SEC. 2. The Congress, commending the President for his past efforts in behalf of the Sakharovs, urges the President, acting directly or through the Secretary of State—

(1) to protest, in the strongest possible terms and at the highest levels of government, the continued internal exile of Andrei Sakharov,

(2) to call upon all other signatory nations of the Final Act of the Conference on Security and Cooperation in Europe to join in such protests, and

(3) to inform the Government of the Soviet Union, that the Government of the United States, in evaluating its relations with other countries, will take into account the extent to which such countries honor their commitments under international law, including commitments with respect to the protection of human rights.

SEC. 3. The Secretary of the Senate shall transmit a copy of this concurrent resolution to the President with the request that he further transmit such copy to the Ambassador of the Union of the Soviet Socialist Republics to the United States.

Mr. STEVENS. Mr. President, I move to reconsider the vote by which the concurrent resolution was agreed to.

Mr. TSONGAS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. STEVENS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

REPORT ON WISHES OF THE PRESIDENT

Mr. BAKER. Mr. President, the distinguished minority leader and I, acting as the committee appointed by the Chair to await on the President of the United States, advised him that the Senate has

completed its business and to inquire whether he has further requests of the Senate.

I am happy to report that the President indicated that he sought no further action by the Senate. He wished me to acknowledge his appreciation to the Members of the Senate for their work this year and especially to convey to all Members and their families his wishes for the holiday season.

I took the liberty of conveying on behalf of the Senate the similar wish to the President and his family.

ORDER OF PROCEDURE

Mr. BAKER. Mr. President, there are only now two or three other small items that I know of that need to be attended to.

GEORGE WASHINGTON UNIVERSITY HIGHER EDUCATION FACILITIES REVENUE REVENUE BOND ACT OF 1981

Mr. BAKER. Mr. President, I ask that the Chair lay before the Senate a message from the House on H.R. 5273, the George Washington University Higher Education Facilities Revenue Bond Act of 1981.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (H.R. 5273) to allow the George Washington University Higher Education Facilities Revenue Bond Act of 1981 of the District of Columbia to take effect immediately.

The PRESIDING OFFICER. Without objection, the bill will be considered as having been read twice by its title, and the Senate will proceed to its immediate consideration.

The Senate proceeded to consider the bill.

The PRESIDING OFFICER. The bill is before the Senate and open to amendment. If there be no amendment to be offered, the question is on the third reading and passage of the bill.

The bill (H.R. 5273) was ordered to a third reading, was read the third time, and passed.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the vote was passed.

Mr. ROBERT C. BYRD. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

PERMISSION FOR COMMITTEE TO FILE BILL AND REPORT

Mr. BAKER. Mr. President, I ask unanimous consent that the Committee on the Judiciary be permitted to file S. 1630, the Criminal Code Reform Act of 1981, and the accompanying report by noon, Tuesday, December 22, 1981.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF PROCEDURE

Mr. BAKER. Mr. President, I know of no further business to be transacted by the Senate. I will inquire of the distinguished minority leader if he has any other matter he wishes to address to the Senate at this time.

Mr. ROBERT C. BYRD. I thank the distinguished majority leader. I have nothing to suggest at this time.

Mr. BAKER. Mr. President, I am advised by the distinguished President pro tempore that he may have one matter he wishes to address.

THANKS OF THE SENATE TO THE MAJORITY LEADER

Mr. THURMOND. Mr. President, I send the first of two resolutions to the desk and ask for its immediate consideration.

Mr. President, I can speak at length on this resolution, but I think it speaks for itself. I move adoption of the resolution.

The resolution (S. Res. 277) was read, considered by unanimous consent, and agreed to, as follows:

S. RES. 277

Resolved, That the exemplary conduct of the distinguished Majority Leader, the Honorable Howard Baker, Jr., from the State of Tennessee is deserving of the highest commendation of the Senate. The fair and just manner in which Senate business has been scheduled and managed are a source of pride to the Senate as a whole and the thanks of the Senate is hereby tendered to the Honorable Howard Baker, Jr., Majority Leader, United States Senate.

THANKS OF THE SENATE TO THE MINORITY LEADER

Mr. THURMOND. Mr. President, I now ask for the immediate consideration of the second resolution.

Mr. President, I think this resolution is also res ipsa loquitur, and I ask for its immediate consideration.

The resolution (S. Res. 278) was read, considered by unanimous consent, and agreed to, as follows:

S. RES. 278

Resolved, That the Senate extends its thanks to the distinguished Minority Leader, the Senator from West Virginia, the Honorable Robert Carlyle Byrd. The extremely cooperative manner in which the Minority Leader has approached his duties as protector of the rights of the Minority have been duly noted and the Senate commends the Minority Leader for his understanding, his devotion to the Rules of the Senate, and for his outstanding leadership.

Mr. BAKER. Mr. President, may I express my deep appreciation to the distinguished President pro tempore, the Senator from South Carolina and my good friend, Senator THURMOND, for his characteristic thoughtfulness in offering this resolution. I appreciate it more than I can say.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished President pro tempore for his thoughtfulness in introducing this resolution. I find it very hard to continue to live up to his good words. I have found it a pleasure to cooperate when I can. I thank the President pro tempore.

ROUTINE MORNING BUSINESS

Mr. BAKER. Mr. President, I am advised that at least one Senator and perhaps others have routine morning business they wish to transact at this time. I ask unanimous consent that there now be a period for the transaction of routine morning business, to extend not past the hour of 10:30 p.m., in which Senators may speak for not more than 3 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMENDING THE SENATE LEADERSHIP

Mr. EXON. Mr. President, let me add my voice to those who have commended the majority leader and the minority leader for their great dedication in the last year. I have been privileged to serve the citizens of my State for almost 3 years in this body. Were it not for the help of the majority leader and the minority leader, the difficulties encountered by the Senator from Nebraska would have been much more than they were otherwise. I wish both of them a most happy and prosperous New Year and a Merry, Merry Christmas.

Mr. ROBERT C. BYRD. Mr. President, will the distinguished senior Senator yield?

Mr. EXON. I am glad to yield to the distinguished minority leader.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished Senator from Nebraska for his remarks, which are typical of his unyielding courtesy. I also wish to say that it is very characteristic of the distinguished Senator from South Carolina (Mr. THURMOND) to make the gracious comments he did. I am very, very grateful.

Mr. BAKER. If the Senator will yield to me, I, too, wish to express my appreciation to the Senator from Nebraska. It has been a great pleasure for me to work with and come to know the distinguished Senator from Nebraska. I am very grateful for his kind and generous remarks just now.

Mr. EXON. I thank the minority leader and majority leader for their remarks.

THE FARM BILL

Mr. EXON. Mr. President, we are about to wind up this session as we wish each other a Merry Christmas and a Happy New Year. It is only possible, I guess, because a few moments ago, on the floor of the House of Representatives, by one, two or three votes—I have not gotten the final total—we, unfortunately, in the opinion of this Senator from Nebraska, passed a farm bill.

I alert my friend, the majority leader, and my friend, the minority leader, that it is entirely possible that when we come back here in a month or so, we could

find a rather disastrous situation on our hands as far as the American food producers are concerned. Maybe by that time, my voice and the voice of others who have been pointing to the near catastrophe that is facing today our family-sized farms will have been heard and maybe we shall understand it both on the floor of the U.S. Senate and the floor of the House of Representatives for passing the ill-advised farm bill that I think fell far short of the needs of our American food producers.

In that regard, Mr. President, I wish to read into the RECORD at this time a letter that I have received in the last few days from a close friend and associate of mine, the former Lieutenant Governor of the State of Nebraska, who has a very deep understanding of the perils that face our food producers today.

The letter is dated December 10. It is addressed to me. It starts out:

DECEMBER 10, 1981.

Hon. J. JAMES EXON,
4327 Dirksen Building,
Washington, D.C.

DEAR JIM: The Union Pacific is Nebraska's largest employer. The top five in terms of annual payroll are:

	(*Million*)
Union Pacific	$110.2
Western Electric	87.6
North Western Bell	86.
Mutual of Omaha	62.
B.N.	55.
	400.8

That is a lot of money. The loss of any one of these businesses would be a disaster for Nebraska. The loss of all five would be a blow from which we couldn't recover. Or could we?

Since April, corn has dropped 79 cents. per bushel. This year Nebraska raised 778 million bushels of corn. Without losing one employee, without the closing of one plant, this state has lost $614.6 million because of the drop in price of one commodity. This loss is more than 1½ times (1.53) the total payroll of Nebraska's 5 largest businesses.

If we add the wheat, cattle and hog losses since April to the corn loss, it isn't difficult to figure out why Nebraska is suffering more than most states. Can't John Block add? If he can add, can't he speak?

Sincerely,

GERALD T. WHELAN.

Mr. President, I just want to say in closing that I think that we have not enacted a farm bill that is acceptable. I say that as one who stood on this floor under the former administration, which was a Democratic administration, and said we were not properly addressing the needs of America's food plant. I say that again tonight under a Republican administration.

I say that, Mr. President, only because I think it is necessary for those of us who have a basic understanding of the grave difficulties facing our family-sized farmers today to attempt to plead, to at least try to bring home the message of the difficulty that they are in today with precipitate drop on top of precipitate drop in almost all commodity prices.

Mr. President, I hope that the Senate will begin to take note of this and maybe one of the first things that will face us when we return from our recess is that we shall take another look at the less than satisfactory farm bill that we have passed in the Congress.

I thank the Chair.

Mr. DOLE. Mr. President.

The PRESIDING OFFICER. The Senator from Kansas.

Mr. DOLE. Mr. President, I just want to say one word about the farm bill. I just left the House floor, and it was kind of close—one vote, two votes. But farm bills are always close. They never satisfy the city people, they never satisfy the country people. Farm bills satisfy everyone but those who live in the cities, those who live in the small towns, and those who live in the country.

This bill is no different from the other bills. We are now recovering from the Carter embargo and those disastrous programs. Right now, prices are low, but I expect things to pick up and, next year, everybody is going to be better off.

The PRESIDING OFFICER. Is there further morning business?

Mr. BAKER. Mr. President, I yield the floor to the Senator from Montana.

THE OIL MERGERS

Mr. BAUCUS. Mr. President, the House at this moment is considering a bill called the oil merger bill. It had been my hope that we would be able to bring that bill up in the Senate tonight after the House disposes of it. It is my understanding that the House would favorably dispose of the bill.

It is, however, my further understanding that to bring the bill up under all available procedures left this evening, each one of them would take unanimous consent. It is further my understanding that there are several Senators who will very definitely object to bringing that bill up under a unanimous-consent procedure. Therefore, I shall not force the issue.

However, Mr. President, it is my hope that at the beginning of the year, we will, in a very expeditious manner, take up this bill and handle it the way it should be handled so we can address the problem that is being created by a rash of oil mergers, particularly mergers by the seven sisters and the major oil companies.

I shall not force the issue tonight; to wait until the House finally disposes of the bill will take too long a period of time and inconvenience the Senate. It would be a futile inconvenience, because the various Senators, I know, will object to the unanimous-consent request.

I thank the majority leader for accommodating me and others this evening in trying to work out some agreement, even though they were unable to do so.

The PRESIDING OFFICER. The majority leader is recognized.

Mr. BAKER. Mr. President, I thank the distinguished Senator from Montana. I know of his diligence and extraordinary efforts trying to bring this matter up in the Senate tonight. He is correct, I believe there will be objections, perhaps on both sides of the aisle, to immediate consideration. I think that is certainly not conclusive of the merits of this bill. I think that, given more time, a different result might obtain. But it is clear to me, and I advised the distinguished Senator, I do not think it can be dealt with this evening. I appreciate his willingness to proceed in that way.

CONCLUSION OF MORNING BUSINESS

Mr. BAKER. Mr. President, is there further morning business?

The PRESIDING OFFICER. Is there further morning business?

If not, morning business is closed.

TO A LOCOMOTIVE IN WINTER

Mr. BAKER. Mr. President, I leave the final words of this session to Walt Whitman and his poem "To a Locomotive in Winter." I ask unanimous consent that it be printed in the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

TO A LOCOMOTIVE IN WINTER

Thee for my recitative,
Thee in the driving storm even as now, the snow, the winter-day declining,
Thee in thy panoply, thy measur'd dual throbbing and thy beat convulsive,
Thy black cylindric body, golden brass and silvery steel,
Thy ponderous side-bars, parallel and connecting rods, gyrating, shuttling at thy sides,
Thy metrical, now swelling pant and roar, now tapering in the distance,
Thy great protruding head-light fix'd in front,
Thy long, pale, floating vapor-pennants, tinged with delicate purple,
The dense and murky clouds out-belching from thy smoke-stack,
Thy knitted frame, thy springs and valves, the tremulous twinkle of thy wheels,
Thy train of cars behind, obedient, merrily following,
Through gale or calm, now swift, now slack, yet steadily careering;
Type of the modern—emblem of motion and power—pulse of the continent,
For once come serve the Muse and merge in verse, even as here I see thee,
With storm and buffeting gusts of wind and falling snow,
By day thy warning ringing bell to sound its notes,
By night thy silent signal lamps to swing.
Fierce-throated beauty!
Roll through my chant with all thy lawless music, thy swinging lamps at night,
Thy madly-whistled laughter, echoing, rumbling like an earthquake, rousing all,
Law of thyself complete, thine own track firmly holding,
(No sweetness debonair of tearful harp or glib piano thine,)
Thy trills of shrieks by rocks and hills return'd,
Launch'd o'er the prairies wide, across the lakes,
To the free skies unpent and glad and strong.

ADJOURNMENT SINE DIE

Mr. BAKER. Mr. President, since I do not see any other Senators seeking recognition, I now move, in accordance with the provisions of Senate Concurrent

Resolution 57, that the Senate stand in adjournment sine die.

(Applause, Senators rising.)

The motion was agreed to, and at 10:28 p.m., the Senate adjourned sine die.

NOMINATIONS

Executive nominations received by the Senate December 16, 1981:

DEPARTMENT OF JUSTICE

Alan C. Nelson, of California, to be Commissioner of Immigration and Naturalization, vice Leonel J. Castillo, resigned.

George L. McBane, of North Carolina, to be U.S. Marshal for the middle district of North Carolina for the term of 4 years vice George L. Miller, term expired.

Stuart E. Earnest, of Oklahoma, to be U.S. Marshal for the western district of Oklahoma for the term of 4 years vice Coy W. Rogers, resigning.

William J. Jonas, Jr., of Texas, to be U.S. Marshal for the western district of Texas for the term of 4 years vice Rodolfo A. Garza, term expired.

Eugene H. Davis, of Utah, to be U.S. Marshal for the district of Utah for the term of 4 years vice William E. Pitt, resigned.

Christian Hansen, Jr., of Vermont, to be U.S. Marshal for the district of Vermont for the term of 4 years vice Earle B. McLaughlin, term expired.

NAVY

The following-named temporary captains of the U.S. Naval Reserve for permanent promotion to the grade of captain in the line and staff corps, as indicated, pursuant to section 611(a) of the Defense Officer Personnel Management Act (Public Law 96–513) and title 10, United States Code, section 624 as added by the same act, as applicable, subject to qualifications therefor as provided by law:

LINE

Hamilton, William H., Jr.

CHAPLAIN CORPS

McPhatter, Thomas H.

The following-named temporary commanders of the U.S. Naval Reserve for permanent promotion to the grade of commander in the line and various staff corps, as indicated, pursuant to section 611(a) of the Defense Officer Personnel Management Act (Public Law 96–513) and title 10, United States Code, section 624 as added by the same act, as applicable, subject to qualifications therefor as provided by law:

LINE

Christian, George E.
Collier, James C.
Costenbrader, David L.
Holmes, John M.
Kratt, John M.
Lindeman, Jon B.
Noble, Vernon H.
Offutt, James H., III
Santopietro, Thomas V., Jr.
Taylor, Gary W.
Vinciguerra, Joseph J., Jr.
Walsh, Robert E.
Walsh, Victor T. C.

MEDICAL CORPS

Geren, John J.
Vanslyke, Gary L.

CHAPLAIN CORPS

Fournier, Wilfred D.
Harris, Donald B.

SUPPLY CORPS

Gibson, Bobby L.
Smith, Richard L.

The following-named officer of the line of the U.S. Navy, for appointment in the Civil Engineer Corps, as permanent ensign, pursuant to title 10, United States Code, sections 531 and 5582, subject to qualifications therefor as provided by law:

Gelderman, Daniel F.

CONFIRMATIONS

Executive nominations confirmed by the Senate December 16, 1981:

COMMODITY FUTURES TRADING COMMISSION

Kalo A. Hineman, of Kansas, to be a Commission of the Commodity Futures Trading Commission for the term expiring June 19, 1986.

DEPARTMENT OF COMMERCE

Peter McCoy, of California, to be Under Secretary of Commerce for Travel and Tourism.

Anthony J. Calio, of Maryland, to be Deputy Administrator of the National Oceanic and Atmospheric Administration.

The above nominations were approved subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.

THE JUDICIARY

David L. Russell, of Oklahoma, to be U.S. district judge for the northern, eastern, and western districts of Oklahoma.

Harold L. Ryan, of Idaho, to be U.S. district judge for the district of Idaho.

DEPARTMENT OF JUSTICE

Benjamin F. Baer, of California, to be a Commissioner of the U.S. Parole Commission for the term of 6 years.

Glenn L. Archer, Jr., of Virginia, to be an Assistant Attorney General.

Stanley S. Harris, of the District of Columbia, to be U.S. attorney for the District of Columbia for the term of 4 years.

Richard C. Turner, of Iowa, to be U.S. attorney for the southern district of Iowa for the term of 4 years.

Donald W. Wyatt, of Rhode Island, to be U.S. Marshal for the district of Rhode Island for the term of 4 years.

Bruce R. Montgomery, of Tennessee, to be U.S. Marshal for the eastern district of Tennessee for the term of 4 years.

Robert T. Keating, of Wisconsin, to be U.S. Marshal for the eastern district of Wisconsin for the term of 4 years.

MESSAGES FROM THE HOUSE RECEIVED SUBSEQUENT TO SINE DIE ADJOURNMENT

Under the authority of the order of the Senate of December 16, 1981, the Secretary of the Senate, on December 17, 1981, received a message from the House of Representatives announcing that the House agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 884) to revise and extend programs to provide price support and production incentives for farmers to assure an abundance of food and fiber, and for other purposes.

The message also announced that the House agreed to the amendment of the Senate to the amendment of the House to the bill (S. 831) to authorize appropriations for the Coast Guard for fiscal year 1982, and for other purposes.

The message further announced that the House had agreed to the following concurrent resolutions, without amendment:

S. Con. Res. 55. Concurrent resolution to authorize the Secretary of the Senate to make technical corrections in the enrollment of the bill (S. 884) to revise and extend programs to provide price support and production incentives for farmers to assure an abundance of food and fiber, and for other purposes; and

S. Con. Res. 57. Concurrent resolution providing for the sine die adjournment of the 97th Congress, First Session.

The message also announced that the House has agreed to the following resolutions:

H. Res. 307. Resolution appointing a committee on the part of the House to inform the President that the two Houses have completed their business and are ready to adjourn; and

H. Res. 308. Resolution appointing the Honorable Jim Wright, a Representative from the State of Texas, as Speaker pro tempore during any absence of the Speaker until not later than December 22, 1981.

ENROLLED BILLS AND JOINT RESOLUTIONS SIGNED

The message further announced that the Speaker had signed the following enrolled bills and joint resolutions:

S. 657. An act to designate the Department of Commerce Building in Washington, the District of Columbia, as the "Herbert Clark Hoover Department of Commerce Building";

S. 1086. An act to extend and revise the Older Americans Act of 1965, and for other purposes;

H.R. 3567. An act to authorize appropriations for the fiscal years 1982 and 1983 to carry out the purposes of the Export Administration Act of 1979, and for other purposes;

H.R. 4119. An act making appropriations for Agriculture, Rural Development, and Related Agencies programs for the fiscal year ending September 30, 1982, and for other purposes;

H.R. 4241. An act making appropriations for military construction for the Department of Defense for the fiscal year ending September 30, 1982, and for other purposes;

H.R. 4331. An act to amend the Omnibus Reconciliation Act of 1981 to restore minimum benefits under the Social Security Act;

H.R. 4431. An act to provide for the designation of the E. Michael Roll Post Office;

H.R. 4503. An act to amend the Federal Water Pollution Control Act to authorize funds for fiscal year 1982, and for other purposes;

H.R. 4910. An act to amend the District of Columbia Self-Government and Governmental Reorganization Act and the charter of the District of Columbia with respect to the provisions allowing the District of Columbia to issue general obligation bonds and notes and revenue bonds, notes, and other obligations;

H.R. 4926. An act to authorize the Secretary of the Army to acquire by purchase or condemnation, such interests in oil, gas, coal, and other minerals owned or controlled by the Osage Tribe of Indians as are needed for Skiatook Lake, Okla., and for other purposes;

S.J. Res. 34. Joint resolution to provide for the designation of the week commencing with the third Monday in February 1982 as "National Patriotism Week"; and

S.J. Res. 136. Joint resolution to validate the effectiveness of a plan for the use and distribution of funds appropriated to pay a judgment awarded to the San Carlos Tribe of Arizona.

Pursuant to the authority contained in Senate Resolution 274, the enrolled bills and joint resolutions were signed on December 17, 1981, by the President pro tempore.

Under the authority of the order of the Senate of December 16, 1981, the Secretary of the Senate, on December

18, 1981, received a message from the House of Representatives announcing that the Speaker had signed the following enrolled bills and joint resolutions:

S. 884. An act to provide price and income protection for farmers, assure consumers an abundance of food and fiber at reasonable prices, continue food assistance to low-income households, and for other purposes;

S. 1192. An act to amend the National Visitor Center Facilities Act of 1968 to provide for the rehabilitation and completion of Union Station in Washington, D.C., and for other purposes;

S. 1551. An act to amend title 5, United States Code, to extend the Federal Physicians Comparability Allowance of 1978, and for other purposes;

H.R. 1797. An act to direct the Secretary of the department in which the U.S. Coast Guard is operating to cause the vessel *Capt Tom* to be documented as a vessel of the United States so as to be entitled to engage in the coastwise trade;

H.R. 2494. An act to designate the John Campbell United States Courthouse;

H.R. 3799. An act to extend the Federal tort claims provisions of title 28, United States Code, to acts or omissions of members of the National Guard, and to provide that the remedy under those provisions shall not be exclusive in medical malpractice actions involving members of the National Guard;

H.R. 4353. An act to amend the act entitled "An act to establish a uniform law on the subject of bankruptcies", approved November 6, 1978;

H.R. 4506. An act to name the lock and dam authorized to replace locks and dam 26, Mississippi River, Alton, Ill., as "Melvin Price Lock and Dam";

H.R. 4894. An act to authorize the Secretary of the Interior to disburse certain trust funds of the Lac Courte Oreilles Band of Lake Superior Chippewa Indians of Wisconsin, and for other purposes;

H.R. 5273. An act to allow the George Washington University Higher Education Facilities Revenue Bond Act of 1981 of the District of Columbia to take effect immediately;

S.J. Res. 57. Joint resolution to provide for the designation of February 7 through 13, 1982, as "National Sclerderma Week";

S.J. Res. 84. Joint resolution to proclaim March 19, 1982, "National Energy Education Day";

S.J. Res. 117. Joint resolution to authorize and request the President to designate the week of January 17, 1982, through January 23, 1982, as "National Jaycee Week"; and

H.J. Res. 377. Joint resolution providing for the convening of the second session of the Ninety-seventh Congress.

Pursuant to the authority contained in S. Res. 274, the enrolled bills and joint resolutions were signed on December 18, 1981, by the President pro tempore.

Under the authority of the order of the Senate of December 16, 1981, the Secretary of the Senate, on December 21, 1981, received a message from the House of Representatives announcing that the House had agreed to the following concurrent resolution, without amendment:

S. Con. Res. 58. A concurrent resolution expressing the sense of the Congress with respect to the continued internal exile and treatment by the Government of the Soviet Union of Andrei Sakharov and his wife, Yelena Bonner.

Under the authority of the order of the Senate of December 16, 1981, the Secretary of the Senate on December 22, 1981, received a message from the House of Representatives announcing that the House had passed the following bill, in which it requests the concurrence of the Senate:

H.R. 5274. An act to provide for congressional evaluation of energy policy by imposing a moratorium on certain acquisitions involving major energy concerns and domestic petroleum companies until June 30, 1982.

The message also announced that the Speaker had signed the following enrolled bills and joint resolutions:

S. 271. An act to amend the Communications Act of 1934 to eliminate certain provisions relating to consolidations or mergers of telegraph and record carriers and to create a fully competitive marketplace in record carriage, and for other purposes;

S. 831. An act to authorize appropriations for the Coast Guard for fiscal year 1982, and for other purposes;

S. 1196. An act to authorize appropriations for fiscal years 1982 and 1983 for international security and development assistance and for the Peace Corps, to establish the Peace Corps as an autonomous agency, and for other purposes;

S. 1493. An act to deauthorize several projects within the jurisdiction of the Army Corps of Engineers;

S. 1946. An act to provide for the final settlement of certain claims against Czechoslovakia, and for other purposes;

S. 1976. An act to amend the Act of July 31, 1946, as amended (40 U.S.C. 193a).

H.R. 779. An act to authorize the Secretary of the Army to contract with the Tarrant County Water Control and Improvement District Numbered 1 and the city of Weatherford, Tex., for the use of water supply storage in Benbrook Lake, and for other purposes;

H.R. 1465. An act to amend the Congressional Budget Act of 1974 to require the Congressional Budget Office, for every significant bill or resolution reported in the House or the Senate, to prepare and submit an estimate of the cost which would be incurred by State and local governments in carrying out or complying with such bill or resolution;

H.R. 2241. An act to provide for the establishment of the Bandon Marsh National Wildlife Refuge, Coos County, State of Oregon, and for other purposes;

H.R. 3210. An act to amend the Surface Transportation Assistance Act of 1978, to establish obligation limitations for fiscal year 1982, and for related purposes;

H.R. 4327. An act to amend the Immigration and Nationality Act, and for other purposes;

H.R. 4559. An act making appropriations for foreign assistance and related programs for the fiscal year ending September 30, 1982, and for other purposes;

H.R. 4879. An act to clarify the treatment of international banking facility deposits for purposes of deposit insurance assessments and to remove certain limitations on the mortgage loan purchase authority of the Federal Home Loan Mortgage Corporation and the Federal National Mortgage Association;

H.R. 4995. An act making appropriations for the Department of Defense for the fiscal year ending September 30, 1982, and for other purposes;

H.R. 5159. An act to amend the Internal Revenue Code of 1954 to provide a temporary increase in the tax imposed on producers of coal, and for other purposes;

S.J. Res. 100. Joint resolution to authorize the participation of the United States in a multinational force and observers to implement the Treaty of Peace between Egypt and Israel; and

S.J. Res. 121. Joint resolution to provide for the designation of the year 1982 as the "Bicentennial Year of the American Eagle" and the designation of June 20, 1982, as "National Bald Eagle Day".

Pursuant to the authority contained in Senate Resolution 274, the enrolled bills and joint resolutions were signed on December 22, 1981 by the President pro tempore.

HOUSE BILL REFERRED SUBSEQUENT TO SINE DIE ADJOURNMENT

Under the authority of the order of the Senate of December 16, 1981, the following bill was read twice and referred to the Committee on the Judiciary:

H.R. 5274. An act to provide for congressional evaluation of energy policy by imposing a moratorium on certain acquisitions involving major energy concerns and domestic petroleum companies until June 30, 1982.

ENROLLED BILLS AND JOINT RESOLUTIONS PRESENTED SUBSEQUENT TO SINE DIE ADJOURNMENT

The Secretary of the Senate reported that he had presented the following enrolled bills and joint resolutions on the dates indicated, subsequent to the sine die adjournment of the Senate:

On December 17, 1981:

S. 657. An act to designate the Department of Commerce Building in Washington, the District of Columbia, as the "Herbert Clark Hoover Department of Commerce Building";

S. 1086. An act to extend and revise the Older Americans Act of 1965, and for other purposes;

S. 1211. An act to amend the Toxic Substances Control Act to authorize appropriations for fiscal years 1982 and 1983;

S.J. Res. 34. Joint resolution to provide for the designation of the week commencing with the third Monday in February 1982 as "National Patriotism Week"; and

S.J. Res. 136. Joint resolution to validate the effectiveness of a plan for the use and distribution of funds appropriated to pay a judgment awarded to the San Carlos Tribe of Arizona.

On December 21, 1981:

S. 884. An act to provide price and income protection for farmers, assure consumers an abundance of food and fiber at reasonable prices, continue food assistance to low-inlumbia, and for other purposes;

S. 1192. An act to amend the National Visitor Center Facilities Act of 1968 to provide for the rehabilitation and completion of Union Station in Washington, District of Columbia, and for other purposes;

S. 1551. An act to amend title 5, United States Code, to extend the Federal Physicians Comparability Allowance Act of 1978, and for other purposes;

S.J. Res. 57. Joint resolution to provide for the designation of February 7 through 13, 1982, as "National Scleroderma Week";

S.J. Res. 84. Joint resolution to proclaim March 19, 1982, "National Energy Education Day"; and

S.J. Res. 117. Joint resolution to authorize and request the President to designate the week of January 17, 1982, through January 23, 1982, as "National Jaycee Week".

On December 22, 1981:

S. 271. An act to amend the Communications Act of 1934 to eliminate certain provisions relating to consolidations or mergers of telegraph and record carriers and to create a

fully competitive marketplace in record carriage, and for other purposes;

S. 831. An act to authorize appropriations for the Coast Guard for fiscal year 1982, and for other purposes;

S. 1196. An act to authorize appropriations for the fiscal year 1982 and 1983 for international security and development assistance and for the Peace Corps, to establish the Peace Corps as an autonomous agency, and for other purposes;

S. 1493. An act to deauthorize several projects within the jurisdiction of the Army Corps of Engineers;

S. 1946. An act to provide for the final settlement of certain claims against Czechoslovakia, and for other purposes;

S. 1976. An act to amend the act of July 31, 1946, as amended (40 U.S.C. 193a);

S.J. Res. 100. Joint resolution to authorize the participation of the United States in a multinational force and observers to implement the Treaty of Peace between Egypt and Israel; and

S.J. Res. 121. Joint resolution to provide for the designation of the year 1982 as the "Bicentennial Year of the American Bald Eagle", and the designation of June 20, 1982, as "National Bald Eagle Day".

PRESIDENTIAL APPROVALS

Under the authority of the order of the Senate of December 16, 1981, the Secretary of the Senate received a message from the President of the United States, on January 4, 1982, during the sine die adjournment of the Senate, announcing that the President had approved and signed the following bills and joint resolutions:

On December 17, 1981:

S.J. Res. 136. Joint resolution to validate the effectiveness of a plan for the use or distribution of funds appropriated to pay a judgment awarded to the San Carlos Tribe of Arizona.

On December 21, 1981:

S. 1098. An act to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes.

On December 22, 1981:

S. 884. An act to provide price and protection for farmers, assure consumers an abundance of food and fiber at reasonable prices, continue food assistance to low-income households, and for other purposes.

On December 26, 1981:

S. 1003. An act to amend title III of the Marine Protection, Research, and Sanctuaries Act of 1972, as amended, to authorize appropriations for such title for fiscal years 1982 and 1983, and for other purposes.

S. 1948. An act to permit to become effective certain Farm Credit Administration regulations which expand the authority of financing institutions, other than farm credit system institutions, to borrow from and discount with Federal intermediate credit banks.

On December 29, 1981:

S.J. Res. 34. Joint resolution to provide for the designation of the week commencing with the third Monday in February 1982 as "National Patriotism Week".

S.J. Res. 57. Joint resolution to provide for the designation of February 7 through 13, 1982, as "National Scleroderma Week".

S.J. Res. 84. Joint resolution to proclaim March 19, 1982, "National Energy Education Day".

S.J. Res. 100. Joint resolution to authorize the participation of the United States in a multinational force and observers to implement the Treaty of Peace between Egypt and Israel.

S.J. Res. 117. Joint resolution to authorize and request the President to designate the week of January 17, 1982, through January 23, 1982, as "National Jaycee Week".

S.J. Res. 121. Joint resolution to provide for the designation of the year 1982 as the "Bicentennial Year of the American Bald Eagle" and the designation of June 20, 1982, as "National Bald Eagle Day".

S. 271. An act to amend the Communications Act of 1934 to eliminate certain provisions relating to consolidations or mergers of telegraph and record carriers and to create a fully competitive marketplace in record carriage, and for other purposes.

S. 657. An act to designate the Department of Commerce Building in Washington, the District of Columbia, as the "Herbert Clark Hoover Department of Commerce Building".

S. 831. An act to authorize appropriations for the Coast Guard for fiscal year 1982, and for other purposes.

S. 1086. An act to extend and revise the Older Americans Act of 1965, and for other purposes.

S. 1192. An act to amend the National Visitor Center Facilities Act of 1968 to provide for the rehabilitation and completion of Union Station in Washington, District of Columbia, and for other purposes.

S. 1196. An act to authorize appropriations for the fiscal years 1982 and 1983, for international security and development assistance and for the Peace Corps as an autonomous agency, and for other purposes.

S. 1211. An act to amend the Toxic Substances Control Act to authorize appropriations for fiscal years 1982 and 1983.

S. 1493. An act to deauthorize several projects within the jurisdiction of the Army Corps of Engineers.

S. 1551. An act to amend title 5, United States Code, to extend the Federal Physicians Comparability Allowance Act of 1978, and for other purposes.

S. 1946. An act to provide the final settlement of certain claims against Czechoslovakia, and for other purposes.

S. 1976. An act to amend the act of July 31, 1946, as amended (40 U.S.C. 193a).

NOTICES OF HEARINGS

COMMITTEE ON SMALL BUSINESS

Mr. WEICKER. Mr. President, there will be a meeting of the full Committee on Small Business on Monday, January 25, 1982, at 4 p.m., in room 424 of the Russell Senate Office Building to consider the committee's 1982 funding authorization. For further information, contact Robert J. Dotchin at 224–5175.

GOVERNMENTAL AFFAIRS SUBCOMMITTEE ON GOVERNMENTAL EFFICIENCY AND THE DISTRICT OF COLUMBIA

Mr. MATHIAS. Mr. President, I would like to announce for the information of the Senate and the public the scheduling of a hearing before the Subcommittee on Governmental Efficiency and the District of Columbia on S. 854, the Foreign Missions Act. The hearing will be held on Monday, January 25 at 9 a.m. in room 3302 of the Dirksen Senate Office Building.

Those wishing to testify or who wish to submit a written statement for the hearing record should write to the Subcommittee on Governmental Efficiency and the District of Columbia, 6222 Dirksen Senate Office Building, Washington, D.C. 20510.

For further information regarding this hearing, persons may contact Marion Morris of the subcommittee staff at 224–4161.

EXTENSIONS OF REMARKS

N.F.I.B. QUARTERLY ECONOMIC REPORT

HON. J. WILLIAM STANTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. STANTON of Ohio. Mr. Speaker, The National Federation of Independent Business has just released its latest "Quarterly Economic Report" which I want to bring to the attention of all of my colleagues in the House of Representatives. As a member of both the Banking and Small Business Committees, I have examined the N.F.I.B.'s study with great interest.

Although there certainly is sobering news about the deteriorating condition of small businesses across this country because of declining sales and high interest rates, I found some good news as well. This survey of 2,200 N.F.I.B. members concluded that inflation—a major component of high interest rates—should continue to decline, providing encouragement for the long-term picture.

The N.F.I.B. study indicates:

Small business anticipates that this downward trend in prices will continue, as the N.F.I.B. Index of Planned Price Increases (a weighted average of planned price changes) indicates we can expect the Non-Food Consumer Price Index to average 8.2% at an annual rate over the next quarter.

I urge all of my colleagues to read the N.F.I.B.'s findings for yourselves and keep them in mind as we carry on with our fight against inflation in the new year.

SUMMARY OF RESULTS

(By William C. Dunkelbert, Purdue University; Jonathan A. Scott, Southern Methodist University; Edison R. Zayas, National Federation of Independent Business)

The condition of the small business community deteriorated further in the third quarter as high interest rates continued to choke off aggregate demand. Sales among small firms registered its second consecutive quarterly decline, accounting for the lowest small business net earnings index since July 1980. "Interest Rates-Financing" remained as the single most important problem for more firms (35%) than any other problem, as the average interest rate paid rose to 19.5%. Third quarter capital outlays remained at depressed levels, and the proportion of firms planning on making capital expenditures over the next two quarters continued to fall. Expectations of sluggish fourth quarter sales will encourage substantial inventory reductions, and the decumulation will be heaviest among small firms in the construction and retail industries.

The simultaneous decline in sales and the peaking of interest rates took its toll on the labor market, as employment among small firms registered its seventh quarterly decrease in eight of the last quarters. Pessimism over future business conditions augurs for continued reductions in small business employment and upward pressure on the national unemployment rate. At the same time, the October NFIB Small Business Opimism Index fell sharply from the July level, indicating we can expect another decline in real GNP growth over the next quarter.

As in recent QER's, an improved inflation outlook provided the only good news, albeit very important news. The percentage of firms responding that third quarter prices were lower was the highest in QER history, and the NFIB Index of Planned Price Increases indicates we can expect the Non-Food Consumer Price Index to average 8.2% (annual rate) over the next quarter. This is highly encouraging to the extent that a sustained decrease in inflation will plant the seeds of economic recovery by allowing interest rates to fall and real personal income to rise.

CREDIT CONDITIONS

Adverse credit market conditions continued to plague the small business community as "Interest Rates—Financing" continued to be ranked more frequently (35%) as the single most important problem than any other problem. The average interest rate paid on short-term business loans rose marginally from 19% in July to 19.5% in October. Although the overall distribution of rates paid continued to shift from the 16%–18% range to the 19%–22% range, the proportion of firms reporting higher rates fell from second quarter levels, indicating that the rise in interest rates slowed in the third quarter. Fifty-six percent of responding firms reported paying rates between 19 percent to 22 percent, up from 48 percent in the second quarter and from 27 percent in the first quarter. Thirty percent reported paying rates between 16 percent to 18 percent down from 34 percent in the second quarter and from 46 percent in the first quarter.

Although the rates paid by firms in rural areas have risen dramatically since the beginning of the year, they continued to pay lower rates relative to firms in metropolitan and suburban areas. Seventy percent of the firms in metropolitan areas paid rates between 19 percent to 22 percent, compared to the 52 percent of the firms in rural areas who reported paying such rates. Similarly, 38 percent of firms in rural areas reported paying rates between 16 percent to 18 percent, whereas only 14 percent of metropolitan area firms paid those rates. Differences in the cost of funds and overhead determine these interest rate differentials.

Firms in the West South Central, Mountain and Pacific regions reported the highest frequencies of rates in the 19% to 22% range. Firms in the South Atlantic-East South Central regions, however, experienced the largest increase in the proportion of firms paying rates between 19% to 22% (twenty-one percentage points above the July level).

The principal effect of this prolonged period of high interest rates has been to squeeze small business earnings through a persistent reduction in sales, and an overly onerous debt burden (especially for firms in inventory-intensive businesses). Reduced earnings in conjunction with unaffordable financing costs have frustrated small business investment and expansion plans as well. At the same time, the restraining influence of high interest rates on aggregate demand has left small firms with excess inventories which are overly expensive to carry at those high rates of interest. As a result, small firms must reduce their inventory holdings over the next quarter, which will in turn augment the current downswing in economic activity.

Credit conditions over the next quarter are expected to improve modestly, as 13% of responding firms anticipated more difficult credit conditions, down from 14% in July. At this writing, short-term interest rates have fallen dramatically, and forecasts of a weak economy, slow money supply growth and softening business loan demand suggest we can expect further improvements in credit market conditions.

PRICES

Improvement in the inflation outlook provided encouragement for the long-term picture. Inflation continued to moderate in the third quarter as the percentage of firms responding that third quarter prices were lower was the highest (13%) in the history of this survey. Small business anticipates that this downward trend in prices will continue, as the NFIB Index of Planned Price Increases (a weighted average of planned price changes) indicates we can expect the Non-Food Consumer Price Index to average 8.2% at an annual rate over the next quarter.

The proportion of small firms planning to raise prices over the next quarter fell among firms in the wholesale, retail, construction and manufacturing industries. The most notable improvements in price trends, however, occurred among firms in the wholesale and retail trades. Thirty-four percent of the retail firms planned on increasing prices, down from 44% in July. Twenty-nine percent of the wholesale firms planned on raising prices, down from 45% in July. Thirteen percent of the firms in the wholesale sector planned on price increases exceeding 5%, down significantly from the 22% who planned similar price increases over the last quarter. This indicates we can expect to see further moderation of prices at the retail level over the coming months. At the same time the weakening of prices at the wholesale level suggests an easing of cost pressures for the cash-strapped small business community.

This apparent slowing of the inflationary spiral is highly important since years of inflation contributed to the weakened condition of small business, and until recently, inflation was considered the single most important problem facing small business. To be sure, the last decade of inflationary government policies has fostered today's intolerable credit market conditions, and only a sustained and convincing drop in the rate of inflation will permit interest rates to fall to more acceptable levels.

SALES

As in the previous quarter, expectations of improved sales failed to materialize as real

● This "bullet" symbol identifies statements or insertions which are not spoken by the Member on the floor.

GNP grew at a very sluggish 0.6 percent annual rate in the third quarter. The Small Business Sales Index, which measures real sales growth among small firms, declined substantially in the third quarter to a level approaching July 1980 sales. This was the second consecutive quarterly decline in small business sales and it was clearly unexpected as satisfaction with inventory holdings deteriorated significantly. High interest rates combined with weak real personal income growth and uncertainty amidst a developing recession, have significantly curtailed consumer spending.

Influenced by the 1.5 percent decrease in October national retail sales, small firms anticipate real sales volume to be very weak over the next quarter.

EARNINGS

As a result of the simultaneous drop in sales and the deterioration in credit market conditions, earnings among small businesses continued to fall. Third quarter earnings, as measured by the Index of Small Business Earnings, dropped to the lowest level since July 1980. Only rigorous cost-cutting efforts will avoid further earnings declines as sales are expected to fall even further over the next quarter.

INVENTORIES

Unexpectedly weak consumer spending in the third quarter clearly surprised small business owners as satisfaction with the level of inventory holdings fell significantly in the third quarter. Eighteen percent of responding firms felt that their inventories were too high, whereas 9 percent felt they were too low. In July, 16 percent claimed their inventories were too high and 10 percent felt they were too low.

Expectations of sluggish fourth quarter sales will encourage large inventory reductions by small firms over the next two quarters. Twenty-three percent of responding firms planned on decreasing their inventories over the coming months, compared to 13 percent who plan on adding to their inventories, for a net inventory change of −10 percent. This is a dramatic deterioriation in inventory satisfaction given that the anticipated net inventory change for the third quarter was only −2 percent. Firms in the inventory-intensive construction, retail and wholesale trades will undergo the most pronounced reductions in inventories as indicated by anticipated net inventory changes of −22 percent, −17 percent, and −11 percent, respectively.

In short, the anticipated deterioration in general business conditions will prompt a curtailment of new orders by small business, which will in turn augment the ongoing decline in economic activity.

CAPITAL EXPENDITURES

Adverse third quarter credit market conditions continued to frustrate small business investment plans. The proportion of small firms making at least one type of capital expenditure remained at the July and April levels of 53 percent. Actual capital expenditures remained at depressed levels with over two-thirds of those making expenditures reporting outlays of less than $20,000.

The proportion of small firms planning on making capital outlays continued to fall. Twenty-seven percent of responding firms anticipated making a capital expenditure over the next two quarters, down from 30 percent in July.

As we mentioned in the July QER, owners of small firms are interested in stepping up their investment outlays, but are prevented from doing so by the unaffordable cost of credit and by dismal sales prospects over the near-term. Since the third quarter of 1980, plans to make capital outlays have consistently diverged from actual capital outlays, indicating the restraining influence credit conditions have had on business investments decisions. Only a sustained and precipitous drop in interest rates, along with a greatly improved sales outlook will restore investment expenditures to the levels sought by small business.

EMPLOYMENT

The third quarter decline in economic activity fostered a net average decrease in small business employment of .11 employees per firm (−.20 employees per firm on a seasonally adjusted basis. This is the seventh quarterly employment decrease in eight of the last quarters, after almost three successive years of sustained employment growth among small firms. Twelve percent of responding firms reported employment increases averaging 4.8 employees per firm, down from 19 percent in the second quarter. Seventeen percent of responding firms reported employment decreases averaging 4.1 employees per firm, up from 13 percent in the second quarter. Non-seasonal employment decreases exceeded the seasonal employment increases by five percentage points. Employment decreases were strongest in the construction and retail industries.

The near term employment outlook is likely to continue deteriorating as expectations of continued high interest rates and slow sales growth force small business owners to lay off employees. The percentage of small firms planning to reduce employment over the next quarter exceeds those planning to increase employment by the largest amount since early 1975. Fifteen percent of responding firms reported plans to decrease employment over the next three months, compared to the 10% who plan on increasing employment. In addition, third quarter job openings dropped to the lowest level ever recorded in this survey. Twelve percent of responding firms reported job openings in the third quarter, down from 17% in the second quarter, and from 30% registered in the fourth quarter of 1978. The greatest drop in job openings occurred in the skilled labor category where third quarter openings fell four percent from the second quarter level. The latter is a particularly important development given the statistically significant inverse relationship we have found to exist between skilled labor job openings and the national unemployment rate. In sum, given the disproportionately large role played by small firms in private sector job creation, the third quarter developments in small business employment suggest a major loosening of the labor market is underway.

SMALL BUSINESS OPTIMISM

Reflecting the dismal third quarter performance, the Small Business Optimism Index dropped for the second successive quarter. The October Index dropped from 89.9 in July to 83.0, the lowest level since April 1980.

Despite a significant improvement in the inflation component and a slight improvement in the expected credit conditions component, sharp declines in all of the remaining components (i.e. expected business conditions, outlook for expansion, net earnings, expected real sales, inventory satisfaction and plans, and workforce changes) were responsible for the strong decline in small business optimism. The October Index indicates we can expect another decline in real GNP over the next quarter.●

THE RODOLFO H. CASTRO FELLOWSHIP FUND

HON. JERRY LEWIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. LEWIS. Mr. Speaker, the development of Mexican American professional managers for private industry is a success criteria for U.S. commercial activities both nationally and internationally.

It is for this reason that I support and encourage participation in the "Rodolfo H. Castro Mexican-American Fellowship Fund" established at the Harvard Business School with the objective of providing financial assistance to Mexican American students.

The following is an article from a newspaper in my district that provides the specifics.

The Rodolfo H. Castro fellowship has been established at the Harvard Business School for the purpose of providing financial assistance to Mexican American students.

The establishment of the Rodolfo H. Castro Mexican-American Fellowship Fund will require an endowment of $50,000, and will be the first endowed fellowship in the history of the Harvard Business School (HBS) honoring a Hispanic. The funding must be completed within 5 years, at which time the fellowship will be activated. Interest on the principal of the fund will provide financial support to Mexican American students who meet the criteria for receiving financial aid as determined by HBS's financial aid office.

Rodolfo H. Castro grew up in Banning, and graduated from Banning Union High School in June 1961. He received his associate of arts degree in business "with honors" from Riverside City College, Riverside, Calif., in June, 1967, and was awarded permanent membership in Alpha Gamma Sigma, (the statewide honor society for California junior colleges).

Castro received a Bachelor of Science Degree from California State Polytechnic University in business administration "with honors" in 1970, and was selected for "Who's Who Among Students in American Colleges and Universities."

In June 1973, Castro received a master's degree in business administration from Harvard University and pursued advanced studies in public administration at Oxford University, Oxford, England.

He has been the executive director of the Community Services Department (CSD) of San Bernardino County since December 1976. Under his direction the department has achieved national recognition for program innovation and cost effectiveness. CSD received the National Asso-

ciation of Counties (NACo) awards in 1978 (Energy); 1979 (Handicapped Access); and 1979 (Bon View Art Project). In 1980, CSD received two National Urban Institute Exemplary Awards for creative projects—Inland Area Urban League Black Models Project and Ballet Folklorico de San Bernardino.

In 1980, then President James Earl Carter awarded the Presidential Energy Efficiency Award to Southern California Edison Co. for CSD's Mobile Home Energy Audit Project. (Castro was invited to the White House in February 1980, to provide domestic policy input and was selected for "Who's Who in California".)

In 1981, CSD received NACo awards for the following programs; Youth Culture, Grassroots Women, Senior Alert, Roadrunner Transit and Mobile Home Energy Audit. In addition, Castro was selected as "Alumnist of the Year" for the California Polytechnic University School of Business.

Castro has been involved with recruiting minority students for the Harvard Business School MBA program for approximately a decade.

Mr. Speaker, it is my pleasure to commend Mr. Castro and his fellowship fund at Harvard Business School to the House of Representatives for furthering educational opportunity in the Mexican American sector.●

REAGAN ADMINISTRATION APPROACH TO HUMAN RIGHTS

HON. BOB McEWEN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 15, 1981

● Mr. McEWEN. Mr. Speaker, an excellent editorial appeared in the Toledo, Ohio, newspaper, the Blade, on November 14, 1981, regarding the human rights issue.

I think this article presents a fair evaluation of the Reagan administration approach to this controversial issue and would like to take this means of sharing it with my colleagues.

The editorial follows:

HUMAN-RIGHTS HYPOCRISY

There is something crassly hypocritical about Americans standing on a soap box and preaching to other peoples of the world about human rights. One of the disasters that beset U.S. foreign policy in recent years was the sanctimonious human-rights activism initiated by former President Jimmy Carter.

It is unfortunate, therefore, that President Reagan has been pressured by congressional do-gooders to back away from his basic policy of putting human rights elsewhere in the world in reasonable perspective.

Congressional pressure has been evident ever since the Senate rejected the nomination of Ernest Lefever for the post of assistant secretary of state for human rights. He was the President's first choice for that job, but the nominee was perceived as only superficially committed to the concept of human rights.

The fundamental issue is not the official condoning of human-rights violations in other nations, whether Communists or non-Communist dictatorships or police states. The fact that in some parts of the world torture, imprisonment without cause, summary executions, and other forms of mistreatment and killing go on is naturally abhorrent to all decent people. But what is so apparent to the rest of the world—and so difficult for us to comprehend—is that Americans have a long way to go before they can dictate moral behavior to the rest of mankind.

How effective a voice can Washington have in this matter when it speaks from a land where the citizenry owns more guns than any other people in the world, where the annual murder rate far surpasses that of any other nation, where the toll from crime in our city streets continues to shock, and where immorality in places both high and low flourishes with an abandon unmatched in most parts of the globe? We are a nation of lawbreakers and can hardly pretend to be a model practitioner of human rights.

President Reagan was on the right track when, upon entering the Oval Office, he toned down human rights as a central issue in the conduct of foreign policy. He recognized, correctly, that Americans have no divine right to set the moral, ethical, or spiritual standards for peoples everywhere, and that the United States could be more successful in influencing other leaders in the treatment of their own citizens through quiet persuasion than by pious or flashy rhetoric.

Mr. Reagan's new appointee to fill the human-rights post in the State Department is Elliott Abrams, now serving as the department's liaison with the U.S. delegation at the United Nations. He is regarded as a conservative Democrat turned Reagan Republican who subscribes to a more balanced application of a human-rights policy. That was spelled out by President Reagan in a statement that accompanied the Abrams' nomination: "The promotion of liberty has always been a central element of our nation's foreign policy . . . We will encourage those who seek freedom, not the least by telling the simple truth about their efforts and the efforts of those who seek to oppress them."

No doubt some congressional critics of the Reagan approach to human rights will still not be mollified. But that should not deter the President from conducting foreign policy on the basis of what is best for this country in terms of security and our geopolitical interests. If that means subordinating a human-rights policy in a particular situation, then so be it.●

SCHOOLS SHRINK, NEED FOR ENGINEERS GROWS

HON. DON RITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. RITTER. Mr. Speaker, earlier this year the Science and Technology Committee held hearings regarding the shortage of engineering professionals. Yesterday the Washington Post printed an aritcle about the growing need for engineers and the stagnated condition of our universities to respond to this need. The challenge may also be an opportunity for industry to reply with quick infusion of support to our engineering schools * * * more efficient than far longer lead-time Government response.

For the benefit of my colleagues, the December 15, 1981 Washington Post article is submitted for the RECORD:

[From the Washington Post, Dec. 15, 1981]

SCHOOLS SHRINK, NEED FOR ENGINEERS GROWS

(By Robert J. Samuelson)

Something unexpected has happened on the San Diego campus of the University of California in the past few years. Undergraduates majoring in engineering jumped from 7 percent of the total to more than 20 percent. Laboratories and classrooms are so packed that some students can get computer time only in the wee hours of the morning.

The San Diego experience isn't isolated. Since 1975, engineering enrollments have risen by about half. Technology seems to be fashionable again. Yet, those who ought to know best—deans of engineering schools and heavy-industry employers of engineers—insist that there is a "crisis" in engineering education and maybe even a "shortage" of engineers.

Now, "crisis" is a vastly overused word, but even if they are half right, their worries amount to more than academic anxiety. Knowledge—especially knowledge of technology—increasingly constitutes a basic source of economic growth and rising living standards. An engineering shortage would suffocate the economy no less effectively (though less visibly) than a fuel shortage.

Indeed, a case can be made that this is precisely what happened in the past decade. Between the late 1960s and the late 1970s, the supply of new engineers barely kept up with retirements and deaths, so that the proportion of engineers in the work force declined. At the same time, research and development spending (adjusted for inflation) wasn't growing much either. Some economists think those trends help to account for America's deterorating economic performance.

Against that background, most of today's news seems good. Popular attitudes toward science and technology appear to have veered away from blind trust and instinctive hostility. In 1979, a poll found that 70 percent of respondents felt "science and technology produce more good than harm," up from 54 percent in 1972 but down from 88 percent in 1957.

Other evidence points in the same direction. Science books and programs are in vogue. There's a boom in home computers. It may be, as physicist Jeremy Bernstein argues, that much popularization oversimplifies science and transforms it into entertainment. But is that such a sin? The drudgery and disappointment that accompany most endeavors are bearable only because people visualize exiciting, even romantic, results.

Electronics is the extreme example of how engineers drive industry. Consider Hewlett-Packard Co. It spends 8 percent of its budget on research and development, and almost one in five workers is an engineer.

The pace of new products is dizzying. Three-fourths of Hewlett-Packard's revenues in 1980 derived from products not on the market in 1975.

Slowing the flow of engineers inevitably means crimping expansion, company executives argue. "The implication of not having them is that design programs are pushed out, problems of improving manufacturing yields in factories don't get attention and opportunities for diversifying are delayed," said Ray Stata, chairman of Analog Devices Inc.

That's precisely what the American Electronics Association, a trade group, believes may happen. It surveyed 671 firms with 1980 sales of nearly $80 billion. By 1985 these firms project a need for some 50,000 new electrical and computer science engineers compared with the 15,000 expected graduates.

The association's projections have inspired much skepticism on the grounds that companies inflated estimates to cover any possible need. But, in a fast-growing industry, a big gap isn't inconceivable. "One of our largest recruiting competitors is Hewlett-Packard," said Robert Mills, manager of professional recruiting for General Electric Co. "We never worried about them 10 years ago."

The accuracy of formal estimates is less important than the ability of universities to meet the demand, whatever it is. In a free market, any shortage would be temporary. Scarcity would result in higher bidding of salaries by competing employers. Students would react by choosing engineering more often. This, in fact, explains much of the recent enrollment surge.

The trouble is that the perfectly greased market doesn't exist. Unlike companies, universities don't (and shouldn't) shut down a department when it's no longer popular. Expanding enrollments in the 1960s and 1970s allowed them to meet changing interests by shifting growth to these areas. Now, with most of the "baby boom" out of college, change is more difficult.

"Universities are contracting," said Richard Atkinson, chancellor of the University of California (San Diego). "It's not that easy to shift resources from one field to another. We had tremendous recruitment of faculty in the late 1950s and early 1960s. We just don't have a lot of retirees" who would make room for engineering teachers. "And, until recently, we didn't have a lot of engineering students."

Moreover, the universities that have absorbed higher enrollments by increasing class size may now be reaching limits. At the University of Illinois (Champaign-Urbana), dean Daniel Drucker is reducing enrollment 20 percent, to relieve pressure on overworked faculty and crowded laboratories. Even now, many qualified students don't get in. The ones who do score at the 97th percentile on entrance exams—a level Drucker finds "ridiculously high for a public university."

What truly frightens Drucker is the possibility that shorthanded faculties could force further cutbacks. Higher industry salaries and small numbers of graduate students have hampered recruiting. Government support is dwindling, too; governments everywhere are cutting spending to spur economic growth. But, if their cuts squeeze engineering schools too much, they ironically may strangle a basic source of growth.

Only about one-fifth of America's college graduates major in science (between 5 and 6 percent in engineering). In retrospect, the country may have produced too many lawyers, too many social scientists, too many journalists and, in general, too many generalists. Today's high demand for engineers may compensate for the slow growth of the 1970s and reflect the impact of anticipated defense contracts.

Or it simply may be that the country needs more people who understand technology, to harness it and to monitor it. A sobering reality is this: Japan, with half the United States' population, now graduates more engineers annually.●

COMPETITION HOGWASH? NOT IN HEALTH INDUSTRY

HON. RICHARD A. GEPHARDT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. GEPHARDT. Mr. Speaker, this succinct editorial appeared in the November issue of Modern Healthcare. It is important, as the editorial states, that the debate of promoting competition in the health system be kept separate from the discussion of benefit cutbacks. My bill, the National Healthcare Reform Act of 1981, H.R. 850, reforms the health system to make consumers sensitive to price when they purchase health care coverage. Through competition, the health system will continue to deliver quality care at an affordable price for Americans.

COMPETITION HOGWASH

Federal and state governments' efforts to reduce their budget deficits may lead to reduced benefits for Medicare and Medicaid beneficiaries, not the implementation of pro-competition legislation or a Medicare voucher.

Opponents of thoughtful efforts to make the healthcare delivery system more price sensitive and to foster real competition among health insurers are trying to touch every emotional button they can in their fight against the pro-competition movement. In the process, they are confusing the likely reduction in benefits that is being imposed by budget cutters with the impact new competition laws might have on benefits. They want to rally Medicare and Medicaid beneficiaries against the competition bills.

Actually, the Gephardt-Stockman Healthcare Reform Act of 1981 (H.R. 850) would expand benefits at the same time it would encourage more rational utilization of services and increased provider productivity. It would extend benefits to low-paid workers and employes of small firms instead of discouraging those firms from providing their employes with health insurance as charged by representatives of labor and the old Great Society crowd. The bill gives employes tax credits to fill any gaps between their employer-paid insurance and acceptable minimum coverage. Credits would go to workers regardless of whether they itemized tax deductions, and workers who owe no taxes would receive reimbursements. In addition, Gephardt-Stockman would expand catastrophic coverage for the underemployed and unemployed.

If benefits are cut, they will be cut by amendments attached to the bill for budgetary reasons. They won't be cut because health insurers have to compete for consumers' business or the system is made more price competitive.●

ROY COUGHLIN'S COMMENTS ON CONSERVATION

HON. ANTHONY TOBY MOFFETT

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. MOFFETT. Mr. Speaker, I am submitting for the consideration of my colleagues a keynote address delivered by Mr. Roy M. Coughlin at the University of Connecticut's Workshop on Energy Economics. Mr. Coughlin, staff manager of buildings at the Southern New England Telephone Co., has long been involved in ride sharing and its conservation consequences. I commend his comments to the attention of this Chamber.

Good morning. Thank you for inviting me here today. I asked Ken Smith how long I should speak this morning. He said, "You can speak as long as you like, but we're leaving at 10 o'clock!" Now, when it comes to buildings, I'm far more of a philosopher than a technician. The advantage of that, of course, is that a technician can give you specific information on specific topics. A philosopher, on the other hand, can answer any questions and give you no information.

I have here a bumper sticker which says "Let's Use It Up Before It's All Gone." That sometimes seems to be the American approach to the use of energy. I believe the energy problem in this nation can be summarized by saying we don't buy it right and we don't use it right. That is, we buy it from nations which are unfriendly and unstable; we then apply it to the wrong end-uses and we waste a good portion of that.

Effective energy management need not be complex—however, it does need to be pervasive and persistent. In Southern New England Telephone we call it Managed Pessimism. That is, we have looked down the road and we see two possible paths: there is the road to plenty, a scenario where the technological fix has put it all right, and there is plenty of energy. If that's the road this world eventually trods, there are no experts in the field who will tell us that the price of energy will ever be lower than is right now. The other road is the one we are most expecting to travel—that of continued threats of disruptions, and of certain growth in prices. If that's our eventual fate, then so be it—for, in either case, we are prepared. Since I am never at a loss for something trite to say, I'll repeat an oft-heard phrase: resource management is good management. Since you are bottom-line managers, I'll tell you that our Managed Pessimism has served us well. Since 1973, we have avoided paying more than $19,000,000 in energy costs, and have saved the equivalent of 420,000 barrels of oil. In 1972, we were paying $16.75 for each processed barrel of oil, that is, the end product as we took it out of the electric outlet, or whatever form in which we used it. In 1980, that same barrel-of-oil-equivalent (BOE), cost us $72.02.

Inflation is defined as that phenomenon which permits you to live in a better neigh-

borhood without ever moving. I need not tell you what havoc inflation wreaks upon all of us. But I do need to tell you that while you may not feel there really is an energy crisis, that's irrelevant if you cannot afford to buy the product. For us, in the telephone industry, energy supply is a lifeline to survival. Telecommunications must stand ready to serve the American public if and when gasoline shortages threaten its mobility.

November 23, 1981 was an historic day—the government shut down, and no one noticed. I believe in government, and want it to succeed. I am pleased that there appears to be movement toward the reduction of government intervention in business operations. However, I would not be as pleased if, as appears to be happening, government withdrew its advocacy for energy conservation. I believe it is a proper function of government to detect impending problems, and to counsel the nation in ways in which those problems may be averted. But it is the American citizen and the American corporation which must do the job. In order to be convinced that there is a job to do, each must be presented with credible leadership offering credible information.

The Energy User News asks its readers on a monthly basis to offer their best estimates of energy price levels for the coming year. October's results pointed to a 25 per cent increase in the price for natural gas, and fifteen per cent each for electricity and oil. In the northeast, and especially here in Connecticut, where energy costs are already the highest nationally, and to which supplies must travel the furthest, these projections, supported by most of the experts I have read, must serve as warnings that if you are not deeply into energy conservation by now, you'd best be ready to take the plunge.

There is another phenomenon developing, of which many are unaware. That is the growth of what I call "Little OPEC". At most of the energy meetings I attend, someone eventually blames OPEC for the continued high cost of energy. Yet right within this nation, there are nine energy-producing states which receive from 12 to 24 percent of their revenues from the exportation of energy. Ranked by exports, they are Louisiana, Wyoming, New Mexico, Kentucky, Alaska, Oklahoma, West Virginia, Montana, and Texas. Now where do you suppose they get the money from? Well, a lot of it, almost three billion dollars, in 1980, came from Connecticut. During 1981, this will probably total more than four billion! If you don't begrudge them this transfer of wealth from our pockets to theirs, then consider another element—because of these revenues, these states are able to reduce or eliminate other forms of taxation on business, and thereby make their states more attractive for industrial settlement.

As businessmen, we are concerned for survival, and for the economic health of our state. As citizens and human beings, we must be concerned that we utilize the most productive, cheapest, cleanest, safest, fastest, and most reliable energy sources we can find. The one which fits that list of "musts" is energy conservation.

As building owners and managers, you may be interested in knowing how we at Southern New England Telephone arrived at the results of which we are so proud. Have you ever heard of top-level commitment? Familiar phrase? I am here to tell you not only that it works, but that it may very well be the only approach that works! How well does it work? Since 1973, our work load has grown by more than twenty percent, while our total use of energy has dropped by about thirty percent! We have reduced use of building fuels by 63 percent! Considering that we never were a wasteful company in the first place, that reduction is all the more dramatic. In fact, during 1980, we saved more ($5,240,000) than we spent for all our energy in 1973 ($5,120,000).

Energy conservation at SNET has become a way of life, to use another well-worn phrase. We are deeply into conservation in our motor vehicle fleet, employee ridesharing, recycling, and in every facet of the business where we can find an application.

Today, we are looking ahead to higher energy prices, which will in turn make some of the techniques which we previously rejected once again worth considering. New technologies are introduced almost daily. New products and new services (some of which are no more useful than the well-known snake oil) besiege us. We must sort, try, evaluate, and apply what we can. We are looking at what we have termed ABE—for Alternative Building Energy sources—to supply a part of our needs now supplied by petroleum. These include some already in use—photovoltaic cells, solar applications, even a small wind generator, which will become more cost-effective. They also encompass things such as coal, hydroelectric, refuse-to-fuel, alcohol, wood, natural lighting and others. We even have a fuel cell soon to be installed in one of our small offices.

By 1990, we hope that alternative energy sources may contribute from nine to 20 percent of our demand mix.

Thank you for your attention today. I congratulate the Connecticut Chapter of BOMA (Building Owners and Managers Association) and the University of Connecticut, for offering today's course on energy economics, and thank you for inviting me to speak.●

TRIBUTE TO LABOR LEADER JERRY WURF

HON. JERRY M. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. PATTERSON. Mr. Speaker, I rise to pay tribute to Jerry Wurf, a great labor leader and American, who has recently passed away before his time.

Jerry Wurf's driving dedication and devotion on behalf of this county's working people will always be remembered. As a union leader for more than 40 years, his commitment to economic and social justice was an inspiration to us all.

More than any other person, Mr. Wurf has to be credited with building public employee unionism in this country. During his 17 years as president of the American Federation of State, County and Municipal Employees (AFSCME), he increased the public employee union's membership from 220,000 members to over 1 million. The breakthroughs he made in collective bargaining for public employees have resulted in major gains for the hundreds of thousands of workers his union represents.

His concern for improving the standards of living for all Americans often thrust him into the forefront of many controversial policy battles. He was a key player in the civil rights movement, an outspoken leader in efforts to combat sexual discrimination in the workplace, and one of the first public figures to recognize the importance of maintaining a social safety net for the elderly and disadvantaged.

We have prematurely lost an inspiring and dedicated American whose vigorous leadership, integrity, and commitment will be sorely missed by us all.●

THE GOLDEN ANCHOR

HON. DANIEL B. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. DANIEL B. CRANE. Mr. Speaker, as the news media has recently been telling us, the gold standard is a topic of great interest today. The Treasury Secretary chairs a commission exploring a gold-based monetary system. A recent Ohio TV poll found 84 percent of the respondents favoring a gold-backed dollar. The President himself reportedly noted that no nation which has turned its back on gold has survived.

Before 1933, any citizen could take $20.67 to the bank and convert for an ounce of gold; the Federal Government guaranteed it. After that date, the U.S. promised to convert $35 into an ounce of gold—but only for foreign governments and not for American taxpayers. American citizens were prohibited from even owning the precious metal. It was not until 1974, when a colleague of mine, named PHIL CRANE, legalized the ownership of gold.

Meanwhile, in 1971, President Nixon closed the gold window—that is, he announced that the U.S. Government would no longer convert dollars to gold for anyone, including foreign governments.

The history of our sick economy begins with the rejection of the gold-backed dollar. In 1971, the dollar was severed from its golden anchor on the international scene and left to lurch in the stormy seas of economic chaos. What happened to the stable base for what was once the world's strongest currency?

Since 1971, we have had no monetary anchor internationally. And, since 1971, prices have doubled, foreign-exchange markets have crumbled, the bond markets, which depend upon monetary stability, have crashed. Is it any wonder people are asking if the abandonment of the gold standard wasn't a serious mistake?

Today we are paying the piper for our folly of cutting loose the dollar from its golden anchor. For example, of average wage in 1971—$175 a week.

Five ounces gold at $35—$175 a week.

Five ounces gold at $440—$2,200 a week—almost $10,000 a month.

Many Americans know the advantages of gold ownership. Mexico, South Africa, and a few other nations also know the advantages of Americans buying gold because $3 billion a year flows into these nations' treasuries from American pockets. Americans are purchasing gold coins at a rapid rate. Yes; $3 billion a year. These same dollars, if the United States had been on a gold standard, would be in the U.S. Treasury today, and we would very likely not be talking about budget cutting or the need to balance the budget, because the money would be here instead of overseas.

We have all heard about the early 1920's hyperinflation in Germany—which was so bad that wages were paid several times a day, and people would rush out to buy goods before prices went up. What we don't often hear is the end of that story: How Germany was rescued. In 1923, Germany issued Rentenmark, and with it introduced an economic boom. What was the difference between this new money and the hyperflationary older money? Simply that the Rentenmark had a golden anchor; it was tied to gold. Within 3 months of its issue, the hyperinflation turned to economic boom times. Individuals and businesses could once again make long-term plans, because of the stability that gold had introduced.

So does it not make sense for us to introduce the same mechanism here in the United States to reduce inflation or are we committed to putting people out of work so they can no longer feed their families.

Why are we tossing about in the turbulent seas of inflation and recession today? Why are interest rates so volatile? The answer is that we have lost our golden anchor.

Ask yourself how many McDonald's hamburgers $100 will buy in 1990. At 20-percent interest rates, the principal amount will triple between now and 1990. What have we left for senior citizens and others who have put moneys into savings accounts, and so forth, for a rainy day—we are stealing their savings by giving them back paper dollars or monopoly money which has very little purchasing power. We are on a course which will destroy the long-term capital markets; that is why the bond markets have crashed so terribly; that is why interest rates are so high; and that is why businesses are being pulled down with the *Titanic* ship of monetary instability.

The spending mania of three generations without a golden anchor is ending in shambles. We are on a self-destruct course. As the respected financial analyst Richard Russell points out, the Federal Government faces its worst financial crisis in its history. Ours is the first generation since the Pilgrims landed that cannot look forward to a better standard of living for its children—was this not the American dream?

A disordered currency is one of the greatest political evils * * * Ordinary tyranny, oppression, excessive taxation, these bear lightly upon the happiness of the mass of the community, compared with fradulent currencies and the robberies committed by depreciated paper money.

Daniel Webster once spoke these words, and they were ignored. God has granted us another chance to heed Webster's warning. Let us moor our golden anchor in the bedrock of economic stability.

We owe the American people a better way of life—Thomas Jefferson stated it very clearly:

"* * * a wise and frugal goverment which shall restrain men from injuring one another, shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned. This is the sum of good government * * *"

THE GOLDEN ANNIVERSARY OF OUR LADY OF LEBANON MARONITE CATHOLIC CHURCH IN EASTON, PA.

HON. DON RITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. RITTER. Mr. Speaker, I would like to share with my colleagues a very special event which occurred in Easton, Pa., on Sunday, November 29, 1981. This event was the golden jubilee celebration of the dedication of Our Lady of Lebanon Maronite Catholic Church in Easton. The building, located at 54 S. Fourth Street, is more than just a church, it is both a symbol and source of pride to the many Maronite families who live in the Lehigh Valley.

The Maronites began settling in the Lehigh Valley shortly after the turn of the century bringing with them a long and colorful history. As we pay tribute to the 15th anniversary of the dedication of the church, it is also a time to reflect back on these hard-working and God-fearing people who have contributed so much to the Lehigh Valley and our Nation as a whole.

The Maronites who came to the United States trace their ancestoral and spiritual roots back to the village of Kfarsghab in the Kadisha Valley of Labanon. It was in Kfarsghab that the Maronites settled after fleeing religious persecution in Syria over 1,000 years ago. They came to this area of tall cedars and barren mountainsides to find peace and to practice their religion. Even when the expansion of Islam virutally engulfed Lebanon, the Marionite community, through perseverance and staunch adherence to their beliefs, made themselves an island of Christianity surrounded by Islam. As Rev. Sami Hayek, pastor of Our Lady of Lebanon Maronite Catholic Church of Easton, stated:

Their life was simple, austere, and laborious as they turned the rocky and arid land into fertile farms and gardens. They nourished it with their sweat, while green pastures and woods sprang up on the barren slopes and hilltops. Lebanese poems and folk songs related the marvelous love story of the Maronites for their homeland and their yearning for freedom.

One hundred years ago the first Maronites left their village of Kfarsghab to seek a better life in the United States. Shortly thereafter, around the turn of the century, the first Maronite settlers began arriving in Easton, Pa. The Maronites that settled in the Lehigh Valley were a God-fearing, honest, and sincere people who quickly adapted to the styles and system of their new home. They were a close knit community who lived in the same area of Easton and held religious services jointly with the Italian community in St. Bernard's and St. Anthony's Catholic Churches until 1931. It was in 1931, after years of saving and soliciting support, the Maronite community opened the doors of their own church, Our Lady of Lebanon Maronite Catholic Church.

Mr. Speaker, on November 29, 1981, approximately 1,500 descendents of the first Maronite settlers in Easton celebrated the golden jubilee anniversary of their church. The day's festivities also included recognition of the founders of the church John Badway Karam, Yaoob Jacob Joseph, Peter Shaheen, Anthony Sar, John Boulous Sassine (the chairman), Joseph Samia, and the sole surviving member of this group, John Jabour. Many of the founder's descendents live on in the community that their fathers and grandfathers helped to enhance. In fact, the Maronite community today has spread throughout Easton and has prospered over the years. They have truly been hard workers and good neighbors.

By proclamation of the mayor of Easton, November 29 has been declared Maronite Day and it is a day when all of us in the Lehigh Valley look to the Maronites and pay tribute for the goodness they have brought to our community.

I would like to share with my colleagues two articles written by members of the Church's congregation. Both are contained in the special 50th anniversary publication and describe briefly the history of the Lebanese

people of Easton and the history of Our Lady of Lebanon Maronite Catholic Church. The articles follow:

A BRIEF HISTORY OF THE EASTON LEBANESE

(By Florence Sar Frangos)

At the turn of the century, when America opened its doors and resources to the peoples of the world, many came including the Kfarsghabi; who left family and home, and journeyed to France, where they boarded a ship (steerage passage) to America. They landed in New York and were met by a Mr. Faour, a prominent New York businessman, who dealt in dry goods and notions. He had no one to sell his wares in the Easton area; so, he outfitted the first Kfarsghabians (the Saba group) with merchandise and sent them, with his agent, to Easton, Pa.

The pioneers and early immigrants, who settled on Lehigh St., were God-fearing, sincere, intelligent men and women. They worked long hours. Their mode of transportation was by foot, with a heavy pack on their backs. They quickly learned the monetary system, and were proficient at saving money. Stares greeted their manner of dress.

In 1913, George and Maneera Burkot arrived. Mr. Burkot was raised in Australia and spoke English; in no time the Kfarsghabians mastered enough English to make themselves understood.

After WWI, the Lebanese bought homes from the Italians and Jews, who were moving away. They learned about clothes, home improvements, insurance and credit. Businesses were branching out, the dry goods and notions business was replaced by grocery stores, butcher shops, coffee houses, and truck farms.

In 1941, when war was declared, 39 men and 2 women served in the Armed Forces of their country. Work, Wait, and Pray, became the watchwords of the day. In 1945, the war was over. We lost one soldier, Airman Charles Loholdt, who died somewhere over Europe in 1944.

The greatest progress of the Lebanese was made after WWII. Many innovations learned during the war were put to useful purposes. They entered the business, professional, and social world. The parents and children take an active part in church, school, social, and political affairs.

In the early 1960s, Lehigh Street came under the axe of the Redevelopment Authority. This brought an end to the Kfarsghabi on Lehigh Street. In 1969, our church and rectory were moved to 4th and Ferry Streets.

The Lebanese are now scattered throughout the city and townships. Our Lehigh Street is no more; but, the memories of it are many and will live in the hearts of all Kfarsghabians who knew it as their first home and haven in America.

1901-1914.—Children born in the United States, taken back to Lebanon, and then returned to America. Badway Joseph Badway—The first child born in Easton, Pa., February 4, 1901. OUR LADY OF LEBANON MARONITE CATHOLIC CHURCH

(By Florence Sar Frangos)

From 1880 to 1901, there were no official settlements of Kfarsghabis in America, so they attended Latin Rite Churches wherever they lived.

From 1901 to 1916, they attended Mass at St. Bernard's, St. Joseph's and St. Anthony's, which was a small chapel located above Gazzetta's Garage on South Bank Street. Its priest, Father John Dario, was sent by the Archdiocese of Philadelphia to administer to the Italian people and to build a church.

The Italians purchased 321 Lehigh Street, an old Jewish Synogogue, and demolished it in 1915. With the help of the parishioners, the new St. Anthony Church was completed in 1916.

The Italians opened their church and their hearts to the Lebanese, including them in all church functions. Father Dario allowed them to hold devotions, novenas, and The Stations of the Cross in Arabic. The Immaculate Conception Society was formed in 1925, with Anthony Sar as its first President.

Father Dario also welcomed the Maronite Priests: Father Korkemaz, the two Father Yazbecks, and Msgr. Louis Zouwein, who made at least two visits a year to hear confessions.

In 12 short years, St. Anthony became too small for the growing Italian community, and plans for a new church, rectory, and school were made. The site at 9th and Lehigh Streets was chosen and Father Haron invited the Lebanese to continue to be members of the church. Father George Zouwein administered to the Lebanese as a visiting priest.

THE CHURCH

(By Florence Sar Frangos and the late Merhej Sassine)

In 1929 the Lebanese explored the possibility of purchasing old St. Anthony's Church. A committee headed by John Boulous Sassine, John Jabour, Peter Shaheen, Jacob Yaoob Joseph, Joseph Francis Samia (Joe Sam), John Badway Karam, and Anthony Sar met with the Archbishop of Philadelphia. The price of the church was $18,000, a large sum of money during the Depression; but with perseverance and patience, the Sassine Committee visited Scranton, Wilkes Barre, Utica, Newark, Philadelphia, and Providence, R.I., and soon the down payment was realized.

While closing costs were in progress, the Archbishop sent Father Emmanuel El Koury Hanna, who stayed with us a short time. He performed the first marriage between Joseph Baurkot and Genevieve Baurkot on October 26, 1930.

On April 1, 1931, permission was received to open the church and rename it Our Lady of Lebanaon Maronite Catholic Church. Rev. Francis Lahood, our First Pastor, said the First Mass on April 1, 1931.

The First Baptisms were twin girls, Elizabeth and Esther, born to Msayheeya and John Karam Simon, on April 19, 1931. The First Marriage, after the dedication of the church was between Joseph Peter Isaac and Catherine Elias Canone on September 4, 1931. The First Confirmation was administered to Luke Shaheen on May 13, 1932 by Bishop O'Hara of Philadelphia, and the First Funeral was Margaret Sar Young on April 2, 1931.

Our Church would not be complete without the generosity of the late Susie Unis Lahood, who refurbished the hall; and to the late Minnette Abel for her gifts of the Baptismal Font, (which is still in use today), for the Altar Linens, the Statues, and the monetary gifts.

Father Lahood was instrumental in teaching the Arabic Mass, Hymns, and Devotions to the newly formed Choir. He remained with us until April 1933. He returned unofficially to build the two Side Altars, which he replaced with marble.

Father Lawrence Birgmanos, a Latin Priest stayed with us until Father Hanna Nehme came in 1933.

Father Nehme continued to teach the Arabic singing of the Mass. In 1934, he formed the St. Theresa's Sodality with Geraldine Burkot Boulous as its First President. The Sodality has always been active in the church, and the "Right Arm" of the priests who came later. The Immaculate Conception Society was dissolved in 1935. Father Nehme left in 1936.

Father Ignatius Sayegh came in 1936. He was a dedicated priest and served the parish well. He died in 1941.

Our next Pastor was a Latin Priest, Father William Magee. He adapted well to the Maronite customs; and the Choir adapted well to the singing of the Latin Mass. Maronite Priests visited frequently from Philadelphia, New York, and Wilkes Barre. Father approved Haflis and Mahrajans. He started May Processions with Dorothy Karam Mawad as the First May Queen. He burned the mortgage on the Church. His comfort to all during the war years will always be remembered. Father placed American Flags on the Main Altar—one for each soldier; as each soldier came back safely, a Special Mass of Thanksgiving was said, and a flag was removed from the Altar. One flag will always remain there—the one for Airman Charles Loholdt, who died somewhere over Europe in 1944.

A testimonial Dinner was given Father Magee on May 30, 1952 by the parish and friends just before he was transferred.

In May 1952, Father Norman S. Peter, came to us from the Diocese of Buffalo. His parents were Maronite, and Father was ordained in the Latin Rite. Father Peter was taught the Maronite Mass in English Phonetics by Rev. Joseph Solomon of Scranton, Pa., Archbishop O'Hara of Philadelphia obtained permission from Rome for Father to also celebrate the Maronite Mass; thus he became the first American-born Lebanese Priest of the Latin Rite to offer the Holy Sacrifice of the Mass in two Rites; Latin and Maronite. Merhej Sassine assisted Father in the celebration of the Maronite Mass.

In the 20 years Father Peter served us, he made many innovations. The envelope system (25¢ a week) of collection was started; the Choir was taught the Jinnazz and Bukoor Hymns; 323 Lehigh Street was purchased; the Rectory was extended; a Youth Center was opened for the MYO; a kitchen and bar were added to the church hall.

In the flood of 1955, the Blessed Sacrament was removed to St. Bernard's Church for safekeeping. A Holy Name Society both Senior and Junior was formed; also a St. Theresa's Junior Sodality. And, Father Peter celebrated his Silver Jubilee of Ordination to the Priesthood.

Changes in the Liturgy were made at the Second Vatican Council; the Maronite Mass was to be said in English as well as Arabic. On March 9, 1966, an Exarchate was formed in North America with His Excellency

Bishop Francis M. Zayek as its Head. Our Lady of Lebanon then came under the jurisdiction of the Exarchate.

In 1966, the mortgage for 323 Lehigh Street was burned.

In 1969, when the Redevelopment Authority demolished the church on Lehigh Street, Our Lady of Lebanon was relocated to 4th and Ferry Streets, and the Rectory to 54 S. 4th Street.

On January 5, 1969 the First Baptisms in the new Church were twin boys, Thomas and Timothy, born to Rita Isaac and Gerald Colver. The First Marriage was between Joseph Canone and Judith Briener on June 7, 1969. The First Funeral was for Margaret Najeeb Herbert.

Father Peter died on March 15, 1972.

From March 15 to September 1972, three priests served the parish, Rev. George Webby (now Vicar General of St. Maron's Diocese), Msgr. Peter Eid, and Rev. Jerome Pavlik, a Franciscan Priest.

On March 22, 1972, the Exarchate became the Diocese of St. Maron, New York, U.S.A.

In September 1972 Father Bernard Khachan became our Pastor. He conducted an active Youth Program; and formed an Arabic School. Plans were formulated and funds set aside for the expansion and development of the church. In October 1974, Father Khachan was transferred to San Antonio, Texas.

His successor was Rev. Hares D. Zogheib. During the six years Father Zogheib was with us, the church hosted the 13th NAM Convention in October 1978. The parking lot adjacent to the church was purchased. On September 14, 1975, Anthony Koury was ordained a Sub-Deacon of the Church by the Most Rev. Francis M. Zayek, Bishop of St. Maron's Diocese, U.S.A.; Heritage Day was started in 1978. Father celebrated his Silver Jubilee of Ordination to the Priesthood.

Father Zogheib was transferred to New Castle, Pa. in January 1980.

Our present Pastor, Rev. Sami Hayek, came to us from New Castle, Pa. He has the Sisters of St. Joseph teaching the CCD classes; a youth Choir which sings the Maronite Mass in English. Heritage Day 1981 proved to be a most unifying experience in the life of the parish; also THE CEDARETTES, a Lebanese Folk Dance Group was formed. Father Hayek has an active Advisory Board. Plans are in the offing for the renovation of the church and hall. And, we are looking forward to Our Lady of Lebanon's Golden Jubilee, and the Kfarsghabis' Centenary to America.●

HONORING THE PHILIPPINE VETERAN

HON. LEON E. PANETTA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. PANETTA. Mr. Speaker, I am today introducing a commemorative resolution to honor the service provided our Nation in the South Pacific during World War II by the people of the Philippine Islands. My resolution designates the week of April 9, 1982, "Philippine Veteran Week," marking the date in 1942 on which United States and Philippine forces defended the islands against the Japanese in the Battle of Bataan and Corregidor. I think it is fitting that our Nation pause on the 40th anniversary of that valorous but costly struggle to pay homage to the loyal and dedicated service of the Filipino people to the war effort.

U.S. Armed Forces operating in the Pacific Theater during World War II were aided by Philippine Island natives assembled into two separate units—Philippine Army regulars and the elite corps known as the Philippine Scouts. Few may now recall that the scouts were in fact fully incorporated as a component of the U.S. Army by a 1901 act of Congress. Additionally, two units of Filipino Americans—the 1st and 2d Filipino Regiments—were trained and assembled in the United States for service in the Philippine Islands.

At the onslaught of the war in the Pacific when the enemy attacked Pearl Harbor and invaded the Philippine Islands, these soliders became the key to the success of our entire South Pacific stategy. It was the continued resistance on Bataan that denied the Japanese an essential base for the projected thrust to the South Pacific. The enemy was forced to retain large army and navy forces in the Philippines, which otherwise could have been employed against Allied shipping of men and materials to Australia and New Caledonia from the United States and the Middle East. Their protracted defense of these islands against incredible odds allowed the United States time to recover from the first blows of the war and begin to send in supplies and reinforcements.

The defenders of Bataan were hopelessly outnumbered and undersupplied. During their entrenchment they endured severe hardship. Repeatedly they established new battle lines, only to be forced to retreat again in the face of the enemy's superior numbers. The toll on lives was heavy; roughly half of the Philippine Scouts were killed in the fighting. The grueling cycle of battle and retreat which characterized the defense of the island has been known since as the Bataan Death March. In the case of one unit of the Philippine Scouts, the 26th Cavalry, its numbers were reduced from about 1,800 to an estimated 300.

Many of those who survived the harsh conditions of Bataan did so only to be confined for the duration of the war in a Japanese prisoner of war camp. Others who were fortunate enough to escape capture were organized in guerrilla units to conduct continued resistance against the enemy occupation and support the return of General MacArthur and his liberating forces.

Despite the valiant service of the Philippine Scouts and the Philippine Army regulars, fighting side by side with U.S. soldiers, they received far less than regular pay for U.S. armed services personnel. This is all the more startling in view of the fact that the Philippine Scouts were a full-fledged unit of the U.S. Army, subject to the same discipline and code of justice as all others of our Nation's Armed Forces. This inequity is one which I and other Members of the Congress have long sought to rectify; in each of the past several Congresses I have introduced legislation to equalize the pay and benefits provided Philippine Scouts. Until such time as the Congress sees fit to provide equitable compensation for the Scouts, though, I think it is appropriate that we acknowledge our Nation's debt for their service, that of the Philippine Army regulars and that of the 1st and 2d Filipino Regiments, by designating the 40th anniversary of the fall of Bataan as "National Philippine Veterans Week."

Enactment of this resolution would provide a meaningful demonstration of our gratitude for the faithful and gallant service of the Philippine soldiers in assisting the U.S. war effort during World War II. I hope my colleagues will join with me in honoring these veterans.

The text of my resolution follows:

H.J. RES. —

Joint resolution to designate the week beginning April 4, 1982, as "National Philippine Veteran Week"

Whereas, the United States Armed Forces operating in the Pacific Theater during World War II were provided invaluable assistance in combat by soldiers of the Philippine Army, the First and Second Filipino Regiments, as well as members of the Philippine Scouts, a unit fully incorporated as a component part of the U.S. Army by Act of Congress;

Whereas, defense of the Bataan Peninsula in the Philippine Islands during the Second World War by the Philippine Scouts, Philippine Army regulars, together with elements of the U.S. Armed Forces in the Far East (USAFFE) against overwhelming odds denied the enemy an essential base for operations in the South Pacific and contributed significantly to the eventual Allied victory in that theater;

Whereas, casualties suffered by the defenders of Bataan were extremely high, and in the case of the Philippine Scouts approximately one out of every two members of that unit did not survive the notorious "Bataan Death March";

Whereas, the Philippine defenders served at less than regular pay for U.S. armed services personnel although serving side by side with U.S. soldiers and although, in the case of the Philippine Scouts, they were fully incorporated in USAFFE;

Whereas, survivors of the defense of the Philippines who escaped capture and imprisonment were in many cases organized in guerrilla units to conduct resistance against the enemy occupation and support the return of liberating forces under the command of General MacArthur;

Whereas, the people of the United States of America are deeply grateful for the loyal and courageous service of those Philippine Island natives and Filipino-Americans who

took up arms on behalf of the U.S. war effort in the South Pacific during World War II: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the week beginning April 4, 1982, is hereby designated "National Philippine Veteran Week", and the President is authorized and requested to issue a proclamation calling upon the people of the United States to observe such week with appropriate ceremonies and activities.●

ACID RAIN DAMAGE SCARRING THE EAST

HON. ANTHONY TOBY MOFFETT

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. MOFFETT. Mr. Speaker, the National Wildlife Federation has provided an excellent analysis of the damage afflicting the 27 States east of the Mississippi due to acid rain. I am providing this material to the Members and I am urging them to support my legislation, H.R. 4829, for the control of acid rain:

ACID RAIN VULNERABILITY OF THE 27 STATES EAST OF THE MISSISSIPPI—A SUMMARY

A National Wildlife Federation (NWF) report on the "Acid Rain Vulnerability of the 27 states East of the Mississippi River" determined that 15 of the 27 states are "extremely vulnerable" to the adverse impacts of acid rain, while 10 states are "moderately vulnerable". One state—Florida—demonstrated "low vulnerability" on a statewide basis (although displaying moderate to high sensitivity and scattered areas of sensitive surface waters). One State, Louisiana, could not be evaluated because of insufficient data.

Using data from published acid rain studies, precipitation chemistry monitoring stations and personal communications with scientific experts, NWF qualitatively assessed the overall acid rain vulnerability of the Eastern U.S. This evaluation was limited to the 27 states East of the Mississippi River where the most complete information is available.

The 27 states have been individually ranked in a table according to their vulnerability to fishery, soil, crop foliage and masonry damage. Visibility impairment and automobile paint damage—measures of existing rather than potential impact—were also considered. A ranking of extreme (E), moderate (M) or low (L) vulnerability was assigned to each state based on factors specific to that state. The summary table in the NWF report also provides a relative ranking of the states determined by the sum of their acid rain sensitivities for each category.

Acid rain vulnerabilities were assessed by examining multiple interactive factors. In evaluating the sensitivity of fisheries in each of the 27 states, for example, NWF considered studies which examined surface water alkalinity and bedrock geology (which are indicators of the ability of water to buffer acidic inputs), soil type and soil chemistry (which are indicators of the resiliency of the soil to buffer acidic inputs and the associated leaching of toxic metals) and a mean weighted pH acidity of rain. Although the most publicized acid rain-impacted fisheries are those in the Adirondack region of upstate New York, NWF found that 13 states have extremely vulnerable fisheries while 8 states' fisheries are moderately vulnerable to acid rain effects. Many of the same factors—soil chemistry, soil type, bedrock geology and average weighted pH of rainfall—were used to determine each state's sensitivity to soil acidification. These factors, when considered in combination, reveal that 13 states have soils which are extremely vulnerable to acid rain with 12 states possessing moderately vulnerable soils.

The rankings for crop foliage damage were based on studies which have documented the pH at which foliage damage to specific crops occurs as well as on the occurrence of high acidity rainfalls within each state. Similiarly, damage to masonry materials was estimated by applying a rough pH range of stone sensitivity to mean weighted annual pH data for the 27 states. It was found that 23 states were vulnerable to masonry damage.

NWF based the estimates of automobile paint damage in each state on actual reports of automobile paint damage and on sulfate/acid rain concentrations occurring in each state. It was found that Florida, New Jersey, New York and Pennsylvania had the highest incidence of reported automobile paint damage due to acid rain last year.

NWF's visibility impairment ratings were determined from studies which assessed the yearly average sulfate concentration found in the U.S. during the mid 1970's and on NO_x concentrations found in the early 1970's. Based on these studies, it was estimated that 20 states had high visibility impairment, while 5 states had a moderate degree of impairment.

This analysis demonstrates the pervasiveness and potential severity of the acid rain problem in the Eastern U.S. and strongly refutes the contention that acid rain is a problem of limited geographic scope. Even some western states are currently experiencing the impacts of acid rain.

Based on the conclusions of this report and its review of the most current acid rain studies, it is apparent that immediate legislative action is needed to begin reducing the emissions of acid rain precursors—especially sulfur dioxide from major coal-fired electric generating stations—in the Eastern United States. This problem must be addressed with a sense of urgency before a growing catalogue of "vulnerable" states succumbs to what may be irreversible acid rain damage.

EVALUATION OF EASTERN STATES' VULNERABILITY TO EFFECTS OF ACID RAIN

State	pH range of rainfall	Average pH of rainfall	Fisheries	Soil	Crop foliage	Masonry (marble, limestone)	Overall ranking	Visibility impairment	Automobile paint damage
Alabama	3.7	4.6	M	M	V	M	M	E	S
Connecticut	3.6	4.4	E	E	V	M	E	E	S
Delaware	3.5 to 5.0	4.4	M	M	V	M	M	E	M
Florida	4.2 to 6.1	4.7	S	S	NV	S	S	M	E
Georgia	4.1 to 6.3	4.6	M	M	NV	S	M	M	S

West Virginia	3.8 to 6.3	4.3	M	E	V	M	E	F	M
Wisconsin	3.8 to 6.1	4.5	E	E	V	M	E	E	M

E—Extremely vulnerable to acid rain effects. M—Moderately vulnerable to acid rain effects. S—Slightly vulnerable to acid rain effects. V—Vulnerable to acid rain effects. NV—Not vulnerable to acid rain effects. XX—Insufficient data.●

SUGAR LOAN PROGRAM NEEDED

HON. BYRON L. DORGAN

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. DORGAN of North Dakota. Mr. Speaker, I rise in support of reestablishing a commodity loan program for the sugar producers and consumers of this country. Since the expiration of the Sugar Act in 1974, the United States has been the only major sugar producer without any sugar legislation at all. Over 80 percent of the sugar produced in the world is either consumed in the nation where it is produced or it is exported under long-term marketing contracts. Therefore, when people talk about the market price for sugar they are talking about the price commanded by a mere one-fifth of the total world production—namely that sugar which is uncommitted, is homeless and is dumped on the world market. This means that year-to-year world production fluctuations are amplified fivefold in terms of their effect on the price of this dump market. As a result, that price has a tendency to vary from extremely high to extremely low—sometimes practically overnight.

In the 8 years since 1974 our sugar producers and our consumers have been virtually alone among those major producing countries in being without the benefits of the stabilizing effects of a sugar program to moderate those price swings. In order to insulate their consumers from shortage induced price spirals, other sugar producing countries seek domestic self-sufficiency in sugar. They accomplish this by guaranteeing producers a price that will allow them to make a profit. In 1974 we abandoned this philosophy and, as a result, our producers are forced to accept a price determined largely by the volume of those other countries' surplus production. Right now that price has reached catastrophically low levels—so low that if the situation continues much longer our entire domestic sugar industry may well be in danger of extinction.

USDA estimates that it now costs about 25 cents to produce a pound of sugar—not counting the cost of land. The world dump price of sugar is such that our producers now are receiving only 60 percent of that amount (15 cents per pound) for their sugar. Our farmers simply cannot sustain that kind of loss for very long and still stay in business.

Since we are not self-sufficient in sugar (we produce about half of our needs) the volatility of the "dump market" can be just as perilous for our consumers. In the first year after the termination of our sugar program in 1974 world sugar production fell by only 1.7 percent—but the world market price increased by 212 percent. With no sugar program to allow our producers to survive price valleys by taking sugar off the market in periods of oversupply we clearly run the risk of lowering substanially domestic sugar production and becoming even more dependent on the dump market and more susceptible to this kind of price swing. But we also lose the price moderating effect of having stored sugar under loan and available for release onto the market in periods of short supply.

With the bare minimum cost of production being 25 percent I am not convinced that a price support of 17 cents per pound is going to be adequate to save our domestic sugar industry and guarantee a reasonable price for sugar to our consumers. But right now the situation is indeed desperate and I would urge my colleagues to support the best possible legislation that reestablishes a sugar program in this country.●

LIBERATION THEOLOGY

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. DORNAN of California. Mr. Speaker, there is a great deal of ink being spilled in theological circles these days regarding a concept known as liberation of theology. Ideas inevitably have consequences and, in this case, revisionist theological ideas are finding a practical application in the political arena, particularly in such areas as South and Central America as well as Africa. In accord with the spirit of the times, liberation theology in the hands of the new theologians has become a thoroughly politicized and secularized concept drawing its inspiration from, of all places, the Marxist critique of society.

Rev. Donald J. Keefe, S.J., professor of theology at Marquette University, has done all Christians a service by ripping away the pseudoreligious mask of liberation theology and exposing in all its nakedness the atheistic, totalitarian horror of Marxism-Leninism. It is an honor and privilege to submit Father Keefe's remarkable essay for the RECORD, the first half of which appears today.

The essay follows:

LIBERATION AND THE CATHOLIC CHURCH: THE ILLUSION AND THE REALITY

(By Rev. Donald J. Keefe, S.J.)

Since the end of the Second Vatican Council, and particularly since the conference of Latin American bishops at Medellin (CELAM 1968), Roman Catholic theology has become concerned with the social and ecumenical dimension of the Christian revelation and of Christian worship to an unprecedented extent. While there had long been an official recognition and approbation of the movements for social reform which had arisen out of the industrial revolution, and while a certain theological interest in ecumenical questions had been evident in the work of such scholars as Lombardi and Congar, these matters remained esoteric for the bulk of Catholic theologians, particularly those of the English-speaking world. Then, quite suddenly, with the end of the Council, the Catholic theological interest ceased to be governed by the dogmatic emphases of the Counter-Reformation, and became ecumenical; since then, it has become difficult to distinguish the work of Catholic from that of Protestant theologians, whether in scripture, church history or systematic theology. At the same time, the rather individualist-oriented moral theology of the preconciliar epoch, which had been concerned with the quite clearly articulated moral tradition of Roman Catholicism, suffered a comparable loss of focus; it, too, underwent an ecumenical detachment from the specifics of Roman Catholic doctrine, and at the same time, in full flight from the all-but-universal Thomism of the recent past, and to an extent inspired by the evolutionary theology of Teilhard and his followers, began to speak of such matters as "the sin of the world," of "structures of sin," and of "the signs of the times" in accents which had much of the tonality of the secular utopianism of the neo-Marxist movements recently accepted as partners in ecumenical dialogue. The conciliar aggiornamento was seen to require a kind of disestablishment of institutional Roman Catholicism, in the sense that the major obstacles to ecumenism and to this church's involvement in the modern world were, precisely, the concrete particulars of its doctrine and of its moral practice.[1] The widely hailed "spirit of Vatican II," in the popular acceptance of that term, amounted to an enthusiasm for a dehistoricized church, whose freedom for the future was understood to rest upon its discontinuity with its past, and its abandonment of any claim to speak with an authority superior to that of the secular academy and the secular moral consensus.

The sudden disestablishment, insofar as many Catholic theologians were concerned, of the institutional church amounted to the equally sudden establishment of surrogate instititions. What these should be was uncertain; Catholic theologians found themselves repeating an unfamiliar history, that of post-Enlightenment Protestanism, and even yet find themselves preoccupied with puzzlements long outdated, particularly with regard to the meaning of history. Some would still hold to some sort of value-free critical-historical method; others have seen past that illusion, and opt for the Romantic option whereby each historian imposes his own autonomous moral judgment upon the data; still others hope for a method of dialectic where by the force of logic will clarify such issues. Some looked to contemporary philosophies for solutions to the enigma of history, and here the contribution of the Marxist schools was relied upon. The Marxist enthusiasm was found quite early to be strangely resonate to the "spirit of Vatican II"; it provided a doctrinal role for the academy comparable to that of the abandoned

[1] The obstacles usually named are the Marian doctrines, apostolic succession, papal primacy and infallibility, sacramental realism ex opere operato, and the teaching surrounding marriage and sexuality.

magisterium, and a theory of history more than sympathetic to the dehistoricization of the Roman Catholic Church. More, Marxism offered a program, a vision of the future to which the Christian intellectual could respond the more enthusiastically in that it conferred an absolution upon the enthusiast, elevating him to a moral plane from which the inequity of those who lacked his vision might be gratifyingly surveyed, and denounced. Finally, it legitimated hatred; not since Dante have scholars so delighted in the damnation of their adversaries. In sum, the prospect of a Marxist Christianity was enticing to many, for it ennobled one's anti-institutional enthusiasm by identifying it with rebellion against the oppression of the poor; by providing a single political solution to all the speculative quandaries of the old theology, it freed one from the burdens of that arduous search for truth, thereby enabling one to identify the Christian faith with the struggle for political power.[2] This struggle had enticed many a theologian at Vatican Council II, where they first encountered the reality of power, and the intoxication persisted; for them, the politicization of theology had become a personal imperative.

When, at the time of the Council, Roman Catholic theologians were suddenly awakened to the reality of institutionalized oppression in the Western world, there existed no well-integrated critical Catholic theology of society and social institutions. Such energy as had been expended in this realm had been exhausted in studies of the natural law (Mounier, Maritain), in studies of the interrelation of church and state (Murray, Sturzo), in the examination of the morality of war (Murray, Ford) and the interrelation of morality and law (St. John-Stevas) and the like, problems of a peculiarly abstract academic interest, the practical solutions to which had habitually been arrived at without much benefit from moral theology. The few Catholic scholars writing in specifically social areas (John A. Ryan, O'Dea, Furfey) wrote less as critical theologians that as sociologists and political scientists; the impact of their work upon Catholic thought never was sufficient to prompt the articulation of a theology of politics. In the absence of an identifiably Catholic political theology, the postconciliar theologians found themselves unable to resist the claims of the new theology of secularity. This had a base in the work of the martyred Lutheran theologian, Dietrich Bonhoeffer, whose critique of immature Christian piety had been underwritten by his own heroic death. The Second Vatican Council, having demanded of Catholics a new openness to the world, and having affirmed the legitimacy of a kind of secular autonomy, seemed also to suggest the ultimately Christian character of many secular goals and programs. The prospect of a Christian maturity freed of ecclesial oversight suggested also the illegitimacy of much of what had passed for Catholic practice heretofore: this practice was tinged, suddenly, with the character of a childish obedience. The identification of "religion" and paternalism, already proposed by Bonhoeffer, found a ready acceptance in Catholic circles whose intellectual energies had in fact long been suppressed in the name of Catholic orthodoxy.[3]

This was also the decade of the radical theologians: Harvey Cox's secular enthusiam[4] seemed to many Catholics no more than a prolongation of that optimism which the Council, following Pope John XXIII, had popularized as aggiornamento. Driven by this optimism, the radical theologians developed a theology of secular hope profoundly influenced by neo-Marxist thinkers such as Bloch and Garaudy. This new theology rested upon a Marxist social critique whose political implications soon became explicit. This development, which passed from a theology of secularity to a theology of hope to a political theology of liberation, took place under auspices owing little or nothing to the Catholic doctrinal and moral tradition. If some of the leading voices in the new theology were Catholic, such as Metz and Dewart, they were so in the new mode: their inspiration was secular and ecumenical, and their attitude toward the Catholic tradition was negative. It had become the hallmark of the contemporary Catholic theologian that he avoid at all cost the despised role of "court theologian," and any manifest concern for official church teaching was suspect of a servile betrayal of aggiornamento. In such circumstances, liberation began to be understood in a context in which Catholic orthodoxy was charged with an ecumenical obligation which amounted to accepting the Marxist social critique—and all the implications of that critique, fundamental to which is a rejection of the free market and of the private ownership and control of capital investment. Equally fundamental is the criticism of religion. In this dialogue, it now became the obligation of the Catholic partner that he acquit himself and his church of the charge of providing an ideological defense of those "structures of injustice" which are the object of the Marxist social critique. Thus, at the outset, it is Christianity which is suspect, and it is suspect precisely because of a concrete historical institutional presence which impedes and is an obstacle to the liberation of the oppressed from the original sin of private property. Thus, for the Catholic Marxist, any aspect of Catholic life which can be interpreted as an obedience must be expunged. The entirety of the doctrinal and moral tradition is to be reviewed in the light thus cast upon it by the new ecumenism and, to the extent that it cannot be integrated into the Marxist future hope, it must be discarded. This ordinarily amounts to its restatement in some theological format which deprives the Catholic tradition of its own historical concreteness, for it is the church's historicity that is the problem, precisely because it competes with that philosophy of history which is integral with Marxism.

Had the liberation theologians' criticism of the church focused upon factual abuses—for example, upon the centuries-long complicity of the Catholic hierarchy with European colonial governing classes and their successors, or upon the longer and shameful record of clerical indifference to the suffering of the poor—no objection could be made to such passionate and angry protest. The easy complaisance with which the conventional middle-class Christian has accepted and accepts the conventional indignities done to the poor and to the helpless is a loathsome thing, excoriated in the Old Testament and personally condemmed by Christ in the New Testament; the implication that Christianity lends support to this oppression can only nauseate, and the more so the more one is aware of the massed misery which avowedly Christian and Catholic countries can countenance, have countenanced, and still countenance. In saying so, I do not speak de haut en bas; it is my own country's slaughter of the poorest of its poor, the weakest of its weak, a slaughter institutionalized by our abortion laws, that I have here primarily in mind.

Unfortunately the liberation theologians were not intent upon the bishops' return to the manifest duties and responsibilities of their office; this was the last thing desired, for that office with its teaching, governing and sacramental functions had been sacrificed to ecumenism, and could hardly now be called to account. Instead, the remedy proposed amounted to the rediscovery of an ancient doctrinal aberration, one which over and over again has proven itself to be no more than the reinvocation of an antihistorical despair, a despair of the goodness of the world God made good and a flight from the terrors of a history whose only hope is that it will end.

This new consciousness, identified by the Christian Marxist as that of the oppressed, experiences history as class conflict, and yearns for the end of that struggle, and so longs for the end of history as such. The experience of class struggle is the experience of the proletariat, at least ideally, and, insofar as the liberation theology of the Marxist is concerned, it constitutes the normative truth or better the normative criterion of all reality. This criterion is not an abstract truth, but an activity, the praxis which liberation jargon refers to as hermeneutically privileged, and proposes as the single touchstone by which any expression of Christianity is to be judged. Quite clearly, this judgment amounts to a reduction of Christianity to the contours of that Marxist philosophy which does not seek to understand the world, but to change it: only that Christianity is valid which is participation in the class struggle. Liberation theology lives upon the identification of valid historical existence with praxis, and upon the further identification of praxis with involvement in class struggle, i.e. against the alienation of the oppressed. To share in the struggle of the proletariat against the oppressor class is to be involved in that praxis which is for the

[2] There is no room here to detail the involuted history of the Social Gospel over the more than 60 years of its influence in American Protestantism. Its effect is apparent in the various documents issued over the past 20 years by the American Friends Service Committee, and in the comparable literature produced by the Department on Church and Society of the Divison of Studies of the World Council of Churches. John C. Bennett has been the W.C.C. spokesman on the subject for many years; more recently he is echoed by such as Robert MacAfee Brown and the former president of Yale and ambassador to Great Britain, Kingman Brewster. On the Catholic side, the politicization of Catholic Relief Services, whose officers despise the "Band-Aid" approach to social ills which the older generation of Catholic missionaries exemplified, is well established; the newer version, centered at Maryknoll, is committed to the liberation theology whose chief American outlet is the Maryknoll Missionary-sponsored Orbis Books. The Catholic counterparts to Brown and Brewster would be the Berrigans, Ivan Illich and most of the higher education establishment. This notable list lacks Dorothy Day, the one Catholic social reformer who was too radical to be a revolutionary, and so became a deeply committed and profoundly Catholic Christian.

[3] It is perhaps curious that those suppressed, of whom the most long-suffering example must be Maurice Blondel, and after him such luminaries as Henri de Lubac, Yves Congar and M.D. Chenu, with John Courtney Murray, Gustav Weigel and Karl Rahner bearing them company, did not and have not joined the anit-institutional chorus.

[4] The Secular City, doubtless the most widely read work in what would henceforth pass for theology, reads rather like a novel of H. G. Wells today, but it set the intellectual climate for the decade in which such hopes soured on the vine.

Marxist the reality of historical truth; it is to live toward that goal of liberation from oppression and so from class warfare which is the goal and the end of historical existence. This goal includes the end of all alienation of humanity from its proper reality; it marks the disappearance of all inequity, of all injustice, of all differentiation in human existence. Until that goal is reached, the Christian Marxist must recognize that both God and man are submitted to the alienation and anguish in which the substance of history consists. Short of that goal, it is maintained, no Christian may regard any church institution, any office or doctrine or moral law as possessing any validity of its own. Such a claim would immediately resist the class struggle, and would amount to oppression, to an ideological resistance to history. To live in history, for the Christian Marxist, is to live toward the ultimate union of God and man; short of that eschaton, the parousia, no historical reality is able to mediate God to man—for history is precisely that which separates God from man. This realization, of course, amounts to the abdication of the sacramental principle: history, for the Marxist, is the realm of total insignificance. Consequently, the sacramental worship of the church is radically incompatible with any kind of Christianity which wishes to be Marxist. For such, there is not actual sacramental presence of salvation in history: history is intrinsically vitiated, opaque to the truth and to the justice of God. The only Christian virtue, supplanting faith, hope and charity, is that praxis which seeks the destruction of all historical structures which claim any intrinsic validity. The Gospels have no other meaning than this, and their truth is available on no other basis. Only this praxis is truly Christian, because only it is truly liberating. Thus the Christian Marxist.●

PSYCHO/SOCIAL IMPACT OF TOXIC WASTE DUMPS

HON. JOHN J. LaFALCE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. LaFALCE. Mr. Speaker, I recently had the opportunity to read "Psycho/Social Impact of Toxic Chemical Waste Dumps," a paper delivered by Dr. Adeline Levine at the Conference on Research Needs for Evaluation of Health Effects of Toxic Chemical Waste Dumps. Dr. Levine, a State University of New York at Buffalo sociologist, raised before the NIEHS conference one of the most important dimensions of our response to toxic waste emergencies: The maintenance of effective communication and mutual trust between expert and layman.

In 1978, Dr. Levine began a 3-year long sociological study of the Love Canal emergency on which her paper is based. My own experiences in dealing with the Love Canal situation confirms most of the conclusions Dr. Levine reaches in her paper. During the height of the public outcry at the Love Canal, experts, speaking the language of scientists, and Love Canal residents, speaking the language of concerned and, in most cases, scared laymen, were seldom able to effectively communicate their mutual concerns. I found myself playing the role of mediator far too often, as the problem of communicating relevant information from the experts to Love Canal residents took precedence over the process of reaching solutions and shattered whatever vestiges of trust existed between the two.

In her concluding remarks, Dr. Levine notes that:

To maintain trust requires that physical scientists learn how to take into account variables, social and political, that go beyond those issues that are normally considered in approaching problems from one's own necessarily narrow disciplinary perspective.

Mr. Speaker, I commend Dr. Levine's paper to all of our colleagues, and submit it for insertion in the RECORD at this point. I know that we can all benefit from her perspective born of the Love Canal tragedy.

The paper follows:

THE PSYCHOL/SOCIAL IMPACT OF TOXIC WASTE DUMPS

(Adeline Levine, Ph. D.)

My topic is the psycho/social impact of toxic chemical waste dumps. My training is in sociology, and my chief experience with toxic waste dumps consists of three years of intensive observation at the Love Canal in Niagara Falls, New York.

I am not going to talk to you today about specific techniques for deriving quantitative assessments of the degree of fear and anguish suffered by populations of normal people who suddenly find themselves in situations of collective stress.

Rather I am going to use my Love Canal experiences to address a far more serious and pervasive psycho/social problem which arose at Love Canal, that of creating and maintaining trust between two groups. Group one were the residents of an area contaminated by toxic waste materials; group two were the government sponsored scientific researchers and other health professionals who worked and studied there (and to whom I will refer as the "scientific professionals.") The problem is important for without trust and confidence, no research involving people's cooperation can be performed in a scientifically acceptable manner, if at all.

At Love Canal, because the challenge of maintaining and increasing initial feelings of trust was not recognized by the scientific professionals, the residents' feelings of uncertainty about their health and welfare were increased. As their feelings of uncertainty increased as well about the competence, wisdom and motivations of government sponsored scientific professionals, their initial feelings of respect and confidence in the scientific professionals changed. A large number became increasingly suspicious, lost respect for the scientist, reacted angrily, and finally refused to cooperate at all with government sponsored research. The scientists themselves suffered from feeling misunderstood, unappreciated, often insulted. Some viewed the people as the "enemy," and finally they were not able to proceed with "research as usual".

Because the social factors leading to the breakdown of trust are likely to be present in any region where a toxic waste dump has contaminated a residential area and where government sponsored researchers study environment and health effects, I think it is important to understand what happened at Love Canal.

The problem begins sociologically speaking with the assumptions, expectations and viewpoints about the roles and the behavior of scientists which existed prior to the actual playing out of the relationships between the two groups.

Scientific professionals are trained to think analytically. They try to select narrow problems, communicate chiefly with each other, and in precise, technical terms. They control the quality of their work in part through cautious interpretations of data. Furthermore they do research for its own sake, to pursue knowledge. Ideally, they are not involved or influenced by anything outside the technical problem. That is, they are not influenced by financial or political considerations, or by emotions. Although we all know that is not entirely true, that disinterested attitude is the ideal for which we strive.

The residents on the other hand, thought of their problems as total. For them it was not just a body part that was involved, but their whole bodies, the bodies of their families, their homes, their lives—all were involved. The residents of Love Canal were told they might be living in a dangerous situation and they wanted information to let them know what to do. They were uncertain about how to proceed; many felt they had lost control over important aspects of their lives. They expected scientific professionals to give them useful, comprehensible information. They felt the purpose of research is to help make decisions, to help people in trouble. Furthermore, they knew that the decisions that would be made about their fate—whether or not to clean up the dump and how, whose homes would be purchased, who would pay costs, what the outcome of law suits would be, were all dependent, at least in part, upon the conclusions and the statements of scientific professionals. They viewed the researchers as politically involved, as financially involved, and as influential in the decisions, whether or not the scientific professionals viewed themselves in that way.

Finally, while the scientific professionals see themselves as different from each other, with different backgrounds, training, specialties and locations in various government bureaucracies, the residents viewed them as part of whatever agency they were employed by: the New York Department of Health, the CDC, the EPA or other governmental agency.

The playing out of relationships between groups is done through communications both by word and deed. By examining some events viewed by residents as key, I hope to show you how the Love Canal populace was moved from a point of trust and respect for scientific professionals, in the spring of 1978, to one of mistrust for them, to the point that they finally refused to cooperate in further studies in the summer of 1980, and now no longer believe what government sponsored scientific professionals say.

In the spring of 1978, the residents were given information about the quality of the air in their basements in the following manner. At a public meeting, they were handed mimeographed lists with the names of ten polysyllabic chemicals on them. Next the chemical compound names were numbers representing values for air readings

done in their basements. The people's addresses were written in at the top of the sheets. After the first shocked silence, the questions began. When residents asked whether they could continue to use their basements (many of which were playrooms, or bedrooms), when they asked whether the numbers meant there was "a lot of contamination," whether the rest of the house was contaminated, the answer was a repetitious "We don't know".

The scientests were trying to communicate what they had learned, leaving open the question of interpretation. They could not communicate their own broad context of understanding. The people interpreted their action as incomprehensive and responded with fear and anger.

In August, 1978 the New York Health Commissioner made a crucial announcement. He issued an official Order, declaring the area a hazard to the health of residents living near the Canal, ordering health and environmental studies to assess the damage, and advising that pregnant women and children under age two move temporarily but as quickly as possible from the homes bordering the old canal.

The Commissioner and his staff thought they were doing their job, for they had preliminary studies showing excess rates of miscarriage among women at Love Canal, had had their findings reviewed by experts, and issued a warning they assumed would involve about 20 families. When I asked a DOH scientist later what they had planned to do once the Health Order was announced, he replied that as scientists they dealt soley with health matters, not with social or political ones.

In the city of Niagara Falls however, 300 miles from the capital in Albany where the Commissioner made his announcement, the residents of Love Canal heard the news via the mass media of all sorts. There was no one in the city to give them correct, official information, or advice. Hundreds of Love Canal residents streamed out of their homes and gathered on the streets. A few started to burn mortgages, they all shared their fears and organized a strong citizens group which they then relied upon as their intermediary with the world, including scientific professionals.

It was in this atmosphere of rush and disorganization that the health studies of the Love Canal people expanded. As the autumn and winter wore on, as the Department of Health staff made numerous phone calls to request information missing from elaborate self-administered questionnaires, as the results of tests were not forthcoming, as the rumors flew that collecting 4000 blood samples within a few weeks had resulted in overlooked laboratory facilities, as rumors about the presence of dioxin in the area were at first denied and then confirmed by the Department of Health, people's suspicions grew.

While the scientific professionals had tried to respond to what they suddenly saw as an emergency, they acted in such a way that their own professional competence was questioned by the people. Then, as more and more information about possible hazards was revealed, people grew suspicious that the extent of the problem was being concealed to fit the solutions already put in place by the governor of New York, through the purchase of homes for example, before the extent of the problem was known.

In February 1979, the Health Commissioner met with the Love Canal residents and in discussing the problem of excess rates of miscarriages, low birth weights and birth defects, he and others repeatedly used the term "fetal wastage". Scientists use technical terms for precision and to remove emotion from the concepts. The people to whom he spoke however, thought of "fetal wastage" as referring to "the baby I lost," "poor little Nancy with the club foot," "my little son that was born dead" and the like. They reacted in short, in terms of the personal meanings these events had for them. They were more convinced that the scientific professional could not understand them.

With a tremendous fanfare of publicity, the EPA announced in the spring of 1980 that a study of Love Canal residents showed that there was a high rate of chromosome breakage among the 36 subjects of the research. The people were notified of the results by teams of EPA scientific professionals who arrived in Niagara Falls shortly after the news appeared in the newspapers. Teams of three professionals met with each resident who took part in the study and they also gave them letters describing the blood study findings.

When I arrived at the Love Canal that day, two events impressed me immediately. I was greeted by the mother of a sick child who had just been told the study results. She held a letter in her hand describing the chromosome breakage in her blood sample. She showed it to me and told me that she had had it all explained but still did not really understand anything except that she and Love Canal were somehow responsible for her sick child. Another woman's shout reached me as I walked in the building. "I don't care if you only have a half hour to spend with me! I don't care if you have more people to see. I don't understand and I want you to explain this to me until I do." It didn't help when people learned their time was attenuated because a press conference had been scheduled later that day.

Two weeks later, the same people learned that there was controversy about the meaning of the chromosome study, when a reporter called from a New York newspaper and told them about it. One of the women who got the news in this way became mildly hysterical. Another, the mother of a profoundly retarded child, said that she had planned to have her tubes tied on the basis of the first report. Now, she wanted to know, what was she supposed to do? Who was she supposed to believe?

In this instance, the control of scientific information had gotten completely out of the hands of the scientific professionals and had become part of the political bargaining between the federal and the state levels of government leaders. People tend to be cynical about politicians, for they see them as expedient. They do not expect scientists to be expedient, or to be involved with expedient measures.

As a consequence, the blood chromosome breakage story and its refutation were seen as the final straw piled on a huge heap. The organized Love Canal residents announced in midsummer 1980 that they would simply "boycott" all further studies undertaken under governmental sponsorship. In this way, they regained some control over this aspect of the situation.

In the midst of the publicity which followed the blood chromosome breakage study, in the midst of criticism of the way in which the scientific professionals from the state and the federal government had handled the Love Canal health related research, Governor Carey appointed a high level committee in June, 1980, to review and evaluate all research done at Love Canal. Dr. Lewis Thomas, Chancellor of Memorial Sloan-Kettering headed this panel.[1] The report issued in October 1980 said it was clear that there was no indication of a variety of specifically named acute illnesses, and that the studies of chronic illnesses allowed no firm conclusions to be drawn.

As far as I have been able to determine, there were no studies available to substantiate their statements about acute illnesses. They interpreted the studies of what they defined as chronic illnesses in such a way as to ignore, overlook, downplay, or omit findings suggestive of health problems for Love Canal residents. When I attempted to learn about the studies which were the basis for their conclusions, the Thomas committee members and chairman refused to answer questions, surely not a usual scientific collegial response. I later learned that the governor's own political aides had helped to shape the final report.[2] Their contributions were unacknowledged in the report.

In this instance, prestigious scientific professionals lent their names and the names of their eminent institutions to what was viewed among the Love Canal residents as a politically inspired cover up.

The feelings and attitudes of the residents about the Thomas committee report can best be summed up by a resident who said: "It's the miracle of Love Canal!" She went on to suggest that the world's toxic wastes should be sent there for it was the only place in the world where hundreds of people could live for years near tons of chemicals and show no effects whatsoever.

As these few examples suggest, the psychosocial impact on the relationship of trust between scientist and citizen is important to understand. The issues go beyond empirical investigation, and reflect basic choices for scientists. Participation in the investigation of high threatening and controversial problems, in highly politicized contexts required political sensitivity and awareness, and social sensitivity and awareness. There is a basic of trust and goodwill, but that basis is readily ruptured. To maintain trust requires that physical scientists learn how to take into account variables, social and political, that go beyond those issues that are normally considered in approaching problems from one's own necessarily narrow disciplinary perspective.●

MORE REACTION TO SURGE IN COAL MINER DEATHS

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. GAYDOS. Mr. Speaker, still another responsible editorial voice has joined in questioning whether the December surge in coal miner deaths is

connected to what appear to be ill advised cuts in the budget of the Mine Safety and Health Administration (MSHA).

This voice—the Pittsburgh Post-Gazette—flatly calls the cuts false economies and concludes that more mine inspectors are needed, not fewer.

In connection with the deaths, it is worth noting that in 1980 MSHA achieved a 10-year low in on-the-job miner fatalities.

A representative of the Subcommittee on Health and Safety has conducted preliminary visits to disaster sites, and the committee will look more deeply into the situation after the second session begins.

Meanwhile, Mr. Speaker, I offer the House the following observations from the December 16 Pittsburgh Post-Gazette:

MINING: TREND TOWARD TRAGEDY

Three coal mining accidents in quick-succession last week marked another setback in the national campaign to make the nation's most dangerous workplace safer.

The 24 miners who died in cave-ins and explosions apparently lost their lives to tragic carelessness. A slate slab fell from the roof of a West Virginia mine. Better inspection inside the mine could probably have detected the unsupported structure.

In a Tennessee accident, a pocket of methane gas, one of the most common causes of mine explosions, was ignited. Better ventilation might have prevented this too familiar cause of mining disasters.

A Kentucky disaster reportedly occurred when several dynamite charges exploded without warning. Careful handling of a dangerous substance may prove to have been absent in that circumstance.

At least one of the accidents occurred at a site of repeated mine safety violations, and each could conceivably have been prevented by the exercise of greater prudence and care in mining operations. Like other recent incidents that proved fatal, the accidents took place at smaller mining operations.

It is also distressing that, while the large toll of multiple accidents tends to focus brief public attention on the lack of mine safety, "smaller" accidents at unsafe mining operations still claim lives with little or no attention on a somewhat predictable basis.

As the end of this year approaches, mining accidents in the United States have claimed a total of 143 lives, so far this year 10 more lives have been lost than last. The mounting annual total once again pushes the curve of safety performance within the industry in the wrong direction. The toll of lives this year exceeding that of last year also raises a warning that should not go unheeded by the federal government.

Congressional demands for stricter precautions and more safety inspections in the mines of America beginning in 1970 led to a decline in the number of mining accidents. In recent years, however, an increasing demand for coal and the consequent activation of many smaller mines has coincided with an increase in mining accidents and with misdirected cries that federal safety regulations have imposed "unproductive" restraints on mining operations.

That philosophical current gained an even more dangerous foot hold in federal government policy this year as the Reagan administration made substantial reductions in the numbers of federal mine inspectors. Clearly, the meaning of such false economies ought to be assessed against the rising toll of lives in the mine fields. The tragic accidents last week ought to convince federal officials that budget planning for the Mine Safety and Health Administration faces the wrong direction. Many more mine inspectors are clearly needed.●

HOSPICE CARE UNDER MEDICARE

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. RANGEL. Mr. Speaker, last week I cosponsored a bill, H.R. 5180, which would make hospice care reimbursable under the medicare program.

Hospices provide an alternative to the traditional methods of caring for the terminally ill—an alternative which recognizes the tremendous emotional and financial burden that terminal illness places on patients and their families.

The hospice movement is a fairly recent development in the United States, having grown tremendously over the last decade. As the experience with hospices is short, it is important in considering legislation such as H.R. 5180 to consider the experience of hospices throughout the United States. In addition, it is important to examine the many experiments and demonstration projects that are being undertaken by both government and private entities to gain from their experience. Thus, in cosponsoring this bill, I look toward its encouraging open discussions on the various issues and implications of covering hospice care under medicare rather than as a complete legislative solution to this complex issue.●

KING WALTER ROGERS, JR.

HON. ED JONES

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. JONES of Tennessee. Mr. Speaker, I rise today to pay tribute to Mr. King Rogers, Jr., of Dyersburg, Tenn. Mr. Rogers passed away recently and his death is a great loss to his community and all who knew him.

Mr. Rogers was always known as a man who was vitally interested in those around him and was very instrumental in the development of Dyersburg. He was a local businessman who unselfishly shared his time and talents for the good of others.

Rather than try to list all of his activities, I would like to insert into the RECORD the article that appeared at the time of his death in the Memphis Commercial Appeal. I want to take this opportunity to express my deepest sympathy to his wife, two sons, and grandchildren. His loss will be greatly felt by all of us who knew and appreciated him so much.

KING ROGERS, CIVIC LEADER OF DYERSBURG, DIES AT 69

King Walter Rogers Jr., 69, of Dyersburg, Tenn., well-known civic leader, businessman and humanitarian, died yesterday at Methodist Hospital in Memphis.

He was president of K. W. Rogers Grocery Stores, which includes nine stores, and of K. W. Rogers Farms and Realties, which includes land and farming interests throughout Dyer County.

He served as board member and president of the Ardmore Telephone Co. and was on the boards of the Crockett County Telephone Co. and the United Telephone Co. He was president and board member of Holiday Inn of Dyersburg and also was a board member of Edenton-Lamb, wholesale grocers.

He was twice named president of the Tennessee Retail Merchants Association.

He was a member of First United Methodist Church of Dyersburg and served on the church's building committee. He was a member of the church's board of stewards and of district finance committees to raise funds for church-supported colleges.

He was appointed in 1971 to the Board of Managers for Methodist Hospital in Memphis and later was named to the hospital's board of trustees, serving as president from 1975 to 1978.

He received the Living Award from the Methodist Hospital Foundation this year for his contributions to the hospital.

Mr. Rogers was a past director of the Dyer County Fair Association and past president of the Dyersburg Chamber of Commerce and the Rotary Club. He was a member of the Dyersburg Power Board and served on the boards of First Citizens National Bank and First Federal Savings and Loan Association.

He was chairman of the American Red Cross chapter and was a member of the Southeastern Area Advisory Council. He was president of the Tri-States Association of Cripples in the early 1960s and was a participant in the White House Conference on Aging under President Eisenhower.

He was active in the Boy Scouts and received the Silver Beaver Award, scouting's highest honor for adults.

He received the Jaycee's Outstanding Young Man of the Year award and its Humanitarian Award.

Mr. Rogers graduated from Dyersburg High School and the University of Tennessee. He also attended Harvard Business School. He served as a member of the University of Tennessee Developmental Council and was its president in 1969. He was a founding member of the university's President's Club and also was a member of the Development Committee at the UT-Martin.

Services will be tomorrow at 2 p.m. at the First United Methodist Church in Dyersburg. Burial will be in Fairview Cemetery. Curry's Funeral Home has charge.

He leaves his wife, Mildred Moss Rogers; two sons, King Walter Rogers III of Memphis and Robert Moss Rogers of Dyersburg, and two grandchildren.

The family asks that any memorials be made to First United Methodist Church, the West Tennessee Area Council of the Boy Scouts and the American Cancer Society.●

THE FEDERAL BUDGET QUESTIONS AND ANSWERS

HON. DONALD J. PEASE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. PEASE. Mr. Speaker, in my most recent newspaper column, I prepared an educational quiz for readers who might be befuddled by the Federal budget process. It follows:

WASHINGTON REPORT

(By Don J. Pease)

The federal budget process is taking more time and getting more confusing every year. Here is an educational quiz which may help you understand the process a little better. The first part is dry, but don't miss question No. 6.

Question No. 1. What is a budget resolution?

Answer. By law, Congress is required twice a year, in May and September, to adopt budget resolutions estimating federal revenues for the upcoming fiscal year and specifying how the money is to be spent and what the resulting surplus or (more commonly) deficit will be. The first budget resolution is a target; the second is binding.

Question No. 2. Why didn't Congress pass its September budget resolution in September?

Answer. Essentially because of President Reagan's last-minute (September 24) request for an additional $13 billion in spending cuts for this fiscal year. The White House negotiated for over two months with leaders of the GOP-controlled Senate and Democrat-controlled House of Representatives. The President finally said he would settle for $4 billion in additional cuts, and the resolution was passed last week.

Question No. 3. What's a reconciliation bill?

Answer. It's a device whereby Congress can order its own committees to change the law in ways to make specific cuts in federal spending. Used this year for the first time, reconciliation is the procedure employed by President Reagan and his congressional allies to cut $35 billion in federal spending for fiscal year 1982.

Question No. 4. What's the difference between an authorization bill and an appropriation bill?

Answer. Both are part of the two-step process by which federal funds are spent. No money can be expended unless the expenditure is first authorized by Congress. That is accomplished by an authorization bill setting a dollar limit and, equally important, the conditions governing the way in which the money can be spent. Once the authorization bill is passed, a separate bill must be enacted to actually appropriate the money. Authorization bills often authorize programs for two, three or four years at a time. Appropriations bills cover just one year.

Question No. 5. What is a continuing resolution?

Answer. If Congress is unable to complete action on all 14 major appropriations bills by the October 1 start of each new fiscal year, Congress passes a resolution "continuing" the federal government in operation for 30, 60 or 90 days until the appropriations bills are passed and sent to the President. It was a continuing resolution that President Reagan vetoed in his November confrontation with Congress that theoretically shut down the federal government for one day.

Question No. 6. Why does Congress persist, year after year, in appropriating more money that the President asks for?

Answer. Ah, that was a trick question. In the past 37 years, only once has Congress appropriated more money than a President asked for in his annual budget request to Congress. That one year in 37 was 1976, when President Gerald Ford requested $282 billion and Congress exceeded his request by two-tenths of one percent.●

A TRIBUTE TO MR. JERRY WURF

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. ROSENTHAL. Mr. Speaker, I wish to express my deep sadness upon learning of the death last Thursday of Mr. Jerry Wurf, president of the American Federation of State and County Municipal Employees. American labor has lost a great leader and the Nation has lost a great reformer and a passionate advocate for progressive causes.

Mr. Wurf was the quintessential labor leader and organizer. Although known as being tough, gritty and hard-driving, he was respected by all who knew him as a man of profound intellect, thoughtfulness and integrity. His effectiveness as the leader of AFSCME stands as the best testimony to this combination of irreverance and principle. During his presidency, AFSCME grew from being a small, struggling, almost bankrupt union to become the largest union of public employees.

Mr. Wurf tirelessly worked to fortify the integrity of the labor movement in America. His memory must continue to be a source of strength for us all.●

SALUTE TO THE BERWICK BULLDOGS

HON. JAMES L. NELLIGAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. NELLIGAN. Mr. Speaker, I have previously noted the proud high school football tradition which we uphold in northeastern Pennsylvania. I have noted that this tradition breeds fierce competition among area teams, and generates large amounts of deserved community pride.

This year's Eastern Conference Class A championship game between Wilkes-Barre's Coughlin High Crusaders and the Berwick High Bulldogs was certainly no exception. Although the Bulldogs emerged victorious by a 40 to 0 margin, both teams brought credit to their communities in the title game, which was played on December 5 at Berwick.

There is no longer any doubt that Coach George Curry's Bulldogs are the best high school football team in northeastern Pennsylvania. The only issue remaining is whether they are the best team in the State. Unfortunately, that issue will never be decided on the field, since there is no State championship game in Pennsylvania.

For my part, I have no doubt that the Bulldogs are the best team in Pennsylvania. On offense, they possess near perfect balance between running and passing games. Triple-threat Keith Seely contributed 16 points to the effort against the Crusaders, scoring once on a pass interception, once on a punt return, and kicking four points after touchdown.

On defense, the Bulldogs were just as dominant, holding the vaunted Crusader offense to just 93 total yards. Neither the Crusader rushing nor passing attacks could get untracked against the Bulldogs' defense.

I only wish that a State championship game were scheduled this year in Pennsylvania. If there were such a game, the fans of high school football teams in the Pittsburgh and Philadelphia areas would have good reason to worry. Their teams would be hard-pressed to prove that the Bulldogs are not the best team in the State—and perhaps in the Nation.

I salute Coach Curry and his players, and commend them for their victory. They have brought credit to the Berwick community, and to the 11th Congressional District, which I am proud to represent.●

SOUTHTOWN ECONOMIST COMMENTS ON UNITED STATES-SOVIET NUCLEAR WEAPONS POLICY

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. DERWINSKI. Mr. Speaker, the Southtown Economist serving suburban Chicago, is one of the largest and most influential community newspapers in the country. In their editorial of December 7, the Economist comments on United States-Soviet nuclear weapons policy, and the administration's possible moves at the negotiations table. I insert this very fine and timely editorial for the Members' attention:

[From the Southtown Economist, Dec. 7, 1981]

MOSCOW HAS CHIPS, UNITED STATES MUST HANG TOUGH AT GENEVA

The Reagan administration has opened its first arms negotiations with the Soviet Union in Geneva. The subject at hand is

theater nuclear weapons in Europe, but the ramifications of these talks are likely to be global in scope.

For starters, it is axiomatic that the Soviet leadership will use the Geneva bargaining to test the mettle of the new American administration.

President Reagan began his tenure in office by proposing a substantial buildup in U.S. military strength and by publicly denouncing the Soviets as amoral revolutionaries who would stoop to any deceit in their quest for world power.

But the same president subsequently lifted the grain embargo imposed by his predecessor following the Soviet invasion of Afghanistan. Then too, Mr. Reagan has pointedly refrained from any recent affirmation of his announced view last winter that any arms negotiations with the Soviets would be conditional upon less aggressive Soviet conduct around the world.

The men from Moscow will want to know which is the real Ronald Reagan. And they are bound to see the Geneva negotiations as an ideal forum in which to prove the limits of the administration's resolve.

The Soviets know that the United States entered the negotiations at something of a disadvantage. Soviet-Warsaw Pact forces already hold a 3 to 1 edge over NATO in theater nuclear weapons. Thus, the Russians can afford to adopt both a leisurely negotiating pace and hard-line positions that may force Washington to choose between a bad agreement or none at all.

Moreover, the rising tide of pacifism and neutralism sweeping Western Europe—to the absolute delight of the Kremlin—places far more pressure for concessions on Washington than on Moscow. Time, it would appear, is on the Soviet's side.

And then there is the matter of the "bargaining chips" available to each side. Moscow's weapons, including the mobile, multiple-warhead SS-20 missiles, are already in place threatening Western Europe. Washington's response—52 Pershing II and cruise missiles—haven't advanced beyond the testing stage and couldn't be deployed in full before 1984.

So, most of the pressure for concessions will be on the side that has the fewest chips to concede.

If this sounds like a case for postponing the negotiations, it isn't. The Reagan administration took office with little choice but to honor the commitment its predecessor made to NATO; namely, that the American-inspired plan to strengthen the Western alliance's nuclear deterrent would be matched by a vigorous effort to negotiate a mutual reduction of European-based nuclear weaponry with the Soviet Union.

Any political doubts about the wisdom of proceeding with those negotiations this year were resolved by the manifest pressures from Western Europe.

But even in these comparatively unfavorable circumstances, the Reagan administration is far from helpless. Mr. Reagan's abundantly justified distrust of Soviet motives and intentions is real enough, as Moscow will no doubt discover. So too is the Reagan team's belief that any agreement that would jeopardize rather than enhance Western security is worse than no agreement at all.

Above all, Reagan administration and its chief Geneva negotiator, former Navy Secretary and SALT team member Paul Nitze, recognize that the Soviets have always seen arms talks as an integral component of their drive to achieve military superiority over the West.

That recognition alone will go a long way towards guaranteeing that NATO's legitimate security interests will be fully protected during the bargaining in Geneva.

Once this message is received in Moscow, Soviet leaders will have one more reason to conclude that the Reagan administration will hang tough where it counts. On just such perceptions hang prospects for a less dangerous world.●

WHY I VOTED IN FAVOR OF HOUSE JOINT RESOLUTION 341

HON. DENNY SMITH

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. SMITH of Oregon. Mr. Speaker, I would like to explain to my constituents why I voted in favor of House Joint Resolution 341, a resolution to waive certain provisions of the Alaska Natural Gas Transportation Act. My reasons for supporting the resolution are simple. The waiver of law is essential if private financing to complete the Alaska natural gas pipeline is to be obtained; and access to the gas reserves in Alaska's Prudhoe Bay, which are estimated to equal approximately 13 percent of this Nation's total domestic reserves, is important if we are to set this country on the path to energy independence.

When I weighed the potential benefits to consumers of having access to Alaskan natural gas against the risks, my decision became clear, but I have reservations. In particular, I am concerned about the prebilling provision that would allow consumers to be billed for the pipeline prior to receiving any gas. I have reviewed the issue carefully, however, and I believe there are important safeguards written into the waiver package that would prevent consumers from being stuck with higher gas bills, without any gas.

Consumers could not be billed for the pipeline unless two conditions are met. First, the project completion date set by the Federal Energy Regulatory Commission must have expired. Second, the pipeline was divided into three segments and at least one of the segments must be completed before consumers could be charged. For the Alaskan and gas-conditioning plant segments, consumers could only be billed for debt service and maintenance costs. Motivation for profit would provide a strong incentive to the pipeline owners to make sure the project is completed in a timely fashion. In addition, construction plans have already been developed to make the project as cost effective and efficiently built as possible, adding credibility to the argument that even if there are delays in completing the project, they would be minimal.

In the short term, Oregonians would not be affected by the completion of the pipeline. Currently only about 15 percent of Oregonians use natural gas to heat their homes, and Oregon natural gas companies have no plans at this time to buy Alaskan natural gas. Projections provided by the pipeline sponsors show, however, that Oregon could one day receive approximately six-tenths of 1 percent of the gas that is expected to be supplied by the pipeline. That may not seem like much, but as the State continues to grow, a stable supply of natural gas will be needed to insure that the energy requirements of the Northwest are met. The completion of the Alaska pipeline would provide energy resources for Oregonians to fall back on in an emergency.

Passage of the waiver package will not guarantee that the Alaska natural gas transportation pipeline will ever be completed. The final test will be in the marketplace, where it should be. Private investors will have to decide whether to put their money into the pipeline project. My vote will only help to remove the legal barriers, so that the project can go forward.

The best way to protect consumers from future shortages is to make sure that there is an adequate supply of natural gas to heat their homes and businesses. I do not want anyone left out in the cold because of politicians' lack of foresight in anticipating our energy needs. The completion of the Alaska natural gas pipeline would guarantee consumers a stable supply of energy for years to come. My vote was for energy independence and for the consumer.●

FEDERAL MEAT INSPECTION ACT AMENDMENTS OF 1981

HON. WILLIAM C. WAMPLER

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. WAMPLER. Mr. Speaker, today I am introducing legislation at the request of the National Association of State Department of Agriculture that would modify the limitations on the interstate shipment of meat and poultry products from State-inspected plants. Under present law, State-inspected plants may only ship meat and poultry products within State boundaries, and so forth, intrastate.

I urge those who support or disagree with this legislation to write to me setting their views. At some subsequent date in the second session, I may introduce a new version of this bill with several technical and drafting changes I have not made in this version together with certain changes in substance that I believe warrant being made based on the recommendations I receive from parties interested in this legislation.

The restriction mentioned above was first imposed because there were no uniform national inspection requirements and many States had not developed any or even adequate inspection requirements for interstate shipment of meat and poultry products. The passage of the Wholesome Meat Act of 1967 required States to enact and enforce inspection requirements that were at least "equal to" the level of Federal inspection. Those States that chose not to meet the Federal requirements, or that were unable to meet the requirements under their State-oriented program, are now under the Federal inspection program. This change brought about uniform inspection of meat in both State-inspected and Federal-inspected plants throughout the United States. Similar requirements for poultry were established by the passage of the Wholesome Poultry Products Act in 1968.

The acts also established the basis for a Federal-State cooperative program to share in inspection costs. The program provides assistance and direction to those State governments conducting inspection programs for meat and poultry products. In addition, the program may provide up to 50 percent of the costs of operating a State inspection program. Currently, though, only 27 States have State inspection programs—23 for both meat and poultry and 4 for meat only. On October 1, USDA took over Rhode Island's meat and poultry inspection program; on October 3, they assumed responsibility for Michigan's meat inspection program. Earlier this year, Arkansas and Idaho relinquished their intrastate meat inspection programs to USDA.

Mr. Speaker, the bill I am introducing by request would amend the Federal Meat Inspection Act and the Federal Poultry Product Inspection Act to permit State-inspected meat and poultry products to move in interstate commerce, but would not allow these products to be eligible for sale or transportation in foreign commerce. Federally-inspected plants which ship products in foreign commerce would be required to keep State-inspected products separated from federally-inspected products.

Second, it would require States to use their own inspection marks on State-inspected products, so that they can easily be distinguished from federally-inspected products.

Further, the bill would establish procedures for plants to apply for inspection services or for a transfer of inspection authority. This provision would prevent establishments from whipsawing between Federal and State inspection services, which forces serious disruptions in inspection personnel, not to mention a needless mountain of paperwork.

Finally, the legislation would require State-inspected products moving in interstate commerce to meet the Federal requirements for marking, labeling, packaging, and ingredients.

The restriction on movement in interstate movement of meat and poultry products is particularly burdensome to State-inspected plants located at or near State borders. They are able to do business with suppliers who are located in the State, but not with their outlets in bordering States. This requires suppliers to segregate State-inspected products from Federal-inspected products at their warehouses. In addition, if a State-inspected plant switches to Federal inspection it can no longer buy products from traditional suppliers within the State who operate under State inspection. Such bill would eliminate these infringements by allowing State-inspected plants to ship products to Federal plants both intrastate and interstate.

While less than 5 percent of the total volume of meat and poultry are slaughtered and processed in State inspected plants, almost 42 percent (5,000 out of 12,000) of all meat and poultry plants are under State inspection programs. Thus, there are a large number of small plants which have only a marginal share of the processed meat and poultry market. This market share has trended downward. In 1967, the volume share slaughtered and processed by State-inspected plants was estimated at about 25 percent. The major reason for this decline is the large number of plants switching to Federal inspection. Given the fiscal restraints States are currently operating under, this trend is sure to continue.

Mr. Speaker, I understand that this legislation or similar legislation has the support of the U.S. Department of Agriculture.

Nonetheless, there are some meat and poultry interests who have reservations, serious or otherwise, about the bill. There are those who consider that States do not possess adequate enforcement mechanisms for monitoring products entering interstate commerce. Some also cite a lack of consumer confidence since State inspection labels separate from USDA federally inspected labels could lead to confusion and possible distrust by purchasers of meat products. Finally, it is contended by some that State-inspected plants already have the option to convert to Federal inspection and that maintaining dual inspection systems is burdensome and expensive.

I would hope that introduction of this bill could provide a forum for an airing of these differences. It may be that changes could be made in the bill to accommodate all interested parties.

I hope that Members also will take time to comment on this legislation and advise me whether they believe it has merit and support.●

HEALTH INSURANCE FOR FORMER AFDC RECIPIENTS

HON. WILLIS D. GRADISON, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. GRADISON. Mr. Speaker, in response to testimony from many welfare recipients across the Nation before the Committee on Ways and Means, I have introduced H.R. 5226, a bill to allow States to subsidize private health insurance for former recipients of AFDC (aid to families with dependent children).

Most of these recipients are women with children to support. Most want to work. Many, however, are afraid to work because a full-time job will put their earnings over the limit for AFDC eligibility. When they lose AFDC, in most States they also lose medicaid.

What these women have been telling us in Memphis, Baltimore, Indianapolis, and Detroit is that they are not afraid of losing their income assistance check from AFDC, but that they fear very much losing their medicaid cards. Many of them have children with health problems beyond the means of a minimum wage employee. In Memphis, we heard from women who tried to get private health insurance to replace their lost medicaid benefits. They found that it cost between $38 and $46 per week. On their minimum wage earnings of $134 per week before taxes, they could not afford the private health insurance. Those with sickly or handicapped children felt their only realistic option was to quit their jobs and rely solely on AFDC and medicaid.

H.R. 5226 would allow States, at their option, to subsidize all or part of this health insurance cost for former AFDC recipients whose wages have risen to the point where they are no longer entitled to medicaid. It would also permit States to bargain with a health insurance company for a group rate for these families lower than they could obtain individually. The subsidy provided to the former recipients would be based on a sliding scale according to family income. State expenditures for the health insurance subsidy would be subject to the same Federal matching as AFDC income assistance.

This bill has a twofold rationale: First, it avoids the so-called notch problem that currently exists in the medicaid program. Under a sliding scale subsidy, the recipient would gradually pay more and more of the health insurance premium but would never cross a point where another dollar of income meant the termination of health coverage. Second, it puts the employed former recipients into the same kind of health coverage

plans used by other working people in our Nation. While these plans may not be as all inclusive as medicaid, private health insurance is perhaps a more appropriate form of coverage for families with income to help them meet deductibles and copayments.

This bill was drafted as an idea piece to set forth the general concept of subsidizing private health coverage for former welfare recipients. I realize that it is silent on a great many details which will have to be specified if this approach is legislated. I hope that people with interest and expertise in this problem will share with me their reactions, comments, and suggestions for improvements and refinements of this concept.●

FEDERAL BUDGET CUTS: A CRISIS FOR PUBLIC GENERAL HOSPITALS

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. WAXMAN. Mr. Speaker, the cuts in health and welfare programs contained in the Omnibus Reconciliation Act of 1981 are having a profoundly adverse impact on the public general hospitals in this country. As the institutions of last resort for the poor, these facilities are a major thread in the fabric of the social safety net. Yet, as the following article from Modern Healthcare magazine makes clear, public general hospitals in Boston, Chicago, Denver, Atlanta, and my own city of Los Angeles are struggling to continue to provide decent care to the poor while absorbing massive Federal, State, and local budget cuts. It remains to be seen how they will cope and, in some cases, whether they will be able to cope at all. There can be no doubt, however, that further cuts in health and related welfare programs, particularly medicaid and AFDC, will have a devastating impact on these facilities and the people they serve. I would urge my colleagues to consider the precarious financial circumstances of the public general hospitals when deciding whether to support the President's request for more social program cuts in fiscal year 1983.

The article follows:

PUBLIC HOSPITALS STRAINING TO SURVIVE FEDERAL ASSAULT ON HEALTHCARE COSTS

(By Linda Punch)

The federal government's assault against rising Medicare and Medicaid expenditures already is taking a heavy toll on many of the nation's big-city public hospitals.

As some industry observers see it, the nation's public hospitals are facing an impending national crisis because of government cutbacks in support for health services for the poor. In Atlanta, Grady Memorial Hospital expects its 1982 budget deficit to double as a result of Medicaid cuts. In Los Angeles, the county hospital system already is cutting $75 million from its budget and predicts that larger cuts are in the offing.

The financial problems appear so overwhelming that at least one public hospital administrator sees public hospitals closing rather than face the impossible task of providing healthcare to the poor without adequate funding. And ultimately, he predicts, the burden of caring for the poor will fall on the private sector, which so far has escaped the financial distress descending on its public sector counterparts.

Although government decisionmakers' concerns about "health cost inflation and economic stability are legitimate ones, there has been inadequate attention to the drastic cumulative impact of their decisions," said Larry S. Gage, general counsel for the National Assn. of Public Hospitals. "Our nation's public hospitals—who deliver the bulk of these services—must translate the abstract political decisions into the harsh reality of medical attention denied."

Cook County Hospital in Chicago was one of the first hospitals hit by budget cuts. Patient transfers from voluntary hospitals "suddenly increased" there after Illinois Gov. James R. Thompson imposed a $285-per-day ceiling on public assistance for inpatient care.

"In July, when the ceiling first took effect, patient transfers increased to 360. It rose to 560 transfers in August and back down to about 350 in September. This compared with anywhere from 90 to 125 transfers a month throughout the previous year," said Elliott C. Roberts, Sr., hospital director.

The problem was alleviated temporarily when Gov. Thompson "did a reversal" and added $88 million to the budget for healthcare, Mr. Roberts said. The governor also agreed to reimburse hospitals on a reasonable cost basis rather than the previously established ceilings. The new guidelines came just before implementation of an Oct. 1 ceiling of $400 per day on Medicaid payments.

The hospital is now in "a situation similar to last year," Mr. Roberts said. "We will be paid for the services we provide." However, if the additional state funds for healthcare are depleted before the end of the fiscal year, he noted, "I perceive the same problems as in July but with different ground rules. This time there won't be any money available."

Illinois isn't the only state where budgets are being pinched. The impact of California's Proposition 13 is just now hitting public hospitals, said Robert W. White, director of health and hospitals for Los Angeles County.

"We're in the process of cutting about $75 million in programs from the system, including elimination of ambulatory care from 42 health centers, elimination of eight health centers and a 10% (budget) cut in all the hospitals," Mr. White said.

County officials expect the financial situation to deteriorate further in the aftermath of federal cuts in Medicaid funds and block grants.

"Our estimate is that Los Angeles County will lose $13 million in Medicaid, resulting in about a $25 million cut in programs," he said, adding that the state Medicaid program already has a deficit of from $180 million to $200 million.

"The state has the authority to cut payments back by 10 percent but nothing has happened yet. We may have further program reductions in January based on the effect of Medicaid, federal cuts and block grants. I don't see any relief in the near future," he said.

A $67 million cut in Georgia's Medicaid program will result in an estimated $4 million loss in revenue for Grady Memorial Hospital in Atlanta, said J. W. Pinkston, hospital director. The hospital already faces a $4 million deficit in its $95 million budget in 1982 because of inflation.

"We were getting along all right, but next year we expected problems because of inflation," he said. "The Medicaid cuts have made it twice as bad. We either have to find a way to bring additional money to Grady or cut a major chunk out of the hospital," Mr. Pinkston said.

The hospital also expects an increase in patient transfers because of the cuts but, "we'll have less money" to treat patients, Mr. Pinkston added. The 930-bed hospital handles about 750,000 clinic visits annually.

"If something is not done soon, we're going to be in very, very serious financial condition. The county already is supporting us by supplying 43 percent of the budget. That's all they can do," he said.

In Massachusetts, state officials announced that Medicaid reimbursement for chronic disease hospitals will be reduced to skilled nursing home rates for patients who should be in nursing homes. The cuts, effective Jan. 1, will be made "whether or not there are beds available" in long-term care facilities, said David Rosenbloom, Ph.D., commissioner of health and hospitals for the city of Boston.

"That could mean a reduction of as much as $100 per day per patient and would cost the city about $5 million per year," he said, adding that "it's too early to tell how other budget cuts will affect us."

"The principal villain isn't the nickle and diming on reimbursement rates. It's the number of people who will lose their Medicaid eligibility and end up at this hospital," Dr. Rosenbloom said.

Many voluntary hospitals already are turning away Medicaid patients seeking elective procedures, fearing that many of them will lose Medicaid eligibility under the cuts, he said.

"The immediate impact of these cuts is to engender substantial fear among the poor that they will lose their healthcare benefits," Dr. Rosenbloom said, terming the cutbacks "an outrage" that will place a heavy burden on public hospitals.

"The industry will be relatively unscathed because everybody but the public hospitals can escape. The only hospitals that can't escape will be those taking care of large numbers of poor and elderly—the inner-city hospitals," he said.

The poor are not responsible for the spiraling inflation in the healthcare industry, Dr. Rosenbloom added. "The hospital industry as a whole is guilty of price gouging and inflation. The legislation setting up Medicaid and Medicare guaranteed the inflation that followed," he said.

Another factor in the high cost of healthcare for Medicaid patients is that in "big cities, teaching hospitals are the primary source of care for the poor," Dr. Rosenbloom said.

"A teaching hospital is an extremely expensive way of providing care. There was enormous inflation because the cost of medical education was tacked onto Medicaid bills," he said.

Dr. Rosenbloom warned that Medicaid cuts eventually will hurt the private sector hospitals. "They think they can protect

themselves by freezing out Medicaid patients, but they're going to find that public hospitals will close rather than have that happen. And then they (voluntary hosptials) will have the ball," he said.

Budget cuts in Colorado will place "greater pressure on public funding sources, which already are strained," said J. L. Kurowski, M.D., manager of health and hospitals for the city of Denver. Although there have been no reductions in Medicaid reimbursement rates, there have been cuts in the number of people eligible for basic categorical assistance programs such as Aid to Families with Dependent Children, he said.

"We're not sure of the number of people involved since it's just being implemented," Dr. Kurowski said, noting that the AFDC rolls alone will be cut by 1,500 people.

"At the same time people are removed from AFDC, they're removed from the Medicaid rolls," he said. "That means we'll have the same patients with no money or new patients (from voluntary hospitals) with no money. We don't know which it's going to be."

Denver General Hospital already is experiencing "patient dumping" in mental health, Dr. Kurowski said. "Community health centers aren't handling the problem of the chronically mentally ill patient with acute episodes. It's the most significant problem we have right now," Dr. Kurowski stressed.

A congressional hearing on the impact of fiscal 1982 budget reductions and program changes on healthcare for the poor will be conducted Jan. 12 in Denver by the House Ways and Means Committee's subcommittee on oversight and investigations. Rep. Charles Rangel, D-NY, is subcommittee chairman.

After the hearings, the National Assn. of Public Hospitals will conduct its first annual conference Jan. 13-14 at the Stapleton Plaza Hotel in Denver.

The conference will examine the impact of current health budget and program reductions on the ability of public hospitals to serve their communities. Conference speakers will include former Dept. of Health, Education and Welfare Secretary Joseph A. Califano, Jr. and Rep. Rangel.●

CONGRESS MUST REMAIN ACCOUNTABLE

HON. DUNCAN HUNTER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. HUNTER. Mr. Speaker, I am appalled at the irresponsible back-door method that was used to provide Members of Congress with a tax cut as well as an increase in the ceiling on outside earnings.

This maneuver was a direct slap in the face of the American people and clearly violates the principle of Government accountability. If Congress believes that it deserves a tax break, then the individual Members should be willing to go on record in support of such a measure.

What occurred yesterday was a deliberate attempt on the part of some Congressmen to avoid responsibility for their actions. It is such tactics which shake the confidence of the American people in their elected officials and provoke cynicism directed at the representative form of government.

I call on you, Mr. O'NEILL, as Speaker of the House, to insure that such devious means are not employed in the future. Representative democracy necessitates that we be held accountable for our actions—especially those that are most controversial. If the Congress chooses to bypass standard procedure when feathering its own nest, it cannot help but invite the wrath of the American public.●

STRONG U.S. DEFENSE POSTURE INSURES OUR GOALS

HON. E. CLAY SHAW, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. SHAW. Mr. Speaker, I was faced with a difficult decision while casting my vote on the Foreign Aid Appropriation bill before the House last week. At a time when we are reexamining domestic spending in an effort to control runaway inflation, I feel it equally important to turn our attention to spending outside of our country. I fully understand and support the basic premise behind foreign assistance. Strengthening our defense posture is an extremely important goal of this administration and one that I strongly support. One necessary arm of this policy is an increase in defense spending. Another important tool in securing our posture is an increase in funding for our Coast Guard. The second arm of this goal which is to strengthen our defense posture can be achieved by beefing up our position internationally. We must increase our presence among our neighbors. A strong and viable presence insured internationally is essential to our overall goals. In this regard, I support United States presence in the Middle East/Persian Gulf region. This area is vital to our interests. Bilateral aid, money sent directly from the United States to recipient countries such as Israel, Egypt, Turkey, the Philippines, and so forth, is an important tool in the development of foreign policy. A large portion of this aid comes under the economic support fund (ESF) which helps friendly nations by providing money to our allies for the purchase of arms. A large portion of this money is used by our friends in the Middle East, Israel, and Egypt, as well as by the Dominican Republic, Turkey, Sudan, and others.

While the bill contains some very important and vital programs, within its complexity are some more disconcerting provisions. The International Development Association (IDA), the lending arm for the World Bank, causes some real concerns. The IDA makes no-interest loans to Third World countries. There was great debate among my colleagues regarding this issue. I supported the reduction of the original funding level in the bill. While I am pleased to see that the level has been substantially reduced, my concerns have not yet been laid to rest. One of the most important components of a successful, strong foreign policy is ultimate control over the direction of such a policy. Direct, or bilateral aid to specific countries allows for such control. Problems arise when foreign policy is conducted by funneling large sums of money into general programs rather than funding directly with direct control.

The decision that I made in regard to this bill was a difficult one. I cast my vote as the final seconds ticked away on the clock, and I must confess, I cast my vote with much deliberation. I was torn between my support for specific portions of the bill and concerns over others. I sincerely hope that my vote will send a signal that Members of Congress take such foreign policy decisions seriously. Maybe it is time for us to reexamine execution of our foreign policy.●

AMERICANS SEND POWERFUL MESSAGE OF SUPPORT FOR POLISH PEOPLE

HON. ALBERT LEE SMITH, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. SMITH of Alabama. Mr. Speaker, the people of Poland are not alone in their struggle to retain their inalienable rights, which are today jeopardized by the Communist Party crackdown on the Solidarity Union. They are joined by the 200,000 Americans who have signed the "Poland will be free" petition circulated by the College Republican National Committee.

These Americans have sent a powerful message of support for the Polish people in their struggle to retain the rights of freedom of religion and freedom to organize into voluntary associations such as trade unions.

In addition to circulating the petition in every State, the College Republicans held rallies across the country in support of Solidarity during the month of November. Over 5,000 young people participated in these rallies, which were held in 12 States. I had the privilege of speaking at the rally here in Washington, D.C. on November 16, which was attended by over 400 students from four area States.

The "Poland will be free" campaign has made an important contribution to freedom around the world by demonstrating that America will not toler-

ate violence aimed at the free trade union Solidarity or the Polish people.●

POTENTIAL IMPACT OF REDUCTION IN ADMINISTRATIVE FUNDS

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. CONTE. Mr. Speaker, I have here a letter from Mr. Alfred M. Zuck, Assistant Secretary for Administration and Management at the Department of Labor that discusses the circumstances surrounding the potential impact of a reduction in administrative funds for the State employment security agencies.

I would like to submit this letter for the record.

U.S. DEPARTMENT OF LABOR,
WASHINGTON, D.C.
Dec. 14, 1981.

Hon. WILLIAM H. NATCHER,
Chairman, Subcommittee on Labor, Health and Human Services, Committee on Appropriations, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: The Secretary has asked me to respond to your letter of November 20 requesting information on the availability of a Department of Labor study on the impact of a 12 percent reduction in administrative funds for the State Employment Security Agencies to process unemployment compensation payments.

The Department does not have any study on the impact of the proposed reduction on the unemployment benefit payment functions in the States. There is an internal staff analysis, a copy of which is enclosed.

The Administration decided not to use the staff analysis as an official position because the analysis did not take into account significant changes that occurred in the UI system after the 1975 recession. The analysis was not modified because it would be extremely difficult to estimate in a short amount of time the impact of system changes.

I would like to elaborate on these interperiod differences to illustrate why we did not attempt to quantify the impact. As is well known to the Committee, it was as a result of the 1975 experience that the Committee provided substantial funds for automatic data processing improvements in the State agencies to increase productivity, cost effectiveness, and quality controls.

The table attached to the analysis indicates that productivity and timeliness of payments increased dramatically since Fiscal Years 1975 and 1976. The Unemployment Insurance Service and the State agencies have developed new procedures and fraud detection methodologies to avoid the problems which arose during the earlier period. In addition, many of the problems generated in 1975 resulted from the hiring of large numbers of temporary employees to process claims. Under mid-session economic assumptions, a much higher proportion of permanent base staff would be used than in the 1975 recession.

For these reasons, the Department decided not to accept the staff impact analysis.

Sincerely,

ALFRED M. ZUCK,
Assistant Secretary for Administration and Management.●

GULF COAST NEWSPAPERS SUPPORT COASTAL BARRIER BILL

HON. THOMAS B. EVANS, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. EVANS of Delaware. Mr. Speaker, from time to time, I have been sharing with my colleagues examples of recent newspaper editorials regarding the Coastal Barrier Resources Act which I have introduced in the House and Senator CHAFEE has introduced in the Senate.

The States bordering the Gulf of Mexico have a good share of all the coastal barriers—islands, spits, tombolos, and the like—that are found in the United States. In their natural state, coastal barriers on the gulf coast, as well on the Atlantic coast, serve many important functions. As the Jackson (Miss.) Clarion-Ledger noted:

The islands serve as natural breakwaters, helping reduce the force of violent storms—hence the designation as "barrier" islands. Besides helping protect the shore, the islands, which form marine nursery grounds, are treasures of animal and plant life.

In fact, testimony this past June before the Subcommittee on Fisheries and Wildlife Conservation and the Environment indicated that more than 80 percent of the shellfish and finfish caught by sport fishermen on the Atlantic and gulf coasts are, at some stage of their life cycle, dependent upon estuaries created and maintained by coastal barriers.

Mr. Speaker, many people believe that it is simply folly to try and build permanent, manmade structures on coastal barriers. A recent editorial from the New Orleans (La.) Times-Picayune stated it this way:

"The shifting, eroding sands of the fragile strips are not really suitable for development, and the obvious vulnerability of the islands to hurricanes makes them unfit for prolonged human habitation."

Not only do many knowledgeable people believe it is unwise to develop storm-prone coastal barriers, but they also believe that those who do develop these areas should do so at their own expense—not the U.S. taxpayers'. The Houston (Tex.) Post noted, "If anybody has so strong a desire to live on a barrier island, it should be at his own expense—not ours." The New Orleans Times-Picayune summed it up this way: "A government pledged to conserving the taxpayers' money should have nothing to do with building castles in the sand." I heartily agree.

Mr. Speaker, I am gratified at the support for H.R. 3252 expressed by these fine newspapers from States along our gulf coast. Their views are particularly significant since so many of our presently undeveloped coastal barriers are found in this region. With this statement, I am including the full texts of six editorials from three Gulf Coast States so that my colleagues may read the editorials in their entirety.

[From the Clarion-Ledger, Jackson, Miss., May 1, 1981]

ISLAND FOLLY: BAILING OUT TAXPAYERS

Proposed legislation barring federal subsidies for residential and commercial development of undeveloped barrier islands off the East and Gulf Coasts should be passed by Congress.

Senator John Chafee, R-R.I., and Representative Thomas B. Evans Jr., R-Del., sponsors of the proposal, say enactment of the bill could save millions of dollars in subsidies that now help develop the islands.

The barrier islands—shifting spits of sand that lie off the coast from Maine to Mexico—are often unstable and vulnerable not only to violent ocean storms but also to gradual erosion of wind and tide.

Mississippians have more than a passing interest in the legislation because of current efforts to develop such a fragile strip of land—Deer Island—located only 100 yards off Biloxi's Gulf Coast shore.

The Chafee-Evans bill does not prohibit development of such islands nor does it provide for any land purchases by the government. "What it does say," commented Evans, "is that if you move ahead, you do so at your own financial risk and not at the risk of the American taxpayer."

The proposal would not affect barrier islands already developed, such as Miami Beach. Chafee said the bill would affect about one-third of the 2,700 miles of island shoreline.

Both common sense and experience show that barrier island development is generally imprudent and very risky at best. The islands serve as natural breakwaters, helping reduce the force of violent storms—hence the designation as "barrier" islands. Besides helping protect the shore, the islands, which form marine nursery grounds, are treasures of animal and plant life.

While the proposed legislation does not forbid further barrier island development, it at least would protect taxpayers from subsidizing such foolhardy ventures.

Experts warned Congress last year that many island developments are disasters waiting to happen, insisting that no manmade structure can stand up to the assault of an Atlantic hurricane that sooner or later will hit. Mississippians, with their memories of Hurricane Camille, would heartily agree.

Nevertheless, the federal government provides subsidized insurance for structures that can be blown away in the first big storm. In 1978 and 1979, taxpayers were stuck with claims and expenses in high-hazard coastal zones exceeding premiums paid by a ratio of more than 3 to 1.

The government also subsidizes water and sewer systems and highways for vulnerable island developments.

The bill would bar subsidies for both flood-insurance policies and water, sewer and highway construction on these undeveloped islands.

The proposal merits the combined support of fiscal conservatives and environmentalists. And the Reagan Administration would be doing the country—and itself—a favor by lending its support.

Hearings are expected sometime this summer. We hope the bill thereafter will win speedy approval.

[From the New Orleans Times-Picayune, Apr. 30, 1981]

SUBSIDIZING SAND CASTLES

There is no reason why the nation's taxpayers should subsidize the private development of barrier islands in the Gulf of Mexico and off the Atlantic coast. There are, in fact, good reasons why they should not.

The little islands serve as protective barriers, diluting the impact of hurricane tides on coastal communities. The shifting, eroding sands of the fragile strips are not really suitable for development, and the obvious vulnerability of the islands to hurricanes makes them unfit for prolonged human habitation. The use of taxpayers' money to subsidize their development is an unwise and inappropriate expenditure.

Two Republican legislators, Senate John Chafee of Rhode Island and Representative Thomas B. Evans Jr. of Delaware, make these points in support of their bills to eliminate federal subsidies for such high-risk ventures. The proposed legislation could save millions of dollars in federal flood insurance subsidies alone by stopping new flood insurance policies from being issued for undeveloped islands. The bills also would eliminate federal subsidies for water and sewer systems and highways.

The two congressmen note that their proposed legislation would not prohibit local governments from zoning barrier islands for development nor stop private developers from proceeding on their own. "What it does say is that if you move ahead, you do so at your own financial risk and not at the risk of the American taxpayer," said Rep. Evans

Without federal subsidies to pave the way and absorb much of the risk, the folly of investing millions of dollars in the development of the vulnerable barrier islands should become more apparent to those eager to reap a financial windfall from their development.

The two congressmen hope to and should receive the backing of the Reagan administration for their bills. A government pledged to conserving the taxpayers' money should have nothing to do with building castles in the sand.

[From the New Orleans Times-Picayune, Oct. 23, 1981]

WATT FOR BARRIERS

Agreement on an issue between U.S. Interior Secretary James G. Watt and environmentalists has been almost as rare as the sighting of a black-footed ferret. For that reason, the secretary's unequivocal support of congressional efforts to halt the use of federal money for private development of the coastal barrier islands attracts attention.

The barrier islands, such as those in the Gulf of Mexico off the coast of Louisiana and Mississippi, are fragile strips of constantly shifting and eroding sands. For years, the federal government has underwritten billions of dollars of federal flood insurance for barrier islands. Federal money spent for highways, bridges and bulwarks against beach erosion also has contributed to development or partial development of some of the islands.

Constantly nibbled at by tides and frequently pounded by hurricanes, the barriers are conspicuously unsuited for permanent man-made works. In their undeveloped state, they serve a useful purpose as buffers that reduce the impact of hurricanes on developed coastal communities.

In an appearance before a Senate Public Works subcommittee, Mr. Watt said the government could save $5.5 billion to $11 billion in the next 20 years by halting the use of federal funds for the development of barrier islands. He pledged his enthusiastic support for a bill sponsored by Senator John Chafee of Rhode Island to curtail federal subsidies for the fragile islands.

It is now up to the interior secretary to produce a definition of "undeveloped coastal barrier" to be covered by the Chafee bill.

Of the bill, Mr. Watt said, this is "precisely the sort of imaginative environmental legislation we need—legislation which can solve real problems in the stewardship of our national resources while at the same time responsibly addressing America's equally serious economic problems."

It is a welcome change from the usual confrontation of the secretary and environmentalists.

[From the Corpus Christi Times, May 6, 1981]

RIGHT IDEA ON ISLAND DEVELOPMENT

A couple of Republican lawmakers up in Washington want to get the federal government out of the business of subsidizing the development of America's environmentally sensitive barrier islands. While their plan will raise the hackies of would-be developers, it seems to us to have a good deal to recommend it.

Senator John Chafee, R-R.I., and Representative Thomas B. Evans Jr., R-Del., said during a news conference last week that their bill could save the federal government a ton of money which is currently going to underwrite flood insurance, subsidize sewer and water lines, and construct roads for island developments which can all too easily be swept away by a hurricane or other freak of nature. Evans noted pointedly that claims and expenses recorded in hazardous coastal zones in 1978 and 1979 exceeded premiums paid in by a ratio of over 3 to 1.

The two took some pains to stress that their legislation would in no way keep persons or companies from building structures on the islands, nor would they prevent local governments from zoning islands for development. "We're not prohibiting anybody from doing anything," Chafee said. "If they want to build a hotel that's fine. We're just saying we're not going to subsidize it."

Chafee and Evans' approach makes eminently good sense. The present situation, in which Washington at least tacitly encourages development of sensitive barrier islands, seems to us wasteful and reckless. Indeed, if it were up to us, we'd like to see the federal government given some powers—tightly limited powers—to slow or even halt the exploitation of islands whose very existence could be threatened by the kind of rape and ruin development that we have so often seen. But Chafee and Evans are at least heading in the right general direction. We hope Congress will follow their lead.

[From the Houston Post, June 7, 1981]

BARRIER GRIEF

For once, environmentalists and dollars-and-cents pragmatists are united in a cause: For the federal government to stop spending tax dollars to boost development on barrier islands. The two groups come from different viewpoints to the same conclusion: The environmentalists believe that the barrier islands are essential to the ecology that lets shrimp, oysters, ducks and geese flourish. The pragmatists believe that it is economically silly to build expensive luxury resorts on islands that will periodically be hit by a hurricane, leaving disaster relief and government insurance to balance the losses.

The widely representative campaign is focused on U.S. government projects that link barrier islands to the mainland at enormous expense and, often, for the benefit of a few. In 1979 Hurricane Frederic swept away the causeway leading from Mobile, Ala., to Dauphin Island. In the decade or so before, Dauphin Island had grown into a seaside resort of retirement homes as well as weekend cottages, private clubs and marinas. Unlike old-time beach houses with wicker furniture and hammocks, many Dauphin Island mansions were furnished with antiques and electric household equipment. The hurricane damage ran to millions. Now the government is building a bigger stronger bridge for some $40 million—$25,000 for each of Dauphin Island's 1,600 full-time residents.

Senator John H. Chafee of Rhode Island and Representative Thomas B. Evans Jr. of Delaware have introduced a bill that would stop the spending of tax dollars to promote private development on the exposed and ecologically delicate barrier islands. Though both sponsors are Republicans, their supporters span the entire political spectrum, including Americans for the Coast with Robert S. McNamara as its spokesman, Howard Jarvis of Proposition 13 renown, the National Audubon Society headed by Russell W. Peterson, William Buckley, Art Buchwald, Lady Bird Johnson, Milton Eisenhower and Gen. Matthew B. Ridgway.

The Reagan administration is sympathetic. A private study of three coastal areas commissioned by the government found that federal spending totaled $53,250 in 1980 dollars for each acre developed. To continue subsidies for barrier island development could cost as much as $6 billion in the next 20 years. To stop the practice would multiply the savings by reducing the expense of disaster relief.

Such built-up portions of barrier islands as Galveston and South Padre would not be affected. But the bills would cover 137 miles of barrier island beaches on the Texas Gulf Coast. It makes no sense for the U.S. government to spend tax money to encourage people to build permanent housing and move their valuables to an island that cannot be made safe against the force of a hurricane. If anybody has so strong a desire to live on a barrier island, it should be at his own expense—not ours.

[From the Houston Chronicle, Oct. 26, 1981]

NO REASON TO SUBSIDIZE BARRIER ISLAND DEVELOPMENT

Each year the federal government spends millions in taxpayers' money to subsidize private development of coastal barrier is-

lands. It is about time the Congress took a closer look at this unfair expenditure.

Legislation has been introduced that would prohibit federal subsidies on undeveloped islands along the Atlantic and Gulf coasts. This means no federal aid for road and bridge construction, sewer and water systems and other improvements, and no federally subsidized flood insurance that takes much of the risk out of building in a particularly risky area.

The legislation, sponsored by Senator John H. Chafee, R-R.I., and Representative Thomas B. Evans, Jr., R-Del., does not call for federal takeover of the coastal islands, nor does it restrict private development. The government has no business telling landowners how to use their land. However, the legislation would take away the subsidies underwritten by U.S. taxpayers and put the financial responsibility where it belongs—upon those who choose to build on these islands.

The barrier islands are fragile and ever-changing, and they are vulnerable, getting the full force of hurricanes and storms, which means expensive developments could quickly be reduced to so much debris that would take thousands of dollars in federally subsidized flood insurance to rebuild. And there is no predicting when another storm will hit and require rebuilding once again—with taxpayers helping foot the bill.

As Interior Secretary James G. Watt said in endorsing the legislation, "Taxpayers should not shoulder the recurring costs and high risks of private development of coastal barriers."

Barrier islands already developed, such as Galveston and Miami Beach, would not be affected by the legislation, nor would developed sections of such islands as Padre Island. Rather, the legislation is directed at those islands that now are mostly beach and sand dunes. Presumably, the legislation coincidentally would result in more of these islands remaining in a closer approximation of their pristine state, providing a buffer against storms for the mainland and offering unspoiled beaches and dunes for the public.

Watt estimates the bill could result in savings to U.S. taxpayers of $5.5 billion to $11 billion in the next 20 years in federal aid for construction on the barrier islands or reconstruction after storms have hit.●

HOMEOWNERSHIP

HON. LYNN MARTIN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mrs. MARTIN of Illinois. Mr. Speaker, homeownership is a dream shared by most Americans. Although it has become increasingly more difficult to own and maintain that dream home, I find solace in knowing that the tax provisions which directly benefit homeowners are still in place.

As we all know, these various tax provisions can help you and me reduce those burdensome costs of acquiring, owning and selling a home. In fact, the mortgage interest and property tax deductibility alone can reduce first-year costs for some households by as much as 35 percent or more.

Nonetheless, even in light of encouragement by the Federal income tax laws, prospective first-time homeowners are finding it extremely difficult to purchase their dream house or any house. Rumors have developed, as we all have heard, which question whether these tax provisions meant to benefit homeowners at a cost of $39 billion to the Federal Government in 1982 alone are really appropriate. Or can this same objective be achieved through a different approach.

Although these are only rumors, one point is certain—homeownership is like Mom and apple pie. Any effort to alter these tax provisions which help you and me purchase that dream home, I assure you, will be met with resistance.●

GIVE THE PLAN A TRY

HON. JOHN J. DUNCAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. DUNCAN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following:

NO PLAN WILL WORK IF NOT TRIED

A lot of politicians and special interest groups say that the Reagan "Save the Nation Plan" will fail. I tend to agree with the others who say "The Reagan Plan won't fail, because it will never even be tried."

One economist puts it this way, "Reagan was elected as captain of the Titanic, a sinking ship."

Have you ever set out to do something and before you hardly get started, someone tells you, "It won't work"? It sure can make your teeth grind and you have to bite your tongue to keep from replying, "How do you know it won't work? I haven't even got it started."

I'm about as handy with tools as a cub bear with gloves, but one time I had clothesline problems. The durn clothesline kept falling down every time the wife hung out a clean wash. Needless to say, I was not very popular with my clothesline, but after agonizing over it for days, I set out with my super plan to put up a clothesline that would cure my troubles and get me out of the doghouse.

I had no more than started to dig the post holes (for the third time) when a neighbor came by and said, "Chuck, that ain't gotta work." It wasn't long until the wife came out and she told me, "It won't work." By then the kids had heard all the votes of confidence I had received and they echoed the unpleasant song, "Daddy, it just won't work." They sang it.

Everyone was yelling that it wouldn't work and I began to believe it. It is an interesting thing how you can influence the mind by mass psychology. The Reagan Plan isn't going to work, just as the man said. It will never be tried.

Oh sure, there have been some piecemeal attempts by Congress to act like they were following the President's plan to reduce the annual increase in government spending, and allow us to keep more of the money we earn, but they aren't going to do away with the Pork Barrel giveaways in their home districts. There is that lack of concern by Congress to cut out waste, run down cheating, and cut down finding more ways to run up our national debt.

It is a case of survival. Survival for staying in Washington, not survival of our economy, that too many of our representatives are interested in. Of course, you can't blame those fellas too much. They are encouraged to keep spending more than is taken in through taxes by all of us. We all seem to have our private interest groups and projects that we feel must be saved. It's like the old story of putting out food for the wild birds. Pretty soon they expect it and forget how to forage for themselves.

Even the city, county and state governments were lulled into the federal handouts. It was beautiful to receive those "free" grants from Uncle Sam. Few can say they have never enjoyed some benefits from that so-called "Washington Winter Wonderland." We just didn't know or we didn't understand that Uncle Sam was borrowing a large chunk of that money and that someday we would have to pay high interest rates for the federal government to be able to borrow more to pay interest on what was already borrowed.

I don't subscribe to the "Doomsday" crowd philosophy, that says, "Every silver lining has a dark cloud," rather than the optimist who claims that "Every dark cloud has a silver lining." However, I'm not going to hold my breath until the federal budget is balanced. I've got a feeling that I'll be pushing up daisies before that trillion dollar debt comes down a nickel.

Who was the little boy who stuck his finger in the hole of the dam and saved the town? He sure couldn't do much with our national treasury as there are so many holes where the money trickles out, that it looks like even President Reagan won't be able to stop the flow. Sorry, Pres. It looks like you got to Washington too late.

Most everyone has already yelled that your plan won't work and so that is all we see and read. I know how you feel, as I just gave up on my clothesline and bought an electric clothes dryer. I thought I'd never get it paid for, but it worked. To this day I still don't know if my Clothesline Super Plan would have worked, as I never tried it.●

ANTITERRORISM AND FOREIGN MERCENARY ACT

HON. MATTHEW J. RINALDO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. RINALDO. Mr. Speaker, on Monday I introduced H.R. 5211, the Anti-Terrorism and Foreign Mercenary Act.

In recent months the press has been filled with reports concerning the reported involvement of American citizens in a variety of military and intelligence support activities on behalf of the Libyan Government. I have been advised that these activities are largely beyond the scope of our present Federal criminal law. My bill would close this gaping loophole.

The bill would make it unlawful for an American citizen, on behalf of a

foreign state, international terrorist group, or faction named by the President in a proclamation, to:

Serve in its armed forces or intelligence agency;

Provide training for persons so serving;

Provide any logistical, maintenance, or similar support service;

Conduct any research, manufacturing, or construction project directly related to its military functions; and

Recruit any other person to do any of the above.

The proclamation could be issued only when the President finds that military support activities by Americans on behalf of a particular foreign state, international terrorist group, or faction are or would be detrimental to the national security. He would have complete discretion in deciding whether to issue the proclamation. Reasonable notice is provided by a 60 day notice provision; this could be waived, however, in an emergency.

This measure clearly would not apply to any friendly countries and, by its nature, would only be used in the most serious situations. Morevoer, the bill would not affect legitimate business activities in designated foreign states; if Libya were the subject of a proclamation hereunder, the American oil companies currently doing business there would not be subject to its penal sanctions, but only to the legal authority now possessed by the President.

The penalties under the bill are up to 10 years in prison and either $25,000 or a multiple of three times the amount of compensation received, whichever is greater.

I believe this omission in our criminal laws is one that should be cured as soon as possible. With the growth in the size of armies and the proliferation of advanced weapons in the Third World, new threats are being posed to our security. Many of these small states, as well as the terrorist groups and factions that infest the Third World, lack the expertise and skills needed to make effective use of their manpower and weaponry. To find these skills, some have turned to technologically advanced nations, like the Soviet Union and its allies, or have hired citizens of such nations, in particular, American citizens.

The Soviets have absolute control over the foreign activities of their nationals. We certainly should not emulate this totalitarian practice, nor could we, under the Constitution, but surely we have the power to prevent such blatant conduct by our citizens that threatens the Nation's security and, indeed, world peace. The constitutional bases of the extraterritorial jurisdiction asserted in this bill are U.S. citizenship and the foreign affairs and foreign commerce powers. With respect to citizenship, it is well established by decisions of the Supreme Court that Congress has the power to enact criminal laws regarding actions, wherever performed, that threaten the country's security. Furthermore, citizenship is a recognized basis of extraterritorial jurisdiction under international law.

This is a carefully drafted bill of vital importance, and I urge its early and favorable consideration by my colleagues.

SUMMARY AND EXPLANATION OF H.R. 5211

Sections 1 and 2: These give the title of the bill, the Anti-Terrorism and Foreign Mercenary Act, and set forth congressional findings that new threats are posed to the national security, foreign relations and foreign commerce interests of the United States by the growth in the size of armed forces and the proliferation of advanced weaponry around the world. They further stated that many states, terrorist groups and factions lack the skills to make effective use of this manpower and weaponry and some have received help from American citizens. In certain instances, such support was or will be detrimental to the national security of the United States.

Section 3(a): This lists the conduct that would be prohibited in the event the President issues a proclamation naming a certain foreign state, international terrorist group or faction. The conduct includes serving directly or indirectly in the armed forces or any intelligence agency; providing training to such armed forces or agency; providing any logistical, mechanical, maintenance or other similar support service to the armed forces or agency; conducting any research, manufacturing or construction project which is directly connected with a military or intelligence function; and recruiting any other person to do any of the above.

Section 3(b): This sets forth the penalty for violating the law. It is up to ten years in prison and not more than three times the total compensation received for the commission of the unlawful act, or $25,000, whichever is greater. The penalty also applies to anyone violating the statute through a business entity such as a partnership or corporation.

Section 3(c): This provides that the President, in his discretion, may issue a proclamation naming a particular foreign state, international terrorist group or faction in which the above activities would then be unlawful. He may do this whenever he finds that either of the following is detrimental to the national security, foreign relations or foreign commerce interests of the United States: (1) the direct or indirect employment of an American citizen by a foreign state, international terrorist group or faction for the purpose of performing military or intelligence support activities; or (2) the direct or indirect involvement of an American citizen in a transaction providing any arms, munitions or other implements of war to a foreign state, international terrorist group or faction. The proclamation would become effective sixty days after its first publication in the Federal Register, unless the President finds that conditions exist which require that it take effect immediately. The President must revoke the proclamation if he determines that those conditions have ceased to exist.

Section 3(d): This provides that any challenge to the validity of the proclamation shall be made in a separate civil proceeding and may not be raised as a defense which could impede the criminal proceeding. This does not limit any defendant's constitutional rights.

Section 3(e): This defines the terms used in the bill. An international terrorist group is one which engages in a pattern of international terrorist activity. Terrorist activity is defined as any felonious, violent act, including murder, aggravated assault, kidnapping, robbery, extortion, arson or destruction of property, which is committed for political purposes.

Section 4: This makes technical changes in the criminal laws and provides that the trial of any offense hereunder, which is committed out of the jurisdiction of the United States, may be in any judicial district of the United States. The purpose of this section is to facilitate the prosecution. Without this modification, it would have to take place in the district where the defendant is arrested or first brought into the country. If the defendant were not arrested or brought into the country, any indictment would have to be filed in the district of his last known residence, or, if not known, the District of Columbia. This provision has caused great inconvenience to the Department Justice. The defendant's right to move for a change of venue in accordance with the rules of criminal procedure remains unaffected, however.●

JOHN L. TAITANO, LOYAL PUBLIC SERVANT

HON. DUNCAN HUNTER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. HUNTER. Mr. Speaker, I take the floor today to commend a fellow San Diegan for his 21 years of fine service to America—Mr. John L. Taitano.

Mr. Taitano is a resident of Chula Vista, Calif. He has lived a full, rich life in his 61 years, which began April 14, 1920, in Agana, Guam.

John Taitano served for 21 years in the Navy, rising to the rank of MS-I (petty officer 1st class) before suffering paralysis from the neck down in the service of his country.

His service began in 1939. Taitano saw action in the Battle of the Coral Sea and the invasions of Kwajalein, Guadalcanal, and Tarawa. In later years, he was in charge of the officers' mess at the Imperial Beach, Calif., Navy airfield.

In recognition of his service in the Navy, I recommended that Mr. Taitano be accorded the honorary promotion to MSC (chief petty officer). However, the Department of Defense has informed me that such promotions are no longer awarded.

But the contribution to our Nation's security by men and women like John Taitano is not forgotten. Mr. Taitano represents the kind of dedication that made the United States the strongest

force for peace in our world. For this, he deserves the highest of accolades.●

MIDDLE EAST PEACE

HON. PAUL N. McCLOSKEY, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. McCLOSKEY. Mr. Speaker, the Mideast situation grows daily more perilous. I think it important that the United States do what it can to urge the opposing sides to recognize two realities:

First, the Arab world should recognize the right of Israel to exist at peace within its pre-1967 borders under U.N. Resolution 242.

Second, Israel should recognize the Palestinians' right to a homeland on the West Bank and Gaza.

A speech I gave to the United States-Arab Chamber of Commerce on this subject last week follows:

ADDRESS OF CONGRESSMAN PAUL N. McCLOSKEY, JR., TO THE UNITED STATES-ARAB CHAMBER OF COMMERCE

I do not come here so much as a Senate candidate—in fact, I may lose some of your support with the remarks that I make today—but I come to try to charge you with what I think are two very important missions that ought to be attempted by a group such as yourselves. These missions are very simple, but they are very difficult.

First, I think you should undertake the mission of convincing the Arab nations and your contacts in the Arab World that they must recognize the right of Israel to exist within the pre-1967 borders. And second, I think you should attempt to open a dialogue with the Jewish-American leaders in this country with the thought that the distinguished leaders in the American business community, and particularly the Arab-American business community and the Jewish-American community, might have it within their power to advance the dialogue now recommencing in the Camp David negotiations and might persuade that dialogue to go forward by cooperation and discussion between Jewish-Americans and Arab-Americans and business leaders.

I might just tell you one basic story of what has motivated me in these long months of debate on this issue. That motivation stems from one thing—my fear that the greatest threat of nuclear war in our time may stem not from a Soviet confrontation with the United States but rather from the Arab-Israeli confrontation. With a capacity on the part of both the United States and the Soviets to destroy the other with two percent of their atomic weapons, I think both U.S. and Soviet leaders may have the restraint to avoid the use of nuclear weapons. But I am not so sure about the restraint of a Begin who can send his air force across two neutral countries to bomb a third in order to destroy a nuclear capacity that under every expert advice we have received was eight years away.

Nor am I convinced that a Qadhafi or Assad or even a Zia in Pakistan would refrain from a nuclear Holy War against Israel and its ultimate destruction if they came into the possession of nuclear weapons. And if a nuclear war should erupt between the Arab world and the Israelis, it seems to me that the danger of a U.S.-Soviet involvement is magnified by perhaps a factor of 100, knowing the nervousness of their military leaders and ours, knowing the difficulty that when a nuclear explosion occurs, from whence it came or who triggered it or ordered it, can cause U.S. and Soviet leaders to reach a stage of nervousness which could lead to a nuclear exchange which would destroy society as we have tried to build it through four thousand years of the world's recorded history, and on this continent for nearly four hundred years.

I first entered politics through a particular and somewhat special circumstance. I was a small-town lawyer in 1963, having practiced ten years in Palo Alto, California. I thought at that time that politics was a dirty business; politicians were less than successful people; that if you were good at something you didn't go into politics, you ran a business or a law firm or a profession or a university. (And frankly, after 14 years of politics, there at least is some truth still in that supposition.) But I happened to be invited in 1963, as the former President of the Pal Alto Bar Association and California Barristers' Association, to the White House conference in June that President Kennedy held for four professions to try to get the leaders of those professions to return to their communities and set up bi-racial committees to try to avoid the racial conflagration that had erupted in Birmingham a few months earlier. You remember when the blacks, unable to redress the grievances of the Jim Crow system, finally rose up in protests against sitting in the back of the bus and segregation at the lunch counters of Birmingham, and went to the barricades to try to end a hundred years of racial discrimination. And when that occurred, foreseeing that it could occur in every city in the United States, Jack Kennedy invited a group of leaders from various professions to a series of White House conferences. And I will never forget what he said from the podium, like this one save that it bore the seal of the President of the United States in the East Room of the White House. He said Gentlemen—and there were very few women lawyers in those days—he said Gentlemen, to the 300 lawyers assembled, I ask your assistance in something that I as President of the United States cannot do. I ask that in the tradition of the legal profession—not bringing lawsuits between opponents—but as counsel to your own clients, where you seek those clients to compromise in order to avoid controversy—that you try to set up bi-racial committees in your home communities to assure that black people can at least communicate to the white power structure—the city governments and business leaders who can act—so that at least those with grievances can discuss with those with the power to redress them, the problems that divide their communities. And I came back, as I think 300 other lawyers did to their own communities, and tried to do exactly that in East Palo Alto and Palo Alto where I was then practicing law. And we were successful to a degree, by setting up those means of communication, in preventing the outbreaks and the kind of racial violence that occurred elsewhere in ensuing years.

Now it strikes me, particularly after the last four months of painful debate, that the major problem in reaching peace in the Mideast is the refusal on both sides, Palestinian and Israeli, to recognize the reality of the other side to exist. Arabs, in my judgment, must recognize that Israel is here to stay; it will continue to exist. There is an emotional attachment to the success and the prosperity of Israel on the part of people all over the world. The ultimate destruction of Israel is not an appropriate goal for any nation or for any people. And those of us who have sympathy with the desire of the Palestinians to redress their grievances cannot go so far as to accept the charter language of the PLO which clearly and explicitly states that the purpose of the PLO is to totally reject any solution save the complete liberation of Palestine.

As long as the complete destruction of Israel is perceived as the goal of the Palestinian Liberation Organization, there is no way that reasoned debate or reasoning advocates can urge upon the Israeli nation or the bulk of the Jewish community in this country that there should be negotiations with the PLO. There is no way to take the emotionalism and fear of 4,000 years of religious persecution and the memory of the Holocaust from the minds of those who would say we might be willing to deal with the Palestinian refugee problem but we cannot do so so long as it is the dedicated and public goal of the Palestinians to wipe us from the face of the earth.

Two years ago, I was one of a group of Members of Congress who were sent to the Mideast to try to explore solutions to the problems of Lebanon. Two Congressmen were of Lebanese descent and one was of Syrian descent. Yasser Arafat assured us in private, in a three-hour discussion in Beirut, that of course he recognized the right of Israel to exist within the pre-1967 boundaries, but that any Arab leader who espoused such an acceptance was liable to assassination, by Habash or any one of the other factions of the PLO which would interpret acceptance of Israel's right to exist as tantamount to treason.

It seems to me that negotiations cannot proceed until reasoning leaders in the Arab world and in the Arab-American leadership speak out and publicly make it clear that the policy of the Palestinians cannot and should not be the destruction, the absolute extinction of Israel, and that that is the next step in this tortuous process toward peace. Recently, when the Saudi eight-point peace plan was presented, the Saudi Ambassador to the United States said explicitly that of course point seven recognizes the right of Israel to exist. Immediately, he was contradicted by the Saudi government back home, stating that the Ambassador didn't have the authority to make that statement. Why? Because clearly the Saudi leaders themselves could be subject to overthrow if not assassination by their recognition of Israel's right to exist. We've seen Sadat assassinated, in my judgment in part because the rest of the Arab world viewed him as a traitor to the Arab cause by his recognition of Israel's right to exist.

Yet, with respect to the Israeli side of the equation, how can the Israelis and the Jewish-American communities accept a Palestinian homeland on the West Bank of Gaza unless their fear of the publicly-announced goal of extinction by the Arabs can be relieved? Frankly, I see no possible peace in the Mideast or for Israel as long as Palestinian aspirations for their own homeland cannot be resolved. I appreciate that a Palestinian homeland on the West Bank and Gaza is considered by many to be a dagger pointing at the heart of Israel. I've tried in vain to convince my Jewish friends that

whatever may be represented in danger to Israel by a Palestinian state on the West Bank is a fraction of the danger to Israel if we proceed for another four to five years without a Palestinian homeland, with young Palestinians willing to die to achieve that homeland. If there is any race or creed that should understand that people will die until they have a homeland it should be the Israelis and the Jewish-American community. but there is no way to convince them of that need and that justice of a Palestinian homeland so long as they say, as they can rightfully do, "Until we took the West Bank, the Arabs would never recognize the right to a Palestinian homeland. They had the power, until 1967, to give a Palestinian homeland; but what Arab nation recognized it then or now?"

I think it absolutely essential that there be a process of reasoned debate in this country—by those of us who have the luxury of living in America—leisurely, thoughtful debate and discussion as to how we can bring to both sides of this controversy the recognition of reality: on the Israeli side, the reality of the need for a Palestinian homeland; on the Arab side, the reality of the right of Israel to exist within the pre-1967 borders. If there is anyone in this room who feels differently, that the Arab world is right in its contention that Israel should be wiped out, then I don't want your political support.

In my judgment, the United States' interest is heavily involved here. It isn't just a matter of Israeli versus Arab, or Jewish-American on one side and Arab-American on the other. The interests of the United States require that we have a peace in the Mideast before that time when the Arabs are able to buy or acquire nuclear weapons. To me there is no possible chance of denying nuclear weapons passing into the hands of leaders in the next few years, who, if this conflict continues to exist, will not use those nuclear weapons. I've had a constituent in Palo Alto write a letter to the Palo Alto Times detailing how to build a nuclear weapon and accompanying it with a diagram. The Palo Alto Times-Tribune printed the letter and diagram. Sixty-two thousand copies were distributed to subscribers and the public; and the next day the Department of Energy classified as top-secret the 62,000 issues. Of course, how do you recapture the cat when it's out of the bag? If Khaddafi can hire former CIA agents to design detonators and fuses and to fly his planes, is there any question that with $20 billion a year in oil revenues, he can acquire nuclear weapons? We have seen as many nuclear scientists defect in our lifetime as members of any other profession, and it seem to me that for money you can buy anything these days. It is merely a question of time before nuclear weapons come into the hands of Arab leaders who, in my judgment, will not hesitate to use them to impose the ultimate holocaust upon Israel.

Now let me come back then to the two missions to which I would direct you and ask that you try to achieve. In my judgment, thoughtful leaders in the Arab world do accept Israel's right to exist within its pre-1967 borders; and I expect that every American businessman, Arab or otherwise, accepts the right of Israel to exist. But there is no dialogue on this point; and when communities talk only to themselves, when the oil industry and the defense industry and the lobbies that represent those groups talk only to themselves and decry the position of their opponents, little is gained. When the Jewish community, which in my judgment is divided at least 50-50 on the Palestinian/West Bank situation, is afraid to speak out or discuss it outside their own community for fear of being ostracized for threatening the Israel that the Jewish community has fought so long to get, it seems to me that within the Jewish community the debate gets narrower rather than broader, that as people talk only to their friends and themselves and those who agree with them, the tendency is to enhance, rather than diminish, one's biases, prejudices and fears. So what is needed is a national dialogue, and indeed here, an international dialogue. I can think of no group better than yourselves to try to bring Jewish-American leaders together with Arab-American leaders and from both standpoints to try to satisfy these opponents 5,000 miles away of the need for these two realities to be recognized: the right of Israel to exist and the right of a Palestinian homeland to exist on the West Bank and in Gaza.

I could be wrong on all of these things that I have urged upon you. There is no politician in America, or the world perhaps, who can guarantee that his views are right or that what is attempted with the best of intentions may not be defeated or frustrated by events over which we have no control. But it seems to me after visiting the Mideast twice, after meeting with the leaders of Pakistan and Saudi Arabia and Lebanon and Israel, that this is the only way we can proceed, moving initially through the Camp David process, and hopefully correlating that process with the Saudi peace proposal. To those who say that the Saudi peace process is unacceptable, who can say here that the Saudi eight-point plan and the positions of the Israelis and the Arabs as they start negotiations are any further apart than, say, when the United Auto Workers and Chrysler sit down to negotiate their periodic contracts? The fact that the parties are far apart at the beginning of negotiations should not militate against reasoning people insisting that those negotiations begin. I think you should go to them, not wait for them to come to you. I am afraid that, left to their own devices, the Jewish-American community, because of its 4,000 years of history and 40 years of fear dating from Hitler's Holocaust, will be reluctant to initiate this dialogue with the business and the oil community. I haven't held a public meeting in the last 10 years where the same fears about the oil lobby or the industrial-defense lobby or the American business community lobby were not expressed by Jewish-Americans in the same manner I have expressed concern over the power of the Israeli lobby or the lobbies of the Right-to-Life movement or the Moral Majority. I think the way to solve these problems is to bring the parties together in dialogue, and I very much hope you will initiate that dialogue.

Thank you.●

SOCIAL SECURITY BENEFITS TO DECEASED RECIPIENTS

HON. LYNN MARTIN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mrs. MARTIN of Illinois. Mr. Speaker, throughout the past 12 months we have all heard the phrase waste, fraud and abuse perhaps to the point that it has lost its emphasis and meaning. But as worn as the phrase may be, its existence is still prevalent throughout Government. Today, I bring to your attention yet another area to which this phrase applies—social security benefits to deceased recipients.

I am proud to be an original cosponsor of a bill, H.R. 5076, which will achieve on a national level the same strides that the State of Illinois has achieved in its efforts to abate social security benefit payments to people who have passed away. These continued benefit payments are running up a national tab of $60 million annually to an already financially distressed social security system. In Illinois alone, out of over 500 suspect cases, almost 300 people were in fact proven to be deceased anywhere from 6 months to 9 years. And Illinois' effort only represented 10 percent of this overall project effort conducted throughout the country. Certainly this project is indicative of a need to coordinate effort between the social security system and the States so that these excess payment can be eliminated.

It has been said that a rolling stone gathers no moss, but I believe that this rolling stone has much moss to gather. In a system that had a 1981 budget of $189 billion, second only to defense, it seems logical that there are other ways to achieve additional savings like H.R. 5076 for this very troubled system. Although the dollars saved by H.R. 5076 alone are small in comparison to the overall social security system budget, this proposal serves as an example. If we find other rolling stones like H.R. 5076, the savings in overpayments, administrative expenses, and printing costs will be an amount of moss worth gathering.●

A SALUTE TO MADELINE MANNING-MIMS

HON. LOUIS STOKES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. STOKES. Mr. Speaker, I would like to take this opportunity to introduce to my colleagues a vivacious and exceptional young woman from Cleveland—Mrs. Madeline Manning-Mims.

Mr. Speaker, many of my colleagues may remember Madeline Manning-Mims as a star on the U.S. Olympic track team in the 1968, 1972, and 1976 Olympic games. She also was the captain of the 1976 and 1980 U.S. women's Olympic track team. Excellence and perseverance seemingly were her goals as she distinguished herself as a world-class athlete.

However, Mr. Speaker, Madeline Manning-Mims is more than a star on the track. My dear friend, Madeline, is

an exceptional human being who is a star in every facet of her life.

Mr. Speaker, armed with her infectious positive attitude, Madeline Manning-Mims gives her best to every endeavor she undertakes. She embodies what people often call a winning attitude.

That was the cornerstone of her success in winning the gold medal in the 1968 Olympic games and a silver medal in the 1972 Olympics. That same winning attitude has permeated all facets of her life.

Madeline has embarked on a promising career as a gospel singer. Madeline and her husband, Roderick, are currently enrolled in Oral Roberts University in Oklahoma. In addition to that, Madeline and Roderick has established a business called Total Personal Management (TPM) which is a promotional enterprise for Madeline's career and the career of other athletes and musicians.

Mr. Speaker, probably most importantly, Madeline has the ability to harness her energy and God-given talents to do positive things for everyone she comes in contact with. For those who are hopeless, Madeline is a constant source of inspiration. She plans to take this philosophy and ability one step further and establish in the future in Cleveland a center named "The Way, The Truth and The Light."

Mr. Speaker, her athletic successes, TPM, and her studies at the Oral Roberts University all attest to Madeline Manning-Mims' winning attitude and motto of excellence and perseverance. There is no doubt in my mind that Madeline Manning-Mims is one of this Nation's best and brightest stars.

At this time, I would like to insert in the RECORD a newspaper article on this dynamic human being. By reading the article, Mr. Speaker, my colleagues can appreciate more the philosophy and character of my good friend—Madeline Manning-Mims.

RUNNER CROSSES LAST FINISH LINE

(By Elton Alexander)

It's the kind of voice you'd like to hear from a telephone operator. Soft, whispery—not sultry, not giddy, but sweet and confident.

"Madeline Manning-Mims, Total Personal Management, may I help you?"

If an adjective ever fit the Cleveland woman who captained a pair of women's Olympic track teams (1976 and 1980); ran in three Olympics (1968-'72-'76); captured a gold ('68) and a silver medal ('72), and reigned as the queen of American middle-distance runners, "confident" is it.

Should your interest be piqued at the thought of reading about exploits from her Olympics, the rigors of her training or her world record attempts in the 800 meters, stop here.

Manning-Mims, 33, from John Adams High School, lives in Tulsa, Okla., and looks forward to other things.

"I'm finished. I've been retired three times," she said in a phone interview. "That's why I'm not saying I'm retiring; I'm finished."

Her tale has become a love story.

Her first marriage, to John Jackson, lasted only a year.

"As a married couple, it was a catastrophe," she said. "He's remarried now and we are friends. The blessing was John, II. Now Rod is a real, real blessing."

Roderick Mims, the "real, real blessing," is a graduate of Glenville High, three years younger than his wife.

"I graduated in 1970 and immediately was drafted into the Army. I served two years as a military policeman," Mims said. The two refer to each other simply as "Rod" and "Mad." Married in 1976, they still talk and act like newlyweds.

"We're looking forward to buying a house, then a couple more children," Manning-Mims said. "This summer, when I was in Norway, I stayed with this couple who sold me this beautiful, beautiful baby carriage. Now I'm looking for furniture, baby things anything."

As she talked from Tulsa, here telephone operator's voice blossomed. She used all her descriptive words twice, as if doubling the pleasure of the things that make her happy.

Mims talked a bit more cautiously, but with determination—the voice of a young executive.

More than a year ago Mims started Total Personal Management (TPM), a promotional enterprise, specifically for his wife's gospel recordings and personal appearances. He was interviewed recently while he was in Cleveland, looking to set up a local office for the business.

The firm counts several track stars, football players and a pair of classical musicians in its fold. It is not a career agency, but a company that looks for promotional ideas for the individual. Through TPM, Mims plans to do some training films and a movie on Manning-Mims' life.

"I met him at a church concert in Cleveland," Manning-Mims recalled. "My car broke down and he was nice enough to take me home. He didn't even know who I was. He said he saw me on TV during the Olympics, but that was it."

Some say opposites attract. Others say find someone just like you. Athletically, Rod and Mad are worlds apart. Personally, they're two peas in a pod.

"I never went to a track meet in my life until I met her," Mims said. "I was into the martial arts. In high school, I didn't play basketball, and track didn't excite me at all."

Still, it was Mims who pushed his wife into one more year of athletics, after last year's summer Olympics boycott. The boycott, plus injuries, left Manning-Mims without the track exit she had hoped for.

"He's the reason that last year wasn't my last year," she said.

"She might say different, but I thought it would bother her," Mims said. "She pulled a hamstring, then received an ice burn that lasss—Mad always corrects me on that (enunciation)—last-ed longer than we expected.

"We looked at what we wanted to accomplish, then started training at CSU (Cleveland State University). I felt it would be best that she give her best one more time."

This past summer, Manning-Mims competed throughout Europe. She did not set any new marks, but she returned to the United States satisfied in mid-September.

"This has been my best year ever. I've been really, really consistent," she said.

With that out of the way, TPM occupies most of the couple's time. Both still attend Oral Robers University in Tulsa, and maintain their high religious ideals, which they hope to bring back in Cleveland in a visible, active and productive way.

"One of our major goals is to build a center here in Cleveland. We'll call it 'The Way, the Truth and the Light,' something along the lines of a Jewish Community Center for blacks," Mims said.

They reserve a lot of time for John, who has shown signs of a budding athlete.

"This past year he went to the state AAU in the hurdles. Now it's football and music," Manning-Mims said. "The drums, naturally."

She has started making the transition from world-renowned track star to weekend athlete. Her husband said that process could be slow.

"Racquetball is the only sport I participate in, and some jogging," Mims said. "When Mad quits running, she quits, but I hope to keep her doing some jogging, at least.

"Trouble is, she does not like running slow. She wants to get it over with."

Manning-Mims will remain an active speaker for Nike Corp. (maker of athletic shoes), the U.S. Olympic Committee and the Fellowship of Christiam Athletes. But top priorities are home and family.

"I've never had a home of my own," she said. "It's always been apartments. I'm really looking forward to this. I bought a deerskin from the Alps and that baby carriage—anything, anything I can get my hands on."

Cleveland, Nashville, Columbus, Tulsa, Mexico City, Munich, Montreal, Moscow and more. All have been stops for Madeline Manning Jackson Mims.

"My life has been full, packed," she said. Now it is time to put down roots.

"That's the main priority now, a home," Mims said. "Get us a home, pronto, then adding to our family. A girl first, then twins."●

UNSCHEDULED RESOLUTION DIFFICULT TO ABSORB

HON. LYNN MARTIN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mrs. MARTIN of Illinois. Mr. Speaker, if I have made one mistake this year, it was thinking that this swamp would somehow be more honest and more straightforward in its dealings than my State Capitol. But, last night, I was shown what an error I had made. After Members could assume there were no more votes, an unscheduled resolution suddenly appeared—no debate, no prior mention, and suddenly I can make $18,000 in outside income. When I was in Springfield, something like this happened. A pay raise rushed through because we needed one.

The next year the people of my State cut the membership of the general assemply by one-third.

Do not argue that we deserve more money, that good people are leaving because the expenses of the position are growing and more money can be

made in the private sector. Do not argue, because I agree. But, how one accomplishes the goal is equally important.

We had a decade of Watergates and "Abscams." People think we are all a bunch of greedy creeps. Well, I know that most Members in Congress are too good to warrant that kind of reputation. But after last night, it will all start again, and this time we deserve it.●

ONE EDITOR WHO ISN'T FOOLED

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. ASHBROOK. Mr. Speaker, I noted with interest the thought provoking article written by Dayton Journal Hearld Editorial Page Editor William H. Wild regarding a canard which had been kicked around these halls for some weeks. It laid bare the true nature of this great school lunch controversy of 1981 charade. Members of this body took the well to castigate the Reagan administration over policies which would dilute the meager school lunch of poor children. It was the great ketchup fiction served up without a mere morsel of truth, excuse the expression.

Mr. Wild hit the nail on the head and I call his penetrating analysis of this controversy to the attention of those who would like to have some truth and light shed on the situation. The article follows:

LET TRUTH KETCHUP WITH FICTION

Editorial cartoonists had a field day.

Editorial writers thundered about the Reagan administration's "soak-the-poor philosophy" carried to extremes in the school lunch program.

Columnist Ellen Goodman sobbed about the "forlorn menu" served to pupils by heartless Reaganomics.

An alleged news story in early September by the Los Angeles Times/Washington Post news service left nothing to the imagination.

"The federal government," it said, "in new changes for the nation's school lunch program, wants to call ketchup and pickle relish vegetables, offer tofu as a substitute for meat and serve peanut butter or nuts as main dishes at noon."

That's how, in a manner of speaking, the tofu hit the fan in the Great School Lunch Controversy of 1981.

There was only one problem, but it is enough to justify an apology to newspaper readers, radio listeners and TV viewers. The story was 90 percent hoax and 10 percent fact. And what fact there was, wasn't Reaganomics after all.

The Washington Post this week got around to admitting that the news media had been serving turkey to their customers on the story all along. It wasn't a very candid admission and it didn't review the Post's own sorry record in the case, but it was revealing.

The context was an editorial regretting that the controversy will probably cost G. William Hoagland his job as the Agriculture Department's director of the Food and Nutrition Service. He was the official directly responsible for the school lunch regulations that supposedly tried to call ketchup a vegetable so that it could be foisted on woebegone kiddies who—if they survived—would grow up to vote Democratic.

Said the Post: "The notion of substituting ketchup for vegetables never appeared in the proposals at all. It was a horrible possibility conjured up by nutrition advocacy groups as something that state agencies might do under color of a new authority to increase menu variety."

That's rather devastating to the notion that a wealthy president, lolling in luxury in the White House, was deliberately trying to put the screws to poor people. Don't stop now, though. There's more.

The original proposal for cutting the national school lunch subsidy envisioned free or inexpensive lunches for those most in need and making up the cost by charging more to those who could afford it. It was as clear a soak-the-rich plan as you could devise.

Did some of the president's rich friends call up and say, "Ronnie! How could you?" Not hardly. The Congress, led by the likes of friend-of-the-poor "Tip O'Neill, decreed that everyone would have to share in the sacrifice.

Congress went on to handcuff the Agriculture Department with a series of special-interest restrictions protecting the dairy industry, vegetable growers and various other food industries. Meanwhile, Hoagland was trying to give state and local nutritionists some room to adjust for local needs.

Tofu, or soybean curd, was proposed as an altenative for the lunch protein requirement at the behest of school districts with Oriental pupils—one of a number of requests for flexibility in meeting ethnic food preferences. Members of Congress, hooting over the phony ketchup issue, attacked the bean curd with relish.

So much for the vaunted congressional sensitivity to ethnic minorities.

Here and there in the news stories from August and September are stray paragraphs of Hoagland's futile efforts to correct the record. Instead, he's been served up well-roasted by Congress as a cruel bureaucrat and then skewered by the White House as an embarrassment to the administration.

His job's a high price to pay just for being the meat in a too-good-to-be-true news story.●

EXCEPTION TO THE "RULES"

HON. LARRY WINN, JR.

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. WINN. Mr. Speaker, I am very disappointed at the way in which the House rules were amended yesterday to allow Members to double the amount they may earn from speeches and other outside activities. This measure was clearly mishandled. In fact, I do not believe anyone in this body can truthfully say that it was even addressed at all. There was no notice given, no explanation, and no discussion. The fact that it was agreed to by voice vote demonstrates that those who were dedicated to the passage of this resolution wanted it out of the way as quickly and quietly as possible. I consider this an absolute affront to the rules of this body and to those of us who dealt squarely and effectively with this same issue back in October. More importantly, however, it is an absolute insult to the American people. As one of my constituents, angry at what he had seen of the televised House proceedings last night, said this morning, "It is obvious to me that Congress expects the rest of us to 'do as I say, and not as I do.' "

Mr. Speaker, by this action, the basic integrity of the House has been seriously crippled.●

TRIBUTE TO ELMER W. HENDERSON

HON. L. H. FOUNTAIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. FOUNTAIN. Mr. Speaker, I want to take this opportunity to express my high regard for Elmer W. Henderson, who is retiring after 27 years of dedicated and effective service with the Committee on Government Operations.

Elmer's wisdom, good judgment, and high degree of professional competence contributed greatly to the committee's work. His warm personality and unselfish disposition have caused those of us privileged to work with him to value him as a good friend, as well as a highly esteemed coworker.

As Elmer Henderson leaves the Government Operations Committee, he has our gratitude for a job well done and our best wishes for the future. I am confident that Elmer will continue making a substantial contribution to the public interest for many years to come.●

COOPERATION IN THE AMERICAS

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. LAGOMARSINO. Mr. Speaker, I submit for the RECORD the address of Secretary of State Alexander Haig to the General Assembly of the Organization of American States (OAS) in Saint Lucia, December 4, 1981.

Secretary Haig proposes a constructive, innovative agenda for cooperation, progress, social justice and security in the Western Hemisphere.

I commend it to my colleagues:

SECRETARY HAIG: AN AGENDA FOR COOPERATION IN THE WESTERN HEMISPHERE

(Following is an address by Secretary Haig before the General Assembly of the Organization of American States (OAS) in Saint Lucia, December 4, 1981.)

At the dawn of the inter-American era, Simon Bolivar wrote that it was extremely difficult "to foresee the future fate of the New World, to set down its political principles, or to prophesy what manner of government it will adopt." The history of the Americas since his time has shown that liberty was to be the basis of the New World's political principles and democracy its preferred manner of government. The nations of this hemisphere, despite their diverse cultures, drew strength from their historic mission to offer man the opportunity for self-development in freedom.

Today, the Americas are confronted by new obstacles to the achievement of this mission. Democracy is being questioned. Economic progress is uncertain. And the prospects for peaceful change are threatened by a pattern of violent intervention.

If we have learned anything this century, it is that respect for the individual, democracy, and the rule of law are essential to progress. Yet under the stresses and strains of change, voices are heard again advocating that freedom be sacrificed, individual rights be curtailed, and that government should dominate the productive process. Is the hemisphere going to be plagued again by totalitarian experiments that destroy liberty and also fail to deliver prosperity?

This region's rich natural resources, productive agriculture, and increasingly sophisticated technology should offer a bright future. But the sustained economic growth of the past two decades seems to have slowed or halted. The terms of trade have turned sharply against many countries. Can we use this period of adjustment to forge the basis for a resumption of stable growth?

Experience has taught us that the search for economic progress, social justice, and human dignity can succeed only in the context of peace and tranquility. Precious resources and energies necessary for development cannot be squandered on conflict. Yet today we are faced by a trend toward violent change, including so-called wars of national liberation and foreign intervention. Can we allow force to become the decisive arbiter of national destiny without jeopardizing our own prospects for peace and prosperity? It will not be easy to answer these questions. But if we are to advance at all, we must draw on our collective strengths to create an agenda for cooperation.

This agenda should focus on three objectives: first, to reaffirm and promote democracy; second, to create new economic opportunity; and third, most urgently, to oppose interventionism by strengthening the principles of nonintervention and collective security.

First, we must assert the enduring value of democracy. The nations of this hemisphere are strongly dedicated to the democratic tradition. This tradition is based upon the idea of man as a creative and responsible individual. We believe that respect for the rights of the individual—including freedom of expression, freedom of religion, and freedom of choice—is fundamental to a humane society.

It is not surprising that pluralistic societies respectful of such rights have created unparalleled opportunities in this hemisphere for their citizens. The revolutionary proposal that the just powers of government derive from the consent of the governed provides the best framework for human development. And democracy alone, among the world's political systems, has proven to be most protective of individual rights. The United States opposes human rights abuses regardless of the source. Our judgment of events must be fair, and we must not allow ourselves a double standard. We should not be more tolerant of the infractions of those who reject democratic values and peaceful change yet more critical of the lapses of those searching for democracy and social justice.

Clearly, a nation cannot be liberated when its people are deprived of liberty. A civilization cannot be creative when its poets and philosophers are in jail or in exile. A state cannot be free when its independence is subordinated to a foreign power. And a government cannot be democratic if it refuses to submit to the test of a free election. The OAS, true to its democratic tradition, should express its support for prompt, free and open elections as the best course for ending civil violence and keeping social peace. Specifically, we hope that the countries of this hemisphere will support the Government of El Salvador as it leads its people through the electoral process toward a political solution of the conflict there.

The OAS can also play a more active role in strengthening democracy throughout the region. If requested, this organization should be able to offer both technical services and good offices for the observation of elections. But we should go further. The nations of the Americas have already established many institutions for economic, social, and military cooperation. Surely the time has come for us to create a permanent forum that will foster democratic leadership and the democratic process.

An institute for the study of democracy in the Americas, under OAS auspices, would provide a regular exchange of ideas and experiences among democratic leaders. By making the Secretary General its director, we would insure a cooperative effort. And by naming the institute in honor of one of our greatest democratic leaders, Romulo Betancourt, we would signify our high purpose.

Second, we can act together to create new economic opportunity. Economic growth can be revived if opportunity for productive enterprise is encouraged. Cooperation for development is needed to strengthen incentives for private investment in new ventures and to open new markets for trade. Clearly, inequalities in the distribution of income cannot be ignored. But a more equitable distribution of income can only be achieved in a climate of economic growth.

In this spirit, President Reagan committed the United States at Cancun to the search for progress through cooperation. He urged that we direct our attention to practical issues: how to develop energy and food resources; how to raise productivity through better education, health, and nutrition; how to improve the climate for investment and trade.

We have already begun to cooperate together on a program for the economic development of the Caribbean Basin. This program reflects the spirit of Cancun. It is based on a clear understanding that the serious economic decline of many countries in the Caribbean and Central America can be reversed only by bold action. For our part, President Reagan is preparing a comprehensive economic package for the nations of the Caribbean Basin. The package includes:

New legislative authority to offer the countries in the Caribbean Basin major trading opportunities—including possible one-way free trade arrangements—in the U.S. market. We have never offered such a preference before to any region;

Specific investment incentives and other measures to spur private investment in private ventures;

An increase in U.S. financial assistance to deal with acute liquidity crises and to help countries achieve more flexible, diversified economies.

The three parts of this plan—trade, investment, and assistance—form an integrated program. The preferential trade treatment will provide wider access to large markets, encouraging new productive investment and structural adjustments in national economies. Investment incentives will stimulate capital formation. And assistance will ease the liquidity crisis enabling countries to restore their credit standing in world capital markets and to restructure their economies.

We believe that the Congress of the United States will see the wisdom of such an integrated approach and approve these initiatives. And we hope that other countries working with us to alleviate the plight of our Caribbean neighbors will also offer meaningful proposals.

The Caribbean Basin effort is only one aspect of a cooperative strategy to increase economic opportunities.

The existing world trading system can serve our interests more effectively. As President Reagan said at Cancun, we have yet to unleash the full potential for growth in a world of open markets. We will make a strong effort in the GATT [General Agreement on Tariffs and Trade] negotiations next year to reduce barriers restricting trade opportunities.

As Secretary General Orfila has proposed, we should consult among OAS members on the multilateral trading system in preparation for the November 1982 GATT meetings. The most useful way to conduct such a consultation might be a conference of our trade ministers.

Another of the priority areas identified at Cancun was agriculture. The actions of this hemisphere take on special importance because we have between us much of the world's capacity to export food. We should explore together how to use our agricultural potential, perhaps convening for that purpose a meeting of our agricultural ministers.

These issues and others have been proposed for the agenda of a special OAS General Assembly on cooperation for development. The United States supports such a general assembly. It could address our objection over the next two decades for agriculture, energy, trade, and other areas. It could debate how to achieve those goals. This regional meeting, like those proposed for trade and agriculture, is intended not to displace but to reinforce the international dialogue begun at Cancun.

Third, we must act to strengthen the principles of both nonintervention and collective security. The nations of the Western Hemisphere have long understood that the search for a better life depends not only on commerce, credit, and trade but also on security. Born ourselves of revolutions, we have sought peaceful change as a basic objective of the inter-American system. And the principle of nonintervention has been regarded as fundamental to peace and progress.

History has shown, however, that the pledge of nonintervention by itself cannot prevent conflict. That task is beyond the power of any single nation. The Americas can be safe only if we work together, through collective security, to deal with threats to peace.

The Rio Treaty reminds us that this mutual responsibility is essentially related to our democratic ideals. Our obligation to resist aggression is all the more important when an outside power seeks to impose a totalitarian ideology or when the purpose of insurgency is to destroy any possibility of freedom and democracy.

We must all face up to the fact that the principle of nonintervention is being violated today. Since 1978, Cuba, with the support of the Soviet Union, has embarked on a systematic campaign of increasing interference against its neighbors. It no longer makes any pretense of respecting the sovereignty of other countries. Instead, Havana calls the leaders of violent opposition groups together, forges unity pacts among them, trains their men, provides their arms, and sends them back to mount a violent challenge to legitimate governments. Terror for the innocent has been the result. We are witnessing this pattern in El Salvador, Guatemala, and now in Colombia. All around the hemisphere, democratic governments have had to downgrade or break relations with Cuba.

There is also cause for worry in Nicaragua today. Despite commitments made to the OAS, pluralism is in danger of repression. The possibility of economic progress for the Nicaraguan people is being undermined by militarization.

The Sandinista regime already supports an army three times greater than that of the government it replaced. Now it is working to establish the largest force in Central American history—with the assistance of at least 1,500 military and security advisers from Cuba. Nicaragua's arsenal already includes tanks and other heavy offensive weapons never deployed before in Central America. Pilots are being trained and facilities readied for modern jet fighters. Meanwhile, the principle of nonintervention is being violated as arms, ammunition, and other military supplies flow from Nicaragua to the Salvadoran insurgents. The people of Nicaragua must be wondering about the purpose of these armaments. How can such a costly military array advance the cause of social justice? Whose interests are served by support of insurrection in El Salvador? The other nations of Central America must also be asking about the meaning of these militant activities. They fear—and we must all fear—that the future may hold a costly arms race at the expense of economic development and social progress. They fear—and we must all fear—that the militarization of Nicaraguans is but a prelude to a widening war on Central America. The tragedy of an uncontrolled arms race and war itself must be prevented. Is there nothing that we can do together to allay insecurity?

For our part, the United States is prepared to join others in doing whatever is prudent and necessary to prevent any country in Central America from becoming the platform of terror and war in the region. The United States has made proposals to Nicaragua to normalize relations. If Nicaragua addresses our concerns about interventionism and militarization, we are prepared to address their concerns. We do not close the door to the search for proper relations.

But, in addition, should we not be discussing together how to prevent the import of heavy offensive weapons—by any country in Central America? Should we not be searching for ways to limit the number of foreign military advisers to reasonable levels—in all countries of Central America? The countries of the region should know that the United States will help them resist illegal intervention from their neighbors or from the outside. President Reagan has made clear that we have no plans to send combat troops to Central America. But we will provide needed additional economic and military assistance. Small countries must be able to call for help when help is needed. And, to paraphrase Abraham Lincoln, when the townsmen come to drive the wolf away from the sheep's throat, the wolf should not then cry that his liberty is being violated.

We must understand that this threat to peace in Central America is not confined only to the victims of violence and intervention in that region. If we fail to act on behalf of the principles of non-intervention and collective security, then the inter-American system will be jeopardized. Ultimately democracy itself will be imperiled.

CONCLUSION

The agenda for cooperation that I have discussed today draws upon the Western Hemisphere's tradition of democracy, its record of social and economic achievement, and its devotion to peace. These resources are remarkable for their strength and duration. They give us confidence to overcome the difficult obstacles that confront us.

Let us measure our progress against the historic mission defined by the OAS Charter: ". . . to offer to man a land of liberty, and a favorable environment for the development of his personality and the realization of his just aspirations." This goal can be reached. We can reinforce our individual efforts by working together, and our example will give hope to others around the world. Our interdependence can be a source of strength, and our diversity can become a source of unity.

Bolivar once prophesied that the inhabitants of the New World would throw off their passivity in order to search for greatness, a greatness defined by justice, liberty, and equality. We have come some distance toward such greatness since Bolivar's time. The mission, indeed the vocation of our generation, is to further advance his vision.●

TRIBUTE TO JERRY WURF

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. ANDERSON. Mr. Speaker, Jerry Wurf will be laid to rest this week. He will be remembered by us for the important contributions he made to the labor movement as leader of AFSCME, the Nation's largest public employee union and the largest member union of the AFL-CIO. Although Jerry Wurf made his mark in the labor movement, I think that this career was not so much an end in itself as a means of advancing his basic goal: the development and enhancement of simple dignity for all men and women. Mr. Wurf was an inspiring labor leader and the movement owes him much; he channeled all his energy, intelligence, and sense of decency into assisting a segment of American workers who, until Jerry came on the scene, had no effective voice to speak for them.

Jerry Wurf was not an abstract theorizer. He maintained an honest belief in the necessity of human dignity, yet, rather than writing books on the subject, he chose instead to—

Organize a local of the Food Checkers and Cashiers Union soon after his graduation from college;

Join the fledgling Congress of Racial Equality in the 1940's;

Actively support Martin Luther King's civil rights movement; and

Go to jail in support of a garbage collectors' strike in Baltimore.

I know many of my colleagues join me in saying, "Jerry, you'll be missed."●

REFORMS NEEDED IN FEDERAL GUN LAW

HON. ROBIN L. BEARD

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. BEARD. Mr. Speaker, the Gun Control Act of 1968 was heralded as a major advancement in crime prevention—legislation targeted specifically to reduce gun-related crime in the United States. Contrary to the optimistic claims of the legislation's supporters, the United States has experienced an exponential increase in the amount of violent crime during the 13-year period following enactment of this law. Even the most dedicated proponents of gun control laws admit that GCA 1968 has failed to reduce crime.

In fact, the staggering increase of violent crime since 1968 has demonstrated that even though lawful commerce in firearms can be tightly controlled, gun control laws have no effect on the illicit movement of firearms into violent criminal hands. Practical experience had proved that criminals are even less likely to observe the firearms laws than obey the criminal statutes.

While I believe that the regulatory framework of the Gun Control Act of 1968 is misdirected, focusing on firearms commerce as opposed to pursuing the violent criminal, the law itself is laden with several serious inconsistencies and disparities which has resulted in civil liberties violations and abuses. It is for this reason that I have joined 169 of my colleagues in sponsoring Congressman VOLKMER's Federal Firearms Reform Act, H.R. 3300.

A brief review of the legislative history of the 1968 Gun Control Act reveals that this legislation was melded from two separate bills containing many technical flaws and inconsistencies and has resulted in inequitable in-

forcement practices. For example, four classes of persons are prohibited from purchasing or receiving firearms—section 922—and six classes of persons are forbidden possession of firearms—section 1201. But only two of these classes overlap and even here the classes are defined in different language. The net result is that the majority of groups forbidden receipt of firearms are not forbidden possession and vice versa.

In fact, one memorable decision by the seventh circuit held that under the Gun Control Act of 1968 an individual who has been convicted of an offense punishable by more than 1 year imprisonment but who is given a full pardon can possess a firearm, but commits a Federal felony when he receives it to begin possession. (*Thrall* v. *Wolfe*, 503 F. 2d 313 (7th Cir. 1974).)

The act makes it a Federal felony to "engage in the business" of dealing in firearms without a special license but fails to give any guidelines on what "engage in the business" means. This is vital to legitimate gun collectors, sportsmen, and persons who inherit firearms. Courts have repeatedly held that, in absence of the legislative definition, there is no minimum profit, no requirement of advertising, employment of others, or premises used for business. The jury is simply instructed that the defendant should be convicted if they find the individual did "any business" in firearms.

In addition, the act requires a federally licensed firearms dealer to keep records of the inventory and sales, but does not require private citizens to do so. But the law is silent about what a firearms dealer who has a private collection, not in his business inventory, should do if he sells a part of the collection as a private citizen. The Bureau of Alcohol, Tobacco, and Firearms, charged with the responsibility of enforcing this act, cannot make up its mind on the issue.

The vague and inconsistent provisions of the Gun Control Act are also compounded by two fundamental problems. The first is that every violation, no matter how trivial or technical, is a Federal felony—subject to penalties of up to 5 years in prison plus a $5,000 fine, in addition, to forfeiting the basic civil rights to vote and hold public office, as well as, ever owning firearms again.

The second problem is that most sections of the act require no proof of intent in order to obtain a conviction. This means that an individual can be convicted of a Federal felony for an honest misunderstanding of the law and with no malice or evil intent.

Congressman VOLKMER'S legislative proposal addresses these intrinsic problems and these needed reforms. First, prosecution for unintentional violations would be ended. With this change, the Federal Government would have to prove that a violation was willful before a conviction could be obtained. Second, H.R. 3300 clarifies and defines classes of persons banned from possessing or receiving firearms; outlines "engaged in the business" of selling firearms; and designates the treatment of a private gun collection by a licensed gun dealer when separate from his business inventory. Third, the legislation would tighten enforcement practices and permit seizures only where the BATF could establish that the firearms were actually used in violation of the law. In addition, where the owners of the firearms must sue for their return, they would be entitled to a reasonable attorney's fee if successful. Finally, the bill would address technical problems with the ban on interstate firearms sales.

I urge my colleagues to carefully consider this long-standing problem. I firmly believe that every American is entitled to fair treatment under the law and that an individual who chooses to own a firearm lawfully and responsibly should not be subjected to capricious and arbitrary Federal oversight. I urge my colleagues to support H.R. 3300, the Federal Firearms Reform Act.●

SLOGANS CAN CREATE A MYTH

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. ASHBROOK. Mr. Speaker, the impact of the following item in a recent issue of Conservative Digest comes not only from what it says but from the fact that the person saying it is Dr. Bernard Nathanson, one of the founders of the National Abortion Rights Action League (NARAL) and director for a year and a half of one of the world's largest abortion clinics. In this interview, he acknowledges that he had a part in the creation of many of the slogans of the proabortion push of the early 1970's and now regrets having "dreamed them up."

The very least we should do in the future as we begin to confront the abortion issue itself—and not just the question of its funding—is to look past the slogans and come to grips with the essential point of the whole issue—human life. Just how precious or cheap is it? Should we have laws that protect some stages of human life but not others? And if so, at what point should constitutional protection of human life first be extended, at what point should it be withdrawn, and what exceptions should be made? These are the hard questions we need to ask ourselves as we deliberate this matter in coming years.

According to Dr. Nathanson, "98 to 99 percent of all abortions are not medically indicated" and are "motivated by some variation of convenience, which means the reasons are social, not medical." That is an awful lot of abortion on demand, and, realistically, specious and contrived surveys aside, that is more than most Americans can tolerate. This fact cannot be dismissed by labeling the abortion question a "single issue" and telling it to go away.

We should not allow ourselves to be misled into wrong decisions by a powerful and monied lobby that would try to confuse the public with mental gymnastics and "dreamed-up" cliches.

The text of the item follows:

FORMER ABORTION LEADER ADMITS: PRO-ABORTION SLOGANS ARE MEANT TO MISLEAD

Q. Do you feel that the medical profession has taken over the role priests played in more primitive cultures? Or, to put it another way, are doctors equipped to provide moral counseling to women contemplating abortion?

Nathanson: That was one of the slogans we cooked up—that the decision to have an abortion should be reserved for the woman and her doctor. All those slogans—that it's a medical issue; that a woman has the right to her own body; that women should have the freedom of choice—I helped coin those lines, for heaven's sake. We dreamed them up as shibboleths to galvanize our troops. And now my teeth ache from having them thrown back in my face.

But specifically on the issue of a woman and her doctor—about 98 to 99 percent of all abortions are not medically indicated. In other words, they're not necessary; they're motivated by some variation of convenience, which means the reasons are social, not medical.

So 99 percent of the time when a woman comes to her doctor for an abortion, her mind is already made up. She comes to the doctor because the doctor is the instrument of her decision.

Q. But you're aware that the slogan carries with it the mental image of a compassionate specialist holding the woman's hand and carefully weighing all the alternatives.

Nathanson: Yes, that's nonsense. The doctor possesses no special wisdom, no unique insights into her existential problems. Do you really think that doctors have the time or inclination to sit down with a calculator and do an economic analysis of the woman's household budget to see whether a new child is financially viable? It's absurd.

A procedure in which the doctor has no input into the decision making cannot, by definition, be medically indicated. So the image of a woman and her doctor debating the necessity of an abortion is basically meretricious. It's a rallying cry, but it is not a serious argument.—Excerpt from interview in the National Catholic Register with Dr. Bernard Nathanson, a founder of the National Abortion Rights Action League, who is now critical of the pro-abortion movement, May 31, 1981.●

VALUE ENGINEERING IN COST CONTROL AND FEDERAL EXPENDITURES

HON. LARRY WINN, JR.

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. WINN. Mr. Speaker, on December 9, I hosted a reception, together with Senator JENNINGS RANDOLPH, for the Society of American Value Engineers, to show the potentials of value engineering in cost control and Federal expenditures. I was quite pleased with the outcome of this reception and the benefits it provided to those who attended. I would like to share the following statements made by various exhibitors, explaining their discipline and the advantages they received by participating in this event.

STATEMENT OF HAROLD G. TUFTY, CVS, NATIONAL DIRECTOR, FEDERAL LIAISON, AND CHAIRMAN, CONGRESSIONAL EDUCATION RECEPTION, SOCIETY OF AMERICAN VALUE ENGINEERS

First, on behalf of all of the exhibitors and the Society, I wish to thank both Congressman Larry Winn, Jr. (R-Kansas), who first co-hosted a similar reception in 1973, and Senator Jennings Randolph (D-West Virginia), who chaired the first Senate hearings on VE, for their continued support and interest in Value Engineering in general and, specifically, for co-hosting this reception December 9, 1981, to explain the potentials of Value Engineering in cost control and federal expenditures.

One of the primary things that we in SAVE wanted to explain to the Members who attended the reception and through this insertion in the Congressional Record to described to the Members of Congress who could not attend was to show its versatility particularly in manufacturing and construction; that it saves money for the taxpayer and creates additional profits for industry; and that it returns at least $10 for every Value Engineering dollar invested.

A second objective that we discussed with Members in attendance who stopped by our exhibit were suggestions of what Members could do if they chose to encourage more Value Engineering in the Executive Branch.

We suggested that a Member might contact agencies within their Committee's jurisdiction and ask the following questions:

(1) To what extent is Value Engineering/Management applicable to your activities?

(2) What VE/VM savings can be expected?

(3) To report regularly to the appropriate Congressional office what VE savings have been accomplished.

And in conclusion, John Bryant, of Harbridge House, Boston, Massachusetts, and SAVE National President, predicted that new annual VE savings in the order of billions of dollars could be expected "from a full application of the VE technique which is now delivering less than ten percent of its federal potential."

STATEMENT OF R. H. HERR, CVS, SENIOR ESTIMATOR, DAY & ZIMMERMANN, INC.

It has been well said before—"Value Engineering is a proven cost containment tool."

There is (nothing—no project) that cannot benefit by the proper application of VE/VM.

This is why Day & Zimmermann, Inc. has been so actively involved in VE for a number of years—including the discipline of Munitions Technology and Production; government buildings as well as those of the private or business sector; both of grass roots new construction and historic monumental facilities approaching two-hundred years since they were originally built.

Value Engineering has the greatest impact on cost during the conceptual and/or feasibility stage of a project whether it be a building, a waste treatment facility or a manufactured item or component. We at D&Z have also successfully VE-ed manufactured items that have been previously in production over a period of time.

Think of Value Engineering not as a cost but as an investment. One that will yield large "dividends" in the form of substantial cost savings for it can be a truly profitable investment.

In light of the current national economy both in the public and private sector, it can be responsibly asked—Who can afford not to use the application of VE/VM?

STATEMENT OF PAUL V. DUBROW, P.E., CVS, CHIEF OF VALUE ENGINEERING, OFFICE, CHIEF OF ENGINEERS; INTERNATIONAL VICE PRESIDENT, SOCIETY OF AMERICAN VALUE ENGINEERS

The U.S. Army Corps of Engineers was one of the many exhibitors at the Value Engineering reception sponsored by Senator Jennings Randolph (D-WVA) and Congressman Larry Winn, Jr. (R-KS), on December 9. An array of 24 implemented studies were presented in capsule video form. They are representative of the Corps' success story which has saved over $750,000,000.

The largest single VE action reported came from the Walla Walla District where Value Engineering pushed the state-of-the-art in dam construction and saved over $11,660,000.

A little known material and construction technique was developed into a project which has gained worldwide attention and has been the subject of an article and editorial in Engineering News Record.

To protect Heppner, Oregon, from a repeat flood disaster which drowned 247 people and destroyed a third of the city in 1903, a rock-fill dam with an impervious core was planned with an estimated cost of nearly $25 million.

Value Engineering studies resulted in the world's first gravity dam constructed of roller-compacted concrete. The contract price is $14.

Other examples of Value Engineering are studies accomplished by the U.S. Army Engineer District, Savannah for the construction program at Sunny Point Military Ocean Terminal in North Carolina. The saving exceeded $5 million from a $34 million construction program.

The Directorate of Facilities Engineering at Sunny Point states: "The Value Engineering studies will allow the Savannah District to award the total construction package with substantial reduction in construction costs, a reduction in operation and maintenance cost and insure a more efficient operation to accomplish the military mission at Sunny Point Military Ocean Terminal.

Value Engineering in the Huntington District produced over $4 million in savings at the R. D. Bailey Laboratory project located near Justice, West Virginia. These studies involved changes in the intake structure which served as a prototype for all design made after construction of the project; a change in the access road which not only reduced the initial construction cost but will also reduce operation and maintenance costs over the life of the project; and last but far from least, the use of a concrete face to replace the impervious core for the dam. This is the first dam of its kind to be constructed by the Corps of Engineers.

STATEMENT OF HANK WALES, CVS, GENERAL ELECTRIC

The Aerospace Business Group of the General Electric Company quite obviously supports this General Electric technique of Value Engineering developed by Larry D. Miles of GE in 1946.

There are many departments of several divisions of the Group. Tonight, we are displaying a typical Value improvement of a gun bolt, developed at our Burlington, Vermont, plant.

Work of this type has enabled us to submit 569 changes to the government, of which 370 have been approved, enabling us to return over $13 million to the Army, with another $8 million pending, and another $3 million in follow-on savings—for a total of $24 million.

STATEMENT OF DEAN VOEGTLEN, HUGHES AIRCRAFT CO.

THE HUGHES EXHIBIT

The Hughes Aircraft Company exhibit displayed photographic enlargements of four value engineering changes, illustrating the "before" and "after" condition. The examples shown were from the Army's TOW Missile and Ground Laser Locator Designator, the Navy's AN/SPS-52 Radar, and the Air Force's F-15 Avionics programs. Total Government savings achieved on these programs since inception was over $100 million. Each of the four panels also depicted significant additional benefits from the VE actions. For example, parts count was reduced, reliability increased, producibility improved and weight reduced from 20-60 percent in each case for each of the examples illustrated.

A dramatic example of the power of VE was demonstrated in a "before" and "after" version of the radar antenna transponder horn from another Army program which could be picked up and examined by the attendees. The original design met the required signal processing function through a complex array of waveguides, requiring very close tolerances and difficult machining, and assembly operations characteristic of current waveguide technology. Through an in-depth examination of the primary function of the item, a new design concept was conceived consisting of a solid state log-periodic antenna which replaced the waveguides. Material and labor costs were reduced 70 percent, weight was reduced 60 percent and operation/maintenance significantly improved with this state-of-the-art design.

Handouts were given to the Congressmen consisting of an article on Value Engineering at Hughes and a summary of the overall Company results to date—618 Value Engineering Change Proposals accepted on 46 different programs which produced $327.4 million in savings to the cognizant Government agencies.

STATEMENT OF GENE E. PERETTI, BOEING AEROSPACE COMPANY

The Boeing Company demonstrated VE savings achieved on its Roland and Air

Launched Cruise Missile (ALCM) programs, pointing out that Boeing has actively applied the VE technique since the mid-1960s. And over the past fifteen years, Boeing has sought to improve VE effort by incorporating an award system that provides a maximum award of $2,000 to employees who submit approved VE ideas.

Boeing is proud of its overall achievements in cost reduction and has tried to involve its employees in the task of submitting cost-reduction ideas; publicity plans; goals and employee awareness meetings are used to remind employees of the importance of cost reduction.

Special themes are used throughout the plant—such as "Slay the Dragon" on Roland; and the "ALCM Bee" (a cute stick-on bumble bee) for the ALCM program.

Boeing has also designed a unique first-of-its-kind eight-hour training course on productivity to reinforce the need for cost awareness. The course emphasizes the application of participative management techniques such as VE and quality circles.●

GETTING OUR ECONOMY BACK IN SHAPE

HON. HAROLD ROGERS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. ROGERS. Mr. Speaker, sometimes the Members of this body wonder whether the folks at home are really serious about getting our economy back in shape.

Well, I'd like to tell you about a constituent in the Fifth District of Kentucky who can help set the record straight and set your mind at ease. Her name is Margaret Morgan and she is from Wilmore, Ky.

A couple of years ago, she began taking stock of our Nation and of her responsibilities as a citizen of this great Nation of ours. And she reached the conclusion that it was her duty to become more active in setting our country back on the right track.

As part of this effort, she decided to encourage the Congress to work right along with the President. And she was willing to make a huge personal investment to get her message through. She rented a typewriter. She was willing to buy the stationery and pay for the postage.

But when I heard about her dedicated efforts, I decided that I wanted to help her tell the Congress her message. Because I'm convinced that there are a lot of Mrs. Morgans out there, with the same views this Mrs. Morgan has, though maybe with a bit less perseverence in getting their views known.

So I'd like to enter Mrs. Morgan's letter here in the RECORD. And I urge my colleagues to consider her views as we go home for the holidays and begin gearing up for the budget decisions in the next session.

DEAR CONGRESSMAN: Thank you for supporting President Reagan in this attempt to reduce federal spending and balance the budget in this most recent vote of the Congress. Americans are grateful for his veto. Of course we are all going to feel the pinch in some areas but it is necessary for all of us to tighten our belts. We do not expect economic recovery overnight, in fact it may be a least five years before we get into an upward swing.

The American Voters put this President in office and that strongly indicates we want his program given their chance.

Again, Thank you.

Sincerely,

MARGARET MORGAN.

Wilmore, Ky.●

OAS RESOLUTION ON EL SALVADOR

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. LAGOMARSINO. Mr. Speaker, on December 7 the Organization of American States (OAS) passed a very significant resolution on El Salvador. OAS approved the United States-El Salvador position of free elections by a vote of 22-3.

Inasmuch as little or no attention was given to this important occurrence by the U.S. news media, I submit for the RECORD for my colleagues, the resolution and a message from the State Department:

DEPARTMENT OF STATE,
Washington, D.C. December 11, 1981.

DEAR REPRESENTATIVE: On December 7, the Organization of American States overwhelmingly passed a very significant resolution on El Salvador. I thought you should have a copy. Three Central American countries that have recently had, or will have, elections of their own—El Salvador, Costa Rica and Honduras—sponsored this popular resolution which passed with twenty-two votes in favor, three opposed and four abstentions.

You will find this resolution to be a strong hemispheric endorsement of the democratic electoral process in El Salvador and a clear call for terrorist elements to renounce violence and enter this process. The large margin of the vote reflects the widespread sentiment in the hemisphere that the Duarte government's plans for the election of a Constituent Assembly in March 1982 offer the best hope for a peaceful solution to El Salvador's political problems. It presents a united front for democratic electoral solutions and against terrorism and outside interference. And it strongly reaffirms the critical role of the OAS in dealing with problems of regional importance.

It makes poignantly clear that those who are closest to, and most affected by, the current political difficulties in El Salvador are of one mind in their approach to resolving them. Its message should be seriously heeded.

Sincerely,

RICHARD FAIRBANKS,
Assistant Secretary for Congressional Relations.

Enclosures:

OAS GENERAL ASSEMBLY RESOLUTION ON EL SALVADOR

The General Assembly,

Having seen:

The provisions of Articles 3 and 16 of the Charter of the OAS, which refer to the principle of solidarity of the American States with a political organization based on the real exercise of a representative democracy, to respect for the fundamental rights of the individual, and to the principle of free determination of the peoples;

Resolution AG/RES.510 (X-0/80), which provides that the democratic system is the basis for the establishment of a political society where human values can be fully realized, and

Having heard:

The statements by the chiefs of delegations during the proceedings of the General Assembly, and

Considering:

That the Government of El Salvador has expressed its intention to find, through the democratic process, the political solution to the violence affecting its country and, to that end, it has scheduled the election of a National Constituent Assembly for March 1982;

That the Government of El Salvador has announced that the political electoral process of El Salvador is in progress, and

That the Government of El Salvador has invited other Governments to observe the holding of elections,

Resolves:

To express the wish that the people of El Salvador attain peace, social justice, and democracy within a pluralist system that enables its citizens to exercise their inalienable rights.

To express the hope that all Salvadorans will attain an atmosphere of peace and harmony through an authentically democratic electoral process.

To suggest to the Governments that wish to do so that they consider the possibility of accepting the invitation extended by the government of El Salvador to observe its election proceedings.

To repudiate violence and terrorism and any act that constitutes a violation of the principle of non-intervention.

To reiterate that, in accordance with the principle of non-intervention, it is up to the Salvadoran people alone to settle their internal affairs.●

"REDS"

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. McDONALD. Mr. Speaker, I would, for the benefit of my colleagues, like to comment during this Christmas season, on the latest fiasco from Hollywood, a film called "Reds," for which we witnessed two full pages in the Washington Post and New York Times, advertising its wonderful merits.

Any film depicting even one-tenth the glorification of the only Communist born in this free land of America

to be buried at the seat of modern communism in Moscow, would not be an incentive for me to attend. To make my point most emphatic, it is an insult to the Judeo-Christian heritage of this Nation to lend credence or monetary tribute to that which represents the worldwide forces of Satan.

Is this a sign of what some of Hollywood is trying to do to poison the greatness of our land? During the same holy season, we see other full-page advertisements praising the latest films of Jane Fonda, of Hanoi fame. Was it not she who went to the capital of Communist North Vietnam, broadcasted propaganda against our fighting forces in the South, and contributed to the torture and degradation of our men being held prisoner in North Vietnam? As we, this Christmas season, remember our Missing In Action (MIA), would we revel during such a season, again to repeat, to lend credence or monetary tribute to that which represents the worldwide forces of Satan? To both Fonda and "Reds," the reply should be an emphatic NO.

It is quite hard in the media these days to find an honest critique of this film, "Reds," but I did, in the Atlanta Journal. I would like to share with my colleagues, the partial critique of Journal staff writer, Scott Cain, from the December issue. Even Eleanor Ringel, on the same day, and taking the opposite view of Scott Cain, had to admit that she "* * * truthfully couldn't give it ("Reds") a rave."

Is it a coincidence that such a large play in the form of advertisements for both Fonda and "Reds" appears at the same time? Or is it that maybe that a certain element in Hollywood is warming up Jane Fonda to be the second American to be buried in the Kremlin—with Tom Hayden's permission, of course. For my colleagues, I share Scott Cain's worthy review with you and call your particular attention to the first four paragraphs—they tell it all:

[From the Atlanta Journal, Dec. 4, 1981]

HOLLYWOOD'S LATEST SHOCK IS IN "REDS"

(By Scott Cain)

Detente has gone too far when Hollywood makes a $33.5 million movie extolling the virtues of communism.

"Reds," Warren Beatty's magnum opus, contains the most shocking politics of any Hollywood film in nearly 40 years. It is a paeon of praise to Bolshevism. They'll love it from Minsk to Pinsk. "Reds" seems certain to win numerous awards at the next Moscow film festival.

Only in America would a multimillionaire actor, who has lived in the lap of luxury all his adult life, conceive a movie in homage to a Marxist.

Only in America would a studio, built and operated at a vast profit for 70 years under the capitalist system, finance a picture that admires socialism.

These are the stupefying mysteries. On a slightly lesser level, one is forced to wonder why Beatty would select John Reed for glamorization. Why not do a sentimental portrait of one of the really big Reds? Beatty could have been the sexiest V. I. Lenin of all time.

And lovable Leon Trotsky? His death scene would have been spectacular, far surpassing what Beatty got out of Reed's short and dismal life. Look at sweet ol' Uncle Joe Stalin. If anybody's reputation ever needed Beatty's handsome physique and pearly-white teeth, Stalin is the man. And think of the fun Beatty could have had playing Stalin's purge scenes of the '30s, gleefully ordering the deaths of millions of loyal Russians.

The list of dedicated, but dour, Communists who needed Beatty's help is endless. Lavrenti Beria is sorely in need of a glossy image, as are V. M. Molotov, Alexei Kosygin, Leonid Brezhnev. What about Andrei Gromyko, old "Grim Grom" himself?

Throughout the movie—for which Beatty served as producer, director, star and co-author—I kept waiting for Beatty to disassociate the film from Reed's politics, but he never does. He treats Reed as a hero.

Well, Reed is a hero in the Soviet Union. He is the only American buried in the Kremlin wall, which is not my idea of a recommendation. You don't have to be a Neanderthal American patriot to be offended by the fact that "Reds" is three hours and 19 minutes of Communist propaganda.

Worse yet, the film is unnervingly well made. Anyone who doesn't keep his wits is likely to be suckered into its ideology. At the screening I attended, several nincompoops applauded a scene in which an effigy of Uncle Sam was burned.

The United States government is, of course, portrayed as monstrous and insensitive.●

OLDER AMERICANS ACT AMENDMENTS

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. CONTE. Mr. Speaker, I would like to call to the attention of the House a matter which I find somewhat disturbing. I have been advised that the Office of Management and Budget is considering a proposal to eliminate the senior aid employment program in title 5 of the Older Americans Act. I hope the words I heard along these lines are not true, Mr. Speaker, because as OMB well knows, the House and Senate conferees intend for this program to continue as outlined in the conference report on the Older Americans Act amendments.

The senior aid employment program employs some 54,000 low-income senior citizens in various jobs of a community service nature. These jobs, many of which center around providing in-home services and direct care to others, are ones which, if it were not for the senior aid employment program, might otherwise go undone.

In the Commonwealth of Massachusetts, some 1,400 senior citizens are providing, under this program, care for children in day care centers, home health care to fellow senior citizens who need such care and a host of other assistance-oriented services. Similar services are provided in many communities throughout the country with very gratifying results.

As I stated, I hope the words I have heard regarding the intentions of OMB with respect to this program are untrue. As we move into the second session of the 97th Congress, I intend to take a close look at this program in the Appropriations Subcommittee on Labor and Health and Human Services when the fiscal year 1983 appropriations hearings begin.

The Congress has demonstrated its desire to see this program and the useful service it provides continued. Let's stick with that position.●

CALL TO CONSCIENCE VIGIL 1981

HON. MICHAEL D. BARNES

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. BARNES. Mr. Speaker, as we draw to a close this session, I want to thank all of my colleagues in the House and Senate who have participated in the Call to Conscience Vigil 1981.

Our individual and combined efforts on behalf of those who are persecuted in the Soviet Union have given a measure of hope to these individuals and their families here who have struggled to be reunited in freedom. We in the Congress have spoken openly and forthrightly on behalf of those who continue to be arbitrarily harassed, arrested, exiled. We commiserate with the families whose loved ones have been stripped of their livelihood and opportunities for a productive and personally fulfilling life. Emigration for Soviet Jews has declined markedly since the high total of 51,000 in 1979, and Soviet refuseniks, ostracized and tormented, wait and endure. They know that we are on their side. They know that we are fighting for them. And they know that we will not stop until they gain their freedom.

I hope that as we begin the new session next January even more of my colleagues will join us in the Call to Conscience Vigil 1982. We have made a difference. Those in the Soviet Union have taken great risks to further the cause of social justice. We in the United States are their partners. The battle is great, but the fortitude of the human spirit is on our side.●

DONALD KENDALL ON REAGONOMICS

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. ASHBROOK. Mr. Speaker, the big government "tax and spend" liberals are conducting an all out assault on the sane and necessary proposals of the Reagan administration to turn this country from economic disaster which these same liberals created. They are saying Reagonomics is a failure. The failure was in their tax, spend and elect policies.

What is Reagonomics? Simply stated, it is an effort to reduce runaway Government spending, reduce taxes to return to the individual and the private sector their rightful place in our private enterprise system while at the same time reducing the regulatory burden that this runaway Government has imposed on individuals, schools, businesses, and private activity. In the process of doing this inflation will be curtailed, our currency revitalized and economic growth which produces jobs in the private sector assured.

Now this is quite a change for the leftists and socialists to swallow. Along with their agent provacteurs, the liberal columnists and television commentators, they have conducted a war on these sound, sane policies.

Donald M. Kendall, president of the board of Pepsi Cola has come up with one of the most succinct and accurate answers to this liberal hysteria that I have seen. It recently was reprinted in the Cleveland Plain Dealer but I understand it appeared in the New York Times prior to that time. I missed the Times article but congratulate the Cleveland Plain Dealer for presenting it as a balanced and reasoned answer to the debate on Reagonomics. I urge my colleagues to read it.

MAYBE REAGONOMICS AIN'T BAD

(By Donald M. Kendall)

After just 10 months as the economy's steward, Ronald Reagan has come under sharp attack for his bold budgetary and tax policies designed to correct decades of mismangement.

Attacks have included wild exaggerations of the reach of the budget cuts, neglect of the beneficial aspects of the tax cuts and failure to report encouraging signs seen since the advent of Reagonomics.

Often overlooked is the fact that Congress did not actually cut the fiscal 1982 budget but only reduced increases planned by the previous administration.

The 1982 budget will be the largest—more than $71 billion larger than fiscal 1981's. Even taking into account the 6.2 percent increase in inflation forecast for fiscal 1982, the budget will grow. Increases in government spending will again outstrip inflation, which is more than we can say for the wages of the average worker and taxpayer.

Nevertheless, we are told Reagan has become the "great dismantler" of 50 years of social progress. Yet, if Lyndon B. Johnson was a hero in 1965 with a Great Society budget of $118 billion, 40 percent on defense, why is Reagan a villain for spending $732 billion, of which just 27 percent has been earmarked for defense?

Look at the fate of several social programs.

School lunches: Subsidies for families with incomes of more than $16,000 have been reduced, but pupils from families earning less than $11,000 continue to receive free lunches. In fact, the per-meal subsidy paid by the government to school districts for these free lunches has been increased, from $1.13 to $1.20.

Food stamps: Some 22.5 million Americans received them the past fiscal year. This year, 21.6 million will receive them, with striking workers excluded.

Medicaid and Medicare: In the last fiscal year, $57 billion was spent there. As such, a reduction of $500 million this year can hardly be described as Draconian.

All told, Reagan will preside over the largest yearly increase in entitlement social programs—from $295 billion last year to $345 billion this year—again, far exceeding anticipated rate of inflation.

While attention has been lavished on the supposed effects of the budget cuts (effects seen largely through the eyes of job-conscious federal program administrators), critics have ignored the promise of the Reagan tax cuts. How many headlines have reported that, according to the Treasury Department, about $2.18 billion will be pumped into New York State's economy after cuts in individual tax rates during the current fiscal year?

This figure does not begin to measure the total boon to the state because it does not consider the state's sizable share of the many tax incentives enacted for businesses and savers.

Recent history shows these dollars will not be stuffed into mattresses, but will be saved, invested and used to pay off debts—which will lead to lower interest rates, capital formation, economic growth, jobs and expansion of the tax base.

When John F. Kennedy's supply-side tax cut took effect in 1964, the rate of disposable income saved by Americans increased from 5.4 percent in 1963, the year before the cut, to 6.7 percent in 1964 and 7.1 percent in 1965.

In 1964, about 45 percent of dollars left in workers' pockets as a result of the Kennedy cuts was saved. In 1965, it was 58 percent.

Finally, while each downward blip on the economic radar screen is reported, the encouraging signs of recent months ahve been all but ignored.

Inflation has dropped 25 percent since Reagan took office; interest rates have dropped to their lowest levels in a year; all-savers certificates generated about $18.7 billion in deposits during October, and the rate of savings—the key to long-range economic health—has begun an impressive climb, from 4.3 percent in January to about 6.5 percent today.

President Reagan's economic recovery program was never intended to provide a quick fix. Yet, relatively minor reductions in the growth of federal spending, coupled with major tax incentives for every worker and business in America, have already begun to produce positive results in the rates of savings, interest and inflation.

The current economic downturn is all the more reason to stick to the course the president has charted, and to seriously consider speeding up the effective date of the next round of tax cuts.●

PEACE IN OUR TIMES?

HON. BOB LIVINGSTON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. LIVINGSTON. Mr. Speaker, genocide in Afganistan, Cambodia, and Vietnam. Nerve gas, chemical warfare, yellow rain. The thunderous cadence of the Soviet jackboot stamping out the spark of freedom throughout the Eastern World—most recently—most visibly in Poland.

Union leaders and their families dragged from their homes at early hours of the morning. Telephone and telex lines cut; newspapers closed, martial law imposed—dissent stifled under penatly of death.

Gradually, the Iron Curtain once again encircles a religious and brave people—and yet like the white and peaceful blanket of snow that hushes the noise of the streets of Washington—the Western world is strangely quiet. Western nations so quick to witness the excesses of the decadent United States—are quietly tolerant once again.

From the Western media, which has beaten so successfully on American intelligence forces—cautions and hopeful for the Polish people—but quick to assure us that it is an internal affair.

From the United Nations and that conglomerate of peace loving nations known as the Third World * * * nothing * * * are they asleep?

Well—perhaps there really is peace in our times.●

DEBATE OVER NATURAL GAS WILL PROBABLY SHED MORE HEAT THAN LIGHT

HON. THOMAS J. TAUKE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. TAUKE. Mr. Speaker, one of the most divisive potential issues for the 2d session of the 97th Congress is the deregulation of natural gas prices.

Like natural gas itself, the debate over deregulation will probably shed more heat than light. And yet there are some people who are providing the kind of careful analysis of the deregulation question that is so vitally needed. One such person is Dr. Charels G. Stalon, member of the Illinois Commerce Commission, who discussed deregulation of wellhead prices in a recent address to the National Association of Regulatory Utility Commissions.

I think that all of us—regardless of how we stand on the deregulation question—will benefit from Dr. Stalon's thoughtful commentary on this difficult issue.

Dr. Stalon's address follows:

DEREGULATION OF WELLHEAD PRICES: FOR WHAT PURPOSE?

(By Dr. Charles G. Stalon)

The nation is deep into the third decade of debates over "regulation" versus "deregulation" of natural gas wellhead prices. Despite that long history, the intensity of the debates, and the apparent victory for deregulation embodied in the Natural Gas Policy Act of 1978, it is disappointing to find so little agreement among opinion leaders and economic policymakers on the proper course to pursue toward wellhead prices at this point in time.

One of the reasons the debates have been so disappointing has been their tendency to focus on processes rather than purposes. Both "regulation" and "deregulation" are processes which can only be defended in terms of their results. Neither is an end in itself. As the nation gears up for the next round of deregulation debate, a review of the purposes of deregulation is needed. I want to make one contribution to that debate today.

My theme is a simple one. I take it from the theme of this convention, "Consumer Welfare: The Only True Regulatory Star". Just as regulation must be defended as a more efficient process for maximizing consumer welfare than all alternative feasible forms of social control of the subject economic activity, so must wellhead price deregulation be defended as a process which maximizes consumer welfare better than all feasible alternatives, or, conversely, as a process which leads to conditions which promise to maximize consumer welfare better than all feasible alternatives.

Accepting the likelihood that the nation has irreversibly committed itself to deregulation, and, furthermore, accepting the proposition that competitive markets generally work better to further consumer welfare than does price regulation, the issues to be addressed are twofold:

(1) Is the nation moving toward competitive markets for the pricing of wellhead gas, or is it going to be satisfied with non-regulated, non-competitive markets with economically disfunctional institutions and practices?

(2) How should the deregulation process now in place be modified to more effectively develop competitive markets for wellhead gas?

My answers to these questions can be grouped under two headings:

(1) the Natural Gas Policy Act (NGPA) program of deregulation which is now unfolding is defective in process. It has great potential for harming consumers—especially residential and small commercial consumers—in the transition to non-regulated markets.

(2) Moreover, the markets which will likely develop at the end of this deregulation program do not promise to be competitive enough to protect consumer interests over the long run. In order to create workably competitive markets for wellhead gas, many traditional practices, especially rate design practices, of the gas industry must be revised.

Permit me to elaborate on each of these topics.

The NGPA deregulation program embodies a defective process.—The one proposition on which almost all participants in the present deregulation debate seem to agree is that the current process, put in place by the NGPA, is deficient in one or more respects.

The underestimation of oil price increases, on which the Act was built, now means that, unless modified, a substantial price increase in wellhead prices will occur in 1985, particularly prices for Sections 102 and 103 gas (new gas from the Outer Continent Shelf (OCS) and gas from new on-shore production wells).

The likelihood that such large price increases will provoke a political reaction and lead to a stretch-out of the deregulation process is widely recognized. The possibility that it will lead to an indefinite extension of regulation seems to be taken as significant by some knowledgable observers. The "Analysis of Natural Gas Producer/Interstate Pipeline Contracts" done early this year by Decision Analysis Corporation for the Policy Evaluation and Analysis Group of the American Gas Association points out that one type of indefinite escalator clause still popular is one which grants to the seller the right to receive the "highest allowed regulated rate". Seventy of the seventy one contracts they examined which were signed after April of 1977 (the date of "new leases" under NGPA) has such clauses.

It appears that this group of well informed members of the gas industry are hedging their bets on deregulation.

A second group, and perhaps a group with more political force, that is dissatisfied with the current deregulation process is composed of pipelines and distribution companies. It is not the 1985 price run up—or fly up, or spike, all three terms are popular—which is the focus of their concerns. Although they also fear political reactions to that run-up, their concerns go deeper and are closer to my theme today. They fear that certain contractual practices in the pipeline-producer market will work to drive wellhead prices above competitive market equilibrium prices and keep such prices in existence long enough—perhaps indefinitely—to harm, seriously and perhaps permanently, pipelines distribution companies.

This harm would occur if the above-equilibrium prices were to induce a significant proportion of industrial customers to shift off gas. Clearly, if that happens, system load factors will decline for both pipelines and distribution companies, and burner tip prices will be forced up to those ratepayers who cannot easily shift off gas, namely, residential and small commercial users.

The NGPA deregulation program scheme is defective in target.—A third defect in the NGPA deregulation process often is not recognized, but it is the one I want to emphasize today. The NGPA process will leave in place a vintage pricing structure at the wellhead for the indefinite future. This vintage price structure almost certainly means that "new" gas will carry a higher price than "old" gas. Since the new gas price reflects—and probably reflects accurately—the marginal social cost of gas, rolling in the "new" gas price and the "old" gas price presents to the distributor at the city-gate—and, therefore, to the state regulatory commissions—a commodity price which is below the marginal social cost of gas. This, I want to argue, is a suboptimal objective.

A vintage price structure at the wellhead in a period during which the marginal social cost of gas is rising, makes it inevitable that prices will not convey the proper information forward through pipelines and distribution systems. Permit me to develop this point at some length.

The Vintage Price System must be Eliminated.—Economic scholars have developed elaborate descriptions of the necessary conditions for allocating resources to maximize consumers' welfare. One of the necessary conditions for achieving such a welfare maximization is that each buyer is faced at each point in time and in each location with prices for goods and services which equal the marginal social cost of producing and transporting those goods and services. The defense of competitive markets lies in their tendency to generate such prices. The defense of public utility regulation lies in the need to use government power to produce such prices when natural monopolies exist.

State regulatory commissions, however, cannot fulfill such a responsibility, if they cannot determine the marginal social cost of gas. If state commissions are to be given price signals at the city-gate which encourages them to fulfill their responsibility, the federal government must construct and preserve contractual guidelines and pipeline rate designs which reveal to them appropriate prices. For the following reasons, the existence of a vintage price system makes that task next to impossible.

First, it is obvious that when a pipeline serves a single distribution utility, the marginal cost of gas to the utility is the marginal cost of gas to the pipeline plus whatever capital cost is called for to fit the planning horizon under consideration.

Second, the task of determining marginal social costs becomes more difficult when discussing a pipeline which serves several distribution utilities in one state. In such a case the marginal cost of gas presented to the state will be different from and the marginal cost of gas presented to each utility. For example, assume a pipeline serves two, and only two, utilities in a state, and these utilities import all the gas coming into the state. If one utility increases its demand and, thereby, induces the pipeline to purchase additional current vintage priced gas, and the pipeline rolls the new vintage price in with the old, then the marginal cost of gas to the initiating utility will not be the pipeline's marginal cost. It will be the old rolled-in price plus a fraction of the difference between that price and the new vintage price. The fraction will equal the proportion of that utility's purchases to total state purchases.

For example, if the rolled-in price is $3 before the increase in demand and the new vintage price is $5 and the new gas quantities match the old gas quantities and the two utilities make equal quantity purchases from the pipeline, then the initiating utility will incur a marginal cost of $4 for the marginal units. Since the "other dollar" is imposed on the state's second utility, the marginal cost of gas to the state is clearly $5, the same as the pipelines.

Third, it follows from the construction of this argument that one can easily imagine a case where many utilities in one state are served by a single pipeline. And calculating as I did above, each utility would estimate its marginal cost of gas at slightly greater than $3 while the state regulatory agency could calculate the marginal cost of gas to the state at $5. It logically follows that it could be rational for the state to coerce the utilities into a consortium to produce synthetic gas at a cost of $5 to displace gas which each utility sees as having a marginal cost to it of less than $4.

Corollaries of these arguments deserve emphasis, since I think they are equally relevant. The three I want to emphasize are stated briefly:

First, most pipelines serve utilities in more than one state and, while it may be true that the marginal cost of gas to a state is larger than the marginal cost to each utility in the state, it is also to be expected that the marginal cost to each state will be less than the marginal cost to the serving pipeline or pipelines.

Second, because the marginal cost of gas to each state is less than the marginal cost to the pipelines serving that state, each state would be economically discouraged from building synthetic gas projects even when the average cost of gas from the synfuels project is less than the marginal cost of gas to the serving pipelines.

The third and final conclusion to fall out of the analysis is that distribution utilities are also going to be economically discouraged from building synthetic gas plants for anything other than peaking units. Only the pipelines will confront the trigger level of the marginal social cost of natural gas. Therefore, the pipelines will be rationally induced to build synfuels plants when it would be economically irrational for either a distribution utility or a state to do so.

Interim recapitulation and summary.—I can summarize this first part of my argument as follows: A vintage price system at the wellhead generates improper price signals to states and distribution companies. It reduces their incentives to develop synthetic gas supplies and it tends to unduly concentrate incentives onto the pipelines for developing such gas. Obviously, this is a disfunctional incentive structure for a nation desiring to use competition to develop new gas sources and to allocate those gas sources efficiently over location and time.

It follows logically from this conclusion and the acceptance of the objective of efficient allocation that any deregulation program which purports to seek consumers' welfare must be full deregulation, that is, deregulation of old and new gas prices.

Competitive markets must be created.—The second half of my argument starts with a reminder that the deregulation of both old and new wellhead prices is not sufficient to create competitive markets. It is only one of many necessary conditions. To take that step and not accompany it with other necessary actions would be a distinct disservice to consumers.

A competitive market requires conditions whereby prices respond to demand changes as well as to supply changes. It requires conditions whereby a buyer can continually reallocate his purchases among competing suppliers so as to minimize his cost. A competitive market cannot tolerate contractual arrangements and/or rate designs which effectively insulate sellers from incremental changes in burner tip demands. Neither can a competitive market tolerate contractual arrangements and/or rate designs which effectively discourage buyers from seeking or developing economically justifiable alternative sources of supply, be they natural or synthetic.

It logically follows, therefore, that many of the contractual arrangements and rate designs which developed when the natural gas industry was regulated end-to-end cannot be permitted to carry over into an industry where only distributors and pipelines are regulated. Long-term contracts and take-or-pay clauses designed to shift risks forward to distribution companies and to ratepayers must be modified and severely constrained to prevent them from hampering the efficient workings of the market.

Contracts which base the price of gas on a price or prices in other contracts between different parties are illegal restraints of trade elsewhere in the economic system. They cannot be permitted to exist in the non-regulated segment of the natural gas industry. To permit their continued existence would be to permit producers to retain the privileges of regulation after releasing them from the responsibilities of regulation.

Producers who want free market privileges must accept the risks of free market firms. They should not seek and they cannot be permitted to shift those risks forward as they have done in the past.

A new role for pipelines.—In this new world of demand sensitive prices, pipelines must also be required to accept greater risks. Since pipelines are repositories of much of society's knowledge of field prices and supply sources, city-gate rate designs must be created which induce them to bargain vigorously in the interests of consumers. City-gate rate designs and contractual arrangements must always be crafted to encourage pipelines to use those skills efficiently and to suffer losses when they fail to do so.

City-gate contractual arrangements must also insure that distribution companies, acting alone or in cooperation with other distribution companies, are encouraged to develop or purchase synthetic gas when relative prices indicate that to be in consumers interest. Only by diligently pursuing such alternatives can discipline be imposed on pipelines and in turn on natural gas producers.

Second interim recapitulation and conclusion.—I can summarize this second part of my argument as follows: Rate design, especially city-gate rate design, must become a topic of paramount importance in a world of deregulated wellhead prices. The purpose of rate design can no longer be taken to be the shifting of risks forward to ratepayers. It must now be taken to be the constructive transmission of competitive market signals and pressures. Risks must be shifted backward as well as forward. The responsibilities of FERC in this regard become enormous.

State commissions must also accept new responsibilities. If distribution companies are to be encouraged to play one supplier against another and synthetic producers against natural producers, then state commissions must be prepared to facilitate contractual arrangements which encourage that play.

Retargeting the deregulation process.—I would like to conclude my remarks today with a proposal on how the nation should retarget the deregulation process. From the reasons offered by others, especially those put forth by the pipelines and distributors, and the reasons I have emphasized today, it is necessary that the deregulation program be revised.

Reopening the issue will permit the U.S. Congress to reduce the likelihood of an economically disruptive run-up in prices in 1985, and more importantly, it will also permit the Congress to clarify the permissible forms of contracting between pipelines and producers.

Both of these Congressional actions should be guided by a desire to create a workably competitive market for gas. In short, we all should encourage Congress to review the deregulation process with the idea that while it is correct that "Consumer Welfare (is) The Only true Regulatory Star", it is equally correct that "Consumer Welfare (is) The Only True Deregulatory Star".●

FARY CALLS FOR CONTINUED FOOD AID TO POLAND

HON. JOHN G. FARY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. FARY. Mr. Speaker, news accounts out of Poland show that since the imposition of martial law on Sunday, the situation is worsening. Polish troops have been used to break strikes by the Solidarity trade union in Warsaw plants and Gdansk shipyards to detain strike leaders. Solidarity leader, Lech Walesa remains in Government custody, and there is a complete communications blackout in Poland. It has been reported that over 5,000 people have been arrested so far.

At this time we do not know exactly what type of pressure the Soviet Union is exerting on Poland that would drive the Polish Government to this confrontation situation with the Solidarity movement. Negotiations and compromise between the Polish people and their Government in the past year and a half have kept Poland from plunging into chaos with far reaching implications for international security. The Polish authorities should continue to seek a negotiated settlement to their internal problems and abandon their hard-line stance. If the political situation becomes any more volatile, it will only facilitate Soviet intervention which would have the gravest of consequences for Europe, the United States, and the Polish people themselves.

In this time of crisis for the brave Polish people, the United States should help the Poles in their struggle for human rights. I have sent a letter, along with other Members of the House, to President Reagan urging him to continue to send food aid to Poland to help the Polish people survive the long hard winter that they are about to face. On December 14, Secretary of State Alexander Haig announced that the U.S. Government has decided to suspend consideration of requests by Poland for further food aid. The U.S. Government should not use food as a tool to make the Polish authorities relax martial law and the suspension of freedoms. The United States must take a strong stand against the Polish Government's recent actions, but denying food credits is not the answer.●

ROBERT W. LEE ON PEARL HARBOR—PART II

HON. LARRY McDONALD
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. McDONALD. Mr. Speaker, this will conclude Mr. Lee's article on Pearl Harbor from the December 1981 issue of American Opinion.

In this concluding part, Mr. Lee traces the role of those high in the Government of the United States who were actually working to guarantee that Japan would attack the United States. The purpose had nothing to do with the best interests of the United States, but rather the best interests of Soviet Communist imperialism. Owen Lattimore, following World War II was identified by Democrat Patrick McCarran's Investigating Committee, as Mr. Lee puts it, "* * * a conscious articulate instrument of the Soviet conspiracy." Harry Dexter White, also was identified as a Soviet agent. These two, were responsible for drafting the policy that led to the ultimate provocation that gave Japan no other outlet than to attack the United States.

Also discussed is the failure of the U.S. Congress, thanks to our own body, to cover up the true and final secrets of Pearl Harbor. Mr. Lee's conclusion follows:

Even Communist spymaster Richard Sorge got into the act by working to scuttle the meeting from the Japanese side. Professor Anthony Kubek writes: "With the rejection of Konoye's offer, Richard Sorge dismantled his spy apparatus, confident both of a Japanese war against the United States and Great Britain, and of continued Japanese neutrality towards the Soviet Union." Sorge was arrested by Japanese authorities on October 18, 1941, and later executed.

Also on October eighteenth, due in large part to his lack of diplomatic progress with the United States, Prince Konoye's Cabinet fell and he was replaced as Premier by the anti-U.S. military regime of General Hideki Tojo. It was another huge step towards war.

In early November, the Japanese Government submitted a proposed agreement to Washington and cabled its Embassy on November fifth (in a secret message intercepted and decoded as part of the "Purple" operation) that November twenty-fifth was the deadline for action on the agreement. On November twenty-second, another cable extended the deadline to November twenty-ninth, after which "things are automatically going to happen" unless an agreement could be reached.

On November twenty-fifth the Japanese Task Force sailed from Tokyo. On that same date, Secretaries Stimson and Knox met at the White House with General George Marshall (Army Chief of Staff), Admiral Stark, and the President. Their discussion was primarily devoted to the intercept which set the final deadline for November twenty-ninth. The likelihood of war was nearly certain and the main question, Secretary Stimson subsequently recorded in his diary, was "how we should maneuver them into the position of firing the first shot without allowing too much danger to ourselves. It was a difficult proposition."

On March 21, 1946, during testimony before a postwar Congressional Investigating Committee, Stimson further discussed this important meeting in these words: "If war did come, it was important, both from the point of view of unified support of our own people as well as for the record of history, that we should not be placed in the position of firing the first shot, if this could be done without sacrificing our safety, but that Japan should appear in her true role as the real aggressor." And he further explained how he felt when news of the Pearl Harbor attack arrived: ". . . my first feeling was of relief that the indecision was over and that a crisis had come in a way which would unite all our people. This continued to be my dominant feeling in spite of the news of catastrophes which quickly developed."

It is worth noting that earlier in the month Secretary Hull had composed a draft calling for a ninety-day truce with Japan. This proposal was endorsed by General Marshall and Admiral Stark since it would provide more time to build our defenses prior to the outbreak of hostilities. Yet, on the morning of November twenty-sixth—the day following the discussion about enticing Japan into "firing the first shot"—Hull telephoned Secretary Stimson to say that he had "about made up his mind" to drop the proposed *modus vivendi* and instead "kick the whole thing over" and tell the Japanese he had no proposal at all. Later in the morning, the President concurred with that view, the truce plan was dropped, and another possibility for averting war went down the drain. General Marshall later testified that the truce might have precluded our entering the war at all, since a delay by the Japanese from December 1941 to the early months of 1942 might have resulted in a change in their opinion as to the wisdom of the attack due to the collapse of the German front before Moscow in December 1941.

Why did Secretary Hull turn sour overnight on his own truce plan? Again we encounter Communist influence. Soviet agent Harry Dexter White, as soon as word of Hull's plan leaked out, drafted a letter to the President for Treasury Secretary Morgenthau's signature. It catalogued the alleged terrible consequences which would follow any agreement with Japan. The letter expressed the fear that "our people, and all the oppressed people of the earth," might "interpret your move as an appeasement of repressive forces." White (through Morgenthau) reminded F.D.R. of the "supreme part" he was "to play in world affairs" and said of the proposed truce: "The parallel with Munich is inescapable."

Professor Owen Lattimore, whom Roosevelt had pointed as special advisor to the Chinese Government, dispatched a cable to Presidential aide Lauchlin Currie arguing against any agreement between the U.S. and Japan on a *modus vivendi.* Historian Anthony Kubek contends that "Lattimore, by this one act, designed to accomplish the Soviet objective of promoting war between the United States and Japan—did more to promote the Sovietization of China than in any other act of his career. All Communist schemes for conquest of China hinged upon destroying the balance of power in the Pacific."

In 1951, the Senate Internal Security Subcommittee concluded, after extensive Hearings regarding Communist influence on our China policy, that Lattimore was a "conscious, articulate instrument of the Soviet conspiracy."

On the afternoon of November 26, 1941, Secretary Hull completed the final version of his ten-point response to the agreement Japan had proposed. Both he and the President knew that Japan could not accept its terms. In his own words to Secretary Stimson, it had "broken the whole matter off. . . . I have washed my hands of it and it is now in the hands of you and Knox—the Army and the Navy." The Army Pearl Harbor Board would later declare that the Hull ultimatum "touched the button that started the war."

Among other things, the note called for the withdrawal of all Japanese "military, naval, air and police forces from China and from Indo-China." Japan was so deeply committed in China that the bulk of her national wealth was tied up in the effort. As Captain J. C. Wylie observed. "If they had chosen to get out of China, I do not see how they could have avoided an intenal revolution . . . and even if they had done so, their successor would have come to power in opposition to any such course."

The Hull ultimatum of November twenty-sixth was largely based on a memorandum written by—you guessed it—Soviet operative Harry Dexter White. The White memorandum (once again over Secretary Morgenthau's signature) contained terms so stiff that White knew Japan would not accept them. The document was in front of Hull as he drafted his reply to the Japanese. In its final form, the ultimatum contained eight of White's demands. In other words, as Anthony Kubek explains, "Harry Dexter White, a Soviet agent, helped in an important, even decisive, way to draft the ultimatum that provoked war between Japan and the United States. This was a primary Soviet aim in the Far East."

It was now simply a matter of waiting for the Japanese to sever diplomatic relations and "fire the first shot."

Shortly before noon on December 1, 1941, President Roosevelt held an urgent meeting with Secretary Hull and Admiral Stark, then had a luncheon meeting with Presidential advisor Harry Hopkins, who had to be transported from a hospital sickbed to attend. The topic of discussion remains a formal secret, but is undoubtedly indicated by the following dispatch which Admiral Stark sent that afternoon to Admiral Thomas C. Hart, Commander of our Asiatic Fleet: "President directs that the following be done as soon as possible and within two days if possible after receipt of this dispatch. Charter 3 small vessels to form a 'defensive information patrol.' Minimum requirements to establish identity of U.S. men-of-war are commanded by a naval officer and to mount a small gun and 1 machine gun would suffice. Filipino crews may be employed with minimum number naval ratings to accomplish purpose which is to observe and report by radio Japanese movements in west China Sea and Gulf of Siam. One vessel to be stationed between Hainan and Hue, one vessel off the Indo-China Coast between Camranh Bay and Cape St. Jacques and one vessel off Pointe de Camau. Use of *Isabel* authorized by President as one of the three but not other naval vessels. Report measures taken to carry out President's views."

Incredible! As Frederic R. Sanborn observes, "What a 'smart' plan it was! First, the beguiling and misleading name, adapted from the one first used in the Atlantic—'defensive information patrol.' Next, the use of

the American flag, and the attempt to convert these pitifully 'small' chartered vessels into 'U.S. men-of-war.' Next, the provocation offered. These vessels were 'to be stationed,' that is, put in fixed positions (perhaps anchored), in what was believed to be the principal and direct path of the Japanese advance. There they were 'to observe and report by radio,' no mention being required of the use of code, the 'Japanese movements.'"

Those with the child-like naïveté might accept that this maneuver was for "defensive information purposes," but as historian Charles Callan Tansill has written: "Adults will persist in the belief that Roosevelt was attempting to rig a lynching which would relieve him of his embarrassments by putting this sacrifice force in the path of the Japanese fleet, where it would be run down or shot up. The formula was ingenious as a means of procuring 'the first overt act' and inducing Japan to fire 'the first shot without allowing too much danger to ourselves.' The Democratic platform reservation—'except in case of attack'—would be fully met, and Mr. Roosevelt would be free to embark on his crusade for the Four Freedoms 'everywhere.'"

It does indeed appear that this cockleshell armada was to serve as a backup target should the Japanese, for whatever reason, decide to move against territory other than that of the U.S. at Pearl Harbor. But Pearl Harbor was attacked before the full operation could be put into effect.

On November 27, 1941, Secretary Stimson met with Admiral Stark and a member of General Marshall's staff and sometime later sent a message to the various Commanders warning of the deteriorating diplomatic situation. The message received by General Short in Pearl Harbor included these words: "If hostilities cannot, repeat cannot, be avoided the United States desires that Japan commit the first overt act." The overall directive was interpreted by General Short to be a warning, so far as his own operations were concerned, to guard against possible sabotage—not overseas attack. He therefore placed his department on sabotage alert and so notified Washington.[1]

If General Short's interpretation of the threat and response was "incorrect" (after all, he had been denied information regarding the "Purple" intercepts, Secretary Hull's November twenty-sixth ultimatum, and other vital information which would have given him a clear picture of the actual situation) it was the duty of his superior officer (General Marshall) to order a correction. Up to the time of the December seventh attack, Marshall made no change in, or comment about, the sabotage alert. Indeed, on November twenty-eighth, Army Air Commander General "Hap" Arnold wired Short instructions to provide for protection against "subversive propaganda," "espionage," and "sabotage of your equipment, property and establishments." This directive naturally led Short to believe that his sabotage alert had been confirmed.

On November twenty-eighth, another intercepted message from Tokyo made clear that the American proposal of November twenty-sixth was (as everyone knew) unsatisfactory and the Japanese reply would end negotiations. That war would likely follow by concurrent surprise attack was indicated by the prior Japanese record (against China in 1894, Russia in 1904, and Germany in 1914) of timing surprise attacks to coincide with the severing of diplomatic relations.

Shortly after noon on December sixth, U.S. intelligence intercepted a message stating that the Japanese response to Secretary Hull's November twenty-sixth missive would soon be sent in thirteen parts, with a later dispatch to inform the Ambassador of the time the reply should be delivered to Hull. As early as December first, Tokyo had begun to instruct its Embassies in potential war areas to destroy their code machines, secret documents, files, etc. This move was most significant, because the mere severing of diplomatic relations would not have jeopardized the cover of immunity for the contents of Embassy offices and would not have required the destruction of those contents. The "destruct" orders were another clear indication that war, and nothing less, was in the works. The Japanese reply to the Hull memorandum would end the negotiations. The time of its delivery would likely indicate the beginning of the attack.

The thirteen-part reply was intercepted, decoded, and ready for distribution to the President and others on the evening of December sixth. When F.D.R. finished reading his copy by around nine p.m., he exclaimed: "This means war."

The President discussed the matter briefly with Admiral Stark that night. General Marshall was away from his office and could not be located. (Nor, he claimed in later years, could he recall where he had been that night. If so, he was the only American who could not recall his exact location on the eve of that day of infamy.)

On the morning of December, 7, 1941, the final Japanese message was intercepted and decoded by seven a.m. (more than six hours prior to the attack). It set one p.m. Washington time (7:30 a.m. in Pearl Harbor) for delivery of the reply to Secretary Hull.

Admiral Stark arrived at his office a bit late—9:25 a.m.—and, after reading the thirteen-part war message, did nothing to warn the Commanders in Hawaii. Even when he was shown the time-of-delivery message an hour later, he still opted to remain silent.[2]

General Marshall, who claims to have been horseback riding, did not arrive at his office until 11:25 a.m., at which time he read the Japanese reply (including the time-of-delivery dispatch), then proceeded to compose a message of warning to be sent to the various Commanders. The message was ready for encoding at 11:58 a.m., which still left plenty of time to reach Admiral Kimmel and General Short prior to the attack. But Marshall then opted to ignore the scrambler telephone on his desk, the Navy and F.B.I. radio systems, and other swift methods of transmission, and instead had his warning message of impending attack sent by Western Union to San Francisco, then by R.C.A. commercial radio to Honolulu.[3] Indeed, the communication was not even marked "urgent" or "priority." As a result, it reached General Short's headquarters six hours after the attack; Admiral Kimmel had it two hours later.

Congressional investigators found "no justification for a failure to send this message by multiple secret means," and Professor Kubek comments: "There has never been a satisfactory explanation why on the morning of December 7th, Washington officials refused to send one short message to Hawaii in time to anticipate the Japanese attack. No officer could make such a grave error of omission and retain his office unless he were acting under orders. Such orders could have come only from Roosevelt. He was the only common commander for all concerned."

And Admiral Kimmel, a major victim of the whole Pearl Harbor affair, observed that the "Lack of action on the part of both the War and Navy Departments must have been in accordance with high political direction, because the officers in both departments repeatedly demonstrated both before and after Pearl Harbor that they were not careless, inefficient or incompetent. One or two of them might have slipped up, but certainly not all of them concertedly . . . ." Clearly there was a conspiracy of terrible proportions.

After the tragedy, with the American people demanding to know why it had happened, a number of investigations were launched over a period of five years. Most involved a tug of war between those anxious to get at the truth and those anxious to effect a coverup of the role of F.D.R.

First, there was the "Knox Report" conducted, while the ships were still smoking, by Navy Secretary Frank Knox. It completely absolved General Short and Admiral Kimmel of any and all dereliction of duty. This, of course, was not in accord with President Roosevelt's need for scapegoats, so the President moved completely to suppress his own Navy Secretary's report and it did not see the light of day until after the war had ended. Even then, little or no publicity was given to it, and not one American in a million knows anything about it to this day.

The Roberts Commission, investigated by Roosevelt with Supreme Court Justice Owens as Chairman, completely whitewashed the issue, finding that the Secretaries of State, War, and Navy as well as General Marshall and Admiral Stark, had fulfilled their obligations in connection with the Pearl Harbor attack. This disgraceful panel unjustly heaped the entire blame on Admiral Kimmel and General Short.

The Naval Court of Inquiry, which ran from July 24 to October 19, 1944, cleared Admiral Kimmel completely and, as noted earlier, charged Admiral Stark with a lack of sound "judgment" in failing to transmit adequate information about the Japanese situation to Admiral Kimmel during the critical period from November twenty-seventh to December seventh.

The last of the eight or nine investigations was conducted between November 15, 1945, and May 31, 1946, by a Joint Congres-

[1] Protecting installations and equipment from sabotage by the local Japanese population meant bunching planes together, placing anti-aircraft ammunition underground, and otherwise making moves just the opposite of proper preparations for an attack by air.

[2] The Naval Court of Inquiry convened in the summer of 1944 to evaluate the Pearl Harbor tragedy was highly critical of Admiral Stark's "judgment" in failing to transmit such obviously critical information to Admiral Kimmel. Admiral Stark responded that his conscience was clear because all of his official actions in the days prior to the attack had been governed by orders from "higher authority." Which was undoubtedly true. During those days, President Roosevelt was the *only* naval authority higher in the military chain of command than Admiral Stark.

[3] A warning of even thirty or forty minutes would have saved lives, and might have stopped the attack altogether. The post-war congressional investigation included testimony by a member of the Japanese attack force which confirmed the logical assumption that the Task Force was under orders to turn back if the American military forces at Pearl Harbor were alerted in advance.

sional Committee. Dominated by Democrats with a vested interest in protecting the Roosevelt image, its work was also largely a whitewash. However, due to the persistance of certain Minority members (especially Senator Homer Ferguson of Michigan), some extremely valuable additions were made to the Pearl Harbor record. It was through Senator Ferguson's efforts, for instance, that the Knox Report was at long last revealed. Also, for the first time, the many Japanese diplomatic message which had been intercepted were laid on the public record.

A serious effort was made to keep those important messages under wraps. Senator Elbert D. Thomas (D.-Utah), fronting for Roosevelt during the ailing President's last days, introduced legislation on March 30, 1945, to prevent the disclosure of any coded material obtained during the war except by permission of the head of a government department or the President. The effect of the bill would have been to suppress disclosure of the Japanese intercepts (the contents of which were collectively called "Magic," since the decoding process had been so remarkable). With nearly unprecedented haste, the bill was reported from Committee within one day and passed by the Senate on April fifth. Fortunately, the House was made sufficiently aware of the bill's sinister significance in time to delay its consideration and eventually kill it.

Finally, there is the matter of G.O.P. Presidential candidate Thomas E. Dewey's experience during the 1944 campaign. Dewey learned that we had cracked the "Purple" code prior to Pearl Harbor and that the White House had known more than fifteen hours prior to the attack that war would be launched somewhere the next day in the Pacific. But, he did not know whether the code was still being used by Japan. If so, he would be assisting the enemy by raising the Pearl Harbor issue in the campaign.

When General Marshall learned that Dewey might be on the verge of breaking the Pearl Harbor story he dispatched a courier with a letter which admitted to Dewey that the code had been broken and warned that it was to our continuing advantage to keep that fact from Tokyo, since the code was still being used. Dewey and his advisors concluded that they had no alternative but to abide by Marshall's request for continued secrecy and the Pearl Harbor issue was never raised.

Could the Japanese actually have been so naive and/or incompetent as to use the same code for so many years—especially when they were being outmaneuvered so consistently throughout the Western Pacific? It seems doubtful, and contrary to standard military practice, which calls for code changes at irregular intervals.[4]

* * * * *

An interesting sidelight to the Pearl Harbor saga was noted by Percy L. Greaves, Jr., chief of research for the Republican Minority during the Joint Congressional Committee investigation. In a chapter of the excellent multi-authored book, *Perpetual Was For Perpetual Peace,* Greaves wrote: ". . . those who testified in the various hearings as to facts that were damaging to the administration and their superiors had few promotions. Those who maintained secrecy, failed to remember, or testified on behalf of the administration, rose very quickly to high places . . . . virtually no one who tried to spread the alarm during the twenty-four hours preceding the attack, or later to reveal facts damaging to the administration, has ever been promoted or rewarded." Every effort was made to prevent exposure of the evidence that Roosevelt, Marshall, and Stark had conspired to make possible the Japanese attack on Pearl Harbor.

That is the only conclusion that a reasonable man could reach. As President Franklin D. Roosevelt once observed: "In politics, nothing happens by accident. If it happens, you can bet it was planned that way." Like Pearl Harbor.●

[4] Washington had intercepted two dispatches in April 1941, from Berlin to Tokyo, stating that the U.S. was reading the Japanese messages. Either the Japanese didn't believe it or their agents were aware that Roosevelt meant to offer the U.S. Fleet at Pearl Harbor as a sitting duck to assure American entry into the war.

THE GOOD SIDE OF MIAMI

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. LEHMAN. Mr. Speaker, Miami has gotten a lot of bad press in the last year, the most recent being a cover story in Time magazine.

No other American community could have done a better job of absorbing and accommodating 125,000 Mariel refugees and over 50,000 Haitians, not to mention thousands of refugees from other parts of the world who have settled in south Florida.

Most of the refugees are poor, and many were ill when Castro sent out from Cuba those he no longer wanted.

In the glare of bad publicity, much good has been overlooked. There are many good people in the Miami area who care very much about their community.

Recently, the Miami Herald printed a series of letters recounting the good things that can still happen in Miami. I want my colleagues to know that the people of Miami still believe in their community. Following are some of the letters included in the Herald:

SING LOUD THE PRAISES OF MIAMI

To the EDITOR:

I'd like to start with a quote from Shakespeare: "The evil that men do lives after them; the good is oft interred with their bones."

Here is my story to prove it. When I was driving on I-95, my faithful car decided to go on strike.

I stood there and waited in intense heat for almost an hour. Then a young man pulled up beside me and asked if I needed help. This young man (his name was Bill) went out of his way to drive me to the nearest exit to use a telephone in a gas station. He then gave me his telephone number. If I didn't get help soon for any reason, I was to call him and he would come back to give me further assistance.

LILLIAN KATZ,
Miami Beach.

To the EDITOR:

During a Dolphins game, my wife noticed that a valuable pearl was missing from her ring.

Thinking that it had fallen out while in the rest room two hours before, she hurried there.

She found an attendant who had come over on the Mariel boat lift and who said, "Thank God you came, because I didn't know what to do with it."

This lady was a refugee who probably could have used the money that the pearl could have been sold for.

I wonder how many "honest" Americans would have acted the same way?

DONALD A. PRUESSMAN,
Miami.

To the EDITOR:

Chivalry is not dead! Several gallants came to my aid on an August morning as I was stranded on the 826 expressway.

Please recognize Roberto, Mr. Jordan, and the unidentified Feick security man for stopping to help.

Very special thanks and recognition to Don Perry, who worked on my car and towed me safely home. What might have been a long, difficult time was instead a most positive one.

TOBY DAVIDOW,
Miami.

To the EDITOR:

Recently I saw what I think is the real Miami. There was a motorcycle/car accident on Biscayne Boulevard and 123rd Street.

The cyclist was hurt and people came to his rescue—a nurse from North Miami General Hospital, a nurse from Parkway General Hospital, and the radiology manager from Southeastern Medical Center.

They were in the middle of the highway taking care of the man. There was little left for the firemen and ambulance to do.

That is the real Miamian, and I'm proud.

MIKE CONNORS,
North Miami.

To the EDITOR:

You should have been there.

Dinner Key Auditorium, filled inside and out with sparkling new boats on display. A jazz band next door in the park playing to a hugely appreciative crowd. Meanwhile up the street, the Banyan Festival noisily capturing downtown Coconut Grove. Sidewalk art displays, the rhythm of Caribbean music, and a stream of business for foreign-food street vendors.

Good for you, Miami! Doing it in style, you city of dreams, you.

RICH LEE,
Coconut Grove.

To the EDITOR:

In these times of so much violence, greed, and man's inhumanity to man, we wish to tell the people of South Florida about some wonderful people.

The paramedics of the Del-Trails Fire Dept. of Delray are the most efficent and compassionate young men we have ever seen. They have saved lives twice in recent weeks and deserve more than just praise.

HAROLD and ADELE WALLACH,
Delray Beach.

To the EDITOR:

I would like at this time to thank The Herald for the story about the 88-year-old

crippled lady, Mary Fanco Vasquez, who was evicted from her home.

The morning after the story was printed, I received several checks to help her, and donations of clothes, linens, household furnishings, and some furniture.

Through the help of the Miami Springs Presbyterian Church, which lent us a truck, we moved Mrs. Vasquez into her new apartment.

ELIZABETH BELL,
Miami.

To the EDITOR:

I recently had the pleasure of attending a "family night" for new police recruits and their families at the Miami Police Department.

What I witnessed was an informal but very professional presentation by officers alerting these families to what the recruits would be up against for the next 21 weeks, as well as making them aware of the realities of the job once they were on the street.

I saw not only men and women who want to serve their community in the worst of times, but family members who, just by being there, showed their emotional support. Each and every one to them should be commended for that.

DONNA SAMOLEWICZ,
North Miami Beach.

To the EDITOR:

Can we please hear some positive remarks about the honest and courageous police of Miami Beach and Miami?

On my way to work, I saw yet another example of one motorcycle officer's bravery as he rushed on busy I-95 to aid the victims of a dreadful two-car collison. I realized I was holding my breath as he weaved in and out at high speeds, risking his life to save another's.

DYANN KLEIN,
Miami Beach.

To the EDITOR:

It is so American to knock what we've got—a country of unbounded beauty, nearly unlimited resources, a judicial system that is the envy of the whole world, food so plentiful that overeating has become a national problem.

A press that nobody can dominate, a ballot box that nobody can stuff, freedom of speech, a system of governing that has endured for 200 years.

Churches and schools of our choice. Over 100 million jobs and the option to quit or change for a better one, freedom to go where we want with the means to get us there.

The opportunity to become a millionaire or a beggar, and last, but not least, a voice in helping to change what you don't like about this country.

Think about it.

JOHN W. DUNNE,
Hialeah.●

LIBERATION THEOLOGY—PART II

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. DORNAN of California. Mr. Speaker, it is once again a great honor to submit for today's RECORD the second and concluding part of Rev. Donald J. Keefe's penetrating analysis of liberation theology found in the winter edition of the new and promising Center Journal. I am certain that my colleagues as well as all concerned citizens will find it to be an illuminating essay on a dark and troublesome topic.

The imposition of the prior truth of any non-Christian historical consciousness upon Christianity is always the perversion of the faith. This, in fact, is the one heresy—the refusal of conversion to the Christian historical consciousness. The conversion which Catholic Christianity requires is precisely that which worships God as the Lord of history. The entirety of Christian doctrine and practice is no more than the expression of this new historical consciousness, a consciousness which has demanded of every generation of Christians from the first century onward a rejection of all the varied intimations of historical futility which have been and remain the alternative to the worship of the Lord of history. Every attempt to reduce the terror of a history experienced as ambivalent and absurd, every salvation scheme responsive to that pagan experience of history, must be foresworn. The Christian experiences not the terror, but the order of history under the dominion of the Triune God, and the salvation which is promised him, which he seeks and makes his own in the sacramental worship of the church, is not a redemption from history, but from sin. History is God's creation in Christ; it is very good, and not all the vice by which humanity has deformed it has been able to obliterate its splendor, its mediation of God. Between God and his creation there is no alienation. History has no autonomous dynamic, no intrinsic struggle between good and evil upon which even God would be impaled. God transcends history as its creator, its redeemer, its saving Lord. To speak of his alienation from history is to introduce a primordial dualism which is the very stuff and substance of a despairing paganism.

When this despair is dominant in consciousness, the familiar proliferation of heresies results. These are only repeated, quite banally, by the liberation theologians. Christ is human; therefore his sonship is not pre-existent and divine; if the Son dies on the cross, it is the Father who suffers death, not the Son; the Trinity is no more than the modalist mask imposed upon God by the disintegrating impact of an alien history. The sacramental presence and activity of God is reduced to his futurity; the church as institution has validity only insofar as reduced to praxis, and so on. The devices are obvious; the results inevitable, their inanity unrelieved by a rhetoric long since found tedious apart form the parochialism of Catholic theology schools, where cultural enthusiasms generally lag a generation or two.

There is nothing whatever novel or vital in liberation theology. Its romance with Marx is ended insofar as Catholicism is concerned. This impossible liaison was condemned by the pope at Peubla, by the Latin American bishops most recently at Santiago, and by the General of the Society of Jesus in direct response to a recent inquiry by Latin American Jesuits. What remains is nothing more than the program for dehistoricizing the church taken up after the Tridentine anathematization of the Reformation by the Jansenist sectarians, more recently by such Modernists as Renan, and now again by Kung and his sympathizers, whose right to proclaim their wares as Catholicism has recently been officially denied. The younger generation of seminarians appear to be more and more resistant to the Kungian insights; while children are still being submitted to this perversion of Catholicism in catechism classes, it is probably safe to rely upon the instinctive distrust of the young for the enthusiastic rhetoric of their elders. The revolutionaries within the church are drawing upon a spiritual account into which no serious deposits have been made for nearly 20 years, and whose currency is badly inflated. The slogans of the 1960's have little cash value in the contemporary world.

Yet the cause of the poor remains as it has been, the cause of the church. This is not politics, but Catholicism. A Catholic theology of politics, which recognizes the reality of economic oppression and responds to it, not with an even more complete disenfranchisement of the poor, but by advancing the cause of a real social and economic liberation, is not a mere academic option, one among many; it is a real necessity for the contemporary church. The pity is that so many well-meaning efforts to formulate such a theology rely now as in the past upon some secular device whose relation to the Christian reality is at best haphazard, and more often is antagonistic. Such was the fault of the Aristotelian sociology of the "perfect society" so much relied upon by scholastic thinkers: such was the panoply of juridical constructs so unthinkingly assumed to be Catholic because Roman, and thus written into much of what passed for "natural law." Such also is the social theory out of which much of the talk of freedom and justice today is drawn. Any attempt, now as heretofore, to apply such concepts theologically is doomed, for they lack all theological foundation, and therefore theological legitimacy. A Christian and Catholic political theology can have no other foundation than the social reality, the praxis, which is the worship of the Lord of history. Only this responsive to the reality of our human existence—for our existence is in Christ, as Paul insists. We must take this fact with an absolute and literal seriousness. The only meaning which freedom and justice and dignity have is that which they have in Christ, and this they have, not in clear and distinct ideas, but in sign and in sacrament. The fullness, the pleroma, as St. Paul calls it, of our humanity waits upon the parousia, the second coming of Christ. Short of that completion and creation of ourselves and our world in integrity, the justice and the peace and the freedom of the children of God are present in this world only sacramentally, in the worship of the church. But that plermoa, that fulfillment for which we long, is actual and real, with the reality of the risen Christ, the reality of the eucharist, by which our historical existence in Christ is sustained in Christ. This is a sustenance in truth, in freedom, in dignity, in justice; it is the single source of our legitimacy; it is the gift of a future which fulfills and does not nullify the present and the past.

This gift has caused and causes the radical human community which is the church. It makes to be present in the world the freedom without which the church cannot worship, cannot exist. Out of that worship, in which the gift is appropriated by the people of God, a new understanding of the dignity and meaning of our humanity has entered

the world, against an enormous resistance—the resistance which is our fallenness, our fear and dread of our own reality, our own history, our own freedom and responsibility. Over the nineteen hundred and fifty years of this eucharistic worship, the pagan despair of human worth has been pushed back, not by theory, not by law, not by charismatic leadership, but by the continual and cumulative appropriation by the people in the pews of the reality which is given them in this worship. It is this dawning consciousness of the reality of dignity and freedom which has been and continues to be the one principle of novelty and ferment in the world: it is this which church doctrine and law and mission articulate and defend and propagate, but do not create. This slow, often hesitant, often betrayed but finally irreversible and indefeasible history of our common salvation is at the same time the entry of every human being informed by that worship into that realm of responsibility for a uniquely personal concentration of the promised Kingdom of Christ; it is an acceptance of personal responsibility for the future which bars as sinful, as a rejection of the good creation, every resubmergence of that individual into the anonymity of a faceless mass and a featureless, meaningless present. The church's worship demands and forces a community of freedom, each of whose members has an incalculable and irreplaceable dignity, value and destiny.

This Catholic worship, which begins with baptism and which is sustained by the eucharistic sacrifice, is that by which our fallen time is nonetheless good, and therefore is history, significant and meaning-bearing time, whose meaning is the new creation, whose first-fruit is the resurrection of our Lord. This history is complex in structure: it is the history of the people of God, and includes the history of the church and the history of the world. For those Catholics whose lives are structured by the sacrament of orders and the vows of religion and whose office is one of a primary responsibility for the formal or liturgical worship of the church, historical freedom and responsibility is ecclesial primarily, and only secondarily has it any public dimension.

For the vast majority of the laity, whose office is to bring Christ to the world, sacramental existence is primarily marital, and lay responsibility of Catholics is measured and filled by what the sacrament of marriage is. In this sacrament, the formal structure of public life in all its dimensions is given, for the reality of communal life is grounded precisely here, in this marital worship. The implications of this sacrament for public life, and so for the political, economic, legal and cultural structures of society, are of fundamental importance; to neglect or ignore them is to set up an antagonism between the dynamics of Catholic worship and those of public life, with isolation of each from each the only alternative to open conflict. Such isolation breeds the totalitarian state, for it requires that a substitute intellectual base be found upon which to ground the public life, and that base is always a rationale, and ideological deformation of the mystery of the human and the free. One does not avoid this by some doctrinaire imposition of Catholicism upon the world; one avoids it only by refusing the isolation of the faith, by taking the truth of Christ, the worship of the church, into all the dimensions of public life. It is the failure to do this, on the right as well as on the left, that has established real injustice and oppression in the Christian world, and the only liberation from such social structures that is real is that which is dynamically present in the worship of the church. The reality of liberation is the reality of the new creation. There is no other, and all its counterfeits are finally idolatrous.

Marriage, taken seriously, forces into historical reality the university of political freedom and of private property; it does so because the marital commitment to another quantitatively different human being defeats all rational analysis. It produces a host of mediating social structures which effectively impede any arbitrary use of governmental power, and which stand as absolute obstacles to the bureaucratic rationalization of society which is today, in the technologically advanced countries, on either side of the Iron Curtain, the single important threat to personal freedom in public life. The permanent and exclusive and total commitment of a man and a woman to each other and to their children is utterly repugnant, absolutely resistant to the despotisms old and new which seek their goal by means of the reduction of human beings to faceless rationalized integers, to units whose only dignity is that of the function they perform. Upon this all the utopian dreams agree, from Plato in his "Republic" to Marcuse and Skinner in the visions of our own day, from the Spartan oppressors of the Helots to the slaveholders and feudal landlords of the new world. Aldous Huxley's satirical "Brave New World" and George Orwell's prophetic 1984 alike recognize the incongruity of such a marriage commitment with the schemes of those who would save a free humanity from the risks of freedom. Orwell's "Big Brother" provides the paradigm of the modern social engineer, the exponent of the secularized society whose radical requirement is that marital fidelity shall be betrayed, that the nuclear family shall give way to a secular social arrangement. The secular stress upon the legitimacy of abortion, upon the sundering of the marital bond on grounds of privacy, the intrusion of the abortionist in the parental function, the secularization of sex education, even the widespread demand for "day-care centers"—all these speak of the social planner's need to displace sacramental marriage with a casual functional relation to which even the sexual differentiation between men and women is being found obnoxious, finally unjust. The secular reduction of men and women to personal insignificance, their seduction by the prophets of liberation from their most fundamental historical responsibility, from the possibility of the radical personal commitment which is marriage, has gone very far. It is not too much to say that it has invaded the very marriage tribunals of the Catholic Church, where the dehistoricization of such commitment, its reduction to a mere ideal not realizable in the concrete, is now widely accepted.

On should not think, however, that it is only the avowed secularist who poses a threat to sacramental marriage. An equivalent threat is posed by every refusal to pay the wages which enable a man to fulfill such a commitment, which enable him to enter into that future of fidelity to which he is pledged, which do not foreclose his social freedom by forcing upon him a sub-Christian life of unremitting toil. If it is true that a free society cannot submit to the bureaucratic programming of its destiny, if it is true that Christian and Catholic worship must finally reject the historical pessimism which now finds expression in the advocates of a Zero-Sum Society as the basis for such economic planning, it is also true that with less fanfare many a capitalist is entrepreneur is quite as fearful of a free society, of a free polity, of a free economy, and of the rule of law as his bitterest bureaucratic opponent. He, too, seeks insurance against a future which he cannot control, and finds himself in consequence engaged in the same reduction of society to a faceless mass of economic entities whose personal insignificance is the price of his own economic security. We must all remember that the obstacle to liberation is finally human sinfulness, not some group of enemies. It is not a demonology that we need, but the recognition of our own sinfulness. It is not accidental that the sacrament of penance is integral to Catholic worship; if we do not worship as sinners, we cannot worship at all. Moreover, if we do not take that worship into our pulic life, it is not Catholic worship, it is not sacramental and we ourselves are removed by that infidelity from the history which is our salvation.

Twenty-five years ago the great Swiss theologian Hans Urs von Balthasar remarked that, while it was quited possible for a medieval man to pray fervently and in good conscience while a few yards beneath the chapel his captive enemy rotted away his life in an oubliette, such innocent savagery is no longer a Catholic and Chiristian possiblity. The love of Christ, manifest in the church's worship, has urged us past the point where we could contemplate without guilt the denial of dignity to those for whom Christ died. Any economic and political freedom we exercise must be not that of a lonely entrepreneur or a feudal landholder isolated from humanity by his wealth, but of men and women charged before God with promoting the dignity and beauty of the world he made good. This dignity and beauty finds its ultimate symbol in the one flesh of the eucharist, the marital sacrifice in which Christ gives himself totally to and for his bridal church. This marital reality is the utterly fundamental ground of all we are, of the new creation itself. Upon it rests all history, all freedom, all justice. We make these actual in our lives only through the worship of the Lord of history, wherein we receive our own history as gift. But we receive it as a people, and we cannot receive it otherwise. When any of us is prevented from a full entry into this worship, the rest of us cannot be at peace until the impediment is removed. We are summoned always to our own liberation, away from those idolatries of power, of money, of lust which are the permanent temptations of our fallenness. By the same summons, we are called to the sanctification, the healing of the world. This is the summons to worship God, and there is no dimension of our lives which that worship must not pervade. It leaves us free: there is no formula for action by which we may be delivered from the daily responsibility of love. However much we do, we remain unworthy servants; there is always before us another summons, a still greater love. Until Christ shall come again, there shall be before us the face of the poor, of the sick, the imprisoned, the oppressed—the face of Christ, the face of our brothers. If we turn away, wearied, disgusted, angered, let us remember from whom we have turned; let us confess our sin in having done so, and let us take up again that burden which is our petty share in the redemption of the world, the one dignity we possess, the only liberation that is real.●

STANDARDS FOR STATE PRODUCT LIABILITY TORT LITIGATION ACT OF 1982

HON. JOHN J. LaFALCE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. LaFALCE. Mr. Speaker, I am pleased to introduce today a bill to alleviate the problems experienced by businesses across the Nation when faced with a plethora of conflicting tort standards in the area of product liability. This proposal, entitled "Standards for State Product Liability Tort Litigation Act of 1982," is identical to a bill which I introduced during the last Congress (H.R. 1675) to add greater certainty to tort litigation by harmonizing disparate State product liability laws.

This bill would mandate that the States comply substantially with the standards set by my bill, or the Federal bill would then become applicable. It would create a much needed single cause of action. Right now you might proceed on the theories of breach of warranty, negligence, strict liability, absolute liability, and any of a number of different defenses might or might not be applicable.

This single cause of action distinguishes among liability arising out of a defect in construction—that is, where a product is not manufactured in accordance with the manufacturer's own specifications—and liability arising out of other unsafe conditions or situations where appropriate warnings or instructions were allegedly not given for defects in construction. In all three classes, liability will result for bodily injury proximately caused by the defect. In the latter two cases, however, where liability arises from unsafe conditions or the failure to provide appropriate warnings, the trier of fact will be required to balance the foreseeability and seriousness of the injuries proximately caused, with the utility of the product to society, and the cost that would have been necessary to have avoided the risk.

My bill also calls for a statute of limitation that would expire 3 years after the date of the incident. Many will want to have it run from the date of manufacture or sale. In my judgment, that would be harsh and unreasonable. In order to compromise and help alleviate what is a real problem, I have proposed a minimal amendment to the statute of limitations that would provide that 10 years after the product has been in use, the burden of proving fault should rest exclusively on the plaintiff, without the benefit of any presumptions such as the failure to comply with ordinances, statutes, or such doctrines as res ipsa loquitor. Ten years after the product has been in use, the plaintiff will continue to have the burden of proof. But he will have that burden of proof without being able to rely upon certain legal fictions.

Further, this proposal would clarify that the state of the art at the time of manufacture is relevant to the unsafe condition of the product. Moreover, we would clarify that the court would have the power to appoint its own expert witnesses. It would also provide for pure comparative responsibility. Responsibility would be apportioned among the plaintiff and all defendents.

My proposal provides that injured employees should retain the right to bring suit against manufacturers. However, the worker's compensation carriers' lien and/or right of subrogation for benefits that it disburses to the injured employee should be eliminated. Further, the employee's recovery against the manufacturer will have to be reduced by the amount of the worker's compensation benefits he has already received. The effect of this would be to leave the injured employee with the same benefits he would otherwise have under the present system, while at the same time cut off the right of the worker compensation carrier to shift its liability. A manufacturer at fault would be responsible to the injured employees, but for a reduced payment. This would remove the incentive for the worker's compensation carrier to institute litigation against manufacturers and would reduce the overall insurance transaction costs, since there could be no apportionment between employers and manufacturers.

In the fall of 1976 I started to receive a considerable number of complaints concerning the unbelievably high product liability premium increases being charged the small businessmen within my congressional district in upstate New York. The volume of complaints increased when I became the chairman of a Small Business Subcommittee in 1977. During the course of that year we conducted 15 days of hearings, with five volumes of testimony relating to the product liability problem.

I am very pleased that with the enactment of the Risk Retention Act of 1981 in September, the Congress has finally taken an important first step in eventually resolving the product liability rate issue. While the act should alleviate some of the current rate problems facing the purchasers of product liability, the marketplace must resolve the issue of whether it, in fact, offers any long-term relief.

In any event, the passage of the Risk Retention Act now opens the way for Congress to focus its attention on the next item on its product liability agenda: tort reform.

In recent years the courts have adopted a variety of concepts. This flurry of new theories has placed an increasing economic burden upon small manufacturers.

I certainly hope that the proposal I am introducing today will provide a vehicle for focusing congressional attention on the formulation of appropriate product liability tort standards.●

ENLISTMENT, UTILIZATION OF MILITARY WOMEN SYMPOSIUM—II

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mrs. SCHROEDER. Mr. Speaker, please allow me to insert the conclusion of the symposium I sponsored October 20, 1981:

HELEN ROGAN. Brigadier General Margaret Brewer is representing the Marine Corps, the first and so far the only woman general there. She retired in 1980 after a long career in the training of women Marines. She was also Director of Women Marines from 1973 until 1977 when that office was disbanded. From 1978 until her retirement, she was the Director of Information and Public Affairs.

BRIG. GEN. MARGARET BREWER. Thank you very much. Representative Schroeder, ladies and gentlemen, it's a real pleasure to be here today. There's one thing I'd like to emphasize in the beginning here. I am not here as a Marine Corps representative in as much as I retired from active service last year. Admittedly, however, my remarks today will focus primarily on the Marine Corps because that is the service I am most familiar with.

The Marine Corps, like the other services, expanded career opportunities for women beginning in the 1970s. We moved forward in the more complete integration of women within the Marine Corps in a very orderly and very evolutionary way. But we also tried to insure that the needs and the requirements of women, a distinct minority in the Marine Corps, were not overlooked. We also tried to insure that combat readiness was not jeopardized.

The Marine Corps is a very combat oriented organization, and combat readiness is a very real issue. But there is another related type of issue, what I call the combat image. Every time that women are assigned nontraditional jobs or there's any indication of combat training for women, a great deal of attention is focused on it. As one example, when we combined the officer training of men and women at Quantico, there was great news media interest in it. The media followed the training program continually. And when a women became the honor graduate of this combined training course, there was not only a great deal of interest but also a great deal of reaction. The Commandant received a great number of calls and letters, some very critical, from present Marines, former Marines, and civilians. They took the view that the training program had become too easy if a woman could endure it well enough to become an honor graduate. This combat image may be perhaps a bigger problem for the Marine Corps than it is for other services.

But nonetheless, the Marines made great progress on enhancing career opportunities for women during the 1970s. This was due in

large part to some very strong, positive leadership at the highest ranks inside the Marine Corps. We opened new occupational fields to women and they were assigned to the Fleet Marine Forces, that is combat forces, although admittedly they were assigned to combat support units. There also plans to increase the number of women in the Marine Corps from about 3,000 in the 1970s to 10,000 during the mid-1980s.

Most of these programs are still quite well on track. However, about two years ago, there were signs that caused a few people some concern. Refinements were made in some of the policies and programs for women. It was difficult to know whether these were actually necessary refinements or whether these signaled changes in attitude. For example, a few occupational specialties and additional combat units were closed to women. This created some very interesting types of situations. For example, a woman lieutenant who was a honor graduate of the combat engineering school suddenly found out that she could no longer work as a combat engineer. There were a lot of other women in similar types of jobs that could no longer work in their specialties. I did not have an opportunity to talk with that particular lieutenant personally. However, I did have a chance to read an interview with her. She was rather philosophical. She said if it was going to happen, she was glad it happened early in her career.

There were also subtle types of changes. For example, recruiting programs returned to the men-only advertising slogans. Everybody's familiar with the old recruiting slogan, Representative Schroeder mentioned it a little earlier, "The Marine Are Looking For A Few Good Men." The recruiting slogan more recently has been "The Few, The Proud, The Marines." However, I just saw a new recruiting poster and advertisement that returned to the male-only theme: "Marines: Men At Their Best."

Another change that occurred within the past few years was embassy guard duty. Several years ago, women were assigned to embassies as Marine Security Guards on a trial basis. The 15 initial women who were assigned to that program were carefully selected, screened, and trained as were the men. When the program was established, it was recognized that women might have to help defend the embassy if it was attacked and might be wounded or killed. But it was also felt that the risk involved was not the same type of risk associated with direct ground combat, such as a rifleman or a machine gunner. It was felt that the risk was closer to that of a civilian police officer. So the decision was made to assign women to this program.

The first 15 women were assigned to various embassies and all went well for awhile. Then the embassy in Karachi, Pakistan was attacked by a mob. There were two women security guards that were assigned there at the time. They prepared to help defend the embassy. However, the local civilian police came to the defense of the embassy and the mob was turned away. As a result of this incident, there was uncertainty as to what might happen in the future. A decision was made at Headquarters Marine Corps that those women should be immediately transferred from that embassy. I'm not sure if any of those 15 women still serve on embassy duty. It appears that the pilot program has been terminated.

In summary I do not underestimate the importance of the combat issue. However, at times there is so much attention being focussed on it, and there is so much emotionalism that is associated with it that it tends to obscure some of the basic issues. There can be a tendency to overlook some of the other issues that are also very important and of immediate concern to the women who are in the military today.

One quick example is promotion opportunities for women officers in the Marine Corps. As you all know, the Defense Officer Personnel Management Act (DOPMA) was enacted into law which means that woman officers in the Navy and the Marine Corps will compete for promotion with their male counterparts for the first time. What is of immediate concern to many of the women are their career patterns, even within noncombat roles. Will they have the necessary opportunities to attend professional schools? Will they be given the necessary command and staff assignments necessary to be competitive for promotion in order in have a very viable Marine Corps career? There are many issues right now and I look forward to your questions later. Thank you.

HELEN ROGAN. Thank you. Major General William Webb is the Army's representative. He is the Assistant Deputy Chief of Staff for Personnel. Before assuming this position in December, 1978, he commanded the First Armored Division and served as Deputy Commanding General of the Army's Fifth Corps. During a career of more than thirty years, he's served in Korea, Europe, and Viet Nam and has been constantly involved with the training and personnel of both men and women.

GEN. W. L. WEBB. Thank you Ma'am, Congresswoman Schroeder. I have served over 34 years as an officer, nearly half of that overseas, including two wars, and have commanded units from platoon through division. For nearly three years I've been the Army's Assistant Personnel Chief and thus have participated in the military policymaking which Congresswoman Schroeder referred to when organizing this symposium.

From the outset, I point out that the Army is vitally interested in its people. We do not look at them as a commodity. As our former Chief of Staff of the Army, the late Creighton Abrams said, "they have needs, interests, and desires. They have spirit, and will, strengths, and abilities. They have weaknesses and faults. And they have names." The Army has a vital mission. And it must consider both its mission and its people when developing personnel policy.

The imperatives of a strong defense and instant readiness should be apparent to us all. The Soviet Union has fielded a force capable of exporting its forces and power in the air, on and under the sea, and on the land, on which the Army is principally involved. I won't belabor that point rather than to say the threat is real. Our Army has an obligation to be prepared, if called upon by our national leaders to meet that threat. It is in this context that combat readiness of our total Army is of such vital importance. By the term Total Army I mean personnel in active forces, reserve forces, and civilians. Thus as an institution, our Army must be ready for combat as its first order of business.

From the military manpower policy point of view, this fact has caused us to take stock of where we have been, where we are and where we need to go. One part of this intense re-look is directed toward policy of both male and female soldiers. We've reached no decisions on change but we have talked to soldiers and officers overseas and throughout the continental U.S. Our concerns have been focused on the combat readiness and on the career development of individuals. I should point out that many of our concerns are also present in both public and private sectors: personal satisfaction, economic viability, recognition for services performed, fair treatment and equal opportunity, desires to raise a family.

The Army can be proud of its achievements in placing volunteers in its units throughout the world, and particularly in its concerns and care for its soldiers and their families. The fact that we are taking an in-depth look at ourselves is also a tribute to Army leadership. It will be a few months before we decide what if any policy changes we might adopt.

In tribute to this discussion some facts might prove helpful. Over 40% of the Army is stationed overseas and has been for over 35 years. Those stationed in the United States must be ready for deployment on short notice. About one-half of our Army is married. The Army tries to assign soldiers married to other soldiers to the same or near locations. Pregnancy of female soldiers and officers causes our commanders to lose the full productivity of these prospective mothers and means that they are not immediately available for deployment. There's a tendency for both male and female soldiers to change skills during their service. The Army experiences the same changing career desires as are reflected, for example, in college students who change majors a number of times before graduating. We must also address the fact that the Army National Guard and the Army Reserves have nearly 50,000 enlisted women in their ranks. Early call-ups and deployment of these reserves are essential to the Army in time of war.

Finally, Congresswoman Schroeder focused my attention on three points. First, how are women presently being utilized in specifically non-traditional roles? Women are now trained and assigned to 94% of the Army's job skills, all but those closely related to combat. At the end of fiscal year 1972, 10% of enlisted women were in non-traditional assignments. The remainder of them were in such traditional roles as clerical and medical. By the end of fiscal year 1980, 61.3% of our women were in non-traditional roles, such areas as computer repair, electronic instrument repair, cartographers, surveyors, air traffic controllers, area intelligence specialists, truck drivers, and mechanics.

Second, what difficulties does the command structure face in integrating women into the ranks? Commanders find that some women, like some men, cannot meet the rigors of repeated and extended field duty. They must assure fair treatment by peers of women soldiers. They must accommodate increasing numbers of women in barracks designed for gender specific living. The Army's combat exclusion policies result in the denial to some women career developing assignments, particularly military intelligence and signal officers who cannot serve in combat battalions.

Third, why do women leave these non-traditional roles at a higher rate than men? Attitudes and interests of both males and females change. Expectations sometimes are not fulfilled. Sometimes male and female soldiers lack the strength and stamina to do the jobs they initially chose. Dirty jobs get old fast. And institutional resistance, the lack of acceptance by male peers, is another reason.

I'd like to stress in conclusion that the Army is proud of its women soldiers and how it has integrated women into its ranks. They provide us needed skills as we strive to improve our combat readiness in these dangerous times. We have done much in a short period of time. Our review is timely, as is this symposium, as we take an intense look at our Army's policy regarding women. We look forward to receiving ideas from this symposium which can help us to improve the Army's combat readiness and take care of its people both male and female. Thank you.

HELEN ROGAN. Finally, Cecile Landrum, who is a civilian with considerable expertise in military matters. She's currently a member of the Woman and the Army Policy Review Group, whose findings will be presented in the near future. Ms. Landrum has done a great deal of manpower analysis and research for the Air Force in Europe and Korea, talking to military families and troops, both male and female.

CECILE LANDRUM. Congresswoman Schroeder, Helen, audience, I'm delighted to be here. The fact that I'm on the Policy Review Group is a statement that we are reviewing some of the issues very carefully. And I'm here today as a representative of that study group.

Rather then tell you what the Services are doing, I'd like to talk about what the study is doing. Many people are concerned about the study and are asking why another study? Let me tell you why: commanders' concerns. The field officers expressed their concern about pregnant women, sole parents, joint military couples, and combat exclusion policies. Congresswoman Schroeder expressed her own concern about another study in her amendment to the Department of Defense Authorization Bill in July of this year when she met with women who asked since they have gone the mile, and have done everything, why they are being studied again. In our latest briefing with General Meyer he reinforced his concern that the interest and the representation of the women in the military was critical to the success of the study.

We've gone through many policy changes all at once. We've changed the numbers of women, the location where they could serve, and the kinds of jobs they can have. There's been no precedent to determine the interrelationship of all these changes. That's what we're about now. While we have always questioned the issue, we've not examined how to do the study. And yet, how we do the study can set the tone for the answers.

What makes me qualified to come into a study like this? I've just finished 5 years with the Air Force, and I spent 2 years on the Presidential Defense Manpower Commission. My last 2½ years with the Air Force I spent as a crew member on a military airlift plane. My study started out looking at crew retention during the time we were losing aircrew members. But flying opened up many opportunities to look at other issues like pilot and missile training for women. I began to look at some of the key changing demographics of the military force: the changed families, single parents of which some two-thirds are male, dual military couples who have children, the overseas spouses who were questioning whether they should continue to travel with their husbands and give up job opportunities or develop their own careers.

The next thing you might say is what relationship does that have to the Army's study? I feel it has a lot. Working on the study, I have had the opportunity to look at these issues from this sociological approach and to link them to the operation of the Army's forces. The willingness of the Army's leadership to develop this approach gives me great faith and hope that we can develop the kind of long range planning that I'm talking about. Continued field research gives us better understanding of the linkage between the mission, the job skills, and the people serving. The different locations, whether in Korea or Germany; the communications between and appreciation of young enlisted people; the levels of young officers and the senior officers, the differences between policy at the experiential level and at the Pentagon level; and the different attitudes of the women serving all have been key to understanding what we are going to do.

The first three months on this study, General Wetzel and I visited army posts worldwide talking to leadership as well as army troops. We went to the recruiting command to see what the recruiters were telling women and men. We went to basic training posts: Forts Dix, Lee, McClellan, Jackson, Sam Houston, Gordon, and Harrison. Just last week I went through the basic training at Fort Jackson. We visited CONUS (or continental U.S. bases), and we went overseas. General Wetzel went to Europe and I went to Korea. We were at Fort Campbell and Fort Hood, and also with the 25th Infantry Division. We did get around.

The many demographic issues reflecting the changes in the civilian society were alive and well wherever we went. We saw women having children later in their lives who face the question of their career or their family. This was very true among officers. We also saw women working outside the home, trying to balance the career and the family. We saw men and women in integrated working situations with women supervising men and men supervising women.

The Army has taken the lead to work with civilians who are also working on these issues. Several of those civilians talked of the gap in their knowledge between the "Pentagon" Army and the "field" Army. So in September we took two dozen people to Fort Benning and Fort Jackson where we gave them four days in the field. They ate C-rations and opened them with P3Fs. They drove in tanks and APCs, fired rifles, jumped out of towers, and had some very interesting times. The experience that these people had will be brought into our study, so that we can learn from their perspective.

We're beginning to ask questions that had not been asked before. Why hadn't they been asked before? Because they hadn't existed. We're finding them by this field work. We're finding that the field experience makes us ask the questions a little differently. In sum I'd like to say that I feel that the methodology and the approach to the study is the key to its success and to the continued growth of the role of women as volunteers in the Armed Forces. Thank you.

CONGRESSWOMAN PAT SCHROEDER. Helen, I would like to point out to the audience that Congresswoman Beverly Byron has joined us. She is from Maryland and is also a member of the Armed Services Committee. We're very honored to have her here.

HELEN ROGAN. Thank you all for such clear and concise descriptions of the policies as they're intended to be, and the question about their efficacy. I hope the audience can now tell us how these policies translate into the daily experience of military life, and what this has to do with readiness.

QUESTION. I've been very interested in the comments made today by the speakers. But let me just quote from an article in the newspaper. It refers to the commission that will review the policies of women in the military, something that's long overdue. It says: "After a decade of dramatic escalation in the military and the role of American women, Armed Service officials under the Reagan Administration are calling a halt. The Administration is focusing on complaints from field commanders of the negative effects of women on the nation's combat readiness."

This should be prefaced by the reason for the halt. When the services went to the all-volunteer force, they didn't get the required number of men. So they increased the women recruitment quotas, and lowered the qualifications. They increased the number without the proper preliminary study on things like physical qualifications. I think the commission is great and I'm going to be very interested in what it comes up with.

QUESTION. I don't know how many of you carry this U.S. Code of Honor card, but I did 34 years ago as a buck private. It says: "I am an American fighting man. I will never forget that I am an American fighting man." Now I am proud of America. I served in Germany and I was there in the barracks. But I had to sleep with a billy club because there were 2 battalions of men, seven women, and an underground tunnel that the men could get to. You know how you beat the barracks rap? You get pregnant because then you could go into dependency housing. And you get more money to spend at the market. And you get all the community service activities. Marriage is another way to beat it. This is the big thing in the Army right now. You get married without telling your commander. The first one that gets out of the Army gets a divorce. That's the big thing. Because you get more money, more benefits and everything.

HELEN ROGAN. Clearly there's a lot of fury that's been stirred up by something I think the Policy Review Group has unwittingly contributed to, that is speaking of women as the problem. What would you say, Ms. Landrum?

CECILE LANDRUM. I don't think that we have spoken of women as the problem. In many cases the men might be the female problem. Or the problem is a male and female problem. The one female-only issue is pregnancy. All the other issues can be classified as either institutional or as male-female. When you talk about sole parents, joint spouses, and combat readiness, they're all issues that relate to both the men and the institution as well as women.

QUESTION. I have a question for General Usher. What type of program or initiative does the Air Force have to put more women into cockpits?

GENERAL USHER. Let me tell you about the most cost-effective methodology we use in estimating the number of enlisted or officer women we take in. We deal with what we call a Qualified Interested Resource. We look at both the male and the female population in the country, the proportion that graduate from college, the degrees received and what the qualifications for our various positions are. We take into account the relative capability of recruits to finish the training. We come up with some planning numbers to use in recruiting women for pilot training.

We recruit about 70 pilots a year. That will produce about 60 after attrition. It's a very sophisticated program that's reviewed

annually, because the statistics we use from the Bureau of the Census, the Bureau of Labor Statistics and the Association of U.S. Colleges change annually.

QUESTION. I'd like to know why the study is just on the Army. Have the other services already done similar studies?

GENERAL WEBB. The Army as an institution felt it was time to take a look at itself. What we're interested in is to accomplish our mission and take care of our people. So the Army has paused to consider where it is, and to be sure if we should make changes. We've not done this in isolation, though. There is consultation between, for instance, the Air Force and the Navy. But we all have unique differences in missions, in the compositions of our forces, and where they're stationed. But as far as the social issues, we all have the same concerns and we're exchanging information.

QUESTION. Can we hear from the other services?

GENERAL USHER. Personnel policy is never static. Missions change and experience accumulates. The job market situation, people's interests, and our recruitment requirements all change over time. If you go back to 1972, about 100 career fields in the Air Force were open to women. We've expanded that to about 226 now. I think that's reflective of that changing process.

ADMIRAL HOGG. The Navy has pushed to move the horizons of utilization without any impact on readiness. That's not to say we don't have management problems but they're problems that we can find solutions to without a reduction in our accession plans.

CONGRESSWOMAN BEVERLY BYRON (D-Md). It's interesting to me how the women in units I've visited talk about their problems. The pregnancy issue is quite frequently brought up. But another thing I have constantly heard is that that men on combat ships have to pull more sea duty, as opposed to women, because of the combat ship restriction. Is there any answer for that?

ADMIRAL HOGG. We conducted a comprehensive study of how many women we could have in the Navy three years ago. We took into account the impact on men and we decided that we should maintain a ship-to-shore rotation of three years at sea and three years at shore. We took into account our abilities to provide adequate upward mobility and opportunities. And we came up with 45,000. We did that study again last year and came up with 44,992. We will do it each year and as our forces level changes, our force support number will change.

CONGRESSWOMAN BYRON. By the same token, don't you impact on their career opportunities? That's one thing I heard discussed a lot.

ADMIRAL HOGG. That is the other side of the coin. The two leading factors in our 45,000 number are that we will not force the men to serve at sea longer than the career plans we desire for them to have at sea. Secondly, and equally important, we provide for women an upward mobility opportunity equal to that of men. Quite frankly, if we go above 45,000, given the combat exclusion constraints we have, women would not have that upward mobility.

CONGRESSWOMAN BYRON. But you run into a time frame problem. Doesn't a pregnancy create a blank on her record? What does that do to her career opportunities when she should be moving up? Those are the problems that concern me.

ADMIRAL HOGG. I have in my division in OPNAV three women who recently had babies but who are back working for me. There won't be any blank on their record. That's not to say that it might be a different situation elsewhere in the Navy. You have a situation where women deployed on ships are taken off the ships. But their command should provide them with some type of continuation in their reports. And I'll check on that to make sure that the policy is fair enough.

QUESTION. I was a war correspondent in World War II, Korea, and Viet Nam. I want to ask about the attitude of the men in the field towards women in the service. I've found, being a member of DACOWITS, that it isn't too good. They still cannot accept that, for instance, one woman on the panel is a Marine General. Is my observation accurate? And if it is accurate, do you do anything to sell the troops on the desirability of women?

GENERAL WEBB. Yes, there is a challenge here in perception. Some of the males look at that as a threat to them. Now I must say that's not found just in the Army or just in the Services. It's true throughout society.

QUESTION. I know. I have a little trouble with men correspondents.

GENERAL WEBB. But really, we're concerned about that. It is a constant training process. Just last week I talked to the senior old crusty non-commissioned officers from throughout Korea and Germany. I just asked the question of how the women are doing. I must say senior non-commissioned officers have a tendency to tell it the way it is. Women are doing a great job, they all said. We have progressed immeasurably. And I believe that having served with women in the field for the past 10 years. But you don't change attitudes overnight. On the other hand were we to dictate preferential treatment to women, that would be a disaster. We've not done that. We have monitored the performance, the rewards, and the recognition of women. We're pleased with the results.

CECILE LANDRUM. I have just two quick comments on this. I found that where the women have already integrated with the men, attitudes have changed just by the relationships. Maybe not as quick as we'd like. But some of the big resistance in the Army is in all-male combat units or other units of men who've not yet worked with women. There's work to be done there.

We can't legislate attitudes, but we certainly can legislate policy. And, from a leadership point of view, when one reinforces policies regarding proper treatment of women, you will see that the treatment will change.

GENERAL WEBB. We concentrate on basic military training, technical training, skill training, and first unit assignment. But periodically afterwards we address these issues, hear views, and point out the fallacies of some of the more traditional views towards women. I think we can educate our people that discrimination has no place in maintaining the readiness.

QUESTION: You mean there is not deliberate policy or program to get at this?

GENERAL USHER. Oh yes. When somebody, for instance, goes to a new duty station, they are required so many hours of training in human relations education. Part of that training is in the role of women. They are constantly reminded what the policies are and they get an opportunity to talk with, as General Webb said, the crusty old sergeants.

CONGRESSWOMAN SCHROEDER. Do you also put the training in an historical context? I often feel like women are still seen as a novelty and a social experiment.

GENERAL USHER. In my experience, you're the first one that's drawn the historical contribution of women to my attention.

QUESTION. We define success in the military as promotion. And promotion is dependent upon command. Couldn't it be said that women's lack of command experience in combat jobs is detrimental to their promotion rates?

GENERAL WEBB. Well, there are people who are promoted into very senior grades who have not had command. I've briefed promotion boards that meet to select people for command. Of course, the board that picks lieutenant colonels and colonels for combat commands doesn't consider women because they're excluded from those units. But as far as the other specialties, specific emphasis is placed on giving women experience. We point out, though, that it will take awhile to get women into the more senior commands.

QUESTION. I just wanted to answer your question on the history of military women. I'm the Director of the Defense Equal Opportunity Management Institute and we train the people that the General was describing who go out into the field to do the training. We do have very strong training blocks devoted to sexism, sexual harassment, and the historical contribution of women in the military.

QUESTION. I'd like to address my question particularly to General Webb. I have been reading a great deal about the pressure the Army feels to reduce the number of future women recruits. I just wonder if it's true? Is there a great deal of pressure? If so, where is it coming from and how do you handle it?

GENERAL WEBB. The answer is no. We are looking at projected sizeable increases of women in the Army which have been in our outyear force projections. We must consider the number of women and the kinds of duties that we should place them in. So that we have both combat readiness and the ability to take care of our women fairly and equally. That's all we're doing. We're under no mandate to reduce numbers.

QUESTION. Well then can you tell us why you're doing it?

GENERAL WEBB. Why we're doing what?

QUESTION. Why you've paused on taking in women and why you're not taking any more women until you see that they're ready for deployment. You act like you're not pausing while earlier this year you asked the Senate Armed Services Committee if you could pause.

GENERAL WEBB. We have not stopped taking women into the Army.

QUESTION. Then just explain to us what your man named Clark was doing when he asked the Senate Armed Services Committee to pause on the intake of women.

GENERAL WEBB. I was not here when Clark testified.

QUESTION. But you knew about it, didn't you?

GENERAL WEBB. The Army has a ramp increasing the number of its women over the next four or five years. The end result was some 20,000 additionl women. Then we said, let's hold what we've got and conduct a study to assure that what we're doing is right for the Army and right for its people. But we haven't stopped taking women in. We haven't reduced the strength of the women.

QUESTION. Will you do that in December?

GENERAL WEBB. We don't know because we have not completed our study. Nor has our

senior leadership decided what to do. But frankly, one of the things we're listening for here is different views to apply to the study.

CONGRESSWOMAN SCHROEDER. Do you think the press has gotten this all out of hand?

GENERAL WEBB. I would pass no value judgment on the media.

CECILE LANDRUM. I want to comment on that. The confusion started when the pause was called. People assumed that we had stopped recruiting women. We've not stopped recruiting women. We're just not going for the higher goals established by the Department of Defense back in 1977.

GENERAL WEBB. I think Cecile's right. Pause was defined as reduction in some people's minds and that's just not correct.

QUESTION. The Navy is continuing with their goals set in 1977. The Army's pausing, but what is the Air Force doing?

GENERAL USHER. The goals that were set in 1977, quite honestly, were imposed by the Office of the Secretary of Defense and since then we've developed a methodology for the accession of women that I alluded to earlier. And we don't work with a goal per se any more. We work based on what the qualified interested resource is. If you follow that methodology, it will be a lower total number of women in the Air Force by 1985 than what OSD had artificially developed and imposed. So, in other words, the increase will be less than what OSD said in 1977 without much experience in either recruitment or utilization of women.

QUESTION. I worked in the office of the Secretary of Defense when they made their decision on the accession numbers you assume was arbitrary. They were not arbitrary numbers but were what OSD felt the Services could readily handle. There was some justification for the numbers that were set, especially in light of the high percent of women's attrition.

GENERAL WEBB. I guess it was just coincidence that they were exactly double what they were previously.

QUESTION. I don't think that was just coincidence. There was certainly some rationale behind it.

GENERAL WEBB. Just as we've changed the studies and rationale in the Army, I would assume that those who had anticipated those numbers in OSD would look at them again. I'm sure that's happening. The numbers somebody once wrote down change over a period of time.

HELEN ROGAN. This debate could go on into the afternoon, but they'll sweep us out if we don't stop here. I hope we've shed some light on a very complicated and difficult subject. I am certainly greatful to have been here and I pass you over to Pat.

CONGRESSWOMAN SCHROEDER. Helen, I want to thank you. I think you did a wonderful job of moderating. And I want to thank the panel and our audience too.

As we talked about the history of military women, I kept thinking of its importance and why women have not been seen as participating in patriotism. I always remind people who Mary Goddard was. She was the one who in 1776 printed the Declaration of Independence. At that time that was an act of treason. She would have been arrested and hung for her patriotism. So I think we all ought to remember that. Women do contribute to history and to be sensitive to the issue of the recruitment and ulitization of women in the military today, we need to remember their contributions of yesterday.

We thank you all very much for participating and I hope this dialogue continues.●

THE BORDER BROADCAST WAR AND C-58 MIRROR LEGISLATION

HON. AL SWIFT

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. SWIFT. Mr. Speaker, I ask my colleagues to direct their attention toward the so-called "border broadcast war" between the United States and Canada. The dispute was initiated by Canada and has disrupted bilateral relations for the past decade. The U.S. Government, pursuant to a complaint filed under section 301 of the Trade Act of 1974, as amended, has found that the Canadian Government acted unfairly against U.S. broadcasting stations, whose television and radio shows are immensely popular in Canada.

One of the major casualties of this dispute has been a television station in my home city, Bellingham, Wash. This station, KVOS-TV, has enjoyed a long and mutually beneficial relationship with neighboring British Columbia. At the request of Canadian advertising agencies and potential viewers, KVOS shifted its transmitting tower in 1954 to a location much closer to Canada. In 1955, KVOS incorporated a Canadian subsidiary to handle its Canadian business and began paying Canadian taxes on all advertising revenues received from Canadian sources. The station even established a production center in Vancouver, Canada.

In 1975, Canadian revenues accounted for 90 percent of total KVOS revenues. The next year, Canada passed bill C-58 which had the effect of denying a tax deduction for the Canadians who accounted for those 90 percent of revenues. By 1977, revenues from Canada had declined by $4.3 million. The station was forced to take drastic measures to stay on the air, including terminating its network affiliation and closing its Canadian production subsidiary.

Meanwhile, KVOS continues to be the most popular station on the Vancouver cable systems. In order to obtain some compensation for this service and to make up for the loss occasioned by the tax deduction, KVOS cut in half its Canadian ad rates.

Three things should be noted for the record. The first, I worked for KVOS for a number of years, so I know this issue intimately. Second, I have no business relationship and no financial interest in this station whatsoever. And third, KVOS is not the only border broadcast station affected by C-58.

H.R. 5205, which I am cosponsoring, provides a vehicle for Congress to support the American broadcasters cause. Canada must recognize that Congress will respond to unfair and unjust Canadian trade practices. As a member of the Telecommunications Subcommittee of the Commerce Committee, I will be examining other communications matters of concern to Canada. Linkage of C-58 to other trade issues is clearly appropriate.●

SITUATION IN POLAND

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. MOAKLEY. Mr. Speaker, I rise today to express my concern regarding the situation in Poland.

From what I can determine of the situation, the conduct of the Polish Government toward Solidarity is a moral outrage. The decision by the government to impose martial law against those who dissent is unconscionable. It is difficult, in a civilized society, to understand the rationale behind such a decision.

The emergence of Solidarity in Poland is an example of the spirit of freedom which has been exemplified by the Polish people so often in the past. This free spirit has never been conquered and deserves our respect and support.

Mr. Speaker, it is my hope that the Soviet Union does not interfere in Poland. Clearly, the Polish people do not desire such domination. If the Soviet Union does interfere, I for one would rise in support of severe economic sanctions against the Soviet Union. In addition, I would urge that the United Nations condemn such action and impose even wider economic sanctions.

My heart goes out to the Polish people whose heroic courage has been an example to the entire world. The Polish people have given so much to our society, through their sons and daughters in the United States. I hope we can now do something to help them in their own country, and I hope that President Reagan will heed the measure expressed by the House of Representatives yesterday to halt deportation proceedings involving Polish citizens until it is determined that the political situation in Poland is stable.●

SOLAR ECLIPSE CONTINUES

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. OTTINGER. Mr. Speaker, on December 1, 2, and 3 the Subcommittee on Energy Conservation and Power, which I chair, conducted field hearings in Denver, Colo., and Los Angeles and San Francisco, Calif., on the impact of the Reagan administration

budget cuts in Department of Energy conservation and solar programs. The subcommittee heard outstanding testimony from representatives of the solar and conservation industries, solar and conservation research laboratories, State and local governments, and public interest groups representing low-income and elderly citizens.

The testimony we received indicated that the drastic budget cuts threaten to impair this Nation's solar industry to the point where many solar manufacturers will be forced to close their doors. The budget cuts in photovoltaics research may force our country to abdicate its technological lead in this field to Japan and other nations. Dramatic new energy efficiency technologies will be abandoned on the workbenches of our national laboratories because of insufficient Federal funds to bring the research to completion.

The subcommittee also heard testimony which poignantly illustrated that although the marketplace may send a signal to low-income and elderly citizens to invest in energy conservation improvements, cuts in the Federal energy conservation programs coupled with severe cuts in other social welfare programs make it impossible for these people to respond to the marketplace's massage. These citizens are left with one option under the Reagan budget—freeze in the dark. That is totally unacceptable and I will continue to fight to preserve these life-saving programs.

These hearings were held during the week that we learned of the Office of Management and Budget proposal to cut conservation and solar programs even deeper in fiscal year 1983. From the initial appropriations in fiscal year 1981, OMB recommends the President cut conservation by 97 percent and solar by 90 percent for fiscal year 1983. When President Reagan first proposed his fiscal year 1982 plans for solar, I characterized the offering as the budgetary equivalent of a solar eclipse. These latest figures can only be equated with a black hole. These cuts are contrasted by a proposed nuclear fission budget that remains virtually unscathed. This inconsistency underscores the administration's willingness to let marketplace principles apply to conservation and renewable energy, while those same principles are waived for nuclear power.

One witness who testified at our field hearings summed up these points most eloquently. He is John Geesman, executive director of the California Energy Commission. I ask that his excellent and entertaining remarks be printed in the RECORD.

TESTIMONY OF JOHN L. GEESMAN

Mr. Chairman, members of the committee, I am John Geesman, Executive Director of the California Energy Commission. I appreciate this opportunity to address you on the impact of the Reagan Administration's energy budget policies because I am convinced that over the next decade they will constitute a more ominous threat to our national security and prospects for economic growth than any challenge we face from abroad. Just when it appeared that this nation was developing a consensus energy policy of efficiency improvements and renewable sources, with the stubborn Yankee value of cost minimization as its cornerstone, this Administration has installed a dogmatic, theocratic regime of evangelical hyprocrites intent on making a mockery of the free market principles they preach.

I have four major points that I invite you to ponder as the Reagan Administration seeks to annual eight years of accumulated experience on energy:

This Administration is fervent in its desire to ignore the technological lessons of the 1970's and instead has made a blind faith commitment to a nostalgic 1950's view of nuclear power.

Despite controversy, California has adhered to a steady, consistent energy policy for the past seven years aimed at channeling investments into efficiency improvements and new technologies. This continuity of policy—in contrast to the flip-flops of four federal administrations—has established a remarkably diverse electrical supply system, one that promised a fertile environment for economic prosperity until the Reagan Administration began its concerted assault on these policies.

The public deserves an energy policy that is based on economic rationality, and ultimately will accept nothing less. Indeed, our system of government depends on a trust that those in power will attempt to follow least cost principles in making decisions on expenditures.

The Reagan Administration energy policies endanger our national security by their indifference to American dependence on imported oil, and threaten our social fabric by their attempt to ignore economic reality.

With respect to my first point, let me say that the Reagan Administration's energy policy makers rival the most devout Islamic fundamentalists in their desire to obliterate the last decade's developments from the history books and escape from technological modernism. The two mullahs of this energy clergy, Mr. Edwards and Mr. Stockman, have banished the energy success stories of the 1970's—conservation measures and the range of solar technologies—to the most distant exile of their holy realm: the so-called "free market", condemned to "compete" against heavily subsidized fossil and nuclear fuels in the way early Christians "competed" against lions. Meanwhile, Mr. Edwards and Mr. Stockman have sought to re-create the unquestioning enthusiasm and unbridled budgetary support for nuclear power that characterized Admiral Rickover's early career. The Administration's initial budget proposal earlier this year slashed federal support for conservation and alternative energy sources by 76 percent and 70 percent, respectively, while pumping a 24 percent increase into nuclear spending. The second round of cuts, announced by the Administration in September, eased the growth rate in the nuclear budget somewhat but still targeted conservation and solar for near annihilation. Finally, this week we learn that OMB is seeking a fiscal year 1983 budget that contains $19 million for conservation and $70 million for solar in a DOE budget expected to exceed $7 billion.

What the Reagan program represents to the American consumer is a direct frontal attack on energy savings and promising new technologies in an effort to resurrect the dead hopes of the nuclear power industry. As one DOE official has explained: "The marketplace will encourage people to use solar energy on their own, but the nuclear industry is weak and requires a government presence to put it on a stronger footing." The DOE nuclear "public information plan", which this committee released publicly only a few weeks ago, demonstrates the extent to which this Administration is willing to go in its efforts to rewrite recent history: a $2 million national campaign to "educate the media" on why nuclear economics can defy the laws of gravity. The program document clearly states that the effort will also explain "why solar won't be available." In a similar vein, the White House recently announced that $1.3 million in budget savings will be realized by stopping distribution of all DOE consumer-oriented publications. Titles such as "Winter Survival: What To Do If The Heat Or Power Goes Off On A Freezing Winter Night"; or "How To Understand Your Utility Bill"; or "Saving Money With Energy Conservation" will no longer be available.

The Reagan Administration has pursued its energy policies with the passion and zeal which have characterized other instances of fanaticism down through history. Mr. Edwards has demonstrated the innocent sincerity which one often associates with dentists. Mr. Stockman has demonstrated the innocent sincerity which one increasingly associates with Mr. Stockman. But to those who would reject the present in preference to the past, to those who would ignore that conservation has supplied 88 percent of the growth in energy demand since 1973; to those who view new technologies, especially those utilizing renewable resources, as a corrupt symbol of big government decadence; to those who still await the second arrival of the too-cheap-to-meter atom, I would counsel one thing. Consult the Imam. As he himself uttered so many times in the 1950's, "Progress is our most important product."

In California, we have had a faith in progress, in government's ability—and indeed, its duty—to channel investments into continuing improvements in energy efficiency, into new technologies which rely on non-inflating renewable energy sources, into resources which, if forced to rely on "market forces", suffer chronic under-investment due to what economists prosaically refer to as "market imperfections". Our policies have been governed by that most basic of American desires: the avoidance of unnecessary costs. In instances where functioning market mechanisms do not exist to assure an efficient distribution of consumer investments, we have relied on government policies to substitute for market forces—always with a least cost strategy in mind.

We have successfully adhered to this approach for nearly seven years under Governor Brown's leadership. Although principles of cost minimization would seem unassailable, they have proven controversial on occasion and have required some difficult choices. But the results have been stunning: conservation programs already in effect will save the equivalent of more than 100 million barrels of oil per year by the year 2000! Just the electricity savings alone are enough to avoid the need for at least eight 1,000 MW coal or nuclear plants over the next 20 years. And these conservation measures are extraordinarily cheaper than conventional alternatives. Simple building retrofits, for example, can cost 1-3 cents per kilowatt

hour compared to 8 cents per kilowatt hour for coal or nuclear generated electricity. While DOE administers the final death blows to the voluntary Building Energy Performance Standards program, mandatory standards adopted by California in 1977 are already saving consumers $150 million annually and a recent tightening of these standards is projected to save an additional $1.5 billion per year in today's dollars by the year 2000.

In the alternative energy area, California already has 500 MW of cogeneration on line, with a total of 3,000 MW expected by 1990. We have already the largest geothermal energy development in the world; over 900 MW of facilities are operating at the Geysers with more than 2,000 MW projected to be operating during the 1990's. California has over 150,000 solar installations, one quarter of all solar units in the nation. Private wind developers are now projecting that more than 700 MW of wind power will be on line by 1990.

But the Reagan Administration's assault on conservation and alternatives as legitimate objects of public policy poses a serious threat to California, for much of our effort relies upon federal support. Loss of the federal tax credits will mean the loss of more than $200 million of private investment annually in California energy conservation and renewable resource projects. Wind energy, of which California has a potential in excess of 13,000 MW, will be especially hard hit by the combination of the lost tax credits and successive federal budget cuts—from $90 million in fiscal year 1981 to $19 million in fiscal year 1982 to a reported $5.6 million in fiscal year 1983. The Residential Conservation Service, which could save 5 to 6 percent of residential energy used by 1985, faces elimination as of June, 1982. The Schools and Hospitals program, which the Administration proposes to cut in half, could save the equivalent of nearly 4 million barrels of oil in ten years. The Administration also proposes to curtail low cost loans to local governments for small hydro and cogeneration projects, delaying or eliminating 250 MW of small hydro development and up to 500 MW of cogeneration projects. Most pernicious of all is the report that DOE is about to adopt the "no-standard standard" for appliance efficiency with the sole purpose of pre-empting the stringent appliance standards pioneered by California several years ago and adopted by several other states.

As Proposition 13 demonstrated to all of us in California government, there is no stronger public sentiment than an enraged electorate convinced that government is mishandling its money. That is the political threat the Reagan Administration is courting in its nuclear nostalgia, its all-out war on conservation and renewables, and its repudiation of least cost principles as the basis of national energy policy. Carnegie-Mellon University's Energy Productivity Center has identified a distressing gap between official federal projections for energy usage in the year 2000 and the consumption patterns that would prevail under a least cost approach assuming economic rationality in investment decisions. The least cost approach would require 76 percent as much oil, 21 percent as much imported oil, 59 percent as much renewable energy, and about 50 percent as much coal and nuclear generated electricity. More directly, the primary energy required per dollar of GNP under the least cost approach is 77 percent of the official government forecast.

How much economic irrationality can our system tolerate? Will the public excuse a 23 percent slop factor? Where does this 23 percent overpayment go? Who benefits? What will happen when the public catches on? Significantly, the Carnegie-Mellon study was based on a 1979 forecast prepared by the Carter Administration. These problems have been exacerbated by the Reagan Administration's energy policies, and if those policies are successful, the gap between official federal projections and least cost principles will surely grow beyond 23 percent. The degree to which the Reagan Administration is willing to ignore economic considerations in it devotion to dogma is best seen in the reaction of the financial community to nuclear power: Merrill Lynch has suggested that any utility with a nuclear plant less than 20 percent complete should consider abandoning the project; Standard and Poors lowered the credit rating of 27 utilities last year, 21 of which at least partially because of significant nuclear exposure; Paine Webber described nuclear plants as "a potential time bomb that could push a company to the brink of bankruptcy overnight."

If the Reagan Administration's nuclear policy is based on an alarming indifference to the fundamentals of fiscal prudence, its casual acceptance of American oil imports is that and more so because of the dangerously myopic approach to national security involved. This Administration has loudly proclaimed its willingness to purchase any weapon system, embrace any adversary, and affront any ally in order to defend the right of multinational corporations to purchase increasingly costly oil from the Middle East. Yet the Administration has not only failed to develop a strategy for lessening our dependence on that region, it has also proceeded to demolish every governmental encouragement to cost-effective, short leadtime, domestic alternatives to oil imports. Incredibly, we are asked to believe that our national interests have somehow been enhanced by entering into a $12.5 billion AWACS deal with the Saudis, instead of investing a fraction of that amount in an energy policy at home. The AWACS planes will afford the Saudis 12 minutes advance warning of an enemy air attack on their oil fields, but of course it takes at lease five minutes to get the Saudi air force airborne. I have to think that we could have bought more than seven minutes of energy security by investing in conservation and renewables programs here in this country.●

THE FUTURE FARM OF AMERICA

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. BROWN of California. Mr. Speaker, we are all rapidly becoming aware of the potential that communications and information technologies hold. Within a generation, our society will have been changed by these technologies. Home and workplace alike will be altered as we enter the information age.

With judicious application of these technologies, society will attain higher efficiencies—efficiencies that will save limited resources. With some planning, we can create systems that replace resources with information. Nowhere is this process needed more than in agriculture.

To some extent, this process has already begun. Integrated pest management (IPM) systems schedule pesticide applications based upon information about pest infestation levels and the point at which economic harm results. Rather than indiscriminate pesticide applications, spraying is timed to deal with high levels of infestation, saving expensive chemicals. In this instance, farmers are using information about plant pests to replace chemicals.

Systems are being developed to expand this concept to increase efficiencies in other areas of farming operations. As the following article from the Los Angeles Times shows, these applications have great potential. The challenge for us in Government will be to insure an orderly development of these technologies and to make available, in a usable form, the masses of information that Government agencies possess. The article follows:

COMPUTER AGE DAWNING DOWN ON THE FARM—ELECTRONICS WILL BE USED TO MONITOR SOIL CONDITIONS, ACTIVATE IRRIGATION

(By David Smollar)

OXNARD.—John and Lynette Roth may be the only people on earth who can be awakened at 3 a.m. by a avocado tree wanting a drink of water.

The Roths have wired their 22-acre avocado grove, overlooking the Santa Rosa Valley 15 miles from their harborside home here, with a computer that can automatically monitor soil conditions, turn on irrigation pumps and ring their bedside telephone should it sense unusual problems such as water leaks or rapidly changing temperatures.

With the prototype system they designed, the Roths have eliminated daily drives to check their hillside ranch, saved water, improved yields and placed themselves on the leading edge of a computer revolution in agriculture. Within a decade, farmers statewide will likely be using comprehensive computer-managed irrigation and pest control systems by simply dialing from terminals attached to their televisions.

Agriculture officials of the University of California at Davis soon will begin testing a statewide network of automated weather stations allowing them to forecast short-range water needs for the state's major crops and transmit that information to farmers hooked in by computer. Private companies are using government grants to test radio and satellite transmitters, thus eliminating the need for underground wiring on individual farms. Other experiments are improving reliability of sensing devices to withstand the rigors of the field.

"We're trying to show the farmer that irrigation scheduling by computer can be so easy that he's got to do it," said Richard Snyder, professor at UC Davis Cooperative Extension. "We expect to reduce the amount of water, improve yields, and save the farmer time," said Snyder, a biometeorologist in charge of UC Davis' four-year, $3.5 million weather research project ex-

pected to start soon with funding from the state Department of Water Resources.

Other officials will use the weather information to predict the arrival of fruit and vegetable pests, giving farmers better data on when to spray pesticides in an effort to cut down overuse.

The hardware is available, officials say. All that is needed now is to take farming and weather information and put it into the language that computers use.

"Then the farmer will sit back at his TV, flick a switch, and be able to pick from a menu or irrigation programs, insect control, 4-H meetings, or anything else," predicts J. L. Meyers, irrigation and soils specialist at UC Riverside extension. Meyer is watering experimental plots of turf grass based on data gathered by computer.

The impetus for automating farming comes from soaring water and energy costs, and already is in wide use in Israel, where it was pioneered. Water rates in Southern California are approaching $200 an acre-foot and the price of now-in-expensive water in the Central Valley is expected to skyrocket beginning in 1983 as pumping contracts expire. Farmers also worry about water supplies after 1985 when Arizona takes a substantial share of Colorado River water while the Peripheral Canal through the Sacramento Delta remains uncompleted.

"The hypothesis we all work with is that farmers overwater as a means of protecting their crops—perhaps 25% to 35% overuse statewide on the average," said Owen Hall, Jr. of the Torrance-based Energy Management Corp. Said Hall, whose firm also holds a research grant from the state: "With a complete computer-based data system, we think that an annual water bill of $500,000, for example, can be reduced by $150,000."

The promise of more efficient watering spurred the Roths to install their system earlier this year. Both work as physicists at the Hughes Research Lab in Malibu and are at home with advanced technology.

"We wanted to water the way we want to," Lynette Roth said, seated in a trailer at the edge of the grove. There, a small Apple computer blinks a blue, green and red graphic overview of the avocado grove. She explained that absentee citrus growers usually depend on management companies that water once or twice a week according to their own schedule, regardless of how much water the trees need.

"But it takes too much labor to check soil moisture and temperatures over 22 hilly acres," she said. "We can't afford it and neither can a management service."

So the Roths divided their 2,000 trees into four blocks and placed in strategic locations in each section instruments that measure soil moisture and temperature. The instruments are connected by underground wiring to the computer in the trailer. The computer reads the sensors every 15 minutes and then checks to see if moisture depletion in any section is at the level that the Roths have told the computer to begin watering. If it is, sprinklers will be turned on in a particular block for three hours. The computer also checks water flow and pressure to make sure that the right amount of water that it ordered is being delivered. The Roths can program the computer to telephone them should unusual conditions be noted and they can send special instructions to the computer from a portable unit they carry with them.

"You're really just transferring your intelligence to the computer," John Roth said. "You can come out here, check a soil monitor somewhere, sense the temperature and decide where to water. The computer has the advantage of being predictive, dedicated, consistent 24 hours a day."

The Roths now use soil moisture content as the key ingredient for having the computer decide when to turn on the water. But they are constantly refining their program to add new sensors, such as those measuring humidity.

In addition, the Roths have programmed the computer to project trends in the event temperatures begin to rapidly climb or fall and to alert them so that they can plan longer watering periods during Santa Ana conditions or turn on sprinklers to avoid frost damage.

"We don't have to come out to the ranch at night and stay on the ground in a sleeping bag when there may be a frost," Lynette said. "All we need is the phone outlet at home."

The Roths don't yet have statistics correlating their $10,000 investment with any economic returns.

"But we do know we're not spending any more money on water this year than last," John said. "And I think we're getting much better use. Compared to our neighbors, we're seeing a tremendous increase in crop yield, And our trees came though beautifully during the (midsummer) heat wave.

"Even if we're only saving 10% to 15%, its worth it."

Because of their scientific backgound, the Roths write their own programs to tell the computer what to do based on the information it gathers from the field. But many farmers may be unable or unwilling to do that, UC researchers say. For that reason, regional systems will give farmers broader data still sufficient to save on watering. Plant water requirements can be forecast either from weather data or from soil samplings.

"A farmer must know how much water has been depleted from the soil and when to then irrigate before he can improve efficiency," said UC's Snyder, who is in charge of the experimental program at Davis, formally called the California Irrigation Management Information Service. "On a regional basis, the best way to get that knowledge is by gathering weather information."

"We're going to estimate how much water crops are using through 24-hour-a-day weather monitoring," Snyder said. "That will allow the computer to forecast water use for a farmer's particular crop over the following 10-day period."

According to Snyder, data on water usage for a particular crop is now gathered in one area and then used throughout the state, even though the climate in the area where, it is gathered, such as Redding, may be different from that in another growing region, such as San Diego. In addition, the information cannot be correlated for use until the beginning of the next growing cycle.

Now we will be able to say, "Here's how much water was used yesterday in this area and here's our estimate of how much water will be needed in the next week or so," Snyder said.

Snyder's project will start initally with 20 farmer volunteers in the Imperial-Coachella Valley, Kern County, western Fresno County, Salinas and Pajaro valleys, and the Sacramento Valley. The farmers at no cost will be connected by computer terminals to the UC data bank at Davis.

There will be 27 automated weather stations throughout the five areas taking nine different measurements on the crops being used for the project.

"The farmer will tell our computer his type of soil, his type of crop, and when he last irrigated," Snyder said. "He'll then receive our estimate of what the allowable soil depletion is and what we estimate the rate of depletion to be. If it's three inches of water, for example, and if he last watered three days before he calls, then maybe he will need to irrigate in three days. And the amount and frequency will vary by the month."

Snyder said that without the computer data, the farmer might guess that his crops needed water every two days. In that way, water usage will be cut down. The data might also be supplied eventually to agricultural water districts so that they can estimate better the amount of water they must send through irrigation channels.

Snyder looks forward to expanding the program after 1985, when he believes farmers will be convinced that computers can improve irrigation with lower costs and few headaches.

But by then, Hall of the Energy Management Corp. hopes to have a more complete system combining both weather and soil data. Hall's company is developing ways to gather soil data by radio transmission rather than using underground wiring, with tests at a broccoli plot at the Irvine Ranch. Hall even looks toward satellite transmission one day.

If added to the weather information, Hall believes, a farmer could have no reason not to use a computerized irrigation schedule.

And at its ultimate, you've got the sprinkler system moving up and down the field automatically based on what the computer recommends.●

FREEDOM HOUSE IS HER VICTORY

HON. BOB EDGAR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. EDGAR. Mr. Speaker, it is most fitting that the story of Ethel Smiley of Darby, Pa., be placed in the CONGRESSIONAL RECORD during this holiday season. It is an inspiring account of 1 of 50 women discovered by the Philadelphia Inquirer who have literally been an angel of mercy to their neighborhoods. Ethel is not an angel in the ethereal sense, but is a "tough" angel who perseveres in the midst of agonizing adversity, and does not take "no" for an answer when justice is at stake in her neighborhood. I submit this article in the hope that it will inspire us all to good works.

FREEDOM HOUSE IS HER VICTORY

(By W. Speers)

The 14-room, chalk-white house that stands alone on two acres fronting on Main Street in Darby has been many things in its almost three centuries. Right now, it's a monument to the will, humanity and "grace under pressure" of Ethel Smiley.

The house, probably Delaware County's oldest, is the last vestige of a late 17th-century, 63,000-acre duchy granted by William Penn to fellow Quaker Samuel Bunting. There were fireplaces in all the rooms, Its stone walls are 20 inches thick. Penn visited

there. Colonial botanist John Bartram planted three trees there. Indians routed by white settlers found refuge there.

During the Civil War, it was a station along the underground railroad where Southern slaves were processed on their way to freedom. Smiley remembers that with a picture of Harriet Tubman in her office. It says Tubman was a conductor on that railroad and was responsible for guiding 300 slaves to new life.

Since 1968 the house and remaining property have been under the stewardship of Smiley. She turned it into Freedom House. It's a place for the very young. Forty-two children, about one-third of them white, attend a day-care center there. It's for the very old. Forty people, half of them white, half black, daily go to the senior citizens center there where they get a decent meal, their health is monitored, their rights protected and those old age blues of loneliness and nothing-to-do are eased. The cost is calculated on each person's ability to pay.

And for the in-between ages it's a place to find something that they can't find other places. Where older youth can play or learn things not taught them in school. Where they can get a start on finding a job or getting into school. It's a place where younger old people who are troubled can come and be helped or referred to help by the people of gentle strength who work there.

Freedom House is Smiley's victory. Victory over the most venal expressions of fear and hatred. Victory over the opposition of her own people. Victory, especially, over all the forces that strained to make her an embittered and vengeful woman.

Like many of those passengers on that abandoned underground railroad, Smiley comes from deep in Georgia—yes, the daughter of a poor sharecropper. It was there that she was initiated into the reality and content of racism.

"We were taught to keep our distance from white folks. It was one of those things you asked your parents about but they could never tell you why. It was a long way to grammar school and we had to walk past this fine white school to a rundown place where we had to build a heater-fire every day before teaching started. Even then I wondered why. The white kids would spit at us from the school bus and the drivers would splash us. We would hide along the side of the road until the bus passed.

"Saturday was always a time for us to go into town. But we knew to get out the way. I was wearing this freshly starched, plaid, pleated dress. I was walking on the sidewalk with my girlfriend when these two white men in coveralls came toward us. We jumped off the sidewalk into the street to let them pass. One of the men was chewing tobacco and he spat on my dress. And the other man said, 'Did you see what happened to that darkie?' It made me feel so bad. I've never forgotten it."

But she also recalls an incident involving her father that counterbalanced the institutionalized humiliation. He loaned a white man money but when he tried to collect the debt, the man threatened to accuse Smiley's father of stealing the money from him.

"My mother begged him to leave the man alone. But he went to him and said he wanted that money because his kids were hungry. The man said, 'I'm a white man.' And my father said, 'I'm a black man.' He was ready to tie into him right then and there. He got his money. I think I got some of him in me."

Smiley got a teaching certificate in Georgia and, after teaching there a while, came north in 1934 to live with a relative in Sharon Hill, Delaware County. She moved to Darby five years later and since 1944 has lived in the same rowhouse on Mulberry Street.

Her teaching credentials weren't any good here so her first job here was as a $5-a-week domestic. She got married. Her husband died two months later of bronchial pneumonia. She was pregnant and took a series of other jobs including a tailor-shop presser and kitchen supervisor in a Darby convalescent home. "I always could handle a kitchen."

She continued working in institutional kitchens and remarried in 1954. She adopted a girl, a sister for her son. In 1960, her sister-in-law died and she took in six of her 10 children, ages between 2 and 9. "The youngest just graduated from college last summer."

Smiley had joined the National Association for the Advancement of Colored People when she came north. She became alert to the life of the tiny island of Darby blacks—entrenched there since the mid-1800s—in a sea of whites, many of them hostile. The latest borough count is 9,649 whites to 1,781 blacks.

First she was drawn to the difficulty that black youths had in getting local jobs. When she was told that their school grades were lower than whites, she investigated and found black students performing at levels comparable to their white counterparts. One day, when checkout lines at the local A&P were long for want of cashiers, consumer Smiley asked to see the manager.

"I was mad. I asked him why he didn't have any blacks working there as cashiers. He told me they couldn't pass the test. I told him to give me the test. I passed and became the first black cashier at that store."

Her success in breaking the color line there led her to explore other workplace barriers near her home. In 1965 she organized extended picketing of the Collingdale Federal Savings and Loan Association, a bank that didn't hire blacks. When she was told—again—that blacks couldn't pass the test, she tested the test by sending in black tellers from outside banks to take it. All of them failed.

"We picketed Collingdale for nine weeks one summer with 30 or 35 students. But it was getting time for them to go back to school and nothing was happening. I called Roy Wilkins and told him I needed help," she said, referring to the late NAACP executive director. "He said the national had too many people tied up in Mississippi at the time. He said, 'You made your point. Now get out of there.'"

Instead, Smiley marched her troops inside the bank where they held a sit-in. Police were called. Arrests were made. The State human relations commission got involved. Negotiations were opened. And a plan was drawn up to integrate the bank. The orderly integration of other area banks follows.

Smiley got the idea for Freedom House 17 years ago. She had always been partial to youth. She was a statewide youth counselor for the NAACP.

"Youth have always been a prize to me." She envisioned a Darby place where young people, both white and black, could come to learn, play and be together. "At the time, there was nothing in Darby for either race. Also, there were black and white confrontations in the schools, fights, and blacks were leaving school. I kept hearing from kids that nobody was listening to them. They liked me listening. So I decided to see what I could do right here instead of running around the state. To look for a place where people listened."

There was no such possibility on the congested "hill" where all the Darby blacks lived. And when she played the with idea of trying for the Bunting House smack dab in the heart of the white section, even her own people were incredulous. "They all thought I was crazy."

The last Bunting had died in 1944 and, after other ownership, the house had been boarded up and the property grown over. In 1968, when the owner asked how much money Smiley had, she told him $75. Despite over three decades of loyalty to the NAACP, her local chapter refused to support her plea to the national organization for funds to secure the property. Three times they turned her down. "I don't cry easy, but after that third time I cried."

Finally, she wore them down and the chapter agreed to back her proposal. But she still had to convince the national organization to advance the money.

She wrote to the national NAACP leadership and was turned down. Then she went to see Wilkins in New York. She sought his backing on a lease-purchase agreement. She asked him to approve a plan where half the dues that usually went from her chapter to the national organization would go, instead, into a fund to acquire the Bunting House.

It had never been done before and Wilkins hit the roof. She remembers that he said, "We have 18,000 branches. Can you imagine what would happen if they all asked to do this? I thought people would grasp what I wanted to do, but they didn't."

Still, Wilkins approved the plan for a year. "It took some convincing." The approval meant $12,000 to Smiley. She took a lease-purchase agreement on the Bunting property in the summer of 1968.

Her battle had only begun.

The first thing she did was organize a bunch of youngsters to help her clean up the neglected property. The second day most of the white children were pulled out by their parents. Smiley was visited by the father of a white girl. "He told me, 'I don't care what it is you're doing, [but] keep my daughter out of here or I'll make big trouble for you.'"

The white children stayed away, but big trouble came anyway. A metal house for Sears that Smiley had set up on the property as a temporary base of operations was burglarized and all the typewriters were stolen. Then the building was vandalized. "'Niggers go home' was written on the floor."

A carriage house that had been at the rear of the property since the Revolutionary War was burned down. The young people helping her shape up the grounds were shot at with BB guns from the fringes of the property. A new station wagon belonging to her husband was fire-bombed three months after he bought it.

Meanwhile, she remembered, the Darby government was doing its best to make sure that Freedom House would go away. The borough council withheld its support of the house's applications to the federal government to carry out programs.

"A good example of that was the time we tried to get $50,000 to train people in office skills. The council wouldn't endorse it even though it cost the borough nothing. And at the time Darby was the third poorest of Delaware County's 49 communities."

The zoning board put Freedom House's applications for variances through delays. At one of its hearings an opponent of Freedom House insisted that the Bunting property was zoned "white-residential."

"One day I just got sick of it. It was a Friday in summer. I gathered a group of kids together and took them down to the Darby Swim Club, which is just down the street from here.

"I told the man on duty I wanted memberships for all the kids. I took out my checkbook and told him I was going to write a check for $1,500. I had about $15 in the account at the time. He didn't know what to do. He said it was against the rules to do it that way. I asked to see the rulebook. He told me to come back. I told him if I didn't have my variance by the following Friday, I was going to blow a horn on the Hill and like the Pied Piper I was going to lead everyone from up there down to the swim club. The very next day, Saturday morning, I had the variance on my desk."

However, all the physical attacks against the property scared off banks from granting Smiley a mortgage. Twice the Bunting House was set on fire, but those burly stone walls allowed only minimum damage. When the first year was over no mortgage was in sight, the escrow money had been exhausted and the property owner said he was going to look for another buyer.

Angered, Smiley's black followers were ready to fight back match for match, BB for BB. She urged them not to and asked the Darby mayor to call a meeting. "I know he was expecting me to say I was calling it off. Instead, I told the meeting that I would auction off the house's ashes if I had to. I didn't want my people wasting time fighting back. I wanted them to keep trying to raise money.

"See, I felt I was on a mission. That the Lord was using me as his vessel. That as I pass this way I was meant to do something good for the people of Darby. I was sure He wouldn't let us fail."

With the help of former State Rep. Joseph T. Doyle, the owner agreed to give Smiley an extension to buy. The national NAACP also granted her an extension of the lease-purchase plan. She began picking up sponsors and donations from churches. She recalls white churches giving more than the black ones. Doyle also got Smiley the promise of a mortgage from Media Federal. But first, the bank wanted $15,000 collateral. She got a man to agree to put up the money, but his children told Smiley that they'd have him put away if he did.

Then she went on a campaign to get 15 people to give $1,000 each. It didn't quite work out that way. But within 10 days she got the $15,000 from individual donations ranging from $100 to $2,000. She had her mortgage but she also lost something precious to her. After 18 years of marriage, she and her husband, James, separated.

"We're still friends. He lives in Sharon Hill. When his car was blown up, he got to worrying about me. He'd say, 'You're going to get yourself killed. Now give it up and come up from down there.'

"But I told him you have to die for something. I loved him and the marriage was important to me. But I wanted him to understand what it was I was doing. He couldn't, and we parted. I've never regretted the decision. It's something I can't help. It's something I don't have any choice about. It's the working of God."

From the single teacher whom Smiley hired part-time at $35 a week 13 years ago, Freedom House has grown to a paid staff of 25. Of the 16 full-timers, four are white. The operation grew when the house next door was purchased. Smiley maintains her simple office here.

From its initial activity of tutoring children and giving them a place to play, Freedom House has expanded to a variety of activities. It's hard programs in job placement, nutrition, tutorials in reading, math and science, music instruction, black history, cooking and homemaker skills. It organizes field trips for young people, provides a summer day camp for them and has been a clearing house for information on scholarships and loans and post-high school training.

"We're not selfish here so we never duplicate anything that anybody else does. We drop it if somebody else does it. And there's a lot of things we do that are never recorded. Like people who come here in distress. If we can't help them, we refer them to someone who can at family service or the welfare department. People come in here with all kinds of problems."

Freedom House, which has always been separate from the NAACP, is now supported with money from Delaware County, grants from foundations and companies and individual donations through fund-raising campaigns.

Smiley speaks of her journey with Freedom House only half-knowing why she stuck it out. "I can't explain it because I don't understand it. I understood why other blacks felt hostile, but I never did. I don't know why. I was angry sometimes but I was never afraid. And the only time I felt resentment was when people spoke down to me. Then I'd fight back like a tiger.

"I felt strongly I had something to do; it was a drive. I wasn't arrogant about it, but I was determined. I knew I had to stick with it and never just take a no. The bigger the challenge, the more bristled up I got. I don't know why."

Smiley won't give her age ("They hear you're old, they want to push you aside"), but probably she's in her mid-60s. She admits, "The steps are getting taller and the kids are getting heavier" and says she's looking to "ease up" soon and maybe do some consulting work.

Still, she can look out the window of her tiny office into the turf once trod by frightened Indians and slaves and envision a Freedom House of the future. "See that empty space out there. I close my eyes sometimes and see a multipurpose center there. A place where poor children that are held behind by poor nutrition would get off to the right start. You rarely see a child that gets started right end up behind bars. And it would cost less to care for them young than if they were behind bars. The center could also be used for . . ."

It's the show that never ends.●

DADE COUNTY DESIGNATES JANUARY AS FRANKLIN DELANO ROOSEVELT MONTH

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. LEHMAN. Mr. Speaker, the Dade County Commission recently proclaimed January 1982, as "Franklin Delano Roosevelt Month."

January 30, 1982, will mark the 100th anniversary of the birth of President Roosevelt, a man who overcame a physical handicap to be elected President of our country an unprecedented four times.

The county commission is encouraging the citizens of Dade County to honor the memory of President Roosevelt by joining the March of Dimes Mothers' March Against Birth Defects. The march is scheduled for the last 2 weeks in January.

Mr. Speaker, I am pleased to include in the RECORD the text of the county commission's proclamation:

TEXT OF PROCLAMATION

Whereas January 30, 1982 will mark the 100th anniversary of the birth of Franklin Delano Roosevelt, elected four time to the presidency of the United States of America;

And whereas under his sponsorship was established the Social Security System which to this day helps protect our citizens in their golden years, and the Federal Housing Administration and other programs that led to decent housing and an improved standard of living for millions of Americans;

And whereas on a non-governmental basis, Franklin Delano Roosevelt established and supported the March of Dimes, which financed and inspired the successful fight against infantile paralysis;

And whereas that organization, now known as the March of Dimes Birth Defect Foundation, is now leading a national campaign in aid of the 250,000 children stricken in this nation each year by birth defects;

And whereas the Dade County chapter of the March of Dimes Birth Defect Foundation and its 10,000 volunteer workers are an inspiration to the community and the nation theyn served: Therefore, be it

Resolved, That the month of January, 1982 is designated Franklin Delano Roosevelt Month in Dade County, and in his honor, the citizens of Dade County are urged to participate in and support the March of Dimes Mothers March Against Birth Defects, scheduled for the last two weeks in January, 1982.●

NATIONAL ENGINEERING AND SCIENCE MANPOWER ACT OF 1982

HON. DOUG WALGREN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. WALGREN. Mr. Speaker, today, I have joined with Chairman DON FUQUA of the Science and Technology Committee in introducing the National Engineering and Science Manpower Act of 1982.

As chairman of the Science, Research and Technology Subcommittee, I have been very much aware of the concerns of our high technology industries for the quality and quantity of our Nation's scientific and engineering manpower. Our goals of economic recovery, international trade leadership, and a secure national defense cannot be met without people who are

trained and ready to use all the tools science and technology can provide. Similarly, our broader hopes for a brighter global future, in which we overcome the age-old problems of disease, hunger, and resource scarcity, will depend on the knowledge and creativity of the developing minds of our youth.

We should be encouraged by many industry, university, and State and local government initiatives to improve science and technology training at all levels. We should especially recognize that this improvement must begin at the early stages of education, and continue through our graduate training and that special stress must be placed on opportunities for minorities and women to be drawn into our science talent pool. We cannot afford to waste any of our valuable resources.

The bill, as introduced, stresses matching grants for private sector or State and local government initiatives in improving science and engineering education. It also emphasizes coordination of currently fragmented Federal efforts to be sure that scarce resources are used wisely and efficiently. Overall, it would be aimed chiefly at creating an environment favorable for development of the many good ideas coming out of our educations, science, and industrial communities concerned with science and engineering training.

I look forward to working with my colleagues and the education community in refining the initiative we are beginning today. I certainly hope that the administration recognizes the serious strains in our science and technical education systems and will be willing to join with us in pragmatic problem solving.●

WASHINGTON POST SERIES ON THE THRIFT INDUSTRY CRISIS

HON. JERRY M. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. PATTERSON. Mr. Speaker, today I would like to place in the CONGRESSIONAL RECORD, for the benefit of my colleagues, the Washington Post's series of articles concerning the crisis faced by our Nation's savings institutions. This series provides a comprehensive explanation of the history of the thrift industry, the problems it currently faces, and some possible solutions. I believe that these articles will be especially interesting to those Members of Congress who do not sit on the House Banking Committee.

This series is timely in that both the House and Senate Banking Committees are currently in the midst of a thorough examination of the financial services industry and its changing infrastructure. The savings and loan industry is a major segment of this industry, and the seriousness of its problems should be given careful consideration by the Banking Committee and by all Members of Congress.

[From the Washington Post's series of Articles]

SAVINGS AND LOANS, MUTUAL BANKS: CAN THEY SURVIVE CRISIS?

MAJOR FINANCIAL SECTOR TO LOSE $5 BILLION THIS YEAR

(By Nancy L. Ross and Rudolph A. Pyatt, Jr.)

America's savings institutions, started in the last century by small bands of neighbors who wanted to deposit extra funds where they could earn some interest and provide loans, for members to buy houses, are in a state of crisis.

Not since the Depression—when hundreds of banks were folding until Franklin D. Roosevelt took office and rushed through legislation to restore public confidence in the foundering banking system—has a major sector in the world of finance faced such severe pressure and the threat of failure. A respected Denver savings and loan executive says there "has been a silent run" on his industry for much of this year.

For the government, housing industry and comsumers, saving the savings institutions will be one of the most substantial challenges to be faced in 1982. Americans have almost $700 billion of their savings on deposit at the S&Ls and saving banks.

But these savings institutions are expected to pose collective losses for 1981 of $5 billion, with three out of four S&Ls and savings banks in the red for the year. In simple terms, it cost savings and loans $11.74 to attract each $100 during October. At the same time they received but $9.91 back on each $100 loaned.

Things are bad and "getting worse," said University of Georgia finance professor Robert R. Dince. Summing up the state of the savings industry today, he added: "By doing exactly what the government told them to do, they wound up in trouble. . . . The federal government created the world in which these guys are dying."

Most S&L leaders and analysts argue that things are not so bad. "I believe the worst is over," said San Francisco analyst Allan G. Bortel. Reagan administration officials have described the plight of savings institutions as a temporary phenomenon.

In a series of four articles starting today, The Washington Post will explore the current problems and possible solutions for an industry known collectively in the business world as "thrifts"—encompassing savings and loan associations and mutual savings banks. This article recounts the worst year in history for the business, while a second article in the Washington Business section tomorrow focuses on metropolitan Washington, where merger fever has broken out and interstate branching may come soon.

On Tuesday, the series will deal with the contrasts between New York State's critical savings bank problem and California's world of normally aggressive S&Ls, which are having problems, too. The final article on Wednesday will outline proposed industry and federal legislative remedies.

IN EVENT OF FAILURE

In terms of savings accounts or certificates, consumers have little fear today from the industry critics because of New Deal laws that established a pool of insurance funds (provided by the industry itself) to guarantee payment in the event of failure.

But the strain on the nation's financial system by weakness in a major sector already has had a traumatic impact on the nation's economy—particularly housing construction activity and residential real estate sales.

Already, consumers are beginning to learn about the new world of housing finance created by the savings industry crisis. It's a world where 30-year mortgages at fixed, low rates have disappeared. Far fewer Americans will be able to buy houses in future decades with the ease their parents encountered after World War II, because a much larger portion of take-home pay will have to be used to pay mortgages with interest rates that are linked to changes in the rate of inflation.

Savings institutions have provided the bulk of home mortgage financing in the United States for most of the 20th century. After World War II, in particular, federal tax and housing policies encourage a partnership between the savings industry and home builders to build the nation's suburbs. House mortgages now held by the savings industry total $539 billion compared with $173 billion in all commercial bans.

But most of these mortgages were arranged with interest rate returns to the institutions that are far below today's cost of money. A decade ago, the typical house mortgage carried an interest cost to the purchaser of less than 6 percent. Passbook accounts at the corner S&L office paid a lower rate to savers, and the institution's operating expenses were paid for by the difference in rates.

But as inflation began to eat up more and more of any savings that an individual had in the 1970s, individual savers began to search for better paying places to put their money.

Ultimately, they were successful in forcing the government to establish a new set of interest-rate rules that in effect allow all consumers to earn interest at levels provided previously only to the wealthy or to corporations on very large deposits.

And this has required S&Ls and savings banks to pay much higher interest rates to attract the deposits that support mortgage loans. At the same time, there has been a banking revolution caused by the ease of electronic money transfer and automatic teller machines, the birth of money market mutual funds as a strong attraction for large and small savers, much higher operating expenses and encroachment into financial services by such outsiders as retailers, industrial companies and Wall Street securities firms.

Overnight, a rather relaxed business was thrust into a competitive environment of attacting money for which most savings executives were ill-prepared. The savings industry sought and won new powers, such as offering checking accounts with interest. Individual S&Ls have become more aggressive in fighting for deposits and their trade associations have been battling for government aid. Outsiders have been hired to provide broader management skills.

Little that has been done, however, has helped much in solving the current crisis. Short-term help, in the form of lower interest rates, finally is on the way. At best, however, it will be a number of months before the industry's long downward slide is reversed.

Even if the current recession is mild and the Reagan administration is successful in

reining in the deficit, it will be too late for a signficant number of savings banks across the country.

Institutions that are on the verge of collapse will be taken over by more healthy businesses and not necessarily traditional savings companies. National Steel Co. now owns S&Ls in three states, for example. Commercial banks are expected to acquire failing savings institutions, in some instances.

MERGER WAVE

Behind the takeovers of failing institutions and a wave of mergers that is consolidating weaker thrifts under the wings of stronger brethren, is an unprecedented accumulation of operating losses for the overall industry.

The nation's 4,400 savings and loan associations and 450 savings banks have just endured their worst quarter on record with operating losses of $1.35 billion for the July-September months this year. In October alone, the 3,800 federally insured S&Ls rolled up losses of $766 million. Savings industry analysts have predicted that losses in the final six months of 1981 will be double the first-half losses of $1.5 billion.

None out of 10 mutual savings banks, concentrated geographically mostly in New York state and New England, are now operating in the red. Losses for 1981 are projected to reach $1.25 billion; customers withdrew $12 billion more than they deposited, or $1 for every $12 on deposit.

At last count, before regulators stopped internal publication of a "troubled" savings institution list in September, about 30 savings and loans were listed in critical condition by the Federal Savings and Loan Insurance Corp. (FSLIC), the agency that insures S&L deposits at member institutions through use of a pool of funds that the S&Ls are required to provide.

Approximately 200 savings and loans will be merged out of existence this year, 60 percent more than last year. This merger rate is expected to grow in 1982. To date, one merger in 10 has been ordered, arranged and partly subsidized by the federal government.

Mortgage loan activity this past month was off 65 percent from a year ago, with consumers simply unable to assume mortgages that carry interest charges of 17 percent or more. Withdrawals from savings institutions exceeded deposits by $22.2 billion during the first 10 months of the year, forcing the industry to charge much higher interest rates on mortgages arranged with what few dollars were left to lend. One glimmer of hope came in October, when new savings exceeded withdrawals for the first month since last February because of the new All Savers certificates that were added to the new tax law as a specific measure to encourage S&L savings.

From the consumers' viewpoint, deposits are insured up to $100,000. Savings and mortgage accounts are automatically transferred to the acquiring institution in the event of a merger. Even uninsured deposits are protected in a merger. Only when liquidation occurs can deposits with accounts over $100,000 lose money, yet this did not happen in the one liquidation that occurred this year in Chicago.

INSURERS' VIEW

How bad is it from the insurers viewpoint? Public fear that the federal agencies insuring the thrift industry could run out of money has led legislators to try to increase the FSLIC's borrowing authority from the Treasury, a move opposed by the administration.

FSLIC, which earns $1 billion annually on its $6.8 billion trust fund, insists it can do the job with existing funds. Thus far this year, it has put out more than $882 million in assistance in 22 mergers and one liquidation. Last year it spent $1.2 billion on 11 mergers. Another federal agency, the Federal Deposit Insurance Corp., which insures mutual savings banks, has spent $46 million net this year to merge the Greenwich and Central Savings Banks in New York City.

Because of the immense repercussions and the specter of a run on an institution if it were to exhaust its funds, FSLIC has sought out potential merger partners even across state lines—a break in federal regulatory policies that have blocked interstate branching for a generation—as well beginning a new program of sharing risks.

How bad is the situation from the point of view of savings institutions? The severity naturally depends on who is talking.

The Reagan administration believes the S&Ls and savings banks have "temporary and manageable" problems and that they will recover satisfactorily without additional government financial assistance.

Deputy Secretary of the Treasury R. T. McNamar and Assistant Secretary for Domestic Finance Roger Mehle maintain that the savings institutions have no problem so long as they maintain their cash flow—as long as people keep paying off their mortgages and the institutions can pay their bills.

Indeed, when interest income, mortgage principal repayments and borrowings are totaled, they more than offset the savings outflows.

INDUSTRY ASSETS

At the other end of the spectrum is economist Richard W. Kopcke of the Federal Reserve Bank of Boston. He took a look at the industry's assets earlier this fall and concluded that two-thirds of all thrifts were potentially insolvent if interest rates did not decline.

If they declined by 4 or 5 percentage points, as they have since, just one-third were potentially insolvent, he said. Kopcke estimated it would take a government subsidy of $80 billion to $120 billion to cover the industry's current and prospective losses and $30 billion to $50 billion just to bring assets up to the level of liabilities.

The New England economist arrived at these dismal projections by using current value reporting, an accounting system that reflects today's market value or what investors would pay for mortgages with interest rates well below those now being demanded.

Normally assets are carried at book or original value. The savings industry is unanimous in attacking current value reporting, saying it represents the liquidation value of assets of companies that are not about to be liquidated. By the same measurement, for example, many banks and insurance companies would be close to insolvency.

The investment banking firm of Goldman Sachs has concluded that even if assets are carried at a market value, savings and loans still have a positive net worth of $20 billion because of certain "intangibles" that do not show up on the balance sheet.

These intangibles include good will, unreal- ized appreciation of real estate, advances from the Federal Home Loan Bank Board (which regulates federal S&Ls) at just over the Treasury's cost, and FSLIC insurance that has thus far covered all savings, even those above the $100,000 limit. Add in a $35-billion cash flow and the industry has total resources of $75 billion that could be used if there is a run on institutions, said Goldman Sachs senior financial economist John Paulus.

"There has been a silent run going on for some time," responds Kenneth Thygerson, vice president of Western Federal S&L of Denver. This loss of public confidence—as evidenced by lower ratings from the Standard & Poor's organization and the very high rates needed to attract jumbo certificates and retail repurchase accounts—results from negative earnings, he maintains. He rejects the argument that liquidity is the only important measure.

And New York State Superintendent of Banks Muriel Siebert was alarmed enough by the situation to hold an unusual news conference last month announcing a $372 million loss by savings banks in her state in the third quarter and urging creation of a presidential commission to consider the industry's future.

The U.S. League of Savings Associations, a trade organization for savings and loans, warned federal regulators last month that "many of our nation's thrift institutions are in rates continue their recent and welcome decline."

But league President William B. O'Connell, in common with most industry executives, deployed the type of publicity Siebert called down upon the industry. The league prefers to remind the public that its members have $29 billion in reserves and thus are not going to declare bankruptcy tomorrow. In fact, S&Ls could continue to lose money at the same rate they are now doing and not run out of money for 10 years.

ROOTS OF PROBLEM

The current problems of the savings and loan industry are rooted in government policy and regulations that proved to be archaic at least a decade ago. Known more commonly in the past as the building loan industry, S&Ls came under government supervision with the establishment of the Bank Board by Congress in 1932. In the years that followed, S&Ls have operated in a regulatory straitjacket.

Strict regulations have been imposed on the industry which, unlike other financial services segments, has been required to invest primarily in residential housing. In exchange for operating under those regulations, and to ensure a continuous flow of funds for housing, S&Ls were permitted to pay a quarter percentage point more than commercial banks on deposits.

Until recent years, S&L executives ran a fairly simple operation—taking in deposits for short periods at relatively low rates of interest and lending those funds at marginally higher rates for long periods of up to 30 years.

That practice flourished as interest rates remained relatively low and as the housing industry boomed between the end of World War II and the late 1970s. But it proved to be the Achilles heel of the S&Ls' fairly simple operation once inflation got out of hand.

In the past three years, some of the heavy restrictions have been lifted as regulators began to realize that competitive forces and sharp swings in interest rates posed serious threats. But those changes weren't enough to help the S&Ls cope with inflation.

S&Ls probably should have begun charging higher mortgage rates as soon as it became clear that the spread was narrowing between their cost of funds and their yields.

On the other hand, if mortgage rates had been higher, S&Ls might still be confronted by the same problems, perhaps not as serious. Federally insured institutions continued to borrow short and lend long until adjustable-rate-mortgage authority was granted this year.

The University of Georgia's Dince questioned management's complacency and lack of innovation. "These guys just follow the railroad to perdition," he remarked.

Bank Board Chairman Richart T. Pratt defended management of the S&L sector by comparing it with that in other industries and insisting that it's no better or worse. "I think that we can't require that any industry be universally populated by the world's best managers," Pratt said in an interview.

THE MONEY FUNDS

In the past couple of years, a major problem for savings institutions has been the attraction of some deposits to the money market funds, which have grown from a mere $4 billion in 1978 to $185 billion today in deposits. For as little as $500, an investor earned as much as 20 percent or more at times this year by investing in a money market fund, substantially more than a passbook savings account paying only 5½ percent.

As small investors turned to the money market funds in greater numbers, the S&Ls tried vainly to have curbs put on the funds, which, while supervised by the Securities and Exchange Commission, are regulated less stringently and do not have to set aside reserves to cover possible losses in the future.

As one response to the plight of the S&Ls, regulators authorized them to issue a six-month money market certificate in 1978—a decision that the industry would just as soon forget.

The money market certificates were designed to make the S&Ls more competitive by enabling them to offer a market rate of return on minimum deposits of $10,000. Early last year, S&Ls were also authorized to offer 2½-year certificates.

The net effect of the certificates was a significant increase in the S&Ls' cost of funds. Although the certificates stemmed the outflow of funds for a while, associations had to come to grips with cash flow problems because of their rising costs.

In retrospect, deregulation of the liability side of the balance sheet through the creation of certificates of deposit sensitive to money market rates was a colossal error. "Things got totally reversed," said Jay Janis, former chairman of the bank board and now president of California Federal Savings and Loan in Beverly Hills. "The asset side should have been deregulated first. It wasn't because of pressure from constituent groups [who opposed variable rate mortgages] and lack of understanding by Congress."

How bad will the situation get? Interest rates on six-month Treasury bills have fallen from a record 15.8 percent on Sept. 4 to 10.7 percent on Nov. 30, although they edged higher last week. Two-thirds of all deposits are now in high interest certificates. According to finance professor Dince, it will be six months before the majority of these are rolled over at lower interest rates. "At least [the thrifts] won't be drowning; they'll be treading water," he said. Until then, savings institutions will be hard pressed to reduce their cost of funds and consequently improve their earnings. In October it cost them an average of 11.74 percent to buy money, while they were earning but 9.91 percent on their mortgages.

Operating profits or losses for thrifts are expressed by changes in net worth, also commonly called reserves or surpluses or retained earnings. FSLIC-insured savings and loans had a new worth of $32.4 billion in December 1980; by June that had fallen to $30.7 billion.

Jonathan Grey, and analyst with Sanford C. Bernstein & Co., predicted that losses should abate in the first half of 1982 to under $1.5 billion. The rate of losses has bottomed out, he says, but the rate of improvement isn't sufficient to save many institutions that are still marginally solvent today.

On the deposit side, the statistics showing a mammoth $22 billion outflow during the first 10 months can be misleading because of accounting methods. It is not clear, for example, how much of that money left S&Ls and went to money market mutual funds—which increased by $106 billion during the same period—and how much stayed within S&L walls in the form of non-insured investments in retail repurchase agreements, a nondeposit offering by many S&Ls that amounted to a short-term investment at money market rates.

All Savers accounts were authorized by Congress as a way to assist the savings industry as well as a way to build up deposits. The industry estimated $238 billion would be deposited in these accounts over 15 months. The first month's response of $35 billion has been followed by increasing apathy caused by sinking interest rates.

The prospect of All Savers being a major factor in the savings institutions' financial future now appears slight. Instead, savings institutions are looking eagerly to Individual Retirement Accounts (IRAs) as a source of long term funds. Projections for contributions to all forms of IRAs range from $25 billion to $80 billion annually, after a change in tax laws on New Year's Day 1982 that opens up these retirement accounts to a much broader slice of the working population.

MORTGAGE DEFAULTS

Mortgage loan closings and commitments remained depressed in October, because of a lack of funds, high interest rates and a moribund housing market. However, in recent weeks, major S&Ls in California began reducing their home financing rates to under the 17 percent level. The industry has been reluctant to lower rates out of a desire to guard against future volatility and make up some lost profits.

Not until mortgage rates hit 13 percent or less, however, is the public expected to begin seeking to borrow again in large numbers.

THE AREA

PART 2

(By Rudolph A. Pyatt, Jr.)

For much of this century, leaders of Washington and suburban Maryland savings and loan associations have taken a weekend off in late May or early June for a few restful days in Atlantic City or at such spas as the Greenbrier in West Virginia and the Homestead in Virginia.

At these annual conventions of the Metropolitan Washington Savings and Loan League, there would be meetings in the morning, golf or a swim for the afternoon and dinners at night. It was a pleasant break for competitors in a closely knit business that first built the District's neighborhoods and then the suburbs through mortgage lending.

But there won't be a convention in 1982 at some distant resort. Faced with record operating losses and a savings institution crisis across the country, the area S&L league has opted for a briefer meeting in the city. There are fewer and fewer S&L executives to attend such a meeting in any event: A year ago there were 16 S&Ls in the District, but mergers have reduced the total to 10 and, by next year this time, there could be five or six.

With the benefit of hindsight, area S&L spokesmen said in interviews over recent weeks, and economic downturn in 1974 should have been an early warning signal that hard times were coming soon. Although the national recession, Arab oil embargo and resulting inflation were topics of discussion at that meeting in 1974, those events caused only a slight riple among savings and loan associations in metropolitan Washington.

Most S&L officials here regarded the cycle as a temporary drag on earnings and returned to business as usual when the economic climate began to show improvement, especially in a metropolitan area still experiencing boom-style growth and unprecedented affluence.

For the most part, savings executives had grown secure, if not complacent, in the knowledge that large reserves of retained earnings, built up over the good business years, had given them staying power to withstand radical shifts in the economy.

But with the industry awash in a sea of red ink and in its worst earnings posture since World War II, the present slump poses serious problems for some area S&Ls. Indeed, for some it is a real threat to survival.

Just as nearly 70 percent of the nation's federally insured S&Ls experienced losses in the first half of 1981, all but 10 of 38 in metropolitan Washington were in the red going into the third quarter. As a group, those 38 associations had losses of $21 million at the end of the first six months.

Further examination of financial data for Washington area S&Ls shows that if losses continue at the rate that prevailed during the first half, some institutions will run out of reserves by the end of the year. In fact, a few of those institutions already are perilously close to the zero level.

What's more, 24 percent of the federally insured institutions in metropolitan Washington are below the minimum reserve-ratio level of 4 percent set by the Federal Home Loan Bank Board, a guideline requiring that total net worth of an S&L be equal to at least 4 percent of liabilities (savings accounts, other deposits).

New institutions have 20 years in which to build their reserves to the required 4 percent level. While most District S&Ls have been in business for at least 20 years (minority-owned Independence Federal opened in 1968) several suburban associations are younger.

Nonetheless, with some institutions at or close to a 2 percent ratio, the Federal Savings and Loan Insurance Corp. (FSLIC) can be expected to step in for closer scrutiny. In fact, two area institutions are considered "basket cases," and barring a dramatic turnaround soon will be acquired by another institution in a merger organized by federal regulators and possibly with financial assistance from FSLIC, which insures deposits.

For the most part, however, Washington-area S&Ls appear to be strong enough to withstand nagging interest rate pressures and the prolonged earnings squeeze that has weakened the entire industry.

Third-quarter results are not yet available from the Federal Home Loan Bank Board, the federal agency that regulates all but state-chartered S&Ls. However, the same factors that combined to devastate earnings in the first half continue to dog the industry, although the recent decline in interest rates has bolstered hopes among most officials. Area S&L executives said they are confident most associations here can ride out the storm for at least another year or two.

"Most associations in this area are much better than elsewhere in the country," said T. William Blumenauer Jr., president of Columbia First Federal Savings and Loan Association. "Most of us can ride this thing longer than the average association."

The current president of the Metropolitan Washington Savings and Loan League agrees with that assessment. But in a more candid evaluation, William Sinclair observed: "Unfortunately, the S&L leadership wasn't shaken enough during the recession of 1974. It was painful then, but we're bleeding now."

Unlike what they did in 1974, S&Ls "can't go back in the market and make those long-term commitments" after the current crisis is over, Sinclair asserted.

Financial reports obtained from the bank board tend to support the position that most local S&Ls can "ride out the storm." The ratio of net worth to savings at the end of the first half, for example, was 8.72 for District S&Ls—the highest in the nation.

Applying the same yardstick to S&Ls in Maryland produced a ratio of 6.88 percent, while the level in Virginia was 5.65 percent, both well above the 4 percent standard required by the bank board.

At least eight metropolitan Washington S&Ls that are FSLIC-insured had reserve ratios of twice the required level or more on June 30.

The District's Perpetual American Federal—with $1.5 billion in assets, the area's largest S&L—and Prince Georges' Savings and Loan Association had ratios almost three times as high as the standard set by federal regulators. And OBA Federal finished the first half with a whopping 25.7 percent—nearly four times the average for all S&Ls in the areas.

Not surprisingly, all three of those associations were among the few that finished the first half in the black. It should be pointed out, however, that OBA over the years hasn't been one of the more active mortgage lenders in the area and is less vulnerable to interest-rate pressures.

While reserve ratios of local S&Ls continue to outstrip the national average, return on assets—another key barometer of industry performance—fell to minus 0.60 in the first six months of 1981 from minus 0.01 at the end of 1980. The return on assets for all Maryland S&Ls at the end of June was minus 0.44, and for Virginia institutions, minus 0.49—matching the national average.

While state-chartered S&Ls in metropolitan Washington have become victims of the same malaise as their federally chartered counterparts, the problems for most don't appear to be as critical. This reflects, in part, the rapid growth of suburban Maryland S&Ls in more recent years when interest rates have been higher and their overall mortgage portfolios do not include large numbers of loans at rates that prevailed before the mid-1970s.

Financial results for individual associations insured by the Maryland Savings-Share Insurance Corp. are unavailable. With few exceptions, such as Government Services Savings and Loan of Bethesda, most MSSIC members are mutal associations and aren't required to make public their results. Government Services has suffered steep losses in the past year and agreed to work on joint development of its headquarters property on Wisconsin Avenue as one method of building up financial strength.

However, aggregate figures provided by MSSIC show that while net worth declined 8.5 percent to $98.49 million in the 12-month period ended June 30, savings at member S&Ls increased 20.4 percent, to $2.73 billion.

In that same period, federally insured institutions were hit hard by disintermediation as depositors withdrew savings and invested them in instruments with higher yields. But most state-charted associations, not guided by federal regulations that limit interest on savings accounts, have offered depositors more competitive interest rates.

Although deposits increased at MSSIC associations, their savings-to-net worth ratio declined from 6.25 percent on June 30, 1980, to 4.64 percent a year later.

"That isn't all that bad," insisted Charles Hogg, president of MSSIC. "It's the new savings that our associations can invest to offset the negative spread [between interest earned on mortgage loans and that paid out on deposits] . . . Certainly, from what I hear about the national averages, our associations are doing better," Hogg added.

State legislatures have been a step ahead of federal regulators in recent years and have taken greater strides to increase the asset base of state-chartered savings and loans associations by allowing them greater flexibility, said William S. Bergman, executive vice president of the National Association of State Savings and Loan Supervisors.

Variable-rate mortgages—where mortgage interest costs to consumers rise or fall with inflation rates—until recently were authorized only by state legislatures, Bergman pointed out.

"Obviously, in those states where variable-rate mortgages have been aggressively marketed, S&Ls which offer them are in far better shape today than other state-chartered associations and their federal counterparts that were locked into a fixed rate of 8, 9 or 10 percent," said Bergman.

Although his association has reported sharp losses recently, Government Services President Alex R. M. Boyle said he believes MSSIC members enjoy a distinct advantage over competitors in the D.C. area.

"I think in many ways the MSSIC-insured associations have been benefited by their freedom from [federal interest ceilings] and their ability to pay higher rates," said Boyle. "We believe the flexibility to do things that enable us to compete with the money markets."

Government rate ceilings were designed to ensure an adequate flow of funds into the housing industry by allowing S&Ls to pay depositors a quarter percentage point more interest than do commercial banks. Both MSSIC and federally insured S&Ls in Maryland compare favorably with associations in other regions, said Charles Kresslein, executive vice president of the Maryland Savings and Loan League.

But Kresslein and other S&L officials in the region expressed concern about overall interest rates and where they might go in the next six months. "With money tied up in high-interest rate liabilities, we can't get out from under," said Mark Saurs, president of the Virginia Savings and Loan League in Richmond.

"The first thing that the business needs is a continuing drop in interest rates," observed John Stadtler, chairman of National Permanent Federal Savings and Loan Association of the District. In a flat interest period where the rate settles around 12 percent, "most of the S&Ls in this area could last for years," added Thomas J. Owen, chairman of Perpetual American.

Assuming that interest rates will continue their downward trend for the next quarter at least, they won't have much of an impact on S&L earnings before mid-1982. "Even if the prime [the rate charged top business customers by banks] goes to 10 percent tomorrow, that's not an immediate fix for the industry," conceded Allan Plumley, president of First Federal Savings and Loan Association of Arlington.

Meanwhile, management officials at most S&Ls here are in agreement that once the current crisis is over, it won't be business as usual. "Their whole outlook on running their associations will have to change," said a veteran S&L official who asked that his name not be used. "By and large, the top savings and loan management in this city has been very complacent," he added.

"I think the advent of Thomas J. Owen, with his innovative ideas and progressive moves, have shown [other local S&L executives] the way," said the same official, who described Owen as a "catalyst."

Owen, who was elected president of Perpetual American in 1976 and chairman and chief executive officer two years later, has spearheaded an aggressive course in maintaining the association's solid position as the region's largest. The key to Perpetual American's profitability in this latest downturn has been a series of innovations that few other S&Ls in the region have tried.

For more than two years, for example, Perpetual American has offered discounts of 5 to 20 percent to customers who prepay mortgage loans under certain prescribed conditions. This gets rid of low-yielding mortgages approved in earlier years. "Of course, we take a loss," said Owen. "But we still think it's better to do that because it allows us to invest those funds in more mortgages and other investments."

In yet another program designed to provide flexibility in its mortgage loan portfolio while increasing income, Perpetual American allows assumptions at less than market rates "on the theory that if you didn't you wouldn't get any upgrading of your portfolio anyway." Owen explained. Under this plan, a purchaser can assume the previous owner's mortgage at a higher rate than had been charged but somewhat below the current market—a gain for both the S&L and buyer.

Owen said his association also maintains an active refinancing program in which an older mortgage rate is blended with a newer one closer to, but at a lower level, than prevailing rates, a program that aids current owners who want to use some of the assets they have built up in a house for remodeling, college educations or other spending.

Two years ago, when S&Ls were profitable, Perpetual American's reserve position had increased to a point where it was virtually impossible to take advantage of tax benefits to which the industry is entitled. Perpetual American solved its problem by

selling about $130 million of its lower-yielding mortgages and taking a loss that improved its tax position.

And Perpetual American's newest gambit could even change the competitive environment in this region if the Federal Home Loan Bank Board goes along.

Under an agreement that was disclosed last month. Perpetual American would acquire a Northern Virginia holding company and its savings and loan subsidiary, Washington-Lee Federal of McLean. The interstate merger proposal is a bit unusual because federal policy until now has been to sanction interstate mergers only as a last resort to save a failing S&L.

Washington-Lee, while not a failing institution, has a reserve ratio of just over 3 percent and it lost $1.9 million in the first half. Though Washington-Lee's reserves are adequate, said Owen, "they aren't the kind they'd like to have or that the bank board would like them to have."

A merger would boost Perpetual's assets to about $1.9 billion. More important, its branch network would extend through Northern Virginia, making it the only local S&L with offices in all three jurisdictions. Its four suburban Maryland offices existed before federal policy prohibited new branches across state lines in the mid-1950s.

Perpetual American's interstate merger proposal is being watched closely by competitors in the District, who for years have railed against laws barring interstate branching.

"If Washington-Lee is determined to be a hospital case, I think Perpetual American will get them," predicted National Permanent's Stadtler. "I don't think any S&L in Virginia is large enough to take them [Washington-Lee] over," he said.

While suburban S&Ls that compete in the same metropolitan market may expand their operations in their respective states, District associations are restricted to a smaller geographic market—just 60 square miles.

The fact that S&Ls in this market compete for the same deposits is an argument that has failed to sway Congress or federal regulators. Indeed, Perpetual American's four Maryland branches last year accounted for 50 percent of its more than $1 billion in deposits.

It is little wonder that other large district S&Ls—including National Permanent and Columbia First, second and third largest in the region—are contemplating interstate mergers as well. In a changed environment where that has been made possible by weakened positions of some suburban institutions, Perpetual American's bid is likely to be duplicated.

"We're keeping our eyes open and our ears close to the ground," said Columbia First's Blumenauer. And Stadtler confirmed that his association has been "talking to various associations on both sides of the line over the last several months."

Stadtler denies being close to a merger agreement with a suburban association, but is prepared to act "if the right circumstances arise. I guess it could be sooner than later," he added.

Merger activity has proliferated in metropolitan Washington in the past year. Most of the mergers have taken place in the District, however.

All but two in this region have been voluntary, prompted by the certainty of tougher competition in the financial services industries and the conclusion that consolidation of relatively strong institutions would make it easier to compete.

Nothing here compares with the collapse or near failure of some S&Ls around the country. Nevertheless, the FSLIC has played a role in at least two mergers involving Washington-area S&Ls this year.

In both cases, neither of the failing S&Ls had been in business long enough to amass reserves that were strong enough to withstand the onslaught of high interest rates and the severe slump in housing.

Community Federal Savings and Loan Association opened for business in 1974 with considerable fanfare as the second minority controlled S&L in the District. But a slumping economy and high interest rates caught up with the small and struggling S&L, eventually forcing management to throw in the towel by agreeing to merge with Independence Federal, also minority-controlled.

Before closing its doors, Community had watched its net worth drain away to a minus $427,424.

County Federal, of Rockville, was merged earlier this year with Metropolitan Federal of Bethesda. The merger was finally completed after months during which the FSLIC had shopped around for a merger partner.

In fact, the exercise was one of the first in which federal regulators opened the bidding for a failing institution to out-of-state associations. At least five District S&Ls were invited to submit merger bids for County.

Acquisition of County by a District S&L would have broken down the legal barrier to interstate branching in metropolitan Washington. However, FLSIC officials decided to keep ownership of the S&L in Maryland by approving the merger with Metropolitan.

After reviewing County's financial position, one District S&L official called it a "can of worms."

FSLIC officials refused to disclose details of the agency's financial assistance in the supervisory merger but County's first-half report to the bank board showed a negative net worth of $4.7 million.

With losses piling up, with net worth shrinking and reserve-ratios slipping dangerously close to the critical level, at least a half dozen area S&Ls appear to be candidates for supervisory mergers if conditions don't improve soon.

"When you're down to 2 percent, the FSLIC takes an interest in you," remarked the president of one of the area's larger associations.

FEDERALLY INSURED S. & L.'S STATEMENT OF CONDITION, JUNE 30, 1981

	Assets	Net income	Net worth	Reserve ratio (percent)
District of Columbia:				
Perpetual American	$1.5b	$1.37m	$120.9m	11.2
Columbia First	930m	−2.97m	59.7m	8.3

[1] Average.

THE CONTRAST

PART 3

(By Nancy L. Ross)

New York—A ghoulish game, prompted by the announcement of third-quarter operating losses even greater than record second-quarter losses, was being played last month in private by New York banking regulators and in public by the media. Question: How long would it take mutual savings banks to go broke if present economic trends continued?

Answer: Almost a third of New York City's savings banks would run out of surplus funds in two years or less, a couple within two quarters or less. Though a few strong institutuons could withstand that magnitude of losses for 10 years or more, for the city's savings banks as a whole, average life expectancy was about three years. Since the third-quarter figures came out, one of the city's remaining 36 savings banks has been merged out of existence by the government authorities. Two more mergers are imminent.

During the current quarter interest rates have dropped sharply. How much the decline is cutting operating losses remains to be seen. Yet, unless interest rates fall further, and more important, remain at low levels for an extended period, the deadly erosion of the thrift industry will continue, according to New York State Superintendent of Banks Muriel Siebert.

Savings banks and savings and loan associations in her state suffered operating losses of over $1.2 billion during the first nine months of this year. The more numerous savings banks accounted for the major portion, $897 million. Of the 105 New York state-chartered savings banks, 97 were in the red. Third-quarter losses of $372 million were 23 percent more than in the second quarter. Three New York City savings banks were marginally profitable. Net worth or surplus fell to $4.4 billion, 17 percent below the December 1980 level. Withdrawals exceeded deposits by $11.4 billion during the first nine months. At the end of September the banks has total assets of over $65.8 million.

As for New York savings and loan associations (plus a handful of federally chartered

savings banks) insured by the Federal Savings and Loan Insurance Corp. (FSLIC), losses for the first three quarters totaled $352.7 million. Net worth was down by 25 percent from December 1980. Savings outflows through September totaled $1.76 billion. Mortgage activity declined by 41 percent during the period to $237 million. At the end of the third quarter they had assets of $26.8 billion.

During the first half of 1981, New York state S&Ls had the second worst return-on-assets ratio of any of the 50 states, Puerto Rico, Guam and the District of Columbia, according to a survey by the Federal Home Loan Bank Board; Puerto Rico had the worst return-on-assets ratio. New York's total loss was $1.45 per $100 of assets, compared with 49 cents for the nation as a whole.

Two major mergers involving the city's thrifts were engineered by state and federal regulators during the disastrous third quarter. West Side Federal Savings and Loan of New York and Washington Savings and Loan of Miami were merged with Citizens Savings and Loan of San Francisco. Between them the New York and Florida S&Ls were losing almost $10 million a month, and their net worth was near zero. Citizens is a subsidiary of the National Steel Corp. of Pittsburgh, which agreed to invest $75 million in the two savings institutions over three years. The FSLIC will provide an estimated $10 million a month in subsidies.

Greenwich Savings Bank, which had losses of $21 million during the third quarter and would have gone broke by next February, was merged with another New York thrift, Metropolitan Savings Bank, at an estimated cost to the Federal Deposit Insurance Corp. of $465 million. At the same time, a separate intrastate-assisted $2.2 billion merger in September involved Franklin Society Federal S&L of New York City and First Federal S&L of Rochester. More recently, Empire State Federal Savings and Loan in White Plains, which had a $4.3 million loss in the first half, was merged into Erie Savings Bank of Buffalo.

Back in the city, Central Savings Bank, which would have exhausted its reserves in six months, was merged with Harlem Savings Bank Dec. 7 at a cost to the FDIC of $160 million. The insurers are still seeking merger partners for New York Bank for Savings and Union Dime Savings Bank.

The West Side Federal and Greenwich mergers made history of a sort. West Side Federal was involved in the first interstate merger since federal regulators changed the rules last spring to aid troubled S&Ls by permitting suitors to come from out of state. Greenwich marked the first time in the annals of New York State banking regulations that a state-chartered mutual savings bank required federal assistance in working out a merger.

But as Siebert said, "If I thought that Greenwich were the first and the last of the supervisory mergers, I would not be here today" at a press conference publicizing the plight of banks.

Why does New York have such a sorry record? Saul B. Klaman, president of the National Association of Mutual Savings Banks, cited the state's unrealistically low usury ceiling of 10¼ percent, which was overridden by federal statute at the end of 1979. Moreover, mortgage loans were made under great political pressure at below-market rates for quite a while, he said.

Other important factors are customer sophistication on interest rates and the resulting cutthroat competition among 35 banks in the city. Siebert remarked: "Many people think the 'thrift problem' is a 'New York City problem.'" Indeed, giveaway campaigns there—ranging from toasters to "bring-a-friend" bonuses to sky-high interest rates on promotional investment plans—give the appearance the Big Apple's banks are either foolish or desperate or both.

Just because New York City is the brashest and the baddest doesn't mean the problem is not serious elsewhere. Take the very different example of California. Nine out of the country's 10 largest savings and loan associations are located in California. Although that state has 195 thrifts, or 5 percent of the institutions nationwide, they command 20 percent of the assets.

Not only are they the biggest with $126.3 billion in assets, California S&Ls are among the best. Collectively, they had a higher return on assets during the first half of 1981 than did 38 other states, the District of Columbia, Puerto Rico and Guam.

But "best" is a relative term in this terrible year for thrifts. According to the Federal Home Loan Bank of San Francisco, California S&Ls lost $232 million in the first half of the year, followed by a third-quarter loss of $261 million. Total operating losses for the year to date: almost half a billion dollars. This contrasts with positive earnings of $152 million in the fourth quarter of 1980.

California's performance during the first half meant an operating loss of 38 cents for every $100 of assets. By the third quarter, California losses soared to an annualized rate of 82 cents per $100. Nationally, it was 84 cents.

More bad news showed up in the net new-savings column. California savers withdrew $995 million more than they deposited during the first quarter. By the second quarter that figure jumped to $2.4 billion and held there for the third quarter as well. Contrast that with a gain of $529 million during the last quarter of 1981.

In the same nine-month period, net worth (assets minus liabilities) declined from $6.8 billion to $6.4 billion. The state's S&Ls had a net-worth-to-deposits ratio of 7.2 percent in September, down from 7.6 percent last December. Yet it was considerably above the national average of 5.9 percent reported at the end of June, and well in excess of the 4 percent required by federal regulators. That is not to say there are no S&Ls in serious trouble in the state; in June the Federal Home Loan Bank Board reported 17 mainly small, new S&Ls had ratios under 4 percent.

Sanford C. Bernstein & Co., which tracks major California stock associations, predicts that H. F. Ahmanson, parent company of the largest S&L in the country, Home Savings, will have a loss of $2.55 per share in 1981 compared with a profit of $2.34 the previous year.

The second largest, Great Western, will show a loss of 20 cents per share compared with a profit of $1.74 last year. Great Western's relatively good performance of a $2.4 million profit in the third quarter is due in part to two unusual items: An Internal Revenue Service settlement of $5.5 million and repurchase of $53 million in Great Western mortgage-backed bonds at $40 million. First Charter, which owns American Savings, will have a loss of $1.95 per share versus a gain of $1.32 in 1980.

Glendale Federal, which recently became the country's fourth-largest S&L when it acquired First Federal Savings and Loan Association of Broward County, Fort Lauderdale, Fla., in a supervisory merger, was said by the Federal Home Loan Bank Board to have suffered a loss of $8 million during September. California Federal, the next largest federally chartered S&L, declined to give figures but acknowledged its share of red ink during the third quarter.

Mortgage loan activity declined from $4.3 billion in the fourth quarter of 1980 to $2.5 billion in the third quarter of this year. October activity was off 25 percent from September. Bernstein & Co. reported that the third-quarter flow of mortgage credit in that state approximated only 5 percent of outstanding portfolios at an annual rate. In other words, mortgage activity during the third quarter was running at 15 to 20 percent of its average during the previous decade. "The flow of mortgage credit has essentially been shut off in California," said the firm.

The above figures indicate that the situation in California, unlike New York, did not take a dramatic turn for the worse until the third quarter. Prior to that, the Golden State's S&Ls on the whole had weathered the crisis rather well for a variety of reasons. These include a period of sustained real estate growth longer than anywhere else in the country, no usury statutes, and a greater percentage of mortgage banking activity than in any state except Texas. With a rapid turnover of their portfolios, California S&Ls were not saddled with low-yielding mortgages to the degree their eastern colleagues were.

Moreover, according to William Popejoy, who switched jobs this month from president of Far West Savings and Loan to president of Financial Federation Inc., for a long time S&Ls in his state did not pay out cash dividends, and by keeping their earnings in reserve, built up capital positions that have seen them through this crisis. Financial Federation showed a loss of $9 million during the third quarter compared with a profit of $1.8 million in the same quarter of 1980.

Two other factors also contributed to the success of California thrifts: The ability of state-chartered S&Ls to invest directly in real estate and to make variable rate mortgages (VRMs). Federally chartered S&Ls only gained the power to make variable rate mortgages in 1979, four years after the state thrifts did. (Federally chartered S&Ls cannot yet invest directly in real estate, whereas California recently upped the percentage of portfolio state-licensed S&Ls can invest from 5 to 12 percent.)

How much help variable rate mortgages were to California S&Ls is a subject of debate. Until recently, when the ceiling was lifted, state-licensed S&Ls were allowed to raise the interest rates on VRMs by just one-half percentage point a year, or 2½ percentage points over the life of the loan. In the words of Linda Tsao Yang, California's Savings and Loan Commissioner, "It's a nice nest egg. Every half point adjustment means $100 million additional a year." Thirty percent of California's mortgages are VRMs.

Yet only half the state-chargered thrifts offered VRMs, countered Popejoy who thinks they were not a major factor. Even James Montgomery, president and chairman of Great Western, which has 60 percent of its portfolio in VRMs, remarked, "The VRM wasn't variable enough to protect us." He meant lenders couldn't raise mortgage payments enough to cover their increased cost of funds.

Also on the minus side was the 1978 Wellencamp court decision prohibiting state-chartered S&Ls from exercising due-on-sale clauses—that is preventing buyers from assuming existing low-interest mortgages. Mortgages without the clause were difficult to sell in the secondary market. The case has now embroiled federal S&Ls and is headed for the Supreme Court.

Another factor affecting profitability and growth is charter. During much of the past decade, the innovative freedom converred on California S&Ls by a state license kept the industry there prosperous. The California federals exerted pressure on Washington to give them parity with the state S&Ls on things such as variable rate mortgages and real estate equity investments, so the advantage of a state charter was removed. Also state regulators have tried to impose stricter rules on branching within California.

Now, given the lure of interstate branching before them, many large California S&Ls claim state charters hinder growth and are rushing to convert to federal charters. If the big S&Ls change charters, the state's Department of Savings and Loans will have insufficient funds as well as less clout. State commissioner Yang, anxious to preserve the dual charter system, deplores this rush to de facto federalization without Congressional debate on whether it is desirable.

With the decline of interest rates during the fourth quarter, is the Golden State now out of the woods? The same factors that mitigated California S&L's losses through the first half of this year make analysts relatively optimistic about next year. Allan G. Bortel of Shearson/American Express in San Francisco projects that the state's S&Ls will break even by March, a couple of months ahead of the rest of the nation, provided Treasury bill rates stay in the 9 to 9½ percent level. He forecasts an industry wide profit of $1 billion to $1.5 billion next year, with California accounting for a quarter of it.

THE FUTURE

PART 4

While experts disagree over the severity of the nation's current savings industry crisis, they disagree even more over what measures, if any, should be taken to end it.

The current policy of the federal agencies that insure savings deposits is to continue the traditional practice of merging failing institutions into healthy ones while waiting for Congress to enact laws that would give savings and loan associations and mutual savings banks some additional powers to ward off future hard times.

The Federal Savings and Loan Insurance Corp. has been quietly shopping around for potential buyers or merger partners. As part of that program, the agency has opened wider the door leading to interstate mergers by inviting associations to bid on failing institutions outside their states.

The merger route, said Federal Home Loan Bank Board chairman Richard T. Pratt, "preserves the [FSLIC] fund, and we think stregthens the industry." What's more said Pratt, whose agency regulates federally chartered S&Ls, "the possibility of having interstate mergers causes a much more competitive consideration on these supervisory mergers than would otherwise exist."

In essence, the practice of permitting large out-of-state competitors to bid on failing S&Ls in mergers organized by regulators is designed to reduce the amount of financial assistance required from the FSLIC.

In recent years the bank board also has implemented several policies that are designed to give S&Ls more flexibility and improve their profitability—such as authorizing adjustable-rate mortgage loans and investing in the futures markets.

Still, there are critics who insist the government is not doing enough in the short term to help thrifts. They propose solutions ranging from government bailout to total deregulation.

The proponents of bailout believe that it was the government that put savings institutions in their present predicament by requiring S&Ls to lend out 82 percent of their primarily short-term funds in housing-related instruments, mostly 30-year mortgages. Mutual savings banks must put 72 percent of their assets into housing to reap the maximum tax advantage. Therefore, the government has a duty to bail them out, these critics state. Also they fear the government could run out of suitable merger partners.

New York State Superintendent of Banks Muriel Siebert and Saul B. Klaman, president of the National Association of Mutual Savings Banks, are among those who support the idea of "mortgage warehousing" to pump more money into the industry. Under such a plan, low-yield mortgages would be exchanged for higher-yielding federal government or agency obligations and eventually repurchased by their owners out of increased earnings from the exchange.

"We could have done this for no more money than it will cost the Treasury on All Savers [certificates recently permitted in the 1981 tax law], about $5 billion in lost revenue. That would support purchases of $100 billion in mortgages," said Klaman. But warehousing smacks of bailout, which the Reagan administration has promised not to do.

At the other end of the spectrum are the proponents of total deregulation. Chief among them are the most aggressive executives of the large S&Ls and Treasury Secretary Donald Regan whose philosophy on competition is "the more the merrier."

Regan previously was chairman of No. 1 securities giant Merrill Lynch & Co., which was instrumental in developing the cash management account—the equivalent of a checking account paying market rates. He has tried as chairman of the Depository Institutions Deregulation Committee (DIDC), a panel of federal regulators with power over financial institution interest rates, to accelerate the 1986 scheduled end to all interest ceilings. As such, Regan is being perceived as the villain by many in the savings industry.

In between these two poles there are many positions on how best to help the savings industry. Some are technical changes in regulation such as changing state prohibitions against counting borrowings as part of net worth. Another suggestion is for FSLIC premiums to be risk related; the most highly leveraged S&Ls would pay the highest premiums.

On the legislative front two major bills are stalled in Congress. One would give short-term and the other long-term assistance.

House Banking Committee Chairman Fernand St Germain (D-R.I.) seeks enactment of emergency legislation that would provide relief for financially squeezed savings institutions. He has expressed preference for a two-tiered approach in which legislation to address broader problems of financial institutions would be considered later. The House has passed the emergency bill.

Meanwhile, Senate Banking Committee Chairman Jake Garn (R-Utah), weary of "piecemeal" legislation dealing with the problem, favors a more comprehensive bill that would restructure the savings and loans and substantially deregulate all financial institutions.

His bill would allow savings institutions to expand operations by making commercial loans. The Garn bill, which incorporates several provisions that were contained in a legislative proposal from the bank board, would permit S&Ls and banks to operate mutual funds, including money market funds, and to invest up to 100 percent of their assets in loans secured by non-residential as well as residential property, time and savings deposits of other S&Ls, obligations of state and local governments and commercial paper and corporate debt, and consumer loans.

The emergency bill has the support of Federal Reserve Board Chairman Paul Volcker and Federal Deposit Insurance Corp. Chairman William Isaac. The broader bill enjoys more industry support, although a consensus on its terms is far from being reached. However, with Congress scheduled to complete the current session shortly, neither bill will be taken up before February. Garn expects any resolution of the controversial interstate branching question will be put off until after the 1982 elections. Meanwhile de facto nationwide banking is becoming a reality through mergers across state lines organized by regulatory agencies as well as through the electronic revolution.

Garn prefers to see a continuation of the old structure in which depository and non-depository institutions pursued separate lines of business. But he concedes there is a "revolution" taking place in the financial services industries.

Bank board estimates show that its legislative proposals, most of which are in the Garn bill, would increase the return on average assets in 1984 by 0.29 percent in a declining interest rate cycle, 0.17 percent in a stable rate environment, and 0.21 percent if rates increase from current levels.

The savings and loan industry had a return on average assets of 0.83 percent in the first half of 1978 and 0.13 percent for all of last year.

Two weeks ago, the savings institution task force of the President's Commission on Housing backed the recommendations in this bill and added a few of its own, such as the ability to make direct investments in real estate and to lease equipment. It also suggested that pension funds and life insurance companies be given incentives to invest more in residential mortgages. It endorsed acquisition of thrifts by commercial banks and other firms across state lines. Planners believe these new powers, which will require at least four or five years to become fully effective, will protect thrifts against volatile interest rates.

Meanwhile, said Kenneth Thygerson, vice president of Western Federal S&L in Denver, preoccupation with interest rates rather than earnings has left the savings associations right where the commercial banks want them: totally distracted, fighting federal regulators instead of the competition.

But while S&Ls struggle for survival, the competition for savings and investment dollars has sparked a revolution in the financial services industries. Traditional lines separating depository institutions from

other financial segments are rapidly eroding.

Technology, bold maneuvers and innovative concepts have enabled credit card firms, major retailers, insurance companies and brokerage houses to slip through regulatory loopholes and set up extensive financial services networks.

But unlike S&Ls and banks, those other competitors aren't hampered by bans against interstate competition or other regulatory constraints that limit the scope of business by depository institutions.

Larger S&Ls recognized the dramatic changes some time ago and have become more innovative.

"We haven't competed with S&Ls for a long time," said William Sinclair, president of the Metropolitan Washington Savings & Loan League. "We've competed with banks. From now on, we'll be competing with the near-banks."

Many of the so-called near-banks have a decided advantage in their ability to offer an array of traditional financial services as well as other consumer products.

For example, Sears, Roebuck & Co., the nation's biggest retailer, is well on its way to becoming a one-stop mart for practically every conceivable consumer financial service. Through its 858 retail stores and 24 million active credit accounts, Sears has access to more consumers than any financial institution.

The retailing giant plans to capitalize on that advantage by operating its own money market mutual fund. Sears also has announced agreements to purchase Coldwell Banker Co., a major real estate brokerage firm, and Dean Witter Reynolds, the nation's sixth-largest brokerage company. Already it owns a large California S&L and giant Allstate Insurance Co.

At the same time, Prudential Insurance Corp. has acquired Bache Group, also a leading brokerage firm. And American Express, with assets of about $20 billion, has broadened its business interests from a worldwide travel and entertainment card network to a merger with Shearson Loeb Rhoades, Inc., another large brokerage firm.

Meanwhile, two traditional competitors—BankAmerica Corp. and Security Pacific Corp.—have announced their intention to enter the securities business despite prohibitions contained in the Glass-Steagall Act. Significantly, the concept of banks selling municipal bonds under the same rules as brokers is advocatd by Treasury Secretary Regan. Technology, as much as any other factor, is largely responsible for the revolution in the financial services industries. In fact, regional banks and S&Ls are turning to more sophisticated electronic funds-transfer systems to narrow the competitive gap.

Increasingly, banks and S&Ls are adding their automatic teller machine networks to switches, which are regional systems that offer greater convenience to their customers. Six major commerical banks and two large S&Ls in the District, Virginia and Maryland recently agreed to participate in a regional network.

For the time being, regional networks of automatic teller machines (ATMs) enable customers to make cash withdrawals across state lines but are considered forerunners to interstate branching.

What's more, experimental interchanges between regional ATM networks and development of a national system for bank and S&L debit cards are being studied.

One thing has been made clear by developments of the past year. The savings and loan industry can't afford to operate much longer in its regulatory framework and demands for changes are coming from within and outside the industry.

The S&Ls "can't do things as they did in the past," said Robert R. Dince, a professor of finance at the University of Georgia.

The industry can't survive by continuing to make long-term mortgages at fixed rates," Dince continued. "They have got to become more short-term lenders."

A Washington-based economist, whose firm serves frequently as consultant to savings institutions, concurs. "There's no benefit to the housing industry in maintaining a specialized thrift industry," he said. "One thing the thrifts have learned if they haven't learned anything else from this; mortgages have to be priced based on what's happening in the marketplace. They have nothing to do with the costs of deposits."

What will the thrifts of the future be like? First, there will be fewer of them. Estimates range that anywhere from several hundred—according to John Dalton, a former member of the Federal Home Loan Bank Board—and several thousand—according to Thygerson—will be wiped out through mergers or failure. Andrew S. Carron of Brooking Institution projects there will be a nationwide contraction of about 25 percent, but one-third fewer in New York and Chicago.

Second, there will be a great diversity in size and function. There will undoubtedly always be some small "Mom and Pop" thrifts that scorn the new powers and continue to operate in the traditional way. At the other extreme, there will be a few large diversified S&Ls, widely spread geographically, that will offer a full line of services—the Merrill Lynches of the thrift industry, in the words of John Detterick, chairman of Allstate Savings and Loan in Glendale, Calif. There will be low-cost producers with high volume, few products and limited distribution, like the discount broker Charles Schwab. And there will be specialist within the industry, deriving their income from fees, along the lines of Goldman Sachs.

Some will become in function, if not in charter, commerical banks. Point Loma Savings and Loan in San Diego, a new thrift that has had spectacular growth, already acts like a bank, investing either in short-term government securities or construction and real estate loans that mature in less than two years. Recently it applied to become a bank.

Other will become mortgage bankers. "We will be the developers' mortgage bankers," said Sinclair. While very large S&Ls may want to engage in domestic and international business lending, small- and medium-sized S&Ls can be expected to concentrate on individual consumers. A term favored by planners is "one-stop family finance center," meaning that the savings institution will meet the credit needs of individuals for housing, autos and consumer loans.

The trade associations of the housing industry oppose the restructuring of the thrift industry because they fear it will weaken its ties with housing. Indeed, that is the critical questions. The experience of the All Savers Act, which was intended primarily to assist thrifts and, only secondarily, to help housing, is telling.

The reason most often voiced on Capitol Hill for saving thrift institutions is that they will be needed to finance housing when it again booms. Government and industry officials, while requesting broader powers for savings institutions, swear that the thrift industry will continue to be the primary provider of housing funds because that is where its expertise lies.

Undoubtedly, this is true for the majority of thrifts. But a few voices have been heard to say if thrifts can't be saved for housing, then they should be saved without housing. If the government will no longer favor housing by offering thrifts "protection" in the form of an interest rate differential, why should they continue to subject themselves to the boom and bust cycles that typify housing? Shouldn't the burden be shared by various segments of the financial community? In effect this is already happening in the market with companies like Merrill Lynch and pension funds becoming more and more involved with residential real estate.

"The housing industry should not be captive to the well-being of the thrift industry or vice versa," said Klaman. "I don't know who is going to be the supplier of funds for housing," said William Popejoy, president of Financial Federation, Inc, of Los Angeles, a holding company for 11 S&Ls. "By default, it will be left to the federal government, which can't even run the Post Office. Why should [a stock S&L] make a home loan to help the community when you could make a loan to a large corporation that has a better return and no market risk of rate change? Some stockholders will buy that argument, but most S&L executives espousing that philosophy will be unemployed."

He believes what is needed is not an incentive for thrifts, but an incentive for housing that would be provided to all financial institutions in order to assure a continued flow of funds to housing. The administration, which feels that housing in the past decade has consumed more than its share of the economy, is unlikely to agree. While it supports the restructuring bill now in Congress, it is also counting on declining interest rates to mitigate the situation.

Given the dissension within the thrift industry, with its competitors and regulators, the likelihood of passage of meaningful legislation is doubtful, at least in the near future. Even if the crisis does abate with declining interest rates, it is already too late for some thrifts. Yet, for the survivors, new powers will mean a new beginning.●

RAISING THE LIMITATION ON OUTSIDE EARNED INCOME

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. BOLAND. Mr. Speaker, yesterday the House agreed to House Resolution 305, a measure that increases from $9,009 to $18,198 the amount of outside earned income which a Member may accept.

I am opposed to lifting the existing 15-percent limit on outside earned income. The limit was put in place as a part of an agreement to lift Members' salaries and is, in my judgment, a fair response to the concerns of the public about the outside activities of their representatives in Congress. I do not believe that a good case can be made for raising the limitation; a judgment obviously shared by an overwhelming

majority of my colleagues just a few weeks ago when a proposal similar to House Resolution 305 was rejected 271-147.

I regret the manner in which House Resolution 305 was brought before the House. A matter of this importance should have been fully debated instead of being considered as a part of the last minute rush of legislation which unfortunately characterizes many of the closing sessions of a Congress. At a time when we are expecting many of our constituents to absorb the impact of Federal budget cuts, hurried approval of what amounts to a pay increase can not be justified.●

WHITE HORSE MOUNTED PATROL

HON. BERKLEY BEDELL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. BEDELL. Mr. Speaker, I am pleased to commend the world famous White Horse Mounted Patrol of Sioux City, Iowa, which has been designated as the "Official Iowa Representative" in the January 1, Tournament of Roses Parade in Pasadena, Calif. This will be the patrol's second appearance in this prestigious parade, having participated by invitation 20 years ago.

The White Horse Mounted Patrol was born of humble beginnings in 1920, by the members of the Abu Bekr Shrine, who were also members of the Sioux City, Iowa Stockyards. At first their mounts were, at best, a nondescript lot—but by a nationwide search and selective breeding the patrol has since blended the blood of the Arabian, saddle bred, and Quarter Horse into a pure white animal, of uniform quality, size and conformation.

This patrol bears the distinction of being the first such unit in North America Shrinedom. They number between 30 and 40 horses and riders and have represented Shrinedom and Sioux City in their many appearances throughout North America. They are known as a symbol of goodwill in both the United States and Canada.

Their appearance on national television of New Year's Day will be their sixth time to receive such nationwide acclaim. Most recently the patrol won first place in a New Orleans competition of all horse patrols from the United States, Canada, and Mexico.

Members of the patrol include, from Sioux City: Paul Braunger, Bruce, Compton, James Cord, who bears the title of president of the patrol, Ralph Heaton, Ervin Hutchinson, Roger Janes, Ronald Jones, L. V. Kuhl, John Lovaas, Ben Miller, Thomas Pohlman, Robert Porter, David Potts, Norris Potts, Dr. Gary Sharbondy, LeRoy Thorp, Richard Wallen, Gene Wickey. From outside Sioux City: Harry Buell of Holstein; Thomas Griess of Tekamah, Nebr.; Kent Hansen of Bronson, who is captain of the patrol; W. R. "Bob" Herbold of Moville; Maurice Jensen of Castana; Rex Seitzinger of Onawa; Lawrence J. Turley of Pocahontas; Douglas VonAswege of Emerson, Nebr.; Gene Waddell of Bronson; and Emil Willer of Akron.

Again I commend the White Horse Patrol on their distinction and express my pride and thanks in their representation of the State of Iowa.●

CHRISTIAN SCIENCE MONITOR HITS COAL INSPECTION PROBLEM

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. SIMON. Mr. Speaker, attrition has reduced the ranks of the Nation's underground mine inspection program, and those who are leaving are among the best inspectors we have.

The result is sagging morale among those who remain and apprehension among the miners whose lives depend on adequate inspections.

The Christian Science Monitor recently examined this troubling issue, and I commend it here to the attention of my colleague.

The article follows:

MINE SAFETY: TRYING TO BEEF UP INSPECTIONS

(By Ward Morehouse III)

Safer coal mines.

That's what just about everyone wants. But the U.S. doesn't have enough inspectors. And tight budgets are making it hard to hire more.

One possible answer: make better use of the inspectors now available.

The issue took on new urgency this week. The toll from three mine accidents in the East in five days now stands at 24 killed.

A move by the U.S. Mine Safety and Health Administration (MSHA) could help. It would give more control over operations to its offices right in the fields.

The agency is about to reorganize its coal mine safety inspection division. It will place its education and training units and its safety violation assessment units under the aegis of the district managers in MSHA field offices.

By strengthening local mine inspection efforts, officials hope to gain more effective enforcement of safety requirements. The agency admits that at present these requirements are not being met, partly because of the federal hiring freeze.

Reagan administration officials say this reorganization—expected to be implemented early next year—is not a response to the recent string of Appalachian coal mine accidents.

But one MSHA official says there should have been better management of existing inspection personnel in the past year as well.

By law, underground coal mines are supposed to undergo four complete safety inspections every year. But in some cases, the number of inspections conducted fall short of that requirement.

For fiscal 1981 (which ended Sept. 30) the MSHA field office in Logan, W. Va., has made only 80 percent of the "complete inspections" on coal mines required by law, MSHA comptroller Richard Baker says. When asked if this 80 percent figure was accurate, the supervisor of the Logan field office replied, "Not hardly that much."

United Mine Workers (UMW) safety experts charge that the reason inspections did not meet federal requirements is the lack of inspectors. Most MSHA officials don't dispute this contention.

According to MSHA's most recent figures, the number of coal mine safety inspectors nationwide dropped by 73 to 1,011 during the fiscal 1981. One MSHA official attributes much of this decline to the federal hiring freeze.

However, Comptroller Baker says that despite the reduction in inspectors, the agency probably could have used this reduced number of inspectors more effectively—and indicated that possibly some lives might have been saved as a result.

In retrospect, Mr. Baker contends, there could have been "prioritization" of mines that officials felt might be potential trouble spots. He adds that the agency could "have accommodated a movement of inspectors" to field offices where there was the greatest need for them.

As of this writing, this year's coal mining accident fatality toll of 143 people is the worst since 1975.

The events of this past week have spurred the UMW to ask the Reagan administration to increase the number of federal mine inspections. But earlier this year similar pleas from the union largely went unheeded. At the UMW's urging, Rep. Nick J. Rahall (D) of West Virginia, whose district includes a big chunk of "coal country," wrote to MSHA officials that the MSHA field office in his district was "seriously undermanned and it's incapable of fulfilling its required inspections under the law." Representative Rahall wrote that for the first three months of 1981 the field office was required to do 91 complete inspections and it conducted only 76. Then, in the next three months of the year, the field office inspections dropped to only 62 of the required 91 inspections.

On Oct. 9 of this year, Thomas J. Sepich, then MSHA's deputy assistant director, wrote back to Rahall explaining that as a result of federal "hiring restrictions," certain field offices had had staffing shortages. However, Mr. Shepich went on to assure Rahall that "MSHA can perform its responsibilities" within these restrictions.

In addition to writing MSHA, Rahall also contacted the federal General Accounting Office about the inspection problems, and one Rahall aide says that the GAO had promised to investigate the situation.●

NUCLEAR ARMS: HOPE FOR A NEW ERA OF COMMONSENSE

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. MAZZOLI. Mr. Speaker, delegates from the Soviet Union and the

United States are meeting in Geneva to negotiate the reduction of nuclear arms in Europe.

I fervently hope these talks will move the world into a new era of restraint and commonsense in the production and deployment of nuclear weapons.

The awesome and horrendous powers of destruction embodied in these weapons threaten the lives of every man and woman on Earth. Indeed, our entire civilization has been placed in dire jeopardy by the continued expansion of the world's nuclear arsenal.

The United States, as one of the world's leading nuclear nations, must make a sincere effort to end the insanity of the nuclear arms race. That is why I have consistently opposed the development and production of both the MX missile system and the neutron bomb.

There is not a more compelling issue than nuclear arms proliferation. I pray the Geneva talks will focus the attention of all the world's leaders on the necessity of curtailing the spread of these weapons before it is too late.●

AND A LITTLE CHILD * * *

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. KASTENMEIER. Mr. Speaker, as the Congress takes a pause in its Hill schedule, and as we read those last pre-Christmas letters from constituents, I would like to share with my colleagues two letters that I have just received. The communications are from a title I teacher in Oregon, Wis., and two of her pupils in the fifth grade—three persons who will undoubtedly be affected by the cuts in which the Congress has acquiesced, at the behest of the administration.

The title I program in elementary schools has been an innovative approach in education, giving a helping hand to children whose backgrounds may not be affording them necessary help in the learning process—they may be from migrant families with second language problems, they may be from low-income American families, or they may be in special State schools for neglected or handicapped children.

The letters I want to share with you will tell you eloquently what problem is highest in their minds. They have also learned to whom their concerns should be addressed.

Mrs. Elizabeth McBride, the teacher, writes:

Enclosed is a copy of a letter which two of my students wrote to President Reagan because they are afraid of a nuclear war. They are only in the fifth grade, but their fear is very real. They asked me to send a copy to you, too, because they understand that the President doesn't make all the decisions.

The students, Mike Schenk and Jerry Ace, of Brooklyn, Wis., wrote to the President:

Them nuclear bomes (bombs) that you got should not be around so people don't get hurt. The bomes are dangers to the United States. These bomes are bad because thousands of people get dead. It is a waste of homes and other stuff around the United States and when we should (shoot) off the bomes it's not worth it because other people suffer for what they didn't do to make a war. These wars are so bad that we don't like it.

As we approach the season of Christmas and Hannukah, it would seem an appropriate time to direct our eyes to their simply-stated purposes: Peace, good will, and love among peoples and—above all—no nuclear "bombs."●

OPERATION BOOTSTRAP AND THE IRS

HON. ROBERT GARCIA

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. GARCIA. Mr. Speaker, the administration will soon announce its program to aid economically depressed areas. Its cornerstone is expected to be enterprise zones, a concept that I have been promoting for over a year and one-half.

However, it seems that this same administration's IRS is attacking the tax incentives which create jobs in depressed areas. I am speaking of Operation Bootstrap in Puerto Rico and the Treasury Department's attempt to eliminate a very successful tax incentive.

Recently, the Wall Street Journal had an editorial spotlighting this inconsistency and illuminating the IRS's single-minded pursuit of corporate income tax credits which generate economic opportunity and stability in Puerto Rico. I recommend this editorial to my colleagues.

[From the Wall Street Journal, Dec. 9, 1981]

ENTERPRISE ENTRAPMENT?

The administration is about to unveil its first-aid measures for economically depressed areas. Generally the idea is to create urban enterprise zones: designated pieces of ground where companies engaging in commerce can enjoy various tax breaks. It's hoped that these tax incentives will lure business into needy places like the South Bronx.

Sounds reasonable and innovative, right? Except it's already being done—in Puerto Rico. Indeed, it's been going on since 1948 when Operation Bootstrap got under way. There have been several permutations of tax devices over the past 30-odd years, but essentially Operation Bootstrap gives U.S. corporations with operations in Puerto Rico a 100 percent U.S. corporate income tax exemption on profits made on the island. Obviously this foments a rather strong incentive for corporations to have as much profit as possible accruing to their Puerto Rican operations.

This type of tax shelter is an especially good one for businesses with a lot of income from "intangibles" like patents and trademarks. It's easier to transfer an intangible asset than a tangible one. For example, consider the pharmaceutical industry.

Profits from pharmaceutical operations come from research, development and then patent ownership. Unsurprisingly, drug companies were among the first—and still are among the largest—corporations to create Puerto Rican subsidiaries. And just as unsurprisingly, transfers of intangibles generate well over half of their tax benefits.

But now consider the IRS. The purpose of the IRS is to collect taxes from the willing and recover taxes from the unwilling. And since tax avoidance is what brings corporations to Puerto Rico in the first place, going after them is like shooting fish in a barrel. For decades now, the IRS has been badgering drug companies, about their Puerto Rican subsidiaries. The dispute is usually over transfer pricing policies: That is, the Puerto Rican subsidiary holds the patent, makes the drug and then charges the parent company a price reflecting returns to the patent. The IRS then challenges and disallows the amount of sheltered profit.

In the past, drug companies had settled "out of court." Five years ago, however, Eli Lilly said, "enough." It took the IRS to tax court over the Darvon patent; G. D. Searle followed suit two years later. The court is expected to deliver its decision on both cases in 1983.

A decision favorable to the drug companies would, of course, resolve the matter once and for all and free the drug companies from being hit-up by the IRS every so often. The IRS has responded by trying to make an end run around any court ruling by "looking into" the whole issue of patent transfers now. The agency is apparently considering various options like a tollgate tax on patent transfers or eliminating the R & D deduction on any patent that is transferred to Puerto Rico.

There is no disputing that the tax breaks for intangibles have been good for the drug companies. They've also been attractive to high tech companies with transferable intangibles. In fact, the plain old tax shelter has proved irresistible to the tune of 2,500 plants which are subsidiaries of U.S. companies. And there's no disputing that the 1981 tax expenditure cost to the Treasury of $1.2 billion looks attractive to the IRS. But the whole point of the tax breaks was to convince companies to move some operations to Puerto Rico and thus to create jobs and boost the island's economy.

Aside from the humanitarian goals of such an endeavor, there are political considerations as well. The Spanish-speaking areas of the Caribbean Basin have become prime targets for Soviet-Cuban troublemaking and Puerto Rico has not been immune to the kind of disorders that are afflicting other islands and Central America. So it seems to be at cross purposes, at best, for the IRS to then go after companies that are providing economic sustenance.

If the administration is really serious about enterprise zones, it might be a good idea to deal with the Puerto Rico conflict first. And when it baits the enterprise hook with "juicy" tax breaks, it ought to drop the IRS on the pier before rowing out to the middle of the lake.●

TRANSFER OF TITLE TO DISTRICT OF COLUMBIA

HON. WALTER E. FAUNTROY

OF THE DISTRICT OF COLUMBIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. FAUNTROY. Mr. Speaker, the bill I am introducing today will authorize the Secretary of Labor to convey all right, title and interest of the United States in and to the Employment Security Building to the District Govenment. The building, which is located at Pennsylvania Avenue and Sixth Street NW., was constructed on land owned by the District of Columbia but conveyed, at no cost, in 1961 to the United States. Since completion of the Employment Security Building it has been utilized principally by the District of Columbia Department of Employment Services, which until 1974 was a Bureau of the U.S. Department of Labor. The cost of operation and maintenance is paid out of the unemployment trust fund pursuant to the Employment Services Administrative Financing Act of 1954 (68 Stat. 668). This fund is made up of contributions from private employers of the District of Columbia, therefore, no appropriated funds are used for this purpose.

In 1964 the United States signed a 20-year note with the Kansas City Life Insurance Co. for $4.4 million at an annual interest rate of 4.68 percent to finance the construction of the building. The proposed bill will require the District Government to reimburse the United States for any payments on the note which come due on or after the date the building is transferred to the District of Columbia.

At this time funds granted to the District for the administration of its unemployment compensation and employment security purposes are used to make payments on the note.

In 1974, under section 204 of the District of Columbia Self-Government and Governmental Reorganization Act, the functions, personnel, and property of the District of Columbia Employment Service were transferred to the District of Columbia Government. However, this section is interpreted to mean only personal property and not real property. This legislation is needed to correct that interpretation.

The U.S. Department of Labor, the Pennsylvania Avenue Development Corporation, and the District of Columbia Department of Employment Services all support the transfer.●

HIGH INTEREST RATES

HON. EDWARD J. MARKEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. MARKEY. Mr. Speaker, it is time for the Depository Institutions Deregulation Committee and Congress to more fully come to grips with the special dilemma faced by the thrift industry. The combined weight of problems is serious: The prolonged period of high interest rates; an imbalance of assets and liabilities, with liabilities far more sensitive to market interest rates; and many cases of negative earnings over the last year. Certainly, action must be taken to address these problems.

Mr. Speaker, one obvious boon to the thrift industry would be an across-the-board decline in market interest rates. The Reagan administration economic program is directly contributing to the swollen interest rates, however. The huge budget deficits which will result from the enormous Kemp-Roth tax cut mean that the Federal Reserve Board is left little choice but to continue its tight money policy. This is the administration's only tool against inflation, but it is a direct cause of high interest rates. The administration must tighten its expansionary fiscal policy, or there will be no relief in sight on interest rates, or for the housing and thrift industries.

The DIDC is currently moving full steam ahead on the liability side of deregulation, as mandated in the Monetary Control Act of 1980. Recognizing the hard times currently plaguing the thrift industry, however, I feel that the DIDC should restrain the pace of its deregulation until action begins on asset-side deregulation, that is, on the lending powers of thrifts.

Mr. Speaker, I urge the DIDC to restrain the pace of its activities, and for Congress to debate and then act upon the necessary steps to revive the thrift industry, whose health is so important to the American economy.●

SOUTH DAKOTA CHAMBER OF COMMERCE LEADS ENERGY CONSERVATION EFFORT

HON. THOMAS A. DASCHLE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. DASCHLE. Mr. Speaker, the South Dakota Chamber of Commerce is leading the effort in South Dakota to conserve energy. Most recently the South Dakota Chamber of Commerce, in cooperation with the South Dakota Office of Energy Policy, has published "Good News For Your Business," a practical guide for commercial energy conservation improvements.

Featuring comprehensive case studies on successful energy conservation programs already undertaken by 10 South Dakota businesses and capsule summaries on energy conserving measures used by 23 other commercial facilities in South Dakota, "Good News For Your Business" provides useful information on proven means of reducing energy consumption, improving energy efficiency, and conserving energy and money. In addition, this publication contains other practical information, including suggestions for beginning an energy conservation program, information on tax incentives, a list of architectural and engineering consulting firms, and a bibliography of useful information, which the business community in South Dakota will find very useful.

The South Dakota Chamber of Commerce has made another important contribution to energy conservation in South Dakota with the publication of "Good News For Your Business" and this valuable public service effort will mean greater energy conserving results for the South Dakota business community in the future.●

THE IMMINENT HAZARD OF EARTHQUAKES

HON. JERRY M. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. PATTERSON. Mr. Speaker, I would like to bring to the attention of my colleagues a most insightful and understandable article published in the October 1981 Atlantic Monthly regarding the imminent hazard of earthquakes. Although the author, James Fallows, focuses his attention on California, the phenomenon of earthquakes is not limited to my home State. Contrary to popular belief, California—and for that matter, the Pacific coast region—does not stand alone in its vulnerability to ground-shaking. In fact, 39 States are subject to the perils of earthquakes. The most extensive continental earthquake outside California occurred in the 1811–12 era on the Mississippi River, in New Madrid, Mo. It is said that the jolt was so strong that it changed the course of the Mississippi River and was felt as far away as Washington, D.C. Recent statistics provided by the U.S. Geological Survey indicate that during the 2-month period of November to December 1980—granted there is a significant time lag on these figures—earthquakes were felt in Oklahoma, Virginia, Hawaii, Massachusetts, and Tennessee. In the preceeding 2 months, quakes were experienced in Connecticut, New Mexico, and Washington.

One can, therefore, see that earthquakes are not merely "a California problem." Rather, the devastation which Mr. Fallows outlines in his article could be faced by citizens and public officials in most other States.

LIVING ON THE FAULT LINE

(By James Fallows)

Standing in the wash of the Santa Ana River, you can see mountains all around you, The San Gabriel, the San Bernardino, and the San Jacinto mountains form a long, semicircular arc to the north and east, pierced by the passes that lead variously to such outposts on the California desert as Barstow, Indio, and Palm Springs. To the south and west are the lower hills that separate the San Bernardino Valley from the booming conurbations of Orange County and from Los Angeles itself, which lies seventy miles due west.

On those days, infrequent during summer, when opaque brown smog has not blown inland to fill the valley and lap over the rim of the mountains, the contours of the ranges are clearly visible from the valley floor. There is no natural obstruction to the view more substantial than the waist-high scrub. The sharp edges and escarpments of the mountains suggest their dramatic origin, as products of the pushes and pulls on the earth's surface that are even now creating mountain ranges in the West. The white gravel in the dry riverbed has been washed down from the mountains during the flash floods that from time to time strike this bone-dry region. The "river" runs with water for only a few days out of every year.

It can seem the bleakest of settings, especially when the Santa Ana winds blow down from the high deserts at temperatures well above 100 degrees. Yet, like many other harsh regions of the Southwest, this has been a scene of phenomenal growth. As people continue to move to southern California, as Los Angeles has filled up, as real estate prices in Orange County have shot to the sky, many people have taken the next step in from the coast and have brought a population explosion to the "Inland Empire." The orange trees that line Interstate Highway 10 are the remnants of groves that were until the past two decades an economic mainstay of the region. They succumbed first to the smog and then to the subdividers. Some 400,000 people lived in the San Bernardino Valley in 1960. More than 700,000 live there now. There are plans for an "instant city" of 200,000 more people, to be built in the hills outside Chino, where the corners of San Bernardino, Orange, and Los Angeles counties touch.

People have moved to this valley seeking cheaper real estate, the good life in the sun, and the opportunities that economic growth creates. They are an hour's drive from the mountains, an hour from the ocean, and far, far away from such northern urban cares as frost and economic decline. And their search has led them to the area that, according to many scientists, will be the site of the next catastrophic earthquake to strike the continental United States.

Those who live in the vicinity, as I did when I was growing up are accustomed to earthquakes. Many pride themselves on surviving them, as those on the Gulf Coast might on surviving a hurricane. But the prospect that scientists now suggest is different from anything within living memory in southern California.

"We have known for years that major earthquakes in California are inevitable," says Clarence Allen, a geophysicist at the California Institute of Technology. "The scientific attitudes have not changed as much as the public perception that this is a real problem." But both scientific and public attitudes have been heavily shaped by two scientific developments of the past decade.

The first, which has been widely publicized since the early 1970s, is the evolution of the theory of plate tectonics. This theory postulates that the earth's crust consists of a number of large "plates," floating on a molten mass within the earth. There are seven of the larger plates—one bearing most of Africa and half of the Atlantic and Indian oceans, another holding virtually all of the European and Asian land mass—and a number of small ones. As the plates have drifted apart from, and into, each other, their motions have changed the world's geography. They opened the basin that became the North Atlantic Ocean, when the North American plate slid away from the Eurasian. They created the Himalayas, which mark the region where Indian was driven northward and collided with southern Asia. They stimulate volcanic action, including the recent eruptions at Mt. St. Helens. (As the small Juan de Fuca plate is pushed beneath the North American plate off the Washington and Oregon coasts, it melts at the tremendous temperatures and pressures of the earth's depths and then flows upward, in molten form, as lava.) The motion of the plates can also cleave regions from one another, as is now taking place in California.

The most famous of the "faults" that are responsible for California's earthquakes is the San Andreas—which, from the perspective of plate tectonics, is not just any fault but the boundary between two great plates. To the east of the fault lies the North American plate, which contains more than 99 percent of the land area of the nation, along with Canada, Mexico, and roughly half of the Atlantic Ocean. To the west of the fault is the Pacific plate, which runs beneath the ocean to the Mariana trench—where it disappears beneath the Philippine plate. The city of San Francisco is on the North American plate. Santa Cruz and Monterey, immediately to the south, are on the Pacific plate. So are Los Angeles, San Diego, and the other population centers of southern California.

Through the millennia, the two plates have been moving past each other along the San Andreas Fault, the Pacific regions slipping north, the North American south. The Baja California peninsula resembles in length and width an indentation on the western coast of Mexico. That is exactly where it came from, geologists say, before it moved north with the rest of the Pacific plate. The motion of these two plates goes on at rates as high as 5 or 6 centimeters a year—very fast, by geologic standards. Rocks on the Pacific side of the fault near Point Arena match those on the North American side at Taft, 350 miles to the south. The two regions abutted one another until the fault motion started about 25 million years ago. Ten million years from now, Los Angeles and San Francisco should lie in the same latitude.

For California, the significance of the tectonic theory was to explain the basic mechanism of earthquakes, not only on the San Andreas Fault but also on the many others that parallel it and the few that run at right angles to it. Year by year, the plates creep past each other, from time to time, rocks must yield. The largest recent earthquake in California, the 1906 "fire" (as civic boosters chose to call it at the time) in San Francisco, could be seen from the perspective of plate motion as the event through which the northern section of the San Andreas Fault released the strain that had been accumulating over the years.

It took a second and more localized scientific development to add the note of certainty to forecasts that a catastrophic earthquake will strike southern California. The man most often identified with this development is Kerry Sieh, a geologist at Caltech. His contribution has been to estimate the schedule on which the rocks along the fault give way.

As the plates move past each other, the strain that accumulates at great depth can be accommodated in different ways. The plates can release some or all of the strain by "creeping" past each other with steady movement, or through numerous small earthquakes that human beings barely feel. Such creeping takes place along a section of the San Andreas Fault in central California, and it leads to novel effects, such as the fissure at a frequently photographed winery in Hollister that is gradually being split by the fault. Much of the tension along a fault line can also be relieved through less frequent quakes of "moderate" power, in the range of 5 or 6 on the Richter scale. Many of the subsidiary faults in California behave this way. Finally, the rocks on a fault line can lock solid. When this happens, there is no gradual distortion of roads, fences, or wineries, nor are the earthquakes frequent. The two sides of the fault remain motionless until the shearing force of the plates' movement overwhelms the strength of the rock itself. The result is a "great" earthquake, which releases enormous accumulated energy all at once and can result in one side of the fault moving as much as twenty feet past the other in the space of a few seconds or minutes. The San Francisco quake of 1906 was such a great earthquake, affecting the northern section of the San Andreas Fault. Another portion of the fault, which runs roughly 200 miles between a small town called Parkfield, in central California, and the San Bernardino Valley, and which is sometimes referred to as the southern section of the San Andreas and sometimes as the south central section, has been locked solid for more than a century. In 1857, during its last great earthquake, the sides of the fault moved past each other by as much as thirty feet. The southernmost section of the fault, which starts near San Bernardino and runs to the Salton Sea, has had no major ruptures during "historic time"—geologists' term for the 200-plus years of written records for the region, as opposed to the eons of the rocks. Scientists' understanding of this portion of the fault is so incomplete that they are not sure whether it should be considered very likely or very unlikely to suffer a major earthquake in the foreseeable future.

Kerry Sieh's approach was to study the layers of earth at several places along the southern San Andreas Fault to see what they revealed about the timing of previous earthquakes. Through a variety of techniques, such as uncovering layers of peat moss that had been deformed by violent earth movements and then determining their age, he concluded that along the portion of the fault that ends north of San Bernardino, there was a pattern of dormant pe-

riods followed by strong earthquakes. Working from an early version of Sieh's findings, the Federal Emergency Management Agency issued the following warning last January as part of a report it prepared for the National Security Council on the consequences of a major earthquake in California:

"Geologists can demonstrate that at least eight major earthquakes have occurred [on the southern San Andreas] in the past 1200 years with an average spacing in time of 140 years, plus or minus 30 years. The last such event occurred in 1857. . . . geologists estimate that the probability for the recurrence of a similar earthquake is currently as large as 2 to 5 percent per year and greater than 50 percent in the next 30 years. . . . The aggregate probability for a catastrophic earthquake in the whole of California in the next three decades is well in excess of 50 percent."

Kerry Sieh has recently reworked his estimates, allowing for greater uncertainty about the magnitude of previous quakes and for the imprecision of the carbon 14 dating process. "The best scientific guess would be that the average interval is somewhere between 125 and 225 years, with both of those being extremes," Sieh said recently. "My own intuitive best guess is that it's about 160 years, plus or minus 30. I'd say that there's a 50 percent chance of a great quake in the next four decades." Considering that the last great earthquake in southern California was 124 years ago, Sieh said at the end of one of his papers, "We are almost certainly not 'overdue' for a repeat of the great 1857 earthquake, but we are clearly well along in the process. We are much too far along, in fact, to neglect serious preparations for the eventuality."

The repeated allusion to "great" earthquakes is important, for it refers to a difference in magnitude so enormous as to become a difference in kind. "Great" quakes are generally understood to be those of magnitude 8 or above on the Richter scale. (Sometimes those of 7.75 magnitude are so classified.) The last "great" quake in the continental United States was the one in San Francisco in 1906. Since then, Alaska has experienced a great quake, in 1964, and there have been devastating earthquakes in Chile, China, Japan, Italy, and elsewhere. But in California, the strongest earthquakes in the past seventy-five years have been in the 6 and 7 range on the Richter scale—and most of them have been centered in unpopulated areas. The most damaging of the quakes, though not the strongest in Richter terms, were the 1933 earthquake in Long Beach, magnitude 6.3, and the 1971 San Fernando quake, also a magnitude of 6.3. Within a matter of years, there will be no one alive in California with personal memory of the effects of a "great" quake there.

Without the testimony of survivors, it may be hard to imagine the consequences of a "great" earthquake. The difference between 6.3 and 8.3 on the Richter scale does not sound fundamental, but it is. Each increase of 1 on the Richter scale signifies an increase of thirty times the energy and ten times the deflection on seismic measuring devices. If the San Andreas Fault should produce an earthquake of magnitude 8.3, as many geologists expect, it would release about 900 times as much energy as did the San Fernando earthquake of 1971. (The greatest quake of modern times, which struck Chile in 1960, had a magnitude of 9.5.)

The effects of major earthquakes are more readily comprehensible when expressed in terms of ground shaking, on the "Modified Mercalli Scale." This is a measure of the effects of ground movement as they are felt in specific regions. The scale runs from I to XII. Level I is "Not felt except by a very few under especially favorable circumstances," and II is "Felt only by a few persons at rest, especially on upper floors of buildings." In a "great" quake, large areas may be subjected to the highest intensities of shaking, levels IX through XII:

Level IX: Damage considerable in specially designed structures; well-designed frame structures thrown out of plumb; great in substantial buildings, with partial collapse. Buildings shifted off foundations. Ground cracked conspicuously. Underground pipes broken.

Level X: Some well-built wooden structures destroyed; most masonry and frame structures destroyed with foundations; ground badly cracked. Rails bent. Landslides considerable from river banks and steep slopes. Shifted sand and mud. Water splashed (slopped) over banks.

Level XI: Few, if any, (masonry) structures remain standing. Bridges destroyed. Broad fissures in ground. Underground pipelines completely out of service. Earth slumps and land slips in soft ground. Rails bent greatly.

Level XII: Damage total. Waves seen on ground surface. Lines of sight and level are destroyed. Objects thrown into the air.

In most versions of the Mercalli scale, levels IX to XII are grouped under the heading "Panic is general."

During the 1971 San Fernando earthquake, in which highway overpasses collapsed and forty-five people were killed when a Veterans Administration hospital fell down, there were shaking intensities of IX and perhaps even higher in some areas near the epicenter. The California Division of Mines and Geology has produced maps that display the predicted shaking intensities for a great quake on the southern San Andreas Fault. They show bands of IX intensity stretching for more than 100 miles, with levels of X to XII expected in sizable zones.

As the descriptions on the Mercalli scale may suggest, the main threat to human life during an earthquake comes not from the earth's movement itself but from things that fall. When severe quakes have occurred in out-of-the-way places, such as the 1872 earthquake in Owens Valley, they have rearranged the landscape but have taken comparatively few lives. That earthquake, centered in the stark region east of the Sierra Nevada Mountains, was the strongest in California's history—its force was so great that within seconds it added ten to fifteen feet to the height of an escarpment and moved the sides of the fault twenty feet past each other—but only sixty people were killed. Unless people are trapped in the path of a landslide, hit by falling trees, or drowned by the large ocean waves, called tsunamis, that earthquakes sometimes produce, they face little danger if they find themselves out in the open when an earthquake strikes.

The danger comes instead from buildings, especially those made of brick and other masonry, that are shaken to pieces during strong earthquakes and, in falling, cause most of the deaths. Some of the unreinforced brownstones of Manhattan, Federal townhouses in the Georgetown section of Washington, D.C., and mansions along Commonwealth Avenue in Boston, all so solidly built could be converted to rubble in an earthquake, for their style of construction is generally the first to fail during strong quakes. Wood-frame houses, by contrast, are the most stable structures since they are able to sway and absorb the earth's motion. Only under the most severe shaking intensities do one-story frame houses collapse.

The ability of different buildings to withstand shock is also greatly influenced by the ground on which they stand. The best place to be during a strong earthquake is on solid rock; the worst is on soft ground, mud, landfill, or areas with a high water table. Rock diminishes the intensity of the shaking; soft earth magnifies it. This principle is not limited to California. If a strong earthquake were to hit Boston (which is a less remote possibility than it may seem, since Boston has historically been one of the more seismically active areas in the East), the houses of the Back Bay would be most severely shaken, because they are built on landfill. In 1906, the regions of San Francisco built on reclaimed land near the bay were far more heavily damaged than buildings on top of the city's rocky hills. The ultimate danger in such areas is liquefaction, caused by violent shaking that drives groundwater upward through the soil and thereby transforms it to quicksand. Heavy buildings, especially multistory structures that are not anchored in bedrock, can tip over or sink into soil after it liquefies.

Through most of its southern section, the San Andreas Fault traverses dry plains and rocky canyons, where there are few buildings to destroy. But after it crosses through the San Bernardino Mountains at the Cajon Pass, it enters the inland valley that is now supporting such rapid growth, and it comes at its nearest point within about thirty-five miles of Los Angeles. It is the combination of the increasing probability of a quake, its expected magnitude, and its nearness to such a vast and wealthy human settlement that has created an atmosphere of concern about an earthquake on the southern San Andreas. Two other possible earthquakes are on the list of concerns: a major quake on the northern San Andreas, which is thought to be less likely, since only seventy-five years have passed since the San Francisco earthquake, but which would affect an even more densely populated area and therefore on the Newport-Inglewood Fault, which runs directly through Los Angeles and was responsible for the Long Beach earthquake of 1933. Statistically, the latter is thought to be a longer shot than either of the others, but because it would affect Los Angeles directly, it might be the most damaging of all.

Shortly after Jimmy Carter took a tour of the landscape of devastation around Mt. St. Helens, he grew concerned about the effects of a catastrophe in California and ordered a federal task force to prepare a report. Based on assumptions about how many people would be killed in different kinds of structures (for instance, 2 to 4 deaths per 10,000 population in wood-frame houses, 5,000 deaths per 10,000 in ordinary masonry buildings), the task force came up with the following estimates of deaths and of injuries serious enough to require hospitalization. Some of the situations it considered were these:

[In thousands]

Location	Southern San Andreas		Newport-Inglewood		Northern San Andreas	
Richter Magnitude	8.3		7.5		8.3	
Time	D	I	D	I	D	I
2:30 a.m.	3	12	4	18	3	12
2:00 p.m.	12	50	21	83	10	37
4:30 p.m.	14	55	23	91	11	44

Note.—D = dead; I = injured.

In addition, there is, of course, the property damage. A consultant named Karl Steinbrugge, who was responsible for many of the most widely circulated damage estimates, predicted that the property damage could amount to some $17 billion for the southern San Andreas, $38 billion for the northern, and $69 billion for the Newport-Inglewood. Because of the enormous uncertainties about both the quakes and the resistance of structures, Steinbrugge stressed that any of the estimates might be off by a factor of two or three—either high or low.

In 1973, the National Oceanic and Atmospheric Administration, known as NOAA, prepared two thick volumes to enumerate the likely effects of a major earthquake in Los Angeles and of one in San Francisco. The books contain page after page of maps, each one plotting the two major faults in northern and southern California and showing their location in relation to major facilities: hospitals, blood banks, reservoirs, railroads, airports, highways, military bases, aqueducts, natural-gas lines, electric generating stations and transmission lines, oil pipelines, and other facilities. The southern California report says, for example, that a major quake on the San Andreas could kill between 400 and 800 people who are already in hospitals and put 50 percent of more of hospital beds out of commission, at precisely the time that the demand for emergency service would be most intense. It also says that "in the event of an 8.3 magnitude shock on the San Andreas Fault, the failures of Fairmont and Bouquet Canyon dams should be assumed," and that such failures could kill more than 7,500 people and render 111,000 homeless; that all of the aqueducts that serve Los Angeles and San Bernardino cross the San Andreas Fault at least once and one of them crosses it four times, and that the region may be without its major water supplies for between two weeks and three months after a quake; that transportation, communications, finance, and all other essential services would be interrupted.

After reviewing these and other predictions, the Federal Emergency Management Agency concluded in its report earlier this year that "the Nation is essentially unprepared for the catastrophic earthquake (with a probability greater than 50 percent) that must be expected in California in the next three decades. . . . Because of the large concentration of population and industry, the impacts of such an earthquake would surpass those of any natural disaster thus far experienced by the Nation. Indeed, the United States has not suffered any disaster of this magnitude on its own territory since the Civil War."

"What must be stressed is that this prospect presents us with an unprecedented problem in the history of the United States," Carl Ledbetter, a young mathematician who was briefly the director of the Southern California Earthquake Preparedness Project, said earlier this year in testimony before a congressional committee. "There has been no other time when the lives of as many as 69,000 people have been threatened at once; there has been no other time when losses on the order of magnitude of $135 billion have been a real consideration; there has been no other time when the productive capacity of a region which generates one dollar in twelve of the country's Gross National Product has been under such a real and unavoidable threat.

"We do not know how to think about threats of this magnitude; they are unreasonable by all our past standards."

Some scientists seem to feel that they do know how to think about such threats. They are concentrating on finding ways to predict when and where earthquakes will occur. From experience in the U.S. and more advanced work in the Soviet Union, Japan, and China, geologists have focused on several signs that usually appear from several months to several hours before large earthquakes occur.

One such sign is a pattern of small "foreshocks" that leads to a major shock. ("The problem is distinguishing between those and other patterns that *don't* turn out to be foreshocks, because no large earthquake follows them," says Karen McNally, another of Caltech's geophysicists.) The Chinese have associated the period before large earthquakes with changes in the nature and behavior of groundwater. The water level in wells sometimes changes just before a quake, and the water may contain different concentrations of radon gas. Both of these changes are apparently signs of rearrangements in the underground rock layers, which affect the courses through which the water must pass. Other scientists have constructed grids of geodetic markers on the earth's surface near a fault, on which they take repeated measurements to determine how much the earth's accumulating strain has distorted the grid.

There are even attempts under way to make scientific sense of the familiar folk-wisdom reports that animals can tell when an earthquake is coming on. In central California, near the San Andreas Fault, one researcher has built a number of burrows for field mice and monitored them to record the animals' activities. He will attempt to establish the normal patterns and the variations from them for seasons and for feeding cycles—and then he will wait for the next big earthquake.

"We need more time—and we need more earthquakes," says Karen McNally. Few phrases are more frequently heard from the geologists and seismologists than "We'll learn a lot from the next big one." Such knowledge may be costly. Clarence Allen, in discussing events of the past year or two, says, "There's been a change in the seismic pattern [in southern California] that makes us more worried than we'd normally be. We know we're in an area and an era where a great earthquake would be no scientific surprise. We see a pattern of low activity for fifteen years or so—and now this change to higher activity, which makes us nervous." There are similar implications from the Palmdale Bulge, an area along the San Andreas Fault north of Los Angeles where the ground has apparently risen about a foot. "On the assumption that the bulge exists, as I would argue it does, it may be significant," Allen says. "Its shape is roughly coincident with the fault, and the very rapid rate of its rise—by geological standards—makes us think it might be trying to tell us something." But just what the bulge—or the changed seismic pattern, or the groundwater, or the animals—may be trying to say will be much clearer after the next big earthquake has confirmed or disproved the hypotheses.

In the meantime, of course, scientists are offering forecasts whose details of time and place may be imprecise but whose general point is hard to miss. But because the day of reckoning is so uncertain, and because the catastrophe is so strongly associated with divine judgment, against which the efforts of mortals are no defense, it has been hard for California and its public officials to decide what to do.

The things that could conceivably be done fall into two categories—mitigation and preparedness. Mitigation means taking steps before an earthquake to minimize the damage; preparedness means being ready to cope with the problems created by the earthquake.

Since earthquakes do most of their damage to buildings, the most obvious mitigating procedure is to strengthen buildings that might otherwise be destroyed. This California has tried to do, by passing new laws and tightening its building codes after each serious earthquake. When the 1933 Long Beach earthquake crushed masonry buildings throughout southern California, including a large number of schools, people realized that if the earthquake had occurred a few hours earlier, when school was in session, thousands of children might have been killed. The result was the Field Act, which set more stringent standards for school construction and, despite some delays in application, has made schools the safest public buildings in the state. During the 1971 San Fernando earthquake, the Van Norman Dam was so severely damaged that, according to most experts, it came within a few seconds' shaking of failing altogether. If it had done so, the death toll from that earthquake might have increased by a factor of 100. Soon afterward, the state undertook a dam inspection program that has—theoretically—made its dams much safer than before. The improvement must so far be considered only theoretical, because neither the dams nor the skyscrapers that have sprung up in Los Angeles since the thirteen-story limit on construction was removed in 1956 have yet been subjected to the test of a major quake. Engineers have often found themselves chagrined by the results of previous quakes. In 1979, a 6.6 magnitude quake struck the Imperial Valley, an earthquake-prone region east of San Diego. The most serious single casualty was the Imperial County Services Building, a new six-story structure that had been advertised as incorporating the latest standards in earthquake-resistance but which was so severely damaged that it had to be demolished.

The major structural peril is the large stock of old (pre-1934), unreinforced masonry buildings. There are about 8,000 of them in the city of Los Angeles alone, and their inevitable destruction is expected to be responsible for 80 percent of the deaths and 75 percent of the injuries in a great earthquake. The buildings are located mainly in the crowded downtown areas of Los Angeles and in the less fashionable sections of San Bernardino and other cities. The population that lives and works in them is largely poor and non-white, which is why earthquakes—though they threaten Porsche and pickup alike when freeway bridges collapse—will probably end up killing a disproportionate number of poor people. The economic forces that have kept the old buildings from being reinforced or renovated during the previous

fifty years also make the owners of the buildings unlikely to invest voluntarily in such reconstruction. Early this year, the Los Angeles City Council passed an ordinance requiring that all the old buildings be either greatly strengthened or razed.

While earthquake experts generally praise this step, they point qut two catches: the deadline for renovation is a dozen years away and could be stretched out even further through legal maneuvering; and no one has figured out who should pay the bill. One school of thought contends that anyone who bought one of these buildings knew there was a hazard and has no right to complain because the gamble didn't work out. Others argue that strengthening the old buildings and reducing the potential disaster serves the public's interest and therefore deserves public financial support, through either tax incentives or low-cost loans. Still another group claims that trying to repair these structures before a quake will always be too costly to make sense. "You can't talk about a massive program of retrofitting old buildings," says Richard Andrews, the acting director of the Southern California Earthquakes Preparedness Project. "If you're talking about a building still under construction, making it seismically resistant might add 5 to 7 percent to the cost. For those that are already built, it can add 100 percent." Instead of worrying about avoiding property damage, some earthquake authorities conclude, it makes better sense to assume that the scientists will provide some warning, and then to get people away from the buildings and out of harm's way when an earthquake is due.

In a more fundamental sense, mitigation includes not only the buildings but also the places where they are built. From this perspective, the population boom in northern San Bernardino County can be seen as a move in the wrong direction. The northern outskirts of San Bernardino and the surrounding small communities—Del Rosa, Highland, Patton, Devore—are dotted with tract homes and new condominium developments. This very region is the southern limit of the 200-mile ground rupture that can be expected if the next great earthquake follows the pattern of the one in 1857. The geological map shows that the San Andreas and several associated faults pass directly through the new developments.

Since 1972 construction near fault zones has been controlled by California's Alquist-Priolo Act, which declares the areas near active faults to be "special study zones" and forbids construction intended for human occupancy within fifty feet of the trace (surface line) of an active fault. I visited one of the largest condominium developments north of San Bernardino, a place with several hundred units—adults-only apartments plus an adjoining mobile-home park. "You may have noticed some wide yards, some extra swaths of grass," Robert Rigney, the county administrative officer for San Bernardino County, later remarked, "Those represent the geologists' best guess about where the fault line runs." When I asked the saleswoman at the development whether there were any earthquake problems in the area, she said, "This is southern California, honey. This is earthquake country. You ever look at a fault map? There's no place you can go that's very far away from them, so my advice is just to forget about it."

Indeed, Robert Rigney says that nearness to the fault, as in the case of this development, could be a source of false alarm. "The fifty-foot limit was designed to protect structures from damage caused by ground ruptures," he says. "Once you've passed that point, proximity doesn't mean much. As for the shaking—well, the whole valley will have that." As Clarence Allen puts it, "In a truly great quake, once you're a few feet away from the rupture it doesn't make much difference whether you're there or five miles away."

Robert Rigney also raises a larger question: Should people be prohibited from doing something—like buying new houses near the fault line—that may well cause them harm? "The zoning laws are designed to protect against injuries and deaths, especially in public buildings. They are not intended to protect property per se. If people choose to live here, that's their choice."

In a sense, he's right. The sociologists whose report make up a larger and larger fraction of official publications about earthquakes have consistently pointed out that among all the possible responses to warnings of quake, moving away from southern California is the public's last choice. "The Southern California public's lack of readiness is quite rational," a report from the Policy Research Center at the University of Redlands said early this year. "The threat is too uncertain in its impact and timing to command a high priority with people, especially since they face more pressing life demands which justify higher costs and yield higher immediate benefits. Just as people accept the risk of driving a car in order to gain the freedom it allows, many residents may also consider the earthquake threat an 'acceptable risk' in light of the benefits of living in Southern California."

The only thing wrong with the idea that people have knowingly accepted a risk is that many of them don't have the slightest idea what the risk really is. The most widespread source of misinformation is the notion that since nearly everyone in California has lived through some earthquakes, they have a rough sense of what a big earthquake would be like. When I moved away from California in the late 1960s, I mocked the fears of my eastern friends about the effects of a quake. I'd been there; I knew what they could do. My confidence was eroded recently, when I discovered that during the period I lived there the strongest earthquake to strike southern California was 4.5 on the Richter scale—about a millionth as strong as the big one that is predicted.

Giving people more of the basic information about faults, earthquakes, and hazards is a principal mission of one of the most hopeful new entries in the earthquake field, the Southern California Earthquake Preparedness Project. The project was launched as a cooperative effort of the federal government and the state. Its major purpose was to bring government officials, industrialists, and scientists together so that they could start figuring out who would do what to repair the damage done by the big earthquake. Who would fly in enough cash to keep the local economy running during the weeks it might take to reconstruct bank records lost when the computers go down? ("They tell us it will take ten days to get restarted for every one day the system is out," says Richard Andrews, of the project.) Who will run the morgues? Who will handle the insurance companies if there is a prediction of a quake nine months from now and they start refusing to renew earthquake coverage?

The project has been hampered in its early stages by messy disagreement between Robert Olson, who as director of California's Seismic Safety Commission, has administrative jurisdiction over the project, and Carl Ledbetter, the mathematician and academic administrator who, at the age of thirty-one, was hired as the project's first director in January of this year. In July, Ledbetter submitted his resignation after Olson had asked him to do so. Olson claims that the disagreement was purely one of personal tastes and administrative styles. Although Ledbetter himself does not say so, others feel that he had made some officials nervous, even envious, because of his very success in getting the press and the public to begin thinking of earthquakes as a serious threat.

The disagreement about the southern California project may have been largely a clash of personalities, but it rises above that to the extent that it illustrates the internal friction that has characterized many efforts to "do something" about earthquakes. Most of the public bodies that have wrestled with the earthquake problem seem to have proven more successful so far in accommodating their own professional and bureaucratic habits than in doing things that would make a significant difference if a great earthquake should strike, say, next month. For politicians, those habits include making gestures of concern. Thus, Governor Edmund Brown, Jr., has appointed a special task force to look into earthquakes; its findings are not notably different from the many reports that other task forces have written and filed over the years. For sociologists, earthquakes provide a reason for polls differentiating between "elite" and "mass" views on, for example, the credibility of earthquake warnings delivered through different news media. The "public policy" consultants have seen in earthquakes an opportunity for constructing elaborate flow charts and "decision trees" of phenomenal complexity, much as their professional brethren did fifteen years ago when laying plans for Model Cities and the Job Corps. Meanwhile, new houses spring up near the fault zone and old houses stand waiting to collapse.

There also seems to be a genial agreement among many of the participants that ignorance is bliss. If there is a constant in the political history of earthquakes in California, it is that responsible officials are often eager to promote the idea it can't happen here. Arnold Meltsner, of the University of California, has pointed out that "the geological map of California published by the California State Mining Bureau in 1916 did not contain any indication of faults, not even the famous San Andreas"—and this ten years after the San Francisco earthquake. Representatives of Palmdale have done their best to have their bulge referred to instead as the "Southern California uplift." When officials of a county in southern California discuss what their role after an earthquake should be, they tend to emphasize what they will be doing to help repair the devastation elsewhere, not what help they themselves will need.

Any non-Californian who is tempted to mock the desire to ignore earthquakes is invited to consider his own situation. While the government's seismic-risk maps show that most of California is in Zone 3, where "major destructive earthquakes may occur," that zone is not confined to California. It also includes parts of Utah and Idaho; the area along the Mississippi where Arkansas, Missouri, Tennessee, and Kentucky meet; the Charleston region in South Carolina;

greater Boston; a strip along the Great Lakes; and the St. Lawrence Valley in upstate New York and northern Maine. For several months in the winter of 1811-1812, a powerful sequence of earthquakes occurred in New Madrid, Missouri. In 1886 there was another powerful earthquake in Charleston, South Carolina.

I asked Clarence Allen what caused those earthquakes. He said, "No one knows."

On a smoggy summer day when the temperature was 99 degrees, Carl Ledbetter rode with me through the foothills north of San Bernardino where the San Andreas Fault runs. "If I remember the maps correctly, the fault goes right past this intersection," he said as we stopped at a crossroads. On one corner of the intersection was a mobile-home park.

"Mobile homes are tremendously vulnerable during earthquakes," Ledbetter said. "They suffer about six times as much damage as regular homes. All of these will be thrown off their supports. They'll all be gone." We drove up a steep hillside, where several dozen new single-family homes were ready for occupancy. "You see the grading on the terraces here? That will never hold. There will be landslides all down this hill."

We drove back down the hill, to the floor of the Santa Ana wash. Farther to the east, where the San Andreas Fault began to divide into two roughly parallel zones, there was a narrow, sharply defined ridge, of the sort that is sometimes created by fault action. Several modern, obviously expensive houses sat on top of the ridge. "I've got to bring my camera up here and take 'before' pictures of all these places," Ledbetter remarked. "Then I'll come back for the 'after.'"

"We could do something about it," he said, as we drove through the wash to Redlands. "Little things can make a big difference, like strapping down the water heater to ensure you'll have something to drink, or knowing how to turn off the gas lines and prevent a fire. Also big things, like thinking about land-use policies, and being prepared for a big earthquake's impact on the nation's economy and its military security. It's not impossible to protect ourselves. But we'd have to start doing it now."●

PROTECTION ISLAND NATIONAL WILDLIFE REFUGE

HON. DON BONKER

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. BONKER. Mr. Speaker, I supported passage of H.R. 1486, which would create the Protection Island National Wildlife Refuge in Washington State.

This 400-acre island is an outstanding seabird nesting and rearing area. Two-thirds of all the nesting seabirds in the inland waters of Washington State depend upon a special combination of soils and climate and a predator-free environment on Protection Island.

The island is the best candidate for refuge designation on the Washington State coast. That is why passage of the bill is a top priority of groups like the Audubon Society. The unique character of the island is also officially recognized by the State of Washington, which has acquired 48 acres for a State game sanctuary on the island's western end.

However, the other 350 acres have been subdivided into 827 lots that are owned by 580 separate entities. This situation complicates land acquisition and management for refuge purposes, and virtually everyone familiar with the island agrees that large-scale development would destroy the island's wildlife resources. Little development has actually occurred, however, and many lot owners are quite willing to sell their properties for a refuge because a construction moratorium is in effect until a State-approved source of domestic water is found.

The committee notes that the current level and type of human uses appears to be compatible with the birds on the island. That is why H.R. 1486 directs the Fish and Wildlife Service to offer life estate or extended use options to the owners of any lots with structures suitable for use as residences.

I supported this committee amendment because it is a reasonable response to the wishes and desires of a relatively small group of people. However, wildlife protection is the chief purpose of the bill and the refuge it would establish, and the committee received extensive expert testimony emphasizing the extreme sensitivity of the seabirds to human intrusion and to disruption of the existing environment.

Human disturbance that forces birds off their nests can produce high mortality among untended young, so, wildlife managers said, human access must be curtailed during key periods of time in the rearing cycle.

Many of the seabirds nest in fragile underground burrows that can be easily trampled and destroyed by people, large animals or vehicles. Thus, testimony before the committee indicated, access to certain areas on the island would also have to be restricted.

And, because most of Protection Island's seabirds nest on or under the ground, they are extremely vulnerable to predators that human visitors might introduce to the island.

Testimony from the Fish and Wildlife Service said:

> Perhaps the most ominous threat posed by development and public use of the island is the introduction, by accident or design, of predators. At the present time there is little nest predation; there are no ground predators native to the island. This is obviously an essential element to the survival of those birds which nest on or under the ground. While free-roaming dogs already are creating harassment problems, the introduction of rats, domestic cats or snakes would have irreversible and disastrous consequences.

The committee was well aware of the very fragile nature of the bird resources of Protection Island, and the record should make clear the committee's intent that the flexibility the bill provides for allowing future human use and habitation should not be administered so as to cause any significant detriment to the well-being or best interests of the island's wildlife.

Mr. Speaker, the future of Protection Island has been a deep concern of a great many dedicated people. Two persons, however, clearly stand out among the island's protectors.

The late Zella Schultz loved Protection Island's birds and studied them for years. The State game sanctuary on the island is named in her memory.

And in recent years, her friend and my constituent, Eleanor Stopps of Port Ludlow, Wash., has taken up the cause. Working through the Admiralty Audubon Society, she organized a nationwide Save Protection Island campaign to raise money to purchase a number of lots for eventual inclusion in a national wildlife refuge. She has been a tireless refuge proponent. Without her good work, H.R. 1486 would not be before the House today.●

POSTAL SERVICE PUBLIC SERVICE SUBSIDY

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Ms. OAKAR. Mr. Speaker, I wish to support the Postal Service public service subsidy. While I do not support the Conte substitute to the continuing resolution, I wish to confirm my longstanding belief in appropriating ample funds to maintain the badly needed public service subsidy for the U.S. Postal Service.

Unfortunately, the administration has proposed a $250 million cut in public service subsidy appropriation for fiscal year 1982. Such action would totally eliminate the subsidy for the current fiscal year. The impact of such a cut would be devastating to the American public, postal users, and the U.S. Postal Service.

Vital services, that all American citizens depend on, such as 6-day delivery, the operation of small, rural post offices, corner collection boxes, and door-to-door delivery will suffer. In addition, a total of 40,000 jobs could be lost if there is a reduction in current delivery service or an elimination of a number of small rural post offices. At a time when the unemployment rate has reached an unprecedented high and RIF's have become a way of life for many Federal employees, added layoffs would only exacerbate this serious problem. Most importantly, Mr. Speaker, the Postal Service is a public service whose historical, nonprofit orientation precludes it from ever attain-

ing a goal of self-sufficiency. Unfettered access to a universal postal system operating at reasonable rates has been a long agreed upon policy. Programs which provide free mailings to the blind and handicapped and special rates for library services, religious, and educational organizations were adopted by the Postal Service to truly serve the people of this Nation. I sincerely believe that these worthwhile services should remain untouched.

Thank you, Mr. Speaker.●

MABEL DUBLIN FROM THE STEUBEN SOCIETY

HON. DENNIS M. HERTEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. HERTEL. Mr. Speaker, Mabel Dublin has been secretary of the Steuben Society of America, Carl E. Schmidt Unit No. 21 in Detroit, for 25 years. Now as she is about to retire I would like to take a moment to reflect on some of the outstanding things she has done for the Steuben Society, a cause she truly believes in and has been highly devoted to over the years.

First and foremost Mabel always upheld the principles of Steubenism in America: duty, justice, charity, and tolerance.

A woman who always did her share and more, Mabel looked out for her fellow brothers and sisters making sure they had a functional and stimulating environment in which to work. She kept the magistrate and members well informed of matters requiring attention. And she often provided positive advice and council regarding unit affairs. Mabel represented the unit in the German-American community, and promoted the influence of German-American culture in civic affairs.

Mabel served as a contact between elected representatives and officials, offering a positive interaction between the unit and Government.

Besides the 25 years of dedicated service to the Steuben Society, Mabel has been a devoted wife and mother.

It is my honor to extend to Mabel best wishes for health, happiness, and success in whatever field of endeavor she may wish to pursue after her retirement from the Steuben Society where her loyal service will be greatly missed.●

ENCOURAGING EFFORTS

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington Report for Wednesday, December 16, 1981, into the CONGRESSIONAL RECORD:

ENCOURAGING EFFORTS

Not many days go by that I do not get complaints about wasteful federal spending. I do my best to see that the misspending is corrected, and because of that experience I find encouraging the quiet efforts behind the scenes which are beginning to yield results in the battle to eliminate excessive spending.

Waste, fraud, and abuse: Waste, fraud, and abuse in federal programs consume at least $25 billion every year—and probably much more. To root out these losses, Congress established offices for 16 inspectors general throughout the bureaucracy and gave them the independence needed to keep a close eye on funds. Supplied with computers and "hot lines" which citizens can call to report suspected waste, fraud, and abuse, the inspectors general make their findings and submit them for prosecution; the findings are also passed along to Congress for corrective action. In the General Accounting Office (GAO), Congress' investigative arm, another effort is underway. A nationwide "hot line," (800) 424-5454, has taken 33,000 calls covering welfare, social security, veterans' benefits, food stamps, health care, and other programs since it was opened less than three years ago. About one-third of the calls have been substantial enough to pursue. In more than 700 instances so far, recovery has been made, reprimands have been issued, or other administrative actions have been taken in response to the illegal activity. Specific initiatives, such as the requirement that food stamp recipients in large cities have their photographs on their authorization cards, are also an important part of the crackdown.

The evidence is that the federal government is making progress. The number of indictments for food stamp fraud has nearly doubled since 1980. The Veterans Administration has identified 66,000 federal employees who owe the government more than $37 million. In the first nine months of 1981, the Farmers Home Administration has trimmed its delinquent debt by $1 billion. A new program at the Department of Health and Human Services has accelerated the prosecution of welfare fraud. Successes like these will not eliminate our fiscal worries, but they will deter wrongdoers, save some money, and help restore the people's confidence in the integrity and efficiency of government.

Consultants: For several years, there has been some concern about the excessive number of consultants who provide advice and service to the federal government. Consultants often have too great a role in the formulation of national policy, a vested interest in the work they do, and too close a connection with government officials who award them contracts. Their work can frequently be handled by regular government employees. Also, consultants are sometimes used to circumvent personnel ceilings, and their reports may go unread. Moreover, the cost of consultants' advice and service is growing. Consultants cost the government about $3.8 billion last year.

Congress and the Office of Management and Budget (OMB) are moving to restrict the use of consultants. A new law will cut spending for consultants by $500 million next year. Another measure, not yet enacted, would give the public more data on consultants and would diminish the opportunity to "contract out". Agencies would be required to evaluate highly paid consultants, and new procedures to prevent conflicts of interest would be put in place. OMB is acting through two proposed directives. One would encourage competition in the awarding of contracts, demand high-level annual approval of multi-year contracts, and keep consultants from doing the work of regular government employees. The other would extend controls to many consultants who are not covered at present.

Publications: The federal government prints thousands of publications each year. While many of these are useful and worthwhile, others are out of date, redundant, or just too costly. Cutting, consolidation, and reprinting in less costly formats are all taking place.

So far this year, agencies have cancelled more than 900 publications. OMB estimates that spending for publications will fall $35 million by 1982. OMB has also directed agencies to show where further reductions can be made. New cutbacks will be under consideration next year.

Regulation: Over the past few years, there has been a groundswell of support in Congress for deregulation of the economy and for reform of regulatory agencies as more legislators have become aware that regulation has costs as well as benefits. Too much regulation can stifle economic growth, raise prices, hinder innovation, and undermine people's confidence in the ability of government to manage its affairs. Another factor behind efforts to deregulate and reform is the explosive growth of regulation. Between 1970 and 1980, the Federal Register more than quadrupled in size from 20,000 to 87,000 pages per year. There is evidence, however, that the growth is being curbed. With only one month of 1981 left to go, the Federal Register has not yet reached 59,000 pages.

Congress has taken many steps to reduce the impact of regulation on the economy. The airlines have been partly deregulated, as have trucking, railroads, and financial institutions. Next on Congress' list is the telecommunications industry. In the area of regulatory reform, Congress enacted three new laws last year. The first requires the government to scale its regulation to the size of the business or organization being regulated. The second forces the government to pay legal costs for certain small businesses and organizations when it loses court cases against them. The third allows OMB to cancel regulations which compel businesses and organizations to report data or keep records. Also important in the drive toward reform is a presidential order which imposes cost-benefit standards on major regulations, requires agencies to select the least costly regulatory alternative, and empowers OMB to review and clear all regulations. Further reforms, such as the legislative veto of regulations and the "sunset" review of agencies, will soon be considered.●

A TRIBUTE TO PAUL M. HAWKINS

HON. DAN ROSTENKOWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. ROSTENKOWSKI. Mr. Speaker, I am honored to salute an outstanding individual, Mr. Paul M. Hawkins, who is retiring as vice president

and Washington counsel to the Health Insurance Association of America after 25 years of devoted service to that organization.

Throughout his long and distinguished career, Paul has been an eloquent and persuasive spokesman. In fact, on numerous occasions I had the opportunity to hear Paul testify before the Committee on Ways and Means. To say the least, he was thorough and always highly professional. As a result, many areas of health care legislation bear his imprint, including medicare and its various amendments.

It has been said that the key to success and longevity as a spokesman for an industry is to be in command of the issues and constantly alert to secure for one's organization the best position possible without compromising or abusing the trust and respect of others. I am sure all who know Paul will agree that he epitomizes this standard.

But Paul's professional accomplishments run deeper than the excellent service he has performed for the Health Insurance Association of America. In the early stages of the career, he served as legal counsel and representative for the American Retail Federation, Inc., the American Hotel Association, and the Citizens National Committee, as well as administrative assistant to U.S. Senator Hugh Butler of Nebraska.

The personal accomplishments of Paul Hawkins are numerous and should not go unmentioned. I will highlight just a few. He is admitted to the bars of several States, as well as the U.S. Supreme Court. Paul is past national director of the U.S. Junior Chamber of Commerce and is a trustee of Doane College, where he graduated cum laude, with majors in economics and history. His law degree was earned at Georgetown University where he was a member of the law journal staff. It is obvious that the drive for excellence has been a hallmark of Paul Hawkins' career.

Mr. Speaker, I can say with full confidence that Paul Hawkins has had a very positive impact on the legislative process. He is a man with a keen mind who possesses an appetite for hard work. And, I am certain that Paul will stay active for many years to come. I wish him the best of luck.●

THE PROPER ROLE OF GOVERNMENT IN ENERGY CONSERVATION

HON. TOM HARKIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. HARKIN. Mr. Speaker, last month, I had the opportunity to meet with Jane Carter, the Undersecretary of Great Britain's Department of Energy while she was in Washington. Ms. Carter is in charge of her country's energy conservation programs.

I would like to share with my colleagues her account of what Great Britain is doing in this area. The Prime Minister of Great Britain, Mrs. Margaret Thatcher, shares our President's conservative views regarding economic policies. Great Britain also shares some similarities with the United States in the energy sector even though their short-term energy situation is in some ways better than ours. They are self-sufficient in coal. In 1980, they produced slightly more oil than they consumed from their North Sea fields. However, they expect to become a net importer in the late 1980's.

I believe that it is noteworthy that with these similarities, the Thatcher government has taken a very different tack regarding energy conservation programs.

President Reagan has moved to dramatically reduce the Government's role in all of its energy conservation programs. These programs have been cut far more than almost any other area of the budget. Even support for basic information about conservation has been sharply reduced. The administration proposed eliminating the creative Energy Conservation Service which Congress decided to fund, although at a reduced level. I know from personal knowledge in my home State of Iowa that program has been very successful.

It provides a way for residential users of energy and small businesses to get good advice on what to do in their specific circumstances.

The President has also cut back funding for the weatherization program which provides for insulation, caulking and other conservation improvements for the homes of low-income families. These cuts would seem to make little sense except in the most short-term viewpoint. In a large proportion of the cases, the Government is also paying for the heating bills for these mainly elderly individuals. The heat provided by the taxpayers is literally going through the roof. If we insulated their homes we would often get our money back in 3 years.

Energy Conservation Research and Development has been literally gutted. In 1980, Congress authorized $340 million for energy conservation research. That is equal to 0.4 percent of our bill for imported oil. For 1982, the President proposed $80 million, a 75 percent cut, and he wants to essentially eliminate the program in fiscal year 1983. What is Great Britain doing?—Just the opposite.

Their Department of Energy is spearheading an active publicity effort to promote energy conservation under the slogan, "Make the Most of Energy." They provide residential, industrial, commercial, and transportation users a wide variety of practical advice, while our Government places a low priority on the distribution of this information.

In Great Britain, there is what amounts to an entitlement program to help British citizens make their homes more energy efficient, whether they are homeowners or renters. Grants of 66 percent of the cost of home insulation are provided, up to a maximum grant of $125. For the elderly, poor and the disabled with little income, the grant equals 90 percent of the cost.

In the United States, we do have a 10 percent tax credit. However, that is of little benefit to the elderly poor. And we do have a reduced weatherization program, but that program has a multiyear waiting list in many areas.

One of the real problems with a "pure market approach," which President Reagan espouses, is the realities of the marketplace. Often, the elderly poor, whose homes are the most poorly insulated, are the least able to afford the cost of insulation and other improvements, even though they may pay for themselves within 2 years. The owner of an apartment who provides a refrigerator has little incentive to provide an energy efficient one at a slightly greater cost which may need only half the electricity if the tenant will be paying the bill.

In the industrial sector, Britain is working with the producers of equipment to create more energy efficient machinery and consumer goods. They are increasing their research and development efforts in this area.

Our Department of Energy had an industrial conservation research and development program which was mainly oriented toward industrial users.

We aimed at those industries in which each company had a small share of the market and in which the company would have difficulty designing new equipment and processes. Although our program has a number of significant successes, the President wanted it eliminated and has, so far, refused to spend most of the money appropriated in this area during the current fiscal year.

Britain also provides their companies with assistance in examining their current facilities and seeing what can be done to make their everyday operations efficient. Small businesses are under an entitlement program providing 75 percent of the cost of 1-day energy audit.

The British Government's commitment to energy conservation, especially in the research and development arena is shared by such countries as Sweden, West Germany, France, and Japan. All of these countries are help-

ing their manufacturers to improve their designs and to develop more energy efficient products to sell on the world market. The corporations of these countries have the pressure and support of their Governments plus added impetus of higher than market prices for energy because of the taxes that those countries assess on oil.

In the 1950's and 1960's, we did not have to pay much attention to the industrial advances of our allies. We were clearly far ahead. That is no longer the case. Our allies are now catching up to us, and in many technologies have already passed us. Energy efficiency is too important an area to ignore. Industry throughout the world is receiving Government support in nearly every country except our own. In a world of high energy costs, less energy efficient products will not sell.

On the home front, we are spending tens of billions of dollars to import oil, and we are spending many additional billions to defend our sources of that oil. We find our foreign policy options limited, and our economy threatened by possible surges in the cost or lack of supply of imported petroleum.

Energy conservation is an area where we need to do more, not less. Individually, our citizens pay higher bills for energy that, in part, they do not need. If they did not use it, we would, through energy conservation, have energy abundance.●

THE CONGRESSIONAL COUNTRY CLUB—FURTHER QUESTIONABLE PRACTICES

HON. PARREN J. MITCHELL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. MITCHELL of Maryland. Mr. Speaker, on two previous occasions I have addressed the subject of charges made against the Congressional Country Club by the Maryland Division of Labor and Industry that the club has defrauded its employees of more than $1 million in wages over the past 30 years.

It has been the finding of the Maryland Attorney General's Office that, while wage-skimming practices have indeed been carried on over a sustained period of time by the Congressional Country Club, the statute of limitations alone prevents legal action by the State to rectify this fraud. Nevertheless, the fight to protect the rights of employees of the Congressional Country Club is being carried on in the civil courts of the State of Maryland by an individual member of the club, George Koch, who, as was recently stated in an article in Washingtonian magazine, "has for 5 years been battling his country club over whether waitresses and other employees have been denied fair treatment and a million dollars in wages."

The full article, titled "Thank You, Mr. Koch," appears in the December issue of Washingtonian magazine. It provides a unique insight into what the article's author, Howard Means, calls "the violation of social trust" by those who operate a country club in the National Capital area that bears the name "Congressional."

Mr. Speaker, as I have said before, because of the serious charges made against the Congressional Country Club and the cavalier manner in which the club's operators have responded to these charges, it is absolutely necessary that we make it known to the public that, despite its name, the Congressional Country Club is in no way affiliated with the U.S. Congress.

The article by Howard Means in the December issue of Washingtonian magazine serves to reinforce that need. While its length prohibits its inclusion in the RECORD, I commend its reading to my colleagues in the Congress, as well as to members of the general public concerned over problems of social and economic injustice taking place in the National Capital area.●

SMALL BUSINESS VENTURE CAPITAL ACT OF 1981

HON. HENRY J. NOWAK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. NOWAK. Mr. Speaker, in 1958 the Congress recognized the importance of developing an institutional, ongoing source of venture capital for small firms. It passed the Small Business Investment Act, which provided for the establishment of the Small Business Investment Company (SBIC) program. Today, there are about 350 active SBIC's across the country.

SBIC's are privately organized, privately capitalized, and privately managed venture capital companies, licensed and regulated by the Small Business Administration. In return for complying with SBA regulations and investing exclusively in small, growing companies, SBIC's are entitled to borrow money from the Federal Financing Bank—at market rates—to augment their supply of private investment capital. The SBIC program has been tremendously successful. Since 1958, over 42,000 small companies have received $3 billion and significant management assistance from SBIC's. Last fall, Deloitte, Haskins & Sells and Arthur D. Little, Inc., conducted a study on the impact of SBIC financing on small businesses. They found that SBIC-backed firms experience growth rates in key areas such as sales, assets, and employment, up to 10 times as great as other small firms.

However, the benefits of the SBIC program are not confined to small business. A second study by Deloitte, Haskins & Sells measured the costs and benefits of the SBIC program to the Federal Government. The study showed that the tax revenues resulting from the program far exceeded its cost. In 1979 (the latest year for which data are available) the Government spent only $4 million to cover all costs of the SBIC program. That same year, SBIC's and their portfolio companies increased their Federal income tax payments by over $440 million. Thus, the Government received more than $110 in increased tax revenues for every dollar it put into the program.

SBIC activity is epecially important in periods of economic downturn, when small businesses find it increasingly difficult to accumulate capital for growth and expansion. The Small Business Venture Capital Act of 1981, which I am introducing today with Mr. DAN MARRIOTT, will enable SBIC's to continue their valuable work in a more effective manner. Among other things, it will remove unnecessary limitations on the amount of leverage available to any one SBIC, and will permit SBIC's to include a restricted portion of the unrealized appreciation of their marketable securities for leverage purposes. It will also eliminate overlapping and dual regulation of affiliate transactions by SBIC's which are regulated as business development companies under the Investment Company Act of 1940 and as SBIC's under the Small Business Investment Act of 1958. Following this statement is a section-by-section analysis of the legislation.

I urge my colleagues to support this bill. Not only do SBIC's provide vitally needed venture capital to the most productive segment of our economy, but they also produce needed revenues for the Federal Government, at little cost to the taxpayer.

SECTION-BY-SECTION ANALYSIS

SMALL BUSINESS VENTURE CAPITAL ACT OF 1981

Section I. Designates title.

Section II. Removes existing $35 million ceiling on leverage to any one SBIC. A limitation on the amount of Federal leverage available to an SBIC is inconsistent with the purposes of the Small Business Investment Act of 1958. It discourages the formation of large, new SBIC's and the growth of existing SBIC's to a private capital level above $9 million—thereby inhibiting the flow of capital to qualified small concerns. Removing the leverage ceiling will eliminate these impediments, and will also encourage the development of large publicly-owned SBIC's under Public Law 96-477, the Small Business Investment Incentive Act of 1980.

Section III. Recognizes a limited level of unrealized appreciation for leverage purposes. This Section would permit an SBIC to include the lesser of 50 percent of the unrealized appreciation of its marketable secu-

rities or $10,000,000 when determining the amount of its leverage eligibility. Should the market value of the securities drop below a certain point, the SBIC would be required to increase its combined private paid-in capital and paid-in surplus within a specified period of time or repay any excess leverage to the government. Marketable securities are defined as those listed on an exchange registered under the Securities Exchange Act of 1934 or NASDAQ, and supported by at least three registered broker-dealers.

Section IV. Broadens discretionary portfolio investment provisions for SBIC's. Under existing law, SBIC's can invest funds not needed for current operations in U.S. Government obligations or in certain Government insured accounts. In general, this section would increase the category of eligible investments for such funds to include repurchase agreements issued by national banks, member banks of the Federal Reserve System and nonmember insured banks, if the repurchase agreements mature in one year and are secured by U.S. Government securities; or in securities maturing within one year which are rated AA by Moody's Investors Service, Inc. or AAA by Standard and Poor's.

Section V. Coordinates affiliate transaction rules for SBIC's which are Business Development Companies under the Investment Company Act of 1940. Currently, an SBIC which is registered under the Investment Company Act of 1940 is exempt from certain conflict of interest provisions in the SBA regulations when those exemptions are covered by the 1940 Act. This section would provide the same treatment for SBIC's which are also Business Development Companies under Public Law 96-477.

Section VI. Authorizes SBIC's to make loans to their employees to buy stock options. This section authorizes the SBA Administrator to prescribe regulations under which an SBIC could make loans to its employees for the purchase of stock options, and provides that such regulations should conform to those rules promulgated for Business Development Companies under Section 57(j) of the Investment Company Act of 1940.●

A GESTURE TO THE HAITIANS

HON. ROBERT GARCIA

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. GARCIA. Mr. Speaker, my recent visit to the Fort Allen Haitian refugee camp in Puerto Rico had a profound impact on me. The suffering that these people are enduring, the blight on their spirit that detention at Fort Allen has caused is most disturbing. The United States is a wealthy country full of good spirited people. I believe that if all U.S. citizens were allowed to observe the suffering of the Haitians in the Fort Allen camp, they too would agree with me that a humanitarian gesture, allowing the refugees to spend Christmas with Puerto Rican families willing to sponsor them, is not only in order but necessary.

That is why I and 13 of my colleagues have sent a telegram to the Attorney General asking him to use his good offices to begin consultations with the government of the Commonwealth of Puerto Rico, to see that the Fort Allen refugees are granted a furlough to stay with those Puerto Rican families that have already offered to sponsor them during the holiday season. A text of the telegram and a list of the signers follows:

DEAR MR. ATTORNEY GENERAL: We the undersigned members of Congress, urge you to take immediate action arranging a furlough during the holiday season for the Haitians detained at Fort Allen in Puerto Rico. It would certainly be in keeping with the American spirit to make a gesture to these poor, demoralized refugees. This time of year invokes a spirit of giving across our great land. It would be a small but significant act to share some of America's bounty and humanity with the Haitians at Fort Allen.

We ask that you use your good offices, Mr. Attorney General, to expedite consultations with the government of the Commonwealth of Puerto Rico, regarding the release of the Haitians to Puerto Rican families offering sponsorship.

Sincerely,

Gerald Solomon, James Scheuer, Mario Biaggi, Guy Molinari, Shirley Chisholm, Charles Rangel, Ted Weiss, Frederick Richmond, Johanthan Bingham, Ben Gilman, Samuel Stratton, Mary Rose Oakar, Robert Garcia.●

THE SAN JOSE JOB CORPS

HON. NORMAN Y. MINETA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. MINETA. Mr. Speaker, it gives me great pleasure to rise today to commend an outstanding job training program in Santa Clara County, the San Jose Job Corps. They have been the recipients of numerous accolades over the years. The most recent one came several months ago from a writer for the San Jose Mercury and News, Mr. Wes Peyton. His article follows:

IF THE GRADUATES CAN WORK, THEN THE JOBS CORPS WORKS TOO

(By Wes Peyton)

"Undoubtedly, a visit to a Job Corps center has been one of the most impressive experiences of my career and provides some of the impetus for ensuring these opportunities are continued for young people throughout the country who otherwise would not have a chance. . ."

That was no bleeding-heart liberal talking. That was Sen. Orrin Hatch, a Utah Republican and, by Capitol Hill consensus, a conservative's conservative.

Hatch, who is chairman of the Senate Labor and Human Resources Committee, had just come back from the Clearfield, Utah, center, and he was explaining to his colleagues why the Reagan administration hadn't included the Job Corps, a fugitive from Lyndon Johnson's Great Society, in its hacksaw approach to the federal budget.

The reason can be summed up in four words. The Job Corps works.

It has been working in San Jose for a decade, and generally working well against some fairly stiff odds: for example, a wholly inappropriate and inadequate downtown site, some neighborhood hostility, one or two brushes with the law by Job Corpsmen—and regular budget jousts with Congress.

It works here because individuals like Ken Dugan, the center director, and Bob Herrera, who runs the center's satellite operations in East San Jose, know how to turn around youngsters who, until they found the Job Corps, were going nowhere.

"Don't get the wrong idea," cautions Dugan 35, chunky, and a 1977 business graduate of the University of Santa Clara. "These kids aren't CYA (California Youth Authority) material. They have potential and plenty of it, but they haven't had easy lives. Many are from single-parent or no parent homes. For the most part, they are school dropouts or about-to-be-thrown-outs; and all of them are poor and out of work. They come to us when society has all but given up on them. Our job is to see that they don't give up on themselves."

Statistics suggest how well the job's been done. In the past decade, about 4,600 men and women between the ages of 16 and 21 years have completed Job Corps training at the San Jose Center. About 4,500 of them either have gone on to further education, enlisted in the armed forces or taken civilian jobs, usually in Santa Clara County. Between 3,600 and 3,700 got jobs locally. In the past year alone, by Dugan's estimate, Job Corps graduates earned more than $20 million here and paid $5 million in taxes.

When you understand that the San Jose center's annual budget is $3.2 million, you know why nobody can tell Dugan (or Hatch) that the Job Corps isn't cost-effective. But the real value of the Job Corps can't be calculated in dollars and cents; it must be reckoned in self-esteem, in hope realized, in lives that are going somewhere. The real value of the Job Corps lies in what it means to individuals like Carol and Jessica Inigo.

Carol is quiet, composed, petite, pretty, 21, and Jessica's mother. Carol is also a high school dropout who had a hard time finding a job that would support her and a daughter, now 3. Mostly, Carol's life was tension, worry and welfare. That was pre-Job Corps.

Now she is enrolled in the office skills program at Herrera's East side satellite center, in quarters rented from the Richard Conniff School at the end of Harriett Avenue. And Jessica? She's at Conniff School, too, in a Job Corps child-care center along with 29 other infants, toddlers and pre-schoolers.

All are children of young women working to complete their high school educations and to learn a marketable skill as well. The children aren't just baby-sat; they, like their mothers, undergo education appropriate to their age and developmental level—everything from finger-painting to reading readiness.

For her part, Carol Inigo is pursuing a high school diploma, taking her turn in the nursery and studying office skills. Her vocational goal is to become a court reporter; her social goal is to stay off welfare. She is emphatic about that.

Will she make it? The odds look good, judged by Herrera's rule of thumb for success in Job Corp programs.

"It's all attitude, attitude, attitude," says Herrera, who holds a bachelor's degree in sociology from San Jose State University and is working on his master's. "We can help them learn to cope, but we can't cope

for them, and that's one of the first things we teach, here and downtown. It's no news to Job Corpsmen (and Corpswomen, if there is such a word) that its, a tough world out there. These young people have had it rough, and those who make it are usually those who have come to see the Job Corps as their last chance. They make it here, or they don't make it."

Those who elect to give it their best shot get plenty of help, starting with a two-week indoctrination and evaluation session at the satellite center. They are interviewed in depth, tested for vocational aptitude and given a crash course in urban survival skills—how to fill out a job application, how to apply for credit, rent an apartment, balance a checkbook.

Then they split their workdays between academic and vocational training. In addition to earning their general equivalency high school diploma (300 Job Corps enrollees here did just that last year), they gain entry-level skills in everything from auto mechanics to data processing and electronics technology. The 315 enrollees in the downtown center and the 125 in the East Side satellite facility spend an average of 6½ months in the program before moving on—to a job or to more education.

Both San Jose facilities are operated for the Labor Department by the Education Division of Singer Corp. The center's staff of 135 are actually Singer employee, which means they can't be stereotyped—and criticized—as government bureaucrats.

Testimonials from Job Corps graduates, of which the center has more than a few, also suggest the program is working surprisingly well, surprisingly because the main center, a complex of five former fraternity houses at 11th and San Fernando streets, is in the wrong place. Dugan agrees it is mislocated, and so does San Jose Police Chief Joseph McNamara, who is a member of the center board of advisers.

"The program is inspiring, that's the only way I can describe it,' McNamara says, "but it's a school without a campus in an area that is jammed with board-and-care homes and halfway houses for the mentally disturbed. And on top of that, there's the university right next door."

In the Job Corps' early days, the enrollees sometimes got into fights with fraternity boys from San Jose State University, but that doesn't happen much any more, both McNamara and Dugan agree.

"That's the one thing we won't tolerate," Dugan explains. "They fight; they go.'

Of course, when they don't fight, they go, too. They go on to jobs, to apprenticeship programs (with the Brotherhood of Railway and Airline Clerks and the Operating Engineers unions here) and to colleges and universities. On average, 30 percent of those who enter the program do not finish, they drop out or are asked to leave. But the 70 percent who make it are on their way in life. Once they were going nowhere, now they have goals, and they are learning how to achieve them.

That's the Job Corps, another reason to be proud of this place we call home.●

"TRIBUTE TO THE HARFORD DEMOCRAT AND ABERDEEN ENTERPRISE ON ITS 125TH ANNIVERSARY"

HON. ROY DYSON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. DYSON. Mr. Speaker, I would like to take this opportunity to pay tribute to a newspaper in my congressional district, The Harford Democrat And Aberdeen Enterprise. Last week's edition of this popular paper, located in Harford County, Md., commemorated its 125th year of existence.

I have had the privilege of knowing the editor and publisher of this newspaper, former Maryland State Senator J. Wilmer Cronin, for many years. He has influenced the direction and tone of this outstanding newspaper for nearly half of its 125 year history. I would like to commend the Harford Democrat for its long service to the community and wish its editor and employees the best of luck in maintaining the paper's vitality in the future.

I am very pleased to submit to you portions of an article written by Cynthia Yockey which highlights the history of The Harford Democrat:

There is a mystery hidden in the history of the Harford Democrat. A yellowed old copy of the second issue shows that the newspaper was first published January 11, 1856, with Joseph B. J. Onion listed as the publisher.

The second issue, like the first one assumes, of the Harford Democrat proclaimed that it was "Devoted to General Intelligence and Civil and Religious Liberty." It was published every Friday and its office was in Bel Air on Courtland Street across from the Court House. The subscription cost was $1 a year, and continued at that low rate until after World War I. In the 1930's the subscription rate was $1.50.

Everything was much farther away in 1856 due to slow transportation. A horse drawn coach advertised its service to Baltimore leaving Bel Air early in the morning and arriving about five hours later in the city. Return service was the next day, three round trips a week.

The Harford Democrat was a four page paper waxing and waning due to the size of paper used, until the 1920's when it went to eight pages. Contents of the paper included ads, sentimental poems, fiery denunciations, terse bits of local news, satirical articles, melodramatic short stories, anecdotes and advice on various matters.

One of the frequent targets of the Harford Democrat's wrath in 1856 was the Know Knothing Party that began in 1852. Also called the American Party, they got their nickname because their meetings were held in secret and the measures they promoted were never discussed openly. When a non-party member asked a party member about his policies, the reply was "I don't know."

The Harford Democrat's owners in 1868 were William Bouldin, a Bel Air businessman, and James D. Watters, a lawyer who later became a judge of the Circuit Court. In 1871 they sold the paper to Joseph M. Streett. Mr. Streett's son, Gover G. Streett, later joined him in the business and the family operated the newspaper for 48 years, still at its location on Courtland Street in Bel Air.

During the late 1880's, the Harford Dispatch, which started June 22, 1895, was absorbed by the Harford Democrat. In one of its first issues, the Harford Dispatch, a semi-weekly, promised "Everything in the way of legitimate news will be found in its columns, stated exactly as it occurs, without any coloring through partisanship or prejudice," and that it would be a clean and wholesome family journal that would keep "the ordinary farmer and businessman abreast of the times."

By 1909 the masthead of the Harford Democrat boasted it was the "Fearless Defender of the People's Rights." It was the largest paper in the county, with 10,000 readers and circulation in Maryland and surrounding states.

The Aberdeen Enterprise from that era was only filled with advertisements and light, amusing tidbits. It was established in 1881 or 1883, depending on the reference consulted. This paper was bought by J. Wilmer Cronin in 1919, the same year he acquired the Harford Democrat, which was still being published in Bel Air. In the 1920's he combined the two newspapers and moved the Harford Democrat editorial offices to Aberdeen where it is now published. Mr. Cronin, a former state senator, has been the publisher and senior editor of the Harford Democrat and Aberdeen Enterprise (the paper's full name on the masthead) to this day. His son William R. Cronin is now managing editor, but the senior Cronin continues to "make this paper up" as he has done for 62 years on the "stone" in metal chases, write news and editorials.

Sen. Cronin's acquisition of the Aberdeen Enterprise was noted by five local papers. The following comments from the Havre de Grace Republican were reprinted in the July 18, 1919 issue of the Aberdeen Enterprise: "The Aberdeen Enterprise resumed publication on July 4 with J. Wilmer Cronin and W. Earle Jacobs, editors, who in closing an editorial, 'Our Paper,' say, 'we propose to fight for progress and reform, attack demagogues and public plunderers, and devoutedly dedicate our columns to the Public Welfare . . . the paper is a seven-column folio, neatly printed, and well filled with items of local interest. We cordially welcome the new editors to the ranks of the fraternity (of journalists), and wish them every success."

Mary Cronin, wife of Sen. Cronin, served 12 years as a member of the state Board of Education. During Sen. Cronin's months away at the General Assembly she also helped run the Harford Democrat.

The readers of the Harford Democrat will always remember the years they read the Aberdeen Personals under the "Heard and Seen" column by Marian Greenland and her news stories and who has been the right arm of Editor Cronin and the staff, has written, edited, made-up the paper.

In 1978 the Harford Democrat added a new publication, "county wide," a friendly tabloid that is distributed free to homes in Harford County.

As the Harford Democrat begins its 126th year of publication the editor and all the employees thank all those who have contributed to its 125 years of service to the community. May our readers and advertisers continue their strength and support now and in the future.●

CUTTING AND PASTING THE MINIMUM BENEFIT

HON. THOMAS J. DOWNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. DOWNEY. Mr. Speaker, now that the minimum benefit has been restored to its rightful owners, perhaps the President has gotten the message that Congress has repeatedly sent to him. No cuts in benefits to the elderly.

These small checks are not wasted, nor are they used for frills. For some they are a sole source of income, for others they provide such extras as medicine, eyeglasses, and busfare. The President insisted that minimum beneficiaries did not truly need this money, but as we later learned from the nuns who took vows of poverty, these checks were their safety net—their only income after retirement from a lifetime of devotion to others.

What I regret most about the action we took today was that we had to put people through the agonizing seesaw of the legislative process. We had their very lives in our hands and it took this administration 5 months to finally reassure them that their benefits were secure. I hope we never again are forced to confront the cruel game of budget politics with the elderly as the pawns.●

ADMINISTRATION URGED TO SHOW COMPASSION AND REHIRE AIR TRAFFIC CONTROLLERS

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. FORD of Michigan. Mr. Speaker, before we adjourn for this year I would like once again to urge the administration to show compassion and rehire as many of the dismissed air traffic controllers as necessary to return the system to full operation.

With the approach of Christmas this would be a good time for the White House to demonstrate charity toward these controllers who face a bleak holiday.

Such a gesture would benefit the whole Nation. The dismissed controllers are not alone in their suffering. With the system operating at only 75 percent of the prestrike level, both the flying public and workers in related industry have become hapless victims. This is adding to our recession problems.

So that my colleagues might have some understanding of the impact of the administration's intransigent position, I would like to quote from testimony given by John F. Peterpaul, general president of the International Association of Machinists and Aerospace Workers, AFL-CIO, before the Post Office and Civil Service Committee:

The economic impact on the air transportation industry from the Administration's reaction to the Air Controllers job action has been severely underestimated. The Administration's response to the air controllers' walk-out has not only destroyed the livelihoods of the fired air controllers and their families but also of many thousands of Americans who had no part in the air controllers' dispute with the Administration but who happened to have jobs dependent upon a healthy air transportation industry. These innocent men and women have been and will continue to be deprived of employment as a result of and so long as the Administration maintains its present position with regard to the air controllers.

Mr. Chairman, the IAMAW's members in the airline and related industries are being laid off in increasing numbers because of this Administration's intransigent position. The Federal Aviation Administration reports that prior to the air controllers' strike, there were 14,500 flights per day. There are now 10,875 flights per day. Presently, pursuant to FAA Directives, General Aviation has been severely curtailed and further scheduling reductions of commercial transport will soon become effective. These new reductions are reportedly being caused by the fatigue of the working controllers and the imminent onset of the worst flying weather of the year. I should note here that General Aviation activity represents 80 percent of all hours flown by private and commercial aircraft in this country. The recent FAA restrictions therefore will have enormous adverse impact upon our members employed in that industry.

These flight reductions have had and will continue to have repercussions throughout the air transport and related industries. Fewer flights generally result in fewer jobs for our members in the manufacture, construction, servicing, and staffing of aircraft. Presently, over 3,200 of our members employed by trunk carriers have been laid off as a result of the present situation. This comes on the heels of the elimination of 4,000 of our members' jobs as a result of the economic impact of deregulation. The loss of these 3,200 jobs alone represents an annual paycheck loss of almost $89 million; a tax loss to the Federal Government of some $18 million; and, an additional cost to State Governments of many thousands of dollars in unemployment payments.

Many of our members employed on commuter carriers are also having their livelihoods threatened. Commuter airlines report that passenger demand is now down 20 percent. It is anticipated that a number of these carriers will be out of business by next year. Already two commuter lines with which we are familiar, Golden Air West and Swift Air, have gone out of business as a direct effect of reduced air traffic control capacity. We are deeply concerned that very soon many more will follow, putting more thousands of our members into ever-lengthening unemployment lines.

Our members employed in the aerospace industry have also been severely impacted. Because fewer air miles are being logged there is reduced demand for engine overhauls and spare engine parts. Thus, Cooper Aeromotive of Dallas, Texas, an engine overhaul company, has laid off 150 of our members. Pratt and Whitney has laid off 700 of our members at its East Hartford, Connecticut plant because of the lack of demand for engines and spare parts for engines. Similarly, demands for new aircraft have decreased. Orders are being canceled and delivery dates are being postponed. Our members have felt the impact at Boeing because the development of engines for Boeing 757 aircraft has been delayed.

The reductions in flights, manufacturing and services and the layoffs which have occurred have caused substantial losses in both Federal and State tax revenues. It is tragically ironic that an Administration so totally dedicated to balancing the budget and maintaining fiscal integrity would knowingly impose economic capital punishment on thousands of skilled men and women, depriving them and their communities of their income and the United States and State treasuries of their tax dollars, in addition to losing the tax revenues from those air transport industries that have been compelled to curtail their operations; while at the same time resolutely preparing to spend upwards of $2 billion to train a second superfluous work force of air controllers.●

SAKHAROV

HON. MARGARET M. HECKLER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 9, 1981

● Mrs. HECKLER. Mr. Speaker, I rise to add my voice to the protest against the Soviet Government's unconscionable treatment of Andrei Sakharov and his family, and to urge adoption of the gentleman from Colorado's strong resolution of support for their struggle.

How much longer, Mr. Speaker, will the Soviet Government continue to persecute this brave and brilliant man? How much longer will they seek to stifle the voice of freedom, and still the conscience of their own nation?

Andrei Sakharov is a man of peace, and he has the courage of the peacemaker. The Soviets have learned that they cannot silence him through physical intimidation—and so they have resorted to the base tactic of harassing his family. Yet Sakharov's courage, and that of his wife, Yelena Bonner, have thwarted the Soviet authorities in even this latest outrage.

Sakharov's willingness to bear the full force of the Soviet Government's vindictiveness on his own shoulders—and to call to the attention of the world the plight of his stepson, Alexey Semyonov, and Semyonov's wife, Yelizaveta Alekseyeva—is what we have come to expect from the embattled yet undaunted spokesman for freedom.

Even as we feared for their safety during the hunger strike that he and Yelena Bonner have maintained for the past 2½ weeks, we applaud the indomitable spirit that this struggle represents.

We know that Sakharov, and the cause for which he has fought for so many years, cannot be overcome even

by the concerted terror of the most repressive government the world knows today. We know that the voice of freedom will not be stilled—that as long as there are men like Andrei Sakharov, and women like Yelena Bonner, to carry the fight for freedom of mind and spirit, the battle is sure to be won.●

A STUDENT'S VIEW OF TWO CHINAS

HON. NORMAN Y. MINETA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. MINETA. Mr. Speaker, I rise today to present to my colleagues a copy of the speech a young constituent of mine gave recently when she received first prize in the annual speech contest sponsored by the U.S. Friends of Free China. Miss Pauline Wan is a resident of San Jose, a recent graduate from Lynbrook High School and is now attending college. Her remarks follow:

Two hundred years ago, the American colonies were controlled by an unresponsive government located two thousand miles away. The atmosphere in the colonies was one of economic repression as the English government raised taxes. Thus, in 1776, the American colonies united and threw off the yoke of English oppression. Now the United States is the most prosperous country in the world while Great Britain has slipped far from her former position as world leader.

Thirty years ago, the Communists in China united as the Americans did and threw off what they considered to be the Republic of China's yoke of oppression. Now Communist China is not the most successful country in the world. Rather it is among the least developed countries, while the Republic of China is numbered among the world's rapidly rising economies.

The disparity between the two Chinas is painfully obvious in a comparison of their standards of living. The per capita annual income in Taiwan is over $2,000 U.S. dollars. Income in mainland China is only $200 dollars per year. In terms of material possessions, in Taiwan there are 250 cars for every 10,000 people. Relative to the United States, that figure may appear small but compared to the mainland China figure of 12 cars per 10,000 people, the Republic of China is quite well off.

Why is there such a huge difference between the economic progress of the two nations? The answer lies in the widely different governmental philosophies of the two countries. Mainland China is a communistic society based on a centrally planned economy. The Republic of China, however, is essentially a free enterprise system similar to the United States.

The fundamental weakness under the Chinese Communist organization is its inability to change. The system is a rigid one with strict dogmatic ideas which do not allow for innovations. Furthermore, it provided no incentives for individuals to work hard and excel. In 1958, the commune system was established. In 1980, 200 million people were on the point of starvation as a result of stagnant agricultural production caused by an inflexible and unrewarding system. Yet despite this terrible state of poverty, the government has not chosen to remove its cause although modification is obviously warranted.

In contrast to the inflexibility of the Communist system is the constantly changing and advancing free enterprise system. The government of Free China, unlike that of mainland China, does not attempt to dictate what the economy must be composed of. Rather, it simply regulates the economy as it is. The result is free competition and an emphasis on industry. Competition promotes higher quality products at cheaper prices. These products have attracted a world market for Taiwan. Between the years 1953 and 1978, foreign trade rose from 300 million to 20 billion, a spectacular increase by any standard. Foreign investment has also increased dramatically. Multinational corporations have established subsidiaries in Taiwan, taking advantage of the large labor force. Unemployment on the island is less than 2 percent.

Alongside the economic success of Taiwan is the failure of the poorly planned Communist economy. With Chairman Mao's conviction that ideology should command came a static economic situation. Since Mao's death, Communist leaders have come to realize the importance of economic freedom in promoting progress and have begun an ambitious program aimed at revitalizing their economy. This program includes many of the aspects which helped Taiwan progress, including foreign trade and investment. Though it has not drastically shifted its policies. Communist China is apparently moving gradually toward a freer market economy. A recent government publication from Peiping carried the following slogan, "To improve our economy, we must copy Taiwan." Thus we can see that even the Communists recognize the advantages of a free enterprise system—that is, a flexible program allowing innovation and competition.

In 1776, the Americans fought for the right to establish a free market economy. In 1949, the Republic of China chose to establish their vision of economic freedom. During the following thirty years, the remarkable success of that system proved to the government that its policies were effective. For the citizens of the Republic of China freedom has brought prosperity and pride in the economic progress as a nation.●

THE CARIBBEAN BASIN INITIATIVES

HON. BALTASAR CORRADA

OF PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. CORRADA. Mr. Speaker, as our colleagues are aware, President Reagan has expressed his intention to propose a comprehensive aid and development package for the nations of the Caribbean basin. The Caribbean basin initiatives program aims to provide aid to stimulate the economic development and strengthening the U.S. role in the area. The CBI will consist of three basic elements: Aid, trade, and investment. I, wholeheartedly, endorse the concept and welcome it as a step in the right direction of correcting years of neglect of our neighbors in the Caribbean. As fellow Caribbean areas, Puerto Rico and the Virgin Islands are our Nation's premier presence in the area. Puerto Rico shares with the Spanish speaking a bond of common language, heritage, and culture and stands ready to assist in channeling assistance to those nations. The Virgin Islands also share a common history and language with the smaller island nations of the Lesser Antilles. Thus, the administration has the best source of help within our own domestic areas. However, before helping others, we have to insure that we do not unwillingly cause harm to our own citizens and our own economic development.

I have written to the Honorable Thomas Enders, Assistant Secretary of State for Latin American Affairs and to Ambassador William E. Brock, U.S. Trade Representative, to bring to their attention a number of points to be considered when drafting the proposal. Some of the issues I discussed in my letters are as follows:

(1) Avoiding injury to Puerto Rico and U.S. domestic areas—It would be tragic and counterproductive if the program unintentionally resulted in the transfer of capital, industry, and jobs from Puerto Rico, the most economically distressed area under the U.S. flag, to other Caribbean countries. We must not lose sight of the impact of our international policies on the U.S. domestic areas. We need to insure that industries do not leave Puerto Rico for other islands in the Caribbean in order to take advantage of benefits under the program. Such a move would defeat the purpose of the assistance program which is to help Caribbean nations but not at the expense of the domestic areas of the United States.

I am also very concerned about the potential impact on the rum industry in Puerto Rico of a reduction or an elimination of tariffs. The rum industry is one of the pillars of our economy; rum excise taxes provide us 10 percent of our annual revenues. Any dislocation in this industry would have a tremendous and detrimental effect on our island's economy.

In order to be able to have all necessary information to properly evaluate the impact of the implementation of the CBI in Puerto Rico, I believe it is essential that the administration provide the Congress with the following data. First, the anticipated effects of proposed policies and legislation on (a) individual agricultural and manufactured commodities now produced in Puerto Rico as well as specialized high technology products which we are now promoting and (b) on banking, insurance, consulting, construction, and other existing and planned export service industries. Second, what proce-

dures and compensatory measures are planned for (a) existing agricultural, manufacturing, and service industries injured by trade competition resulting from the CBI and (b) those agricultural, manufacturing, and service industries established elsewhere other than Puerto Rico as a result of these initiatives.

(2) Providing expertise from Puerto Rico—Puerto Rico offers a wide range of expert knowledge and ideas on the problems of the Caribbean. We have lived with those problems, studied them in our universities, and coped with them in our government and business activities.

We have experienced them all: The struggle for economic development, the pains of colonialism and racism, the threats of terrorism, the decline of agriculture, the fluctuations in tourism and commodity export prices, the costly dependence on imported energy, the need for land reform and population planning, the ravages of inflation and fiscal strain, the need for investment and technology from outside our shores and for a diversification of our economy internally—and through it all we have staunchly supported political democracy, a free-market economy and our bond with the United States of America. But Puerto Rico offers more than the example of our own steady progress on the journey, still far from completed, to economic development. We can draw from that experience to help others. Just as President John F. Kennedy called upon two distinguished Puerto Ricans, Teodoro Moscoso and Arturo Morales Carrión, to head respectively his alliances for progress and Latin American Bureau at the State Department, so it is to be hoped that President Reagan will also seek the benefit of our experience and reach into the Commonwealth for the top officials in his Caribbean initiatives program.

On this point, I am encouraged by the testimony of Robert J. Ryan, Jr., Director of the Office of Regional Economic Policy, Bureau of Inter-American Affairs of the Department of State during oversight hearings on territorial policy before the Public Lands and National Parks and Insular Affairs Subcommittee of the House Interior and Insular Affairs Committee on December 15, 1981. In his testimony Mr. Ryan states that:

> Puerto Rico and the Virgin Islands have experience in resolving development problems which is uniquely valuable to other countries in the region. They have people with technical skills and management experience. They also have a special sensitivity which derives from their unique history of preserving their culture and values which fostering close relations with a culturally very different United States, and geographically they are in a location which can serve as the hub of a communication network for the region as a whole.

(3) Establishing headquarters in Puerto Rico—On the basis of geography, language, ethnicity, and ideological and historical affinity, Perto Rico is better suited than Washington or any other part of the United States to be the operational headquarters for this program. We can provide on a more economical basis than Washington both office space and personnel. We already have the necessary bilingual institutions of education, agricultural training, vocational training, and medicine, all experienced in the problems and people of the tropics. We have leaders in business, agriculture, labor, local government, tourism, public health, export promotion and every other walk of life who would be invaluable lecturers, discussion leaders, and resource personnel upon whom visiting officials and scholars could draw. By basing the administrative and operational headquarters of the new Caribbean basin initiatives program in Puerto Rico, the administration would not only save money and time but also greatly enhance the program's appeal and prospects for success.

The administration has discussed the establishment of a North-South center modeled after the highly successful East-West center in Hawaii. I encourage them to give serious consideration to this idea and to the possibility of locating the center in Puerto Rico.

(4) Stimulating agricultural production—The University of Puerto Rico—and its College of Agricultural Sciences—would be the ideal training and research institution for the instruction of farmers and others involved in agriculture in the Caribbean basin and for the introduction of new technology and methods for agricultural development. The similarity of climate and soil conditions, particularly to those of other islands in the Caribbean, would make the training obtained at a Puerto Rican agricultural center more directly and immediately applicable. In addition, teams of agricultural experts from Puerto Rico could be dispatched to Caribbean and Central American countries to consult on particular agricultural problems; and Puerto Rican suppliers and contractors would be best positioned to undertake major irrigation, road building, and land clearing projects.

Mr. Ryan's testimony also alludes to this point and indicated a willingness to explore ways to transfer the technology and expertise of the Puerto Rican agricultural sector.

(5) Facilitating industrial development—Puerto Rican educational institutions and teams can also provide instruction and consulting services to Caribbean businessmen and students in management, technology, marketing, and finance. Puerto Rico's Fomento and the Government Development Bank can train and help develop more effective counterpart agencies in other Caribbean governments. Puerto Rican businessmen can form joint ventures with their counterparts in those countries. Indeed, one of the options that has been studied is the concept of "twin plants" that would be of mutual benefit to Puerto Rico and the Virgin Islands and the nations of the region. Puerto Rican consultants can advise those U.S. mainland investors in need of guidance on doing business in the Caribbean. Puerto Rican contractors can participate in the construction of highways, posts, communications systems, airports, and other infrastructure necessary to attract foreign investment. Puerto Rico's underutilized petroleum refineries and petrochemical industry can act as processing and distribution center for Mexican and Venezuelan crude oil destined for use on other Caribbean islands. Puerto Rican industry can provide the final assembly facilities and skilled labor necessary to complete the production of electronic and other products for which the components would be manufactured, with unskilled or semiskilled labor and less investment risk, in one or more of the other Caribbean locations with which U.S. investors have less familiarity. U.S. tax and tariff arrangements should be modified to encourage this kind of production sharing, provided once again that it increases the total production facilities in the Caribbean and does not merely move some out of Puerto Rico. At the same time, we must protect the special tax treatment enjoyed by companies located in Puerto Rico under section 936.

In all these ways, Puerto Rican participation in the Caribbean basin initiatives program can benefit all concerned—each recipient country's development, U.S. foreign policy objective, the economy of Puerto Rico, and friendly political and economic ties among all three.

Mr. Speaker, I understand that the President will be announcing the details of the CBI sometime in January and that legislation to implement this program will be submitted to the Congress in February. I urge my colleagues to give serious thought and consideration to the package the administration will send to the Congress with particular emphasis on the impact the various proposals will have on U.S. domestic areas. I would be happy to discuss this very important issue with any of my colleagues who share my concern over the CBI.●

RAISE AND TAX BREAK BY BACKDOOR MANEUVER?

HON. PAT WILLIAMS

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. WILLIAMS of Montana. Mr. Speaker, the American people do not object to tax laws which treat Members of Congress as other Americans, who, because of the demands of their jobs are required to maintain two homes; but, I strongly object to the method by which this current tax change is being granted. Allowing changes such as this to be made, without the benefit of a recorded vote, does indeed give the appearance of a "backdoor" maneuver. If the Members of this House wish to receive a tax cut, let them come forward, justify it on the record, and account for themselves by recorded vote.

The rule regarding outside income was brought before this House earlier this year. At that time, I and 270 of my colleagues went on record against the proposed increase in income limits. I fully expected, as did my constituents in western Montana, that this vote accurately reflected the intention of the House to maintain reasonable outside income limitations. To renege on that promise, without the benefit of full discussion and recorded vote, is to deceive those constituents and give them ample cause to cry "foul."●

ALASKAN NATURAL GAS PIPELINE

HON. PHILIP R. SHARP

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. SHARP. Mr. Speaker, yesterday the President signed Senate Joint Resolution 115, the joint resolution approving the waiver of law relating to the Alaska natural gas pipeline. The approval of this resolution makes it possible for private financial negotiations to move forward in order to bring Alaska natural gas to U.S. consumers. Access to this gas will not only help this country reduce its dangerous dependence on foreign energy sources, but will help revitalize key sectors of our own economy by generating thousands of new jobs. Approval of the resolution also fulfills commitments to Canada to facilitate construction of the project on a privately financed basis.

With this action, the responsibility now rests squarely with the private financial community to devise a financing plan to move the project to completion. We in the Congress have done our part. It is now up to the private sector to complete this important national energy project.

Mr. Speaker, let me also comment briefly at this time regarding certain questions which have been raised regarding the procedures used by the House in considering the President's waiver. As you will recall, on Wednesday, December 9, this body passed House Joint Resolution 341 approving the waiver and then on Thursday passed Senate Joint Resolution 115, an identical Senate resolution. This somewhat unusual procedure was required after an objection was lodged to the ordinarily routine unanimous consent request to merge the House-passed resolution with the identical Senate-passed resolution. As the consequence of these procedural developments, certain questions were raised by some of our colleagues as to whether in voting for Senate Joint Resolution 115 the House's actions would be rendered subject to challenge in the courts. Let me assure my colleagues that the House's actions in approving the President's waiver were entirely proper.

Any challenge must rely on an extremely tortured interpretation of the statute. It is axiomatic that the words of a statute should not be interpreted so as to destroy its essential purpose—in this case to allow timely congressional consideration of a waiver of law proposed by the President. Moreover, the courts have consistently taken the position that the power granted to each House of the Congress by article 1, section 5 of the Constitution to establish its own rules of proceeding, is, to the extent not inconsistent with fundamental rights or other constitutional restraints, "absolute and beyond the challenge of any other body or tribunal". *United States* v. *Ballin,* 144 U.S. 1,5 (1891).

With the President's signature of Senate Joint Resolution 115, further procedural or legal challenges to the enactment of the resolution would be without merit. It is my firm hope that now that the Congress and the President have duly considered this question and have acted in their constitutional capacities to approve Senate Joint Resolution 115, any remaining doubts as to the efficacy of the resolution can be finally put to rest.●

IN EL SALVADOR THE STICK HAS FAILED, BUT THE CARROT MAY SUCCEED

HON. MICHAEL D. BARNES

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. BARNES. Mr. Speaker, I would like to include for the record an article that appeared in the Los Angeles Times on November 15, 1981, on the prospects for peace in El Salvador and United States policy alternatives. The author, James Cheek, is a well-known Latin American specialist and a former Deputy Assistant Secretary of State for Inter-American Affairs. In his article entitled "In El Salvador the Stick Has Failed, But the Carrot May Succeed," Mr. Cheek argues that the political, economic and military situation in El Salvador is at a stalemate and that the best prospect for an end to the violence lies in negotiations.

Although Secretary of State Haig himself has also publicly recognized that the situation is at a stalemate, he continues to emphasize a military solution to the conflict, while many countries in the area are seriously analyzing and advocating informal discussions. These actions parallel Mr. Cheek's assertion that: "The time may be ripe for a coordinated international effort to bring together all parties to the dispute for a dialog."

Here in Congress, there have been concrete actions taken to encourage a dialog. Just today we adopted the conference report on the foreign aid bill, which contains a provision requiring that the President investigate the possibility of negotiations, elections and a settlement of the conflict, and the views of international actors on these issues. And the Foreign Affairs Committee recently approved unanimously a resolution introduced by Congressman YATRON, expressing the sense of Congress that the President should press for unconditional discussions among the opposing factions in El Salvador.

Mr. Cheek provides different scenarios for informal talks with no preconditions. I hope that the administration will consider in the near future the prospect of a negotiated settlement. After all, we all share a common goal—finding a democratic political solution to the civil strife in El Salvador. And there seems to be a consensus among knowledgeable people that the best way to achieve this is through a dialog.

[From the Los Angeles Times, Nov. 15, 1981]

IN EL SALVADOR THE STICK HAS FAILED, BUT THE CARROT MAY SUCCEED

(By James Cheek)[1]

What are the prospects for peace in El Salvador, and how might the United States help bring it about?

The situation in El Salvador today is, as Secretary of State Alexander M. Haig Jr. has acknowledged, "essentially stalemated." This is particularly true on the military front. It is increasingly apparent that neither the government of Jose Napoleon Duarte nor the guerrillas of the opposition can win by force of arms.

[1]James Cheek, currently an associate of the Fletcher School of Diplomacy and Law at Tufts University and of the Center for International Affairs at Harvard, is a senior Foreign Service officer with the State Department. He is a former deputy assistant secretary of state for inter-American affairs.

The junta cannot impose a military solution because it lacks not only sufficient manpower and material, it also suffers a paucity of the critical ingredients necessary for victory in a guerrilla war: mass popular support. The Reagan Administration has shown no real willingness to give the Salvadorans the muscle they need to win. Prospects for popular support seem equally remote.

The guerrilla forces, although formidable, suffer similar deficiencies. They are short of funds and new recruits. And neither Cuba nor other foreign governments seem willing to escalate their military aid to the levels required for victory, Nicaragua, a vital link in the guerrillas' supply chain, may have to reduce its involvement, which has jeopardized Western support for the Nicaraguan revolution. For example, Thursday, while testifying before the House Foreign Affairs Committee, Secretary of State Alexander M. Haig Jr. refused to rule out a U.S. naval blockade of Nicaragua. He also declined to give assurances that the United States would not support exile groups seeking to overthrow the country's Sandinista government. In addition, the guerrillas, like the government, lack sufficient popular support for a military victory. This was amply demonstrated by the failure of their "final offensive" early this year.

Similarly, the Salvadoran political situation is at a stalemate. Salvadoran politics are hopelessly fragmented. All groups continue to act selfishly, motivated primarily by narrow self-interests. There is deep distrust among them. There is no consensus about the past, present or future.

Duarte and his Christian Democrats, with U.S. support, have effectively controlled the civilian side of the government and maintained their uneasy partnership with the military. But, in the prevailing climate of violence, independent labor groups and many businessmen do not actively support the junta and its program.

The political left, with much of its leadership in exile, also has failed to increase its popular support or to mold its loose coalition of small political factions into a more effective political instrument. The extreme right, despite the much-heralded emergence of "new" political parties, appears to be no more viable as a governing force than when it was cast out by the military in October, 1979.

The vast majority of Salvadorans clearly wish to see an end to the violence and continue to reject either totalitarian or authoritarian solution, but they have yet to give their support to any of the political groups currently on the scene. The holding of genuinely free and credible elections, however, might permit the people to commit themselves. That at least seems to be the hope of the Duarte government. However, major obstacles to holding such elections must be overcome.

Internationally, political attitudes toward El Salvador also seem to be deadlocked. The Duarte government continues to enjoy the political and diplomatic support of the United States, Venezuela and a mixed group of Latin American civilian and military governments. The Farabundo Marti Front has the full support of a group of Marxist and radical governments spearheaded by Cuba. The front's political arm, the Democratic Revolutionary Front, receives support from a number of European and Latin American Socialist parties as well as from active "solidarity committees" in the United States and elsewhere. Mexico and France have recognized the coalition of the two groups as "a representative political force." The extreme right receives some backing from sympathetic elements in neighboring countries, the nations of Latin American's southern cone and the United States.

Events of the past year, however, have demonstrated that foreign powers have limited ability to influence the political situation in El Salvador. Thus, the political deadlock in El Salvador, like the military stalemate, is not likely to be broken by the intervention of outsiders on behalf of a particular group.

Movement has occurred on the economic front, but it has been almost totally for the worse. The gross national product has registered three consecutive years of negative growth for a cumulative decline of 25 percent. Declining coffee prices largely offset the $65 million in additional U.S. aid this year. More foreign aid probably will do little to slow the downward spiral of the economy.

Although additional U.S. economic aid will probably not be of the $300-million magnitude Duarte is urgently requesting (an increase of $50 million to $100 million is a more realistic expectation), it should be sufficient to prevent the guerrillas from winning in the economic arena the victory they cannot win on the battlefield.

How can the United States help break the current stalemate to bring about the movement necessary for a democratic solution?

Allowing the stalemate to continue is a course that will result in a victory for the guerrillas. In a war against guerrillas, as Lt. Gen. Wallace H. Nutting of the U.S. Southern Command put it in a recent press conference, if you aren't winning you are losing.

All-out military support of the regime, including significantly increased amounts of economic aid, might save the junta, but it now appears difficult to implement given the Reagan Administration's budgetary constraints and the absence of any active support in the United States for greater escalation. And even if the Administration could summon up the necessary money and public support, the ability of the Salvadoran government to successfully wage a campaign to repress violence while implementing reforms is at best uncertain.

El Salvador's best prospects for putting an end to the bloody conflict now tearing the country apart lie in the search for a democratic political solution. Of course, it would be best if the Salvadorans themselves would overcome the deep animosities and fears that now beset them. President Duarte recently invited any group that would lay down its weapons to help arrange and take part in national elections. But he excluded any negotiations or dialogue with "organized armed sectors." For its part, the Democratic Revolutionary Front does not reject elections but insists that negotiations occur before they are held. In addition, the front refuses to urge the guerrillas to lay down their guns, maintaining that to do so would be "political and physical suicide."

Still, leaders both of the front and the Christian Democrats have reportedly expressed a willingness to hold informal talks with no preconditions. The time may be ripe for a coordinated international effort to bring together all parties to the dispute for dialogue.

There should be a meeting of concerned governments, with the various Salvadoran factions waiting in the wings. While Cuba and other governments giving military support to the insurgents might not participate in such a meeting, that should not deter others.

The Organization of American States would be a proper forum for bringing the governments together, as most of them are members or have observer status. Certainly, some foreign governments will be reluctant to engage in what might be considered "intervention" in another nation's internal affairs. And some Salvadoran factions will object on similar grounds. But such considerations must be put aside by the recognition that the El Salvador war is a matter of grave concern which threatens regional, if not global, peace and security. The efforts in 1978 by the Organization of American States to help resolve the crisis in Nicaragua offer a precedent.

If it is not possible to act within such a framework, there is nothing to prevent friendly foreign governments from cooperating in the search for peace outside of the Organization of American States. A political solution for El Salvador has already been discussed at a number of high-level meetings of foreign government leaders, such as President Reagan's meetings with Mexican President Jose Lopez Portillo and his Oct. 18 discussions with French President Francois Mitterrand. Although no peace initiatives have resulted from these bilateral sessions, they have been useful. They conceivably could be expanded into an informal multilateral meeting of key nations (such as the United States, France, Mexico, Venezuela, West Germany, Ecuador, Canada) at the foreign-minister level. Such a meeting at least might be able to agree on measures for bringing about a dialogue between the Salvadoran government and its leftist opponents and to form a contact group for carrying this initiative forward.

Bringing about a peaceful, democratic solution of the bloody conflict in El Salvador is admittedly extremely difficult and complex, and may prove impossible. But the objective at least merits a major effort by responsible and concerned members of the world community. In view of the current across-the-board stalemate in El Salvador and the apparent willingness of some of the parties to talk with one another, now may be the time for such an initiative to succeed.●

AUTHORITY TO ESTABLISH FEES AND ALLOWANCES FOR JURORS

HON. WALTER E. FAUNTROY

OF THE DISTRICT OF COLUMBIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. FAUNTROY. Mr. Speaker, the bill I am introducing today will provide the Council of the District of Columbia with the authority to establish fees and allowances for jurors serving in the Superior Court of the District of Columbia. The measure will amend the District of Columbia Code, section 11-1906 which now states that: "Jurors serving in the Superior Court shall receive the same fees as jurors serving in the United States District Court for the District of Columbia." The impact of this language is that su-

perior court juror fees are pegged to the Federal fee. The amending language will change this situation.

The Court Reform and Criminal Procedure Act of 1970 created a State-like court system in the District by removing local jurisdiction from the Federal district courts. However, a separate witness and juror fee system was not established. As a result, the current fee for a juror in the Superior Court of the District of Columbia is the same as the Federal fee, $30 per day, with additional payments for protracted service.

There has been a continual escalation in the total amount of fees paid over the years and the increases in the fee limit has a profound affect on the District. Between the years 1976 and 1978, the superior court spent and average of $1,457,161 per year on juror fees. However, with the increase in per diem as of January 1, 1979, from $20 to $30 the District had to ask the Congress to approve a supplemental appropriation of $500,000 to fund the increase for the remaining portion of fiscal year 1979. In 1980 the budgeted amount of superior court juror fees was $1.6 million and the needed amount was over $2 million. Likewise, the budgeted amount for juror fees in fiscal year 1981 is $1.8 million with an anticipated shortfall of approximately $200,000. The trend will continue in fiscal 1982.

In comparison with other States the juror fees in the District are exceptionally high, and this is principally because the District is tied to the Federal standard for U.S. district courts. Presently, a survey conducted by the Center for Jury Studies, revealed that beginning in 1980 the average juror fee in State and local courts averaged approximately $10 per day. This quite clearly is an inequitable situation as far as the District is concerned.

Since the existing schedule of juror fees is having a disasterous impact on the District's budget and because it is way out of line with the fees paid in most other jurisdictions I believe the law should be amended to allow the City Council to determine what the adequate rate of compensation should be for jurors serving in the Superior Court of the District.●

A TRIBUTE TO DR. PHILIP J. BEAN

HON. ROY DYSON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. DYSON. Mr. Speaker, I rise in honor and commemoration of a truly remarkable man, Dr. Philip J. Bean of St. Mary's County, who passed away December 3, 1981. Dr. Bean epitomized the old-fashioned, caring, country doctor, and he has left behind a legacy of selfless, dedicated service to the people of St. Mary's County.

Born in Baltimore in 1891, he came to the area in 1914 after an internship at Baltimore's Bayview Hospital. From the outset, he took his practice to the sick, making his first calls on horseback, and working out of a saddlebag. In the years before his retirement he was still making regular visits to his bedridden patients in outlying nursing homes.

Dr. Bean's mark on the community is immeasurable. Before he retired in 1980, he had delivered more than 5,000 babies, including some of the most prominent citizens in the area. According to a local legend, he was once honored at a gathering where all those who had been delivered by him were asked to rise. The entire room stood up.

Throughout his career, Dr. Bean was recognized for outstanding service. In 1959, Pope John XXIII honored him as a Knight of St. Gregory in recognition of his good work, distinguished personal character, and notable achievements. In the mid-1960's, the St. Mary's Chamber of Commerce named him their Man of the Year. He agreed to attend the ceremony, however, only on the condition that all the proceeds would go to St. Mary's Hospital. Most recently, the Knights of Columbus voted him Man of the Year. Yet despite his enormous success and recognition, Dr. Bean remained a humble man who worked with devotion for his people.

Mr. Speaker, the love and dedication of Dr. Bean has been an inspiration to the citizens of St. Mary's County and to all those who met him. He is survived by his wife of 66 years, Sarah, 3 sons, 16 grandchildren, and 24 great-grandchildren. Dr. Bean has passed away, but his work and example live on in the hearts and minds of the many people that he helped and touched.

Perhaps the December 4, 1981, editorial by Richard Polk in the Enterprise stated it best when he said:

When one of Dr. Philip Bean's babies heard of his death Thursday he remarked, "The county isn't big enough to hold the people who want to come to his prayer service."

That is the feeling held by everyone of this beloved old country doctor. Terms like "kindness" and "total dedication" were what people used to describe the doctor from Great Mills.

He spanned the era of the horse and buggy to the day of the automobile. When he started practice there were few roads and great distances between housecalls. Though he soon had a car after he started his practice, he could not put out his horse out to pasture. In those early days the roads were only passable during the dry months. The winter meant he would have to get out his saddle again. But he made the trips because that was the only way he could serve his patients.

He continued making housecalls for years after it became fashionable to have patients come to the doctor instead. He did it because that was the way he always did it.

Dr. Bean's practice covered some 66 years and during that time he touched nearly everyone in the county. "He was one of a kind," County Commission President George Aud, one of Bean's more than 5,000 babies, said.

"Other doctors might take your last buck," another one of Bean's babies observed, "Dr. Bean always gave your last one back."●

OVERPRODUCTION MUST STOP

HON. BERYL ANTHONY, JR.

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. ANTHONY. Mr. Speaker, I have received many letters from farmers in the past few months describing the impending disaster in my home State in the farming sector.

Many of the letters have not suggested any alternatives. However, I have just received one letter from Earl Clemmons of Tamo, Ark., which I believe goes to the heart of the issue. Either acreage reductions will be put in place for the 1982 crop in order to reduce total production or massive national bankruptcies of American farmers will result. There is no third choice. We have produced and are producing more than we can consume and sell overseas. It must stop in 1982.

I wanted to share with my colleagues, Mr. Clemmons' thoughtful letter:

Representative BERYL ANTHONY, Jr.,
Room 213 Cannon, Washington, D.C.

DEAR CONGRESSMAN ANTHONY: You are well aware that U.S. agriculture is in a disastrous economical condition. For too long the 5 percent of us involved in agriculture have subsidized the other 95 percent with cheap food and exports to help pay for imports of oil, coffee and automobiles.

Wealth can only be created by natural resources. Everything in the economy of this nation has its origin in the soil. Thus, there are only four ways of creating wealth: agriculture, including forest products; mining; fishing; and the oil industry. All segments of the economy are directly dependent on these four industries or their derivatives.

Now, as a result of good weather, we have over production of all agricultural commodities and prices are depressed far below production costs. This is going to trigger the target price regulation for rice and cotton, sending trauma through the Department of Budget—and unless you and your colleagues act immediately—further problems in 1982. We need a 20 percent set aside (compulsory) for all commodities for 1982 with no payments in order to stem the overproduction that faces us next year. Then we could get our income from the market place instead of the target prices.

When the agricultural economy is good—the problems of unemployment in Duluth, Detroit, Chicago, Moline, Waterloo and all the manufacturing centers are lessened.

When the farmers have some extra cash they will improve their capital accounts with newer machinery and profitable innovations. An agricultural production line is not like industry that can be stopped for a few days or weeks to stem overproduction. In most instances in the U.S., decisions are made in the winter, put into operation in the spring, and then carried through to harvest and marketing. Once we begin a crop, the only way is forward down a pathway paved with dollars and notes at the bank—hoping that the harvest will erase the notes and replenish the dollars in our pocket.

A 20 percent set aside would cut the demands on foreign oil imports and lessen the deficit in our balance of payments. A set aside would decrease the demand on borrowed capital, thus allowing the interest rates to decline futher. A set aside, by helping to move the markets up, would permit many farmers, especially cotton and rice, to repair their financial houses thus lessening demands on target prices and FHA financing.

Sincerely,

EARL CLEMMONS,
Tamo, Ark.●

HUMAN RIGHTS

HON. DON BONKER

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. BONKER. Mr. Speaker, Aryeh Neier, vice chairman of the Helsinki Watch Committee and the Americas Watch Committee, which are important human rights organizations concerned with human rights violations in Eastern Europe and Latin America, recently wrote an Op-Ed piece entitled "Of Reagan and Rights." In his article Mr. Neier analyzes the Reagan administration's compliance with human rights laws and notes, "up to now such laws have been disregarded." I would like to commend to the attention of my distinguished colleagues Mr. Neier's thoughtful comments.

[From the New York Times, Nov. 12, 1981]

OF REAGAN AND RIGHTS

(By Aryeh Neier)

According to a State Department policy memo recently approved by Secretary of State Alexander M. Haig Jr., "Human rights is at the core of our foreign policy." Public disclosure of this memo seems to have ruffled feathers elsewhere in the Administration. James A. Baker 3d, the White House chief of staff, dealt with the matter on a television program by attempting to downgrade the memo, saying it did not constitute "any significant change in policy."

It is President Reagan's prerogative, of course, to embrace the department's memo on human rights enthusiastically or to repudiate it. However, whatever policy he follows, he must comply with laws of the United States intended to promote human rights internationally. Up to now, such laws have been disregarded.

Here is the record.

The Administration has disregarded Section 502B of the Foreign Assistance Act. It requires the United States to deny "security assistance," including sales of defense equipment, to governments that engage in "a consistent pattern of gross violations of internationally recognized human rights." Hardly any country fits this criterion better than Guatemala, where, as the Inter-American Human Rights Commission of the Organization of American States has recently reported, the Government is assassinating thousands of teachers, priests, lawyers, journalists, and leaders of Indian and peasant organizations, unions, and opposition parties. Yet in June, the Administration sold $3.2 million worth of trucks and jeeps to Guatemala after removing this equipment from the "security" assistance list.

The Administration has disregarded Section 701 of the International Financial Institutions Act. It requires United States representatives at multilateral development banks to oppose loans to governments engaging in a "consistent pattern of gross violations of internationally recognized human rights." This law specifies that gross violations include, "torture or cruel, inhumane, or degrading treatment or punishment, prolcnged detention without charges, or other flagrant denial to life, liberty, and the security of the person."

Disregarding this law, the United States has recently voted, in multilateral development banks, for loans to Argentina, Chile, Paraguay, South Korea, and Uruguay, even though the State Department's own published reports show that all these countries have engaged in the specified violations. For example, the Argentine Government admits that it holds some 900 people in prolonged detention without charges; in addition, it refuses to account for the "disappearances" of an estimated 20,000 people in the last five years.

The Administration has disregarded Public Law 96-259, as amended in 1980. It requires that: "The Secretary of the Treasury or his delegate shall consult frequently and in a timely manner with the chairman and ranking minority members [of several specified Congressional committees] to inform them regarding any prospective changes in policy direction toward countries which have or recently have had poor human rights records."

The first notice to Congress of a change in policy was a letter from Treasury official, W. Dennis Thomas, dated July 1, 1981, and received by the House Banking Committee on Friday, July 3, when many members of Congress had already left Washington for the holiday weekend. Votes on a $300 million loan to Argentina and a $40 million loan to Uruguay (which, since the 1973 coup, probably has had, per capita, the largest number of political prisoners in the world) took place on Tuesday, July 7. The vote on a $126 million loan to Chile took place on July 8. As the Administration was aware, Congress would be in recess that week.

For a long period, the Administration disregarded Section 624(f) of the Foreign Assistance Act. It provides that: "There shall be in the Department of Sate an Assistant Secretary of State for Human Rights and Humanitarian Affairs." In early June, President Reagan's first nominee for the post, Ernest W. Lefever, withdrew following a 13-4 vote by the Senate Foreign Relations Committee to reject his nomination. Now, five months later the President has finally nominated a candidate, Elliot Abrams, to fill the post.

The Abrams nomination is a welcome sign to advocates of human rights both because it is associated with implementation of the policies called for in the State Department memo and, more important, because it is a beginning step in complying with the laws intended to promote human rights. In determining whether to confirm Mr. Abrams, the Senate should satisfy itself that he will see it as his first duty to make certain that Mr. Reagan and the Administration fulfill the constitutional mandate that "he take care that the laws be faithfully executed."●

THE INTERNATIONAL SECURITY AND DEVELOPMENT COOPERATION ACT OF 1981

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. OTTINGER. Mr. Speaker, I rise to express my concern for provisions in the conference report on the International Security and Development Cooperation Act. While I have always believed that U.S. foreign assistance is crucial to our national security and world stability, I am greatly disturbed that this measure directly contradicts our interests in that it repeals human rights restrictions on providing military aid to some of the worst tyrants in the world.

I am particularly distressed that the conferees repealed the ban on military aid and sales to Argentina only days after a new hard-line government ousted the brutal regime of President Viola, reportedly for being too moderate. Indeed, several days before the House considered its version of the foreign aid authorization, my friend from Connecticut, Mr. GEJDENSON, joined me in circulating a dear colleague letter which detailed the appalling human rights climate in Argentina under President Viola. We argued that any attempt to weaken the human rights restrictions on aid to Argentina could only encourage security forces there to continue their widespread violations of human rights including torture, repression, and virulent anti-Semitism.

Days later, a new and frightening development occurred in Argentina which confirmed our worst suspicions, and which makes the repeal of human rights restrictions even more dangerous. On December 11, 1981, President Viola was ousted by Leopoldo P. Galtieri, a reported hard-liner who opposes elections in the foreseeable future as well as any dialog with Argentina's political parties. Clearly, Mr. Galtieri can only worsen an already brutal human rights climate in Argentina.

Nonetheless, the conferees went ahead with the repeal, thus imperiling thousands of Argentines who have looked to the United States for some hope and relief from torture and repression.

I am also disturbed that the conference report lifts the ban on military

sales and aid to Chile. While the conferees adopted a provision requiring Presidential certification of significant progress in human rights, it does not condition aid or military sales on curbing torture or other human rights abuses.

Despite these highly disturbing provisions, the conference report does make sense in other areas. It continues to link aid to El Salvador to political and economic conditions; it retains the Clark amendment which prohibits covert or overt aid to any forces in Angola, thus keeping alive the prospects for a settlement on Namibia; it authorizes $1.6 billion in each year for development assistance programs; it removes the Peace Corps from ACTION and establishes it as an independent agency within the executive branch; it authorizes $785 million each year in economic support funds for Israel on a grant basis; it provides $5 million in fiscal year 1982 for infant feeding programs, and $1.5 million for human rights activities.

On the basis of the more positive provisions and objectives of the bill, I will support it. While some of its provisions represent a tragic step backwards toward the worst human rights violators, taken as a whole, the package should be accepted for its continuation of vital development assistance programs and its contribution to world stability and peace. I do want the administration to know, however, that I will vigorously oppose all of its attempts to provide military assistance to regimes which make torture, repression, brutality, and anti-Semitism a way of life.

Mr. Speaker, because of my particular concern for Argentina and its future human rights situation, I am including in today's RECORD the "Dear Colleague" letter that the gentleman from Connecticut and I circulated on December 8. It is vital that we understand the human climate even before the ouster of Viola, and what it promises to be in the future:

HOUSE OF REPRESENTATIVES,
Washington, D.C., December 8, 1981.

DEAR COLLEAGUE. It appears likely that the House will consider the foreign aid authorization bill (HR 3566) later this week. Amendments may be offered to significantly weaken the Foreign Affairs Committee's carefully constructed compromise language which conditionally repeals the prohibition of military aid to Argentina yet retains certain restrictions on such aid in order to signal Congress' concern over the human rights situation in Argentina.

The Committee has recommended the conditional repeal of Section 620B (or the Foreign Assistance Act) which prohibits military assistance to Argentina on human rights grounds. The new language states, however, that military assistance to Argentia can only be resumed if the President submits a detailed report to Congress certifying that the provision of assistance is in the U.S. interest, and that the Argentine Government has made significant progress in complying with the internationally recognized principles of human rights. The language requires that particular attention be paid as to whether the Government of Argentina has made every effort to account for those citizens identified as "disappeared" and whether the Argentine Government has brought to justice or released those prisoners imprisoned at the disposition of the "National Executive Power."

We are distressed that Congress is considering even a partial repeal of human rights restrictions on providing aid to Argentina. Nonetheless, we commend the Committee for fashioning a compromise which would give the Administration flexibility in dispensing such aid, while continuing to make clear Congress' great concern for the terrible human rights situation in Argentina.

Consider the human rights climate in Argentina today:

(1) Disappearances: No explanation or accounting has yet been given for the 9,000 documented disappearances (to say nothing of the unreported disappearances estimated to range to as high as 20,000). As Time Magazine recently reported: "Most of those who disappeared . . . were abducted by plainclothesmen claiming to be members of the Argentine security forces. The evidence is overwhelming that many, if not most, of those seized were tortured, murdered, and their bodies dumped in secret graves."

(2) Arrests Without Due Process: There are an estimated 750 political prisoners who are incarcerated indefinitely "at the disposition of the National Executive Power (PEN) by reason of state of siege." The majority of these prisoners have been in prison for over 5 years without having been brought to trial.

(3) Anti-Semitism: In March of this year, the Argentine newspaper publisher Jacobo Timerman published an article in the New Yorker describing his 29 months of imprisonment in Argentina. This article is but one of many that document that extreme anti-Semitic, Nazi elements continue to operate openly in the armed forces and in the government of Argentina. Such virulent anti-Semitism is the virtual official policy of the regime that the Reagan Administration has chosen to embrace.

(4) Political Rights and Freedom of Expression: Union and political activities continue to be prohibited. Thousands of short term arrests at rallies occur regularly and newsmen have been threatened and violently repressed.

Jacobo Timerman, who endured the systematic torture and brutal repression of the Argentine Government has said: "A quiet diplomacy is silence; a silent diplomacy is surrender." Any attempt to further weaken human rights restrictions on aid to Argentina would add to the recent U.S. record of a repugnant diplomacy of complicity. Total repeal of Section 620B can only encourage the security forces of Argentina to continue their brutal violations of human rights, torture, repression and virulent anti-Semitism.

The language contained in the foreign aid authorization bill is reasonable. It allows the Administration flexibility, yet does not wantonly condone the brutal human rights violations of the Argentine Government and its security forces. It provides hope to thousands of Argentines—the relatives of the disappeared and many others—that the United States has not abandoned its commitment to human rights in Argentina and around the world.

We urge you to reject any measure to weaken or eliminate the human rights conditions for aid to Argentina contained in the International Security and Development Cooperation Act.

Sincerely,

RICHARD L. OTTINGER,
Member of Congress.
SAMUEL GEJDENSON,
Member of Congress.●

A PROUD ANNIVERSARY FOR PATTI LaBELLE

HON. WILLIAM H. GRAY III

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. GRAY. Mr. Speaker, I rise to share with my colleagues my thanks for your hospitality today in playing host to concert and theater star Patti LaBelle.

Your graciousness will mean a great deal to Ms. LaBelle, and I know that her visit with you will be a highlight of this, the 20th anniversary of her show business career.

I am proud, Mr. Speaker, to count Ms. LaBelle as a native of my home city of Philadelphia. This talented woman launched her career in our city, singing in local churches and clubs. She soon achieved fame as the lead singer of Patti LaBelle and the Bluebells.

In the 1970's, demonstrating her considerable versatility, Ms. LaBelle was the star of the disco group LaBelle, a group universally acclaimed as one of the most talented and best known in its field.

Most recently, after 4 years of success as a solo performer, Ms. LaBelle turned her talents to the stage, opening here in the Nation's Capital as star of the show "Arms Too Short To Box With God." Ms. LaBelle has scored rave reviews for her performance, and is looking forward to continued sellout performances and a national tour.

As successful as Ms. LaBelle's career has been, Mr. Speaker, she has never forgotten her hometown. Her talents have taken her to such world-renowned showplaces as the Met, Carnegie Hall, the Apollo, the Olympia in Paris, the Academy of Music, and the Drury Lane in London. Yet, she has participated in numerous civic affairs and charitable causes both in Philadelphia and across the Nation. She resides with her husband, Armstead, and their three sons in Greater Philadelphia, and only recently was the recipient of the key to the city of Philadelphia.

I am proud, Mr. Speaker, to recognize Patti LaBelle on the 20th anniversary of her distinguished career in show business, and I take this opportunity to wish her well in the many new avenues in which she intends to use her talents in the years ahead.●

LEGISLATION TO MODIFY TAX LEASING PROVISIONS

HON. JOHN F. SEIBERLING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. SEIBERLING. Mr. Speaker, I am introducing legislation today to modify the tax-leasing provisions of the Economic Recovery Tax Act.

Several bills have been introduced to repeal these provisions entirely, but I think that would probably be going too far. My bill is an attempt to retain the beneficial features of tax leasing while eliminating the bad features—and saving the Treasury billions of dollars.

Mr. Speaker, I was an early cosponsor in the 96th Congress of the Jones-Conable Capital Cost Recovery Act, the predecessor of the accelerated depreciation provisions of the Economic Recovery Tax Act. Although I had some concerns about the specifics of that legislation—and still do—I supported—and still do—the concept of accelerated depreciation as one way to help our Nation's industries meet their enormous need for investment capital. Properly drawn accelerated depreciation legislation is a supply-side measure in the truest sense of that overused term.

But accelerated depreciation has certain problems which cannot be ignored. One of these is that firms which are unprofitable or marginally profitable cannot use accelerated depreciation because they lack taxable income from which to take deductions. Under existing law, unused deductions can pile up for as long as 18 years, waiting to be applied to taxable income.

This has two unfortunate consequences. First, many corporations would be excluded from using a vital capital formation tool if a way were not found to permit them to get the tax value of their depreciation deductions. Moreover, they would be put at an even greater competitive disadvantage with profitable firms, which can reduce the effective cost of their investment dramatically through accelerated depreciation and the investment credit.

Second, firms with unused deductions would become attractive takeover targets, since acquiring firms have the right to take a merged company's unused tax benefits and use them to shelter its own income from taxation. Without a way for companies to dispose of their unusable tax benefits, the enactment of the increased tax benefits would almost certainly result in a wave of corporate mergers based on tax considerations, not on whether the merger makes sense from an economic perspective. Unfortunately, tax leasing itself may be providing some of the funds for the current spurt of mergers.

Tax leasing was devised as a way for firms to dispose of their unusable tax benefits from the investment tax credit and accelerated depreciation deductions. Under the new law, a company without taxable income which invests in depreciable assets can enter into a sale and leaseback with a "profitable" company (that is, one that has taxable income) for the sole purpose of transferring tax benefits to the latter company. The profitable company makes a down payment to purchase the equipment, which constitutes the only exchange of cash in the whole deal. Provided that the other minimal requirements of tax leasing are met, the profitable company acquires the legal right to the investment credit and depreciation deductions on the equipment. From the unprofitable company's point of view, its investment cost has been reduced by the amount of the down payment, and it has shed unusable tax benefits. Of course, the unprofitable company may, in fact, have substantial profits, but because of other tax benefits may have no taxable income.

The essential question that Congress must ask about these leasing deals is how much of the tax benefits from the investment credit and accelerated depreciation is being passed through to the unprofitable firms, and how much is being retained by the profitable firms.

Any answer to this crucial question is complicated by the rather involved manner of computing the tax "pot" available from the investment credit and depreciation deductions. This computation must take into account the annual tax effects of several factors: The investment credit; the lease payments, which are income to the profitable company; the loan payments made by the profitable company to the unprofitable company, the interest portion of which is deductible to the profitable firm; and the depreciation deductions on the equipment. And when the annual tax effect of the interaction of these factors has been determined, it must be expressed in terms of its present value, an analytical technique which factors in the time value of money by discounting future cash flows at some constant rate. Complicating this analysis still more are the fact that the life of the lease—which is governed to some extent by the life of the equipment—can affect the total tax benefit, and the fact that these tax benefits are actually a commodity whose price is determined in the marketplace—and whose price can thus change according to changed circumstances. For example, a recession, which reduces all business profits, would increase the supply of and reduce the demand for tax benefits, which would cut the price that profitable companies have to pay for them.

But even with all these complications, it is essential for Congress to attempt to evaluate these tax deals in order to insure the best allocation of Federal tax dollars. From the best information I have been able to obtain, it appears that the unprofitable companies are currently receiving only about 60 percent of the total tax benefit available from their investment credits and depreciation deductions.

To take an example—based on an illustrative lease prepared by the Joint Tax Committee—Loser Corp. and Winner Co. enter into a 15-year tax lease for a $1 million machine. Winner pays Loser $200,000 cash and an $800,000 note, and Loser agrees to lease the equipment from Winner at a price whose annual payment exactly matches Winner's loan payment; thus, no money other than the $200,000 down payment changes hands.

From Loser's perspective, its $1 million machine now costs only $800,000. From Winner's perspective, the deal looks like this: when all the investment credits, depreciation deductions, interest expense on loan payments, and rental income are considered, Winner will have tax savings in the first 5 years totaling $521,400, and tax payments for the next 10 years totaling $329,500, for a net tax saving of $191,900.

But it is not accurate or even credible to say that Winner has paid $200,000 for benefits totaling only $191,900, because the tax savings and payments have to be evaluated in terms of their timing. Since the tax savings occur in the first 5 years and the payments do not begin until 5 years in the future, the present value of the tax benefits of this deal—at an 8.1 percent after-tax discount rate—is actually $321,000, not $191,900. Loser has received $200,000 from a total tax "pot" of $321,000, or 62 percent, and Winner gets the balance, or 38 percent. It is this enormous diversion to the winners of tax benefits Congress intended for the losers which has led to calls for repeal of tax leasing.

The legislation which I am introducing today retains the advantages to the loss company of tax leasing, while eliminating the waste which occurs from using a profitable company as the middleman to enable companies to dispose of their unusable tax benefits. Under my bill, loss companies would receive directly from the Treasury what the market appears to be giving them now for their tax benefits—20 percent of the value of their investment. This is done through a refundable investment credit of 20 percent. Future depreciation deductions on that equipment would be prohibited, since the effect of the 20-percent credit is to give the company the same

benefit of its investment credits plus accelerated depreciation as it would obtain by leasing them.

Further refinements of this legislation may be necessary as we obtain more information about the established market price involved in these deals. But in any event I am opposed to tax leasing as it exists today, because it must inherently involve wasted tax resources. From the taxpayers' and the unprofitable companies' point of view, tax leasing is a catch-22. If there is no benefit in tax leasing to profitable companies, they will not enter into them, and unusable tax benefits will pile up—but to the extent that there is some benefit to profitable companies from these leases, tax resources are being misdirected. And this does not take into account the commissions paid to investment bankers and other advisers who bring the two parties to the lease together. Their services are not free.

In recent testimony before the Senate Finance Committee, Treasury officials testified that tax leases will cost the Treasury $14.7 billion a year by 1986. If this money goes to its intended beneficiaries, it will be well spent. Congress has a strong obligation to see that it does.●

LONG REPORTS CRIME SURVEY RESULTS

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. LONG of Maryland. Mr. Speaker, Americans want security in their homes and of their persons—and are demanding curbs on crime. Even nonvictims feel crime is a daily threat.

I recently asked my constituents in parts of the Second Congressional District what experiences they had had with crime and with the system for obtaining criminal justice, as well as what they had done personally to prevent crime.

Here are some of the answers:

My first cousin was murdered in broad daylight in the entranceway of his apartment building. Five youths were seen by neighbors running away after gunfire . . . Suspect never caught, though $10,000 reward was offered.

My son and I were held at gunpoint in our home for 45 minutes and robbed. We were threatened and thought we might die that night.

A man forced the victim to stop and then stood beside the car demanding victim lower driver's side window. When victim refused, culprit smashed window and glass sprayed through car, cutting victim and his wife.

(The culprit) ran a red light, struck her car, jumped out of his car and assaulted her * * * then left the scene. For these acts, he received no sentence—not even a traffic ticket. Plead insanity—it's the greatest!"

A sign (warning of community patrols) was put up and was stolen!

Our home was broken into and robbed. A suspect was caught with some of the stolen articles. * * * I got a letter from the State's Attorney's office stating the charges had been dropped * * * I still don't know why.

We take every precaution. My child doesn't know what it's like to walk to a friend's house one block away by herself.

As much as I regret having to do it, I am going to purchase a weapon for use at home * * * the police are not visible enough to prevent crime. We need more police.

Stiffer punishments should be given * * * Every home on my street has been robbed. We must do something now!

A summary of the responses to my questionnaire highlights the burdens on our criminal justice system—police, prosecutors, courts, jails—and points up the willingness of citizens to take a positive role in local crime prevention.

CONGRESSMAN LONG'S QUESTIONNAIRE ON CRIME

1. Have you (or your family) been victim of a serious crime in the past 2 years?

Yes—47 percent; No—53 percent.

2. If so, what type of crime?

Burglary—61 percent; robbery—25 percent; vandalism—6 percent; others—8 percent.

3. Did you report the crime to police? If yes, was a suspect caught?

Reported—94 percent; of those reported, suspect caught—38 percent.

4. Was the case brought to trial? If not, why not?

Brought to trial or pending trial—55 percent; disposed of through dismissal, plea bargaining, variety of other reasons—45 percent.

5. Was the suspect convicted?

Of those cases brought to trial—95 percent yes.

6. Was the sentence fair? too light? too harsh?

Fair—26 percent; too light—63 percent; too harsh—0 percent; unknown, unsure—11 percent.

7. Were you kept advised of the status of the case?

Yes—31 percent; only through own initiative—6 percent; no—63 percent.

8. Does your neighborhood have a citizen crime prevention program?

Yes (have or starting one)—26 percent; no—74 percent.

9. If so, do you participate? If not, would you be willing to?

Participate now—11 percent; would participate—79 percent; would not or don't—10 percent.

10. What measures, if any, have you taken to protect yourself and your property?

Most frequently mentioned (many respondents mentioned more than one). Improved locks, better lighting or use of timers, installation of alarm systems, having a guard dog or a firearm on premises, trade house-watch help with neighbors, mark belongings for identification.

Mr. Speaker, In July I joined with 15 of my colleagues to urge President Reagan to make crime prevention a top priority. I am saddened that the administration has not moved more swiftly.

Because most crime—such as burglaries, muggings, rapes, murders, arson, and vandalism—must be investigated, prosecuted and tried at the State and local levels, I have sponsored the Justice Assistance Act of 1981—H.R. 4481—to provide Federal seed money toward improving local criminal justice systems—including victim and witness assistance, juvenile crime prevention, career criminal prosecution, "Sting" operations, and antiarson activities. Up to $170 million per year could go toward State, local, and private citizen group efforts to halt crime. My bill has already won approval of the House Judiciary Committee. It now awaits House and Senate floor action.

In my message to constituents, Mr. Speaker, I pointed out that crime will stop only when criminals see punishment as swift, firm, and certain. It is clear from my survey, and from national studies, that this is far from today's situation. Enactment of my bill, and strengthening of criminal justice at the State and local level as well as the Federal level, will go a long way toward reaching that goal.●

SAUDI ARABIAN BEHAVIOR SINCE THE AWACS VOTE

HON. BOB SHAMANSKY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. SHAMANSKY. Mr. Speaker, the senior Senator from Rhode Island and the junior Senator from Ohio recently brought to the attention of the other Chamber the curious record of our "good friends," the Saudi Arabians, since approval of the $8.5 billion AWACS arms package. I want to bring this demonstration of so-called moderation to the attention of the House:

First, on October 29, 1 day after passage of the Senate vote in favor of AWACS and F-15 offensive armament, the Saudis increased the price of their oil by $2 a barrel. The new price, $34 a barrel, is nearly triple that of early 1978 when we first agreed to sell the Saudis sophisticated F-15 fighters for defensive purposes to encourage "moderation."

On November 10, the Saudis turned over $28 million to the PLO. Their annual funding of that terrorist body reaches roughly $400 million. Some of this money undoubtedly will help the PLO continue its arms buildup in Lebanon, directly jeopardizing the very cease-fire the Saudis helped arrange last summer.

Then the Saudis attacked Oman for its cooperation with the United States and Egypt in the military exercise, Operation Bright Star, and pressured Oman to ask the United States to reduce its participation. Bright Star, of course, was designed partially to improve our ability to defend Persian Gulf oil producers—like Saudi Arabia.

Finally, early in December the Washington Post reported that our

new-found Saudi friends and the other Arab States of the gulf council offered Oman $1.2 billion if the sultanate would cancel its agreement with the United States permitting us access to Omani military facilities. The Saudis denied the report, but their denial hardly was reassuring. Their Information Minister claimed his country and Oman shared a "unity of fate and aim . . . which might not be understood by the Western World." One thing that certainly cannot be understood is recent Saudi behavior if that nation indeed is an ally.

Other recent Saudi Arabian moves included trying to avoid the Camp David accords with proposals that do not even mention Israel by name, suggestions to bring the Soviets into Middle East negotiations, and continuing to refuse any American military facilities on Saudi soil or to cooperate in regional defense efforts against Russian expansionism. When the late President Sadat of Egypt recognized the futility of continued warfare with Israel, he made his historic trip to Jerusalem. Yet when the Saudis faced Libyan and Syrian hostility to their minimal peace proposals at the recent Fez conference, they dropped them.

I urge the administration to continue its support for the Camp David process and reaffirm its commitment to our two principal partners in the region—Egypt and Israel—with actions as well as words. And I urge the Saudis to behave like the friends they claim to be. Thank you.●

PROPOSED ELECTION LAWS DIM HOPES FOR DEMOCRACY IN BRAZIL

HON. MICHAEL D. BARNES

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. BARNES. Mr. Speaker, a recent development has darkened the prospects for democracy in Brazil. I am referring to reports that appeared in the press last week, with regard to new electoral legislation that has been introduced by President Joao Figueiredo.

For some years now I have been following the process of political liberalization in Brazil. This process, commonly known as abertura, is aimed at restoring the country to a democracy after 17 years of military dictatorship. But the new electoral law, which was introduced in Congress by President Figueiredo, will in fact slow down this process while assuring that the military will stay in power until at least the end of the decade. Among other things, according to the Washington Post, this legislation will require mandatory straight-ticket voting while prohibiting coalitions among the opposition parties.

The people in Brazil are anxiously waiting to return to a democratic system of government. The past few presidents have encouraged popular expectations by advocating abertura. I hope that the present government will understand the implications of not delivering what the people have been promised for a long time.

I also want to call to the attention of my colleagues an extremely unfortunate development which occurred last month, when a military court sentenced Luis Ignacio da Silva, a key labor figure, to 3½ years in jail for leading an illegal strike.

I want to include in the RECORD an article which appeared in the Washington Post describing these adverse developments.

[From the Washington Post, Dec. 6, 1981]

PROPOSED ELECTION LAWS DIM HOPES FOR DEMOCRACY IN BRAZIL

(By Jim Brooke)

RIO DE JANEIRO, December 5.—Dimming hopes for a return to democracy in Brazil, President Joao Baptista Figueiredo has sent to Congress a set of restrictive election laws that virtually guarantees uninterrupted rule by the present military-technocratic alliance through the end of the decade.

This week he also canceled part of Congress' upcoming summer break for a special session to act on the election package. The congressional session, which is to last through Jan. 15, is the first called by the executive in 13 years.

Figueiredo, the lastest of five Army generals to rule since the 1964 military coup, repeatedly has vowed "to make this country a democracy." Since he took office in 1979, his *abertura*, or liberalization program, has received widespread international acclaim as a showcase attempt to guide a Latin America military dictatorship back to civilian rule.

But the long-awaited election rules unveiled this week are written so as to ensure a government party victory at the polls next November.

As a measure of the sudden reversal, forecasters last month predicted Brazil's opposition parties would win governorship races in 18 of the 22 states. Today, political observers say the official Social Democratic Party will sweep at least 17 of the state races.

"It's a new Pearl Harbor," said Ulysses Guimaraes, a member of Congress and president of the strongest opposition party, the Brazilian Democratic Movement.

"We are facing the collapse of the electoral process," read the official statement of the moderate Popular Party, the second-largest opposition force. "What is planned here is nothing more, nothing less than the strangling of the opposition parties."

"It demystifies the farce of the abertura," commented Luis Ignacio da Silva, Brazil's most popular labor leader and president of the Workers' Party. Last month, a military court sentenced da Silva to 3½ years in jail for leading an "illegal" auto workers' strike. He currently is free while the conviction is appealed.

The new bill prohibits coalitions among the five opposition parties and requires mandatory straight-ticket voting. At the ballot box, Brazilians traditionally have voted first for their local interest. But under the new bill, by voting for a favorite candidate for city council an elector will also automatically vote for state deputy, federal deputy, federal senator, and governor—all on the same party slate. Not by coincidence, the government party's strength is concentrated at the local level—with 75 percent of the mayors and 87 percent of the city council.

Both opposition and government officials believe this system of "compulsory coattails" will sweep the government's relatively weak candidates at the state and national level into office. In 1984, this pool of elected officials is to make up an electoral college to choose Figueiredo's successor, whose term will run through 1991.

"The crucial differences between liberalization and democratization is that liberalization entails significant civil liberties—freedom of association, freedom of the press—but democratization is the point where higher national positions of government are put at stake in fair elections," said Guillermo O'Donnell, an Argentine political scientist here. O'Donnell is comparing the recent experiences of Spain and Brazil for a project on democratization sponsored by the Woodrow Wilson Center for International Scholars at the Smithsonian Institution in Washington.

"In Spain, the opposition was allowed to participate in the formation of the new regime and the writing of the new constitution," O'Donnell said. "But in Brazil, the military has been reluctant to let the opposition share responsibility."

Indeed, last week, at the same moment that nine opposition leaders were meeting with Brazil's minister of justice to negotiate the final details of an electoral reform bill, Figueiredo called leaders of the government party into his office to announce the preliminaries of his secretly prepared electoral package.

"The only topics we can discuss now are soccer and beauty contests," said Tancredo Neves, leader of the Popular Party, when informed of the new electoral rules.

Last Monday, Alfred Stepan, Brazilian scholar at Yale University was to give a speech on Brazil's democratization before the Overseas Development Council in Washington, shortly before he walked to the podium, he glanced at a Brazilian newspaper with news of the electoral package.

A paper here quoted him saying: "I had a prepared speech, but now I don't know what to say. . . . This is much worse than the Rio Centro bombing or the resignation of Golbery in its implications for the transition from liberalization to democracy. I don't know what to say."

Gen. Golbery do Couto e Silva, widely considered to have been the chief military architect of restoring democracy to Brazil, was replaced as chief of staff after resigning Aug. 6. Golbery had been under fire from the right since May, when he pressed for a complete investigation of suspected military involvement in the bomb explosion in which one military intelligence officer was killed and another wounded when a bomb they apparently were carrying exploded in their car.

Figueiredo's election bill is assured passage in Congress. If the government's slim majority cannot muster enough votes for approval, a filibuster by the opposition will be futile. In Brazil, all bills submitted by the executive automatically become law after 40 days if Congress does not act on them.

To discipline his party, Figueiredo has threatened to break the mandate of any government congressman who breaks ranks and votes with the opposition. Last month,

10 such defections in the normally rubberstamp Congress caused a key government bill to be defeated.

That vote was reportedly the first time since 1964 that the government lost its automatic majority—a result that is said to have led Figueiredo to push through his electoral law changes.

"Negotiation is back," reported a newspaper headline after the unexpected government defeat in Congress in October.

In September, Figueiredo suffered a mild heart attack, and for the first time in 17 years, Brazil had a civilian president. Vice President Aureliano Chaves took office for 51 days while Figueiredo was indisposed. In 1969, a military triumvirate blocked a civilian vice president from taking contol after the military president suffered a heart attack.

During Chaves' interim presidency, he paid a lengthy call on Congress—the second such presidential visit in 17 years of military rule.●

VIRGINIA AMORELLO

HON. DENNIS M. HERTEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. HERTEL. Mr. Speaker, I would like to take this opportunity to say a few words in memory of a dear friend, Virginia Amorello, former treasurer of the city of Harper Woods, Mich., and devoted wife and mother. She is fondly remembered by her family, friends, and members of her community for the love and devotion she gave to her family and the many contributions she made to her community.

Born in Highland Park, Mich., and a graduate of Ecorse High School and Detroit Commercial College, Virginia moved to Harper Woods in 1954. Here, starting as a clerk she began her career as a public servant. Her dedication and ability earned her promotion to administrative clerk, and in 1965 she was appointed city treasurer, where she served until her retirement in March 1981.

A devoted wife and mother, Virginia married Joseph Amorello 39 years ago; they had three daughters, Janine, Judy, and Janice, and six grandchildren.

Virginia worked tirelessly to enrich her community, her State, and her country. She was a devoted wife, model mother, and good friend. Her death on November 13 is a great loss and she will be missed dearly by her family and community. It is my privilege to honor her for her outstanding achievements and contributions to the city of Harper Woods.●

PERSONAL EXPLANATION

HON. MICKEY LELAND

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. LELAND. Mr. Speaker, I regret that I had to be absent on Wedneday, December 16, 1981, and missed most of the recorded votes. It was necessary for me to return to Houston for a meeting of great importance with our newly elected mayor, Kathryn Whitmire. I was paired for the votes cast today and returned to Washington at the earliest possible time.●

AN HONOR FOR ST. GREGORY'S

HON. WILLIAM R. RATCHFORD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. RATCHFORD. Mr. Speaker, I am honored to tell my colleagues today of the rare distinction achieved little more than 1 month ago by the parishioners of St. Gregory the Great Church of Danbury, Conn., my home town. I know that this House will join me in saluting the parishioners of St. Gregory's and its fine leader, Father John Wigh, and in wishing them great success in the noble endeavor on which they have recently embarked.

It was in early November, Mr. Speaker, that a delegation from St. Gregory's traveled to the Vatican to receive a rare blessing from Pope John Paul II for the cornerstone of a new church, designed in the shape of a dove, that is expected to be under construction by next April. The fruit of their travels was that St. Gregory the Great Church has become the first church in the United States to have its cornerstone blessed by a Pope.

For many years, St. Gregory the Great Church has played an important role in the religious life of its community—the community of my native city of Danbury. Its parishioners and clergy have turned a renovated barn on Great Plain Road in that city into a place of worship as dignified and as holy as any cathedral, any church in this land.

Now that St. Gregory's is embarking on an ambitious project of construction of a new church—a church that harkens in its architecture to the symbolic dove that is commonly depicted on the shoulder of St. Gregory in religious art—this cornerstone represents both a strong tie to the great traditions of the Holy See and a link to a future full of hope and promise, a cornerstone of the parish's faith in its community and in its own high purpose.

I know that my colleagues will join me in recognizing this historic pilgrimage by the parishioners of St. Gregory's, the momentous blessing by Pope John Paul II, and the commitment by these parishioners to building with a now blessed cornerstone a house of worship unique in all our land.

I ask permission, Mr. Speaker, to append to my remarks the text of an article on the pilgrimage of the priest and 29 parishioners of St. Gregory's that appeared on November 17, 1981, in the News-Times of Danbury.

ST. GREGORY PARISHIONERS VISIT POPE TO HAVE CORNERSTONE BLESSED

DANBURY.—St. Gregory The Great Church became the first church in the United States to have its cornerstone blessed by a pope when the priest and 29 parishioners made a pilgrimage to Rome last week.

Judy Rafferty, one of the parishioners who went on the pilgrimage, found it appropriate that Pope John Paul II, a man noted for his peace missions, should bless the cornerstone of the church which will be designed to resemble a dove.

"We waited in Pope Paul VI Hall with 8,000 people from all over the world to see the pope," Mrs. Rafferty recalled yesterday. "When the pope came into the hall, the room filled with an aura of excitement and happiness. When I first saw the pope, I was absolutely thrilled beyond words.

"The wonderful thing was that the excitement everyone felt was filled with an undertone of peace. It was such an honor to be in the same room and so close to him," she said.

The pastor of the church, the Rev. John Wigh, who returned with the parish delegation Friday, said the Vatican ceremonies were an emotional experience.

"I can't remember exactly what Pope Paul said to Father Alfred Russo and myself when he actually blessed the cornerstone, as it was such an emotional moment," Wigh said.

"But in essence, the message he wanted me to bring back to Danbury was that we should keep our faith and continue to be loyal children of the church," Wigh added.

Wigh said the papal blessing came about because several years ago one of the parishioners, Edward Markowski, had met an archbishop in Turkey. The archbishop, the Most Rev. John Henry Boccella, now has a high-ranking job at the Vatican.

"I said to Ed, 'Wouldn't it be nice if we could get a short note from the pope about our new church?' Ed wrote a letter to the archbishop and we received a reply asking us to bring the cornerstone to the pope for a blessing. We decided to make up a special small cornerstone face which we could cement into the actual cornerstone," Wigh recalled.

With the cornerstone tucked under his arm, Wigh left Nov. 5 with the 29 parishioners who signed up to go on the pilgrimage.

Wigh described the event this way:

"My parishioners sat in the tenth row from the front in the hall, which held 8,000 people, and Father Russo and I sat in special seats in front of the first row.

"When the pope first came in we couldn't see him, as everyone was standing. He walked side to side to greet the people.

"When he reached the row where our delegation was, Donald Rafferty presented him with a Danbury Stetson hat. The pope was really delighted. He pointed to his head and asked 'Mio?' for me? The pope thought the

hat was from Texas, but we told him that it was made in Danbury."

Wigh described how Pope Paul then went up to the platform where he addressed everyone in Italian. Then the pope recognized different priests from many different countries and spoke to each in their native tongues. When he recognized the St. Gregory priests and parishioners, Pope Paul said in English:

"I am happy to welcome the delegation from Saint Gregory The Great Church in Danbury, Connecticut. In blessing the cornerstone for your new church, I send my greetings to the whole parish family. May you always be aware of your dignity as members of the Body of Christ and give thanks to the Lord always."

After greeting all the delegations, Pope Paul left the platform to bless the sick. While this was happening Russo and Wigh went to stand next to a table on which lay the cornerstone, a wooden carving of the pope's coat of arms, and proof sheets of photographs taken during the pope's earlier greeting of the Danbury delegation. He blessed the cornerstone and coat of arms and autographed the pictures.

Russo, assistant pastor at St. Gregory's, was in Rome on sabbatical, studying at the North American College. Russo, who speaks Italian, was able to guide the local delegation through the tight security that has been in effect since the attempt on the pope's life in May.

St. Gregory's has for years been in a renovated barn on Great Plain Road. Parishioners decided to build a new church when they found out that it would cost $400,000 for more planned renovations.

The new church is designed to look like a dove from the air, with outstretched wings. The dove was chosen because it is a representation of the Holy Spirit and a symbol of St. Gregory the Great, who is often pictured with a dove on his shoulder.

Construction is expected to begin in April. The church has raised $500,000 for the new church, which is expected to cost $700,000.●

PERSONAL ANNOUNCEMENT

HON. THOMAS A. DASCHLE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. DASCHLE. Mr. Speaker, I make this statement by way of an explanation of a vote I made today on H.R. 5159, the Black Lung Benefits Act of 1981. It had been my intention to vote for this very good, this very needed piece of legislation. Unfortunately, as is increasingly becoming the case, a bit of parliamentary gimmickry forced me to change my vote to a "present." This piece of gimmickry was the inclusion in this worthwhile piece of legislation an amendment which gives a tax break to Members of Congress. I suppose nobody should be too surprised about another tax break being voted on this floor. It appears that for the last year we have been so concerned with creating tax loophole after tax loophole that all the other business of the Congress has taken a back seat. But this last tax loophole is just too much to swallow. I cannot justify to my own conscience voting for a tax break for myself when we have spent the past year cutting and cutting and cutting, on programs which the poor of this country need, not to buy a second car, or to put in a bigger swimming pool, or send a child to Harvard, but to merely survive. On the other hand, I could not bring myself to vote against a bill that would have provided the needed medical benefits to a large number of coal miners who, because of years of industry neglect, are suffering from a debilitating, and often fatal, disease. Faced with this Hobson's choice, I voted "present". But I would like to take this opportunity to denounce in the strongest possible terms the parliamentary maneuvering that tries to sneak by pay raises, however disguised, to Members of this body. If we continue to play these shabby tricks, this Congress will richly deserve the low level of esteem that the public has for it. I choose not to be associated with such underhanded tactics.●

MONSIGNOR BELA VARGA: HUNGARIAN PATRIOT

HON. JOHN LeBOUTILLIER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. LEBOUTILLIER. Mr. Speaker, my distinguished colleague from New York (Mr. GREEN) ably commemorated today the 36th anniversary of the last free elections in Hungary and the role the vice chairman of the Smallholders Party, Msgr. Bela Varga, played in those elections and in the preceding Budapest municipal elections.

As we consider the actions taking place in Poland today, we might well take note of the desire for freedom evidenced not so very long ago.

Msgr. Bela Varga had been a relentless fighter against totalitarianism of any color. His wartime record is that of a courageous fighter for the human rights of those persecuted by the Nazis, be they Hungarian Jews, Polish refugees, or escaped French POW's. For his services, President DeGaulle conferred upon him the cross of the Legion of Honor after World War II. He helped Hungarian Jews to escape deportation and arrest in 1944-45, and it can be said that he had upheld the most valiant and valuable assets of his priestly profession in politics and through humanitarian acts.

His steadfast opposition to Nazism did not diminish his dedication to democratic principles and his opposition to atheistic communism.

He resolutely rejected the Communist offer, backed by the Allied Commandatura in Budapest, for an electoral alliance with the Communist Party in the Budapest municipal election, which was to be the test run for the national election 1 month later. He organized a coalition of liberals, conservatives, reformers, and nationalists under the banner of the venerable Smallholders Party, the only significant opposition in the previous regime, and gathered 50.1 percent of all votes in "red" Budapest on October 7, 1945. This gave impetus to the national party to reject the electoral alliance and to win 57 percent of all votes cast in the November 4, 1945, elections while the Communists received only 17 percent.

As a result of the election, a coalition government was formed in Hungary with Zoltan Tildy, as President. Francis Nagy as Prime Minister, and Msgr. Bela Varga as the Speaker of the Parliament. Communist perfidy and intimidation, however, coupled with Soviet pressure, ended it on May 30, 1947, and Monsignor Varga had to flee his beloved Hungary. Prime Minister Nagy, after continuing on for a short time, soon disappeared in prison, as did many of the leaders of the party.

Msgr. Bela Varga continued his anti-Communist fight from emigration. With the benevolent approval of our Government, he had established the Hungarian Committee in 1948 which encompassed most of the emigre politicians who had served in some capacity in the Government or Parliament between 1945 and 1948. He had protested loudly the brutal suppression of human rights and individual freedoms between 1947 and 1956, and his services were recognized by President Eisenhower.

Today, Monsignor Varga still serves as a focus for opposition to the Kadar regime in Hungary, among Hungarians abroad. Recently, he commented on Hungarian-Polish solidarity and on the 25th anniversary of the Hungarian Revolution—statements which were carried by Radio Free Europe and Voice of America and were reprinted in the RECORD by my distinguished colleagues from New York (Messrs. GILMAN and GREEN).

At this anniversary of the last free elections in Hungary, we salute both the intrepid Hungarian people so devoted to Western values and the ideal of freedom and liberty, and one of their outstanding sons, a resident of New York City, Msgr. Bela Varga.●

TRUST FUND STATEMENT

HON. MARGARET M.HECKLER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mrs. HECKLER. Mr. Speaker, today I am reintroducing a revised version of H.R. 4945, the Low-Income Energy Assistance Trust Fund Act of 1981,

which I first introduced on November 12, 1981.

This legislation sets up the mechanism to provide for outstanding petroleum company overcharges owed the Federal Government to be made available for low-income energy assistance and weatherization.

The Department of Energy's Office of Special Counsel has identified $10.7 billion in alleged pricing and allocation violations by the 35 major oil refineries as of September 30, 1981. When the consumer, whether it be a major utility or an individual, who suffered because of these violations, is identified, restitution is made. But when the injured party cannot be identified, these moneys and any applicable fines will revert to the U.S. Treasury.

My legislation establishes a trust fund into which such unidentifiable moneys can be channeled for use, as authorized by the Congress, for low-income energy assistance and for home weatherization programs.

The use of overcharge repayments to finance these two very needed and worthwhile programs is very fitting. This legislation would make the major oil companies help the very people most affected by the high cost of home heating energy.

In Massachusetts alone last winter, 82,482 households received low-income energy assistance, up 43,482 from the previous winter.

This trust fund is an off budget item that would insure that despite across-the-board cuts in other programs, funds would be available to aid the truly needy to insulate and weatherize their homes and to receive assistance in paying the high cost of heating.

Mr. Speaker, I intend to press for early hearings on this measure and I urge my colleagues to support this legislation so that a trust fund can be established and begin to work as soon as possible.●

KEEN DISAPPOINTMENT

HON. HOWARD WOLPE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. WOLPE. Mr. Speaker, I rise to express my keen disappointment in yesterday's unannounced vote bestowing upon Members of Congress a substantial increase in allowable outside income. Only 6 weeks ago, during formal consideration of this very issue, the House overwhelmingly rejected an increase by a recorded vote of 271 to 147. Yesterday's vote—taken at a time when most Members were not on the floor to raise objection—undermines the clearly stated will of the Congress.

Legitimate and forceful arguments against the increase have been expressed effectively by many of my colleagues in previous debate and I shall not repeat them here. What we must understand is that last night our integrity as a deliberative body was compromised. As a Congress, we reached agreement that limitations on outside income should not be relaxed. Last night, without notice, explanation, discussion or consideration, a small group decided to discard the decision of the House—an action for which there is no excuse.●

OVERSEAS EDUCATION ASSOCIATION COMMENDATION

HON. STENY H. HOYER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. HOYER. Mr. Speaker, the Overseas Education Association, an arm of the National Education Association, represents teachers and affiliated professionals in the Department of Defense school system overseas.

This school system is one of the United States largest systems. With 277 elementary, middle, junior high, high schools, and a community college, the Department of Defense dependents' schools educate approximately 130,000 students. The Overseas Education Association represents approximately 6,500 teachers. Their job is not an easy one since these employees, because they are overseas, are often forgotten by policymakers here in Washington. There are many pressing issues facing these teachers, issues which the Post Office and Civil Service Committee, of which I am a member, have and will continue to examine this coming year.

During oversight hearings held by the Elementary, Secondary and Vocational Education Subcommittee of the Education and Labor Committee and the Subcommittee on Investigations of the Committee on Post Office and Civil Service, Jack Rollins, president of the OEA, presented testimony which I hereby submit for inclusion in today's RECORD.

Jack Rollins, a teacher at Misawa High School in Misawa, Japan, before he assumed the role of president of OEA, has presented a very interesting outline on the reality of teaching overseas. I would urge my colleagues who have an interest in this school system to read Mr. Rollins' excellent testimony. And I would also like to publicly commend the OEA for the vigorous and informed job they are doing on behalf of the DOD school system, the teachers who serve it, and the students and families who profit from it.

STATEMENT BY JACK ROLLINS, PRESIDENT, OVERSEAS EDUCATION ASSOCIATION

Mr. Chairman and Members of the Subcommittee on Elementary, Secondary, and Vocational Education of the Committee on Education and Labor and the Subcommittee on Investigations of the Committee on Post Office and Civil Service, I am Jack Rollins, President of the Overseas Education Association, which represents approximately 6,500 teachers in five regions administered by DODDS. My perspective of DODDS' administration of the Overseas Schools is that of a teacher. Before being elected President of the OEA I was a teacher at Misawa High School in Misawa, Japan.

I view this as a unique opportunity to speak to Members of Congress about the Overseas Dependent Schools. I am submitting a detailed presentation which outlines our objections to the administration of the Overseas Schools by DODDS. I ask that it be included as part of my remarks and inserted in the Committee's hearing record.

My comments will focus on teacher concerns about the DODDS system. Teachers in DODDS are perceived to have an enviable opportunity to see the world while teaching overseas. The reality of teaching in DODDS is quite different. The contrast between the image and the reality is quite stark.

Teaching overseas in a DODDS school means ever-increasing class sizes without any expectation that the school budgetary situation will improve. Teaching in an overseas school means waiting two or sometimes an unbelievable three years for materials and supplies. Teaching in a DODDS school means teaching in a dilapidated school building with inadequate facilities for your students. Teaching in the overseas schools means you can't be certain when you will be paid. That may sound incredible, but it's not. A teacher in Oslo, Norway has his or her paycheck processed through SHAPE Headquarters in Belgium. Many times it is late. The same applies to personnel records. The fact is that personnel management in DODDS is highly decentralized and relies on civilian personnel offices in the United States and overseas for support. DODDS does not have a comprehensive system to collect accurate and comprehensive data on students or personnel at regular intervals.

Teaching overseas in a DODDS school means inadequate housing and living quarters. Teacher status carries a low priority; the result is inadequate and inconsistent housing arrangements. DOD also uses discriminatory housing policies for teachers. The medical treatment for teachers overseas is inadequate. In many instances teachers are provided medical services only on a space available basis. To say the least, the inconsistent access to medical treatment available to overseas teachers is discriminatory.

Teaching overseas in a DODDS school means increasing job responsibilities without just compensation. Teachers are given additional extracurricular assignments without compensation. The evaluation system utilized by DODDS is inadequate and is often viewed as an harassment tool. For teachers who are interested in advancement, the DODDS' promotion system is a farce. Although Public Law 96-91, "Defense Department Overseas Teachers Pay and Personnel Practices Act," created the personnel authority for teacher pay schedules, appointment procedures, methods of employment, and the personnel operation and payroll system, teachers feel that the system as administered by DODDS is inept. The training programs for teachers are inadequate and the Certification and Recertification program is frankly a joke.

The recruitment procedures used by DODDS deserve comment. If I may take a few minutes of your time to explain the DODDS recruitment system, the order in which DODDS places teachers in vacancies each year is as follows:

1. Presently employed conditional or career teachers have priority in retaining their positions in a particular school if the position continues to exist.

2. Presently employed full-time indefinite teachers have priority in retaining their positions in a particular school if the position continues to exist.

3. Participants in the Inter-Regionals Transfer Program have priority in filling the remaining vacancies over local hires and stateside hires.

4. So-called locally hired dependents of military and DOD civilian personnel have priority in hiring for remaining vacancies over stateside hires.

5. Teachers hired stateside have priority for the remaining vacancies over local hires-tourists.

6. Tourists hired in an emergency should receive the last consideration.

Such a system designed to serve the needs of a school system worldwide can work only if there is a comprehensive centralized system to match the information about vacancies and qualified applicants within all of the above categories. DODs has no such comprehensive management system. As reported in the Department of Education's Report on the Overseas School Transfer Plan, the selection of school personnel varies greatly depending upon whether the personnel are being transferred, hired locally, or recruited from the United States. There is not a consistently applied policy for employing teachers.

I would like to make two additional points in this area. Career teachers, although theoretically eligible to apply for transfers to other schools, find in many instances that the vacancies are not reported until after the closing period for transfers has expired. This, in some years, has meant anywhere from 400 to 600 vacancies being denied to transfer applicants. A teacher in the overseas schools—despite the romantic image back home—is often frozen into a single teaching position with little opportunity for either advancement or transfer.

The last point in the area of teacher assignments and transfer concerns teachers who are hired stateside by DODDS. In some cases these teachers are hired in April but are, due to the slowness of the DODDS processing system, unable to arrive at their assigned school until November. These teachers miss the beginning of the school year; their students suffer; and to compound the whole comedy of sloppy hiring practices the teacher may find that the actual assignment is a field for which he or she may not be qualified—in which case, the teacher and students suffer for the ineptitude of DODDS.

The entire personnel management system of DODDS deserves close study by Congress. It is not too much to ask that the people employed to teach the children of our service people overseas be hired and employed through the most efficient and evenhanded system possible. I would suggest that since DODD's personnel authority originated through Congressional action, Congress through your Committees thoroughly review what DODDS has produced. In the area of transfer procedures. I would suggest a negotiated system between teacher representatives and DODDS through which teachers can apply and compete for vacancies in the world through a system made up of procedural requirements based on qualifications and points.

DODDS has a poor record in the areas of collective bargaining and grievance processing. If teachers have justified grievances, DODDS' attitude seems to be centered around refusing all grievances with the intent of forcing arbitration. There is very little attempt to resolve issues at lower levels; nor is there any process for resolution at regional or national levels. Basically, the only time the OEA has any success in getting DODDS to fulfill its obligations to its employees is by suing the Department in court or through arbitration or the Merit Systems Protection Board and Federal Labor Relations Authority cases. Even this process is problematical because DODDS has refused to do what the arbitrator, the MSPB, and the FLRA have ruled they do.

On the subject of bargaining, despite the law which requires negotiations on all policies that affect employees, DODDS has consistently refused to recognize OEA's right to bargain. During the negotiations which do take place, DODDS uses bureaucratic delay to complicate the bargaining process. The OEA argues that teachers in the overseas schools should have the same bargaining rights as other federal employees. It is clear that DODDS management philosophy is intent on thwarting the bargaining process at every level.

Another concern of teachers is that schools are moving to the practice of hiring employees other than teachers to perform the teachers' classroom responsibilities. Substitute teachers and aides, paid less than certified teachers, are being placed in classrooms to teach. In a world-wide system with decentralized and haphazard administrative procedures such as DODDS it is easy to see how schools are allowed to shortchange their students with unqualified instructors. In some cases, budgetary restraints force the school to use such methods. Frankly, it isn't surprising to see schools having to cut corners. They are forced to operate on shoestrings. For your information, DODDS has not to my knowledge developed a specific budget allotment formula as required by P.L. 95-561 for determining the minimum funding necessary for operating each school in the system. As a result, school principals are forced to make do. It is a sad commentary to say that our overseas schools will have to make do because DODDS has not met its statutory and educational obligations.

I will conclude by saying that DODDS teachers seek a managerial system educationally oriented and sympathetic to teacher and student welfare. It may seem unusual for me to be advocating the transfer of the DOD schools from the Department of Defense to the Department of Education when many are saying "Stay with Defense—they have all the money this year." There is no evidence either through past practice or present commitment that DODDS will truly prioritize the educational programs provided to the children of service people overseas.

I believe the Department of Education offers our students a better education. ED can offer us a more educationally oriented budget that would offer the different title programs along with additional monies for specialists and training needs. ED can offer us more adequate logistical support with improved and better managed inter-service support agreements with the military; ED can guarantee us the maximum standards of a DOD civilian overseas through legislative guarantees with Status of Forces Agreements (SOFA); ED can offer us the opportunity to grow in conjunction with other government school programs, such as the Section 6 schools; and ED can offer us the opportunity to fully participate in the education process by being members of curriculum committees, advisory committees, and North Central evaluation committees, and by honoring the government's obligations in the full faith collective bargaining arena.

The Overseas Education Association supports the Department of Education and supports the transfer of the Department of Defense Dependents Schools into the Department of Education. The OEA waits for the day when teaching overseas comes close to its stateside image. Improvement in the management of the overseas schools can only mean that the students in those schools will be receiving the education they deserve.

Thank you.●

GO SLOW WITH MA BELL

HON. EDWARD J. MARKEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. MARKEY. Mr. Speaker, I call to my collegues' attention the following New York Times editorial regarding telecommunications legislation. I concur with any number of people who have pointed out that this upcoming legislation could well be the sleeper issue of the 97th Congress. Telecommunications affects every single American, and impacts all sectors of our economy. This editorial accurately claims that the Senate-passed telecommunications bill is flawed and not well thought out. I urge my colleagues in the House to not repeat the mistakes of the Senate and to pay attention to this critical legislation as the debate on it intensifies. Last week, after months of a comprehensive investigation into the status of competition in the telecommunications industry, Telecommunications Subcommittee Chairman TIM WIRTH offered the House version of S. 898. While I have not completed an indepth analysis of this legislation, I will say at the outset that it is an enormous improvement over the Senate legislation. I am confident that as the House bill moves through an open legislative process, in the same manner in which it was drafted, we will be able to continue to improve upon a solid bill and produce telecommunications legislation which benefits all Americans. As this editorial points out, it is our turn to move cautiously and knowledgeably ahead.

[From the New York Times, Dec. 12, 1981]

GO SLOW WITH MA BELL

Telecommunications is to the nation what the sensory and motor nerves are to a person—critical. And telecommunications technology is changing at a pace that the law has been unable to match. Deregulation

has therefore become the slogan for letting the new market define itself and letting engineers take this exciting field where they can.

The Federal Communications Commission has decreed deregulation, urging Congress to revamp the nation's communications policy. The courts and the Justice Department, too, seem to prefer that Congress rather than lawsuits define the rules for a brave new world. With American Telephone and Telegraph moving rapidly into the void, the Senate has produced a bill that would dramatically free the company of many restraints. In the House, Chairman Timothy Wirth of the telecommunications subcommittee has now introduced a more cautious bill moving in the same direction.

The Senate bill would prescribe an express timetable for deregulating most long-distance communications and substantially liberating other A.T. & T. enterprises. But that would leave no room for correcting course if deregulation turns out not to stimulate but to discourage competition. As its details become known, the House bill should be judged by how well it guards against that risk.

Technologies now promise spirited new competition in long-distance service. Yet A.T. & T. must retain a monopoly over most local service. In return for that, it bound itself, in a 1956 antitrust suit, not to enter most of the new computer and data businesses. How then can Ma Bell deal with the erosion of its long-distance income? Some change is obviously needed.

The Senate bill, however, takes scant account of the fact that Ma Bell still controls 96 percent of long-distance business and 85 percent of the transmission facilities that its rivals must also use. For example, the Senate would abolish controls over long-distance business within two or at most four years. By then there may exist enough satellite and microwave systems to force Ma Bell to share its lines at reasonable rates. But what if they don't?

A.T. & T.'s rivals also fear that it will exploit its size and phone monopoly to gain unfair advantages. Ma Bell's unregulated enterprises, for example, might get favorable financing from its cash-rich regulated activities. Or Ma Bell might secretly subsidize them by sloughing off research and manufacturing costs on the regulated operations.

The Senate's answer to these fears would require Ma Bell to create a giant new subsidiary—not-so-Baby Bell—for all unregulated operations and to maintain an arm's-length relationship between them. But that is no answer unless the arrangement can be effectively policed. Both the General Accounting Office and the Reagan Justice Department agree that the Federal Communications Commission is not now equipped to do the job.

How should Congress proceed? Cautiously. Instead of decreeing fixed timetables for deregulation, it should instruct the F.C.C. to relax constraints—but only as market conditions and its auditing capacities permit. That may somewhat retard the benefits of free-market innovation, but it would prevent dangerous new concentrations while the law learns to deal with new hardware.●

BELMOND, IOWA

HON. COOPER EVANS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. EVANS of Iowa. Mr. Speaker, I was pleased to read the article in the December 15, 1981, edition of the Christian Science Monitor portraying Belmond, Iowa, which is in my home district.

It is truly a pleasure to read such a positive report on a small midwestern town. It deserves the attention it is receiving as a rural community that has developed an attitude of perseverance combined with a desire to grow.

Reprinted below is the article from the Christian Science Monitor.

BELMOND, IOWA—EVERYTHING GROWS HERE, EVEN ART

(By Maggie Lewis)

BELMOND, IOWA.—The average yield per acre in Iowa this year is 128 bushels of corn. In north-central Iowa soil and rainfall, the two main variables in farming, are very good for corn; and in Wright County the average acre pushes up 132 bushels, according to Gene Maahs of the Iowa Farm Bureau. But this year, farming near Belmond, a small town in that favored county, Dave Nelson grew 150 bushels of corn per acre. And Chloe Jenison's farm on the other side of town is producing corn, soybeans, and an art museum.

Both of these yields have to do with the third factor Mr. Maahs mentions when we get to Belmond: the people. Dave Nelson, who has wanted to farm since he was a baby (like three generations of Nelsons before him), is responsible for that extra 18 bushels an acre. And no one but Chloe Jenison would think of giving a farm for an art museum.

Chloe Jenison is a former schoolteacher, and the 120 acres she lives on east of Belmond have been in her family for over 100 years. She has no children, and she wants the farm to stay intact. If negotiations go right, she will give the farm to the Belmond Arts Council, along with $75,000 to put up an art museum, which would be supported by renting out the land to farmers.

If it seems strange for a town of 2,506 to have an art museum, or for an art museum to grow corn and soybeans, that's because you haven't been to Belmond. It's not so much that there's a bond between farming and art appreciation there, it's that life in Belmond is one of the most unified experiences available in the United States today. Everything in Belmond seems to be bonded to everything else. The Belmond Arts Council, whose annual Arts Festival, shows the paintings of off-duty farmers and accountants along with those of professional artists, is no exception. Marilyn Parks, director of the Iowa Arts Council, thinks Belmond is taking "the sane way" toward cultural activities. The kids who are in high school plays are also on the football team, she pointed out, and the owner of the local Ben Franklin Variety Store is one of the Belmond Arts Council's best organizers.

Dave Nelson puts it another way. He says that when he gets up in the morning and realizes he's 29 years old and will be farming for the rest of his life, "It gives me a good feeling I know where I'm at."

The farmland surrounds Belmond like a huge, still, black ocean. This particular land, or "ground" as it's affectionately called here, has a special hold on Belmonders. Farms are kept in families by shrewd fathers who put land in trust if they have daughters, so the husbands can't sell it off. Farmers fret over their sons' marriages, afraid the land will go in divorce settlements. Well they might fret—it is some of the richest farmland in the world, and, at up to $4,000 an acre, some of the most expensive. (Last year, Belmond farmland sold for $1,000 more per acre than the Iowa average.) Nelson and his father and brothers are farming 1,400 acres together, sharing machinery and expenses as his father buys up land and gives it to his sons to escape inheritance taxes.

Even though Dave Nelson is a quarter of a million dollars in debt (at least until he sells this year's crop and refinances his machinery) to be "where he's at," he is happy. His land is prime, but the town of Belmond is also a big part of his sense of place. Like his neighbors who can't even see Belmond from their combines over the swell of the land, he has a strong affinity for the low, little town that has survived 125 years through Indian attacks, the depression, and a devastating tornado. They may live outside it, but Belmond is there home.

"All these magazines that brag up farmers who get up at dawn and work 'til dusk, go to church on Sunday mornings, and live with the family the rest of the week? That's a bunch of bull," says Nelson, who looks in every other way the part of the "noble farmer"—ruddy-face, lean, blond, and quiet but straightforward. "I'm home maybe two nights a week. So what do I do the other nights? I've got Jaycees, I've got bowling every Thursday night, usually my wife and I go out once a week. Try to, anyway. . . ." And there are church meetings, committee meetings, and school programs to fill any free time. Nelson thrives on this bustling social life, and so do his colleagues.

"Some guys would kill if they couldn't get into town every day," Nelson says. The farmers have a good time in Belmond, and they pay it back. When they're asked, they give some of what they made off their land. Fund-raising drives regularly exceed their goals, and the town is dotted with little improvements: parks, shelters, baseball diamonds, a pool, and tennis courts, all put up by individual philanthropists or groups like the Jaycees using local funds.

But an art museum is something else again. Jim Caulkins, the canny arts organizer who runs the Ben Franklin store when not hustling up action for the Belmond Arts Festival, painting landscapes, or playing his saxophone or guitar, says Chloe Jenison chose the arts council as beneficiary because it has "moxie." In Belmond, that counts for a lot.

"People say the tornado [in 1966] was a terrible thing," says Sue Anders, a short woman with a habit of peeping brightly at you from under long bangs. She is president of the Belmond Arts council and so excited about Belmond that you can hear exclamation points when she talks about it. "The tornado wiped out all of Main Street, City Park, it took down huge trees, cut a swath through the center of town. People had to come together to dig out. But not one business moved! If we can gather around and get things done after that, we can do anything!" The arts council is one of 38 civic organizations with that attitude.

To an outsider, Belmond has an eminently battened-down look. The rebuilt stores on Main Street huddle behind a single gray arcade faced with artificial granite on which all their names are lettered in identical plain, white-plastic letters. This arcade is supported with I-beams on which perch identical white globe street lights. Other than the grain elevators, which shine like skyscrapers in the distance, there is not much here over one story high. If you are a stranger you find your way around these nondescript, solid shops and dwellings by looking out to those elevators: the silver one is to the east, and the white one is to the west. Otherwise, it is hard to tell the difference between buildings. It is harder to imagine this sturdy but supremely unremarkable-looking town as the home of a new art museum.

That is, until you have seen Belmond by night. Then, all 2,506 Belmonders—farmers included—get busy. If they're not at a grandmothers club meeting, they're at the historical society, and if you don't catch up with them there, try the arts council. In the security of small towns, people don't feel they have to lock their doors; in Belmond they leave them open because people and their neighbors are always racing in and out of each other's houses with the minutes of their last meeting, plates of brownies, and telephone lists.

The activity could be dizzying, except that it's all so planned and orderly. It's as if people were still trying to tidy away the memory of those chaotic moments on Oct. 14, 1966, when the black cloud bore down on the town and the clocks stopped at 2:55 p.m. It is an awesome memory. Someone outside of town saw six or seven funnel clouds converge on Belmond. Six people were killed, a low toll considering that 20 minutes before the tornado hit the whole town had been on Main Street, watching the homecoming parade. One hundred and nine houses were demolished, 160 had major damage, and 75 of 112 businesses were also damaged or destroyed. The side of the Belmond Hotel was sheared off so that the insides of the rooms—perfectly in order—could be seen from the street. One woman found, amid the rubble of her home, that a bed was still perfectly made, except for a lump under the bedspread which turned out to be two pieces of artificial fruit that had been in a dish on her dining room table. "The dish never did come home," she says in Belmond's "Tornado Book," a collection of stories and horrifying pictures commemorating that day.

"The first reaction was to get over the shock," says Ann Wilson, news editor of the Belmond Independent and arts council member. "It happened on a Friday, Saturday, people kind of stood around, and Sunday people came in with rakes and chain saws." The town hasn't paused since.

Projects are completed, funds are found, deadlines are met. That's just the way it is in Belmond.

But even here, the Belmond Arts Council is something to be reckoned with. Jim Caulkins, who has a twinkle in his eye and a beard, talks as if he were sitting around a potbelly stove; actually he's figuring out how to apply to the National Endowment for the Arts for funding. He says Chloe Jenison offered them the farm "because she thought we were the only ones that would have the moxie to do it. We've done everything we wanted to do.

"We haven't backed off anything," said John Schneckloth, a soft-spoken man who looks so young Caulkins calls him "Johnboy" and who throws pots when he isn't teaching art or putting in parking lots for the Jaycees.

It all started in 1977 when "We said 'Hey, there's so much local interest and local talent, why don't we form an arts council?'" This was no problem. Belmond has a talent for councils. They started planning their first arts festival that May and had it in June, with "seed money" from the Chamber of Commerce. Since then they have become a self-supporting tradition. Submissions have doubled, and the arts council was doing fine before Chloe Jenison even approached them.

Having gone to so many meetings, Belmonders seem to have internalized Robert's Rules of Order. The night the arts council settled down around a plate of brownies in a comfortable living room to explain what they do, six people talked, but no one had to interrupt. Everyone had their say, jumping in and out of the stream of talk whenever their pet subject came up. From the sound of it, the arts festival works the same way.

The council invites three visiting artists a year (sponsored by the Iowa Arts Council) to put on workshops and then holds an art show under the new arcade. The state council screens the artists, the town council picks them and pays half the expense, but the relationship between councils is strictly voluntary, at Belmond's instigation. Workshops are attended, Belmond council members are proud to note, by anyone: grade-school children, grandparents, the local art teacher, and professional artists. "The art teacher was just . . ." Caulkins remembers. ". . . Ecstatic," Schneckloth finishes for him. "She hadn't had her work critiqued since she was in college."

"We'd like to see a lot more people in them!" Sue Anders says of the workshops. She paints and takes photographs when not working on the computer programming for her husband's firm. "We really publicize them and we really push them."

Why?

"There's a lot of closet artistic people," Caulkins says. "I guess that's part of it, you draw the people out."

"It's just a way of growing! You don't stagnate," says Mrs. Anders, stating a Belmond rule.

Almost everything in Belmond has been judged and ranked at the county seat or in Des Moines, and, like the corn and soybeans, is expected to grow. When you ask, for example, about the high school band, people immediately reply, "Best in the state." Larry Flannagan, director of the Belmond Industrial Development Committee, says, "We think we've got one of the best industrial development groups in the state and we think we've got one of the best arts councils, too. That's just typical of Belmond, everything that's done is just top-notch." His group just got Eaton Industries, a multibillion-dollar engine parts company, to build a valve plant here, bringing in 300 jobs.

They learn to be top-notch in school, where kids are encouraged to compare their standardized test scores to their performance the year before. Even when they're in the tenth percentile, the lowest, "If they still gain those two (points) they feel like last year was really worth their effort," says Howard Dorman, high school guidance counselor. "All the parents want their kids to have all the advantages they possibly could. Sometimes it's a problem for our kids. They've gotta have music, and athletics, and a job, and four or five classes. . . . Once they get out of high school, it's easy."

Belmond High School puts on two plays a year. When the Belmond High School Thespians are in high gear, they rehearse every night until 10 and Friday nights till 1 a.m. Every other year, they do a musical, which involves 150 kids. There are only 250 in the school.

The competition is with oneself and the rest of the state. Though artists compete for ribbons in the arts festival, there is no artistic snobbery, because the arts council is just there to get people to participate.

This attitude works very well for keeping the Jaycees busy and getting people to bake for bake sales. But all this old-fashioned Midwestern boosterism seems as if it would be death on that elitist, bad-humored thing known as talent—not to mention the development of the quirky, unteachable, untestable aesthetic sense that comes with it. But artists who have conducted workshops bask in Belmond's atmosphere. Marilyn Parks says artists sent by the state arts council seem to get a lot of "nurturing" in Belmond. A poet who taught a workshop at the Belmond Arts Festival wrote, "I've had a marvelous time," and stayed over to play in a pickup band with Mr. Caulkins. One painter is coming back again this year to teach without any prompting, he had so much fun last time. Artists who exhibit under the arcade on Main Street tell Mrs. Anders that though they sell more in galleries, they love being on the sidewalk here, where people have no compunctions about walking up to them and saying "How did you do that?"

The reaction was the same when Chloe Jenison began stapling rolls of canvas to the wall of her farmhouse and painting long, pageantlike scenes of American history and her own family's past. She found they were unconditionally welcome in town. The arts council hung them in store windows and the library for the festival. Ron and Ginny Courson, arts supporters for years, went out to the farm and escorted her to the arts festival's annual effort at Bohemianism, a coffeehouse they set up in the local retirement apartments. She wasn't being courted, since no one knew then about her plans to give the farm away, nor did the Belmond Arts Council feel it had "discovered" a primitive artist. They just appreciated her for doing her paintings at all. In Belmond, participation is almost as shining a virtue as growth.

But the idea for some sort of museum had been on Miss Jenison's mind for years, probably since 1937, when she took her mother to New England to visit a lighthouse her ancestors, Lucy and Miles Standish, had built. It was then that her interest in history was kindled. And after her parents died, she kept the farm. Though she rents the land out to farmers now, she still lives in the farmhouse, surrounded by mementos, stacks of paintings, needlework, and the four orphan cats she brought up herself. As she painted her historical works, she began dreaming up the idea of a home for her works, and a keeper for her land.

All of which made the town arts council look like the answer to her dilemma. Nobody took Miss Jenison's offer seriously at first, but then her lawyer sent them a message that she'd like to get on with it. They gulped and held a feasibility meeting.

"We're an organization with a budget of probably $3,000 a year and all of a sudden you're talking about half a million dollars," said Schneckloth.

"We talked about it in our meeting," Mrs. Anders said. "It all boiled down to the fact that it was a chance to do something really great. . . ."

"Town our size could never get a chance again," said John Schneckloth.

"And could we pass it up?" Anders said.

"Could we say no and live with it the rest of our lives?" Schneckloth said.

"And we decided, 'Well, we're going to try.' " said Anders.

And with typical unanimity, they have been. Someone jokingly told them they will have to earn the museum. After several tries, Miss Jenison has agreed on an architect's drawing. Her lawyer has drawn up an agreement for her to sign. The arts council feels she will sign it, but in the meantime, she has small disagreements, changes her mind, and keeps demanding the council get on with it. But they do keep getting on with it, with the moxie they're famous for. Ann Wilson visits Chloe Jenison every couple of weeks, and the rest of the time Miss Jenison calls arts council members daily to grill them about how they're doing.

She took me out to the farm with her one afternoon. It is a pretty piece of land that rises slightly and commands a view of the hill near Belmond that was used to scout for Indians. The barn, which Miss Jenison insists must be kept, along with the farmhouse, as part of the museum, is over a century old and looks it. Chloe Jenison sat in a long dress among her things and talked about the doings of her ancestors in a voice filled with childlike wonder.

Her great-grandparents were on their way to Spirit Lake, Iowa, in 1856 when they were spotted from the hill. They stopped in Belmond for water and were talked into staying by settlers who needed help holding off Indians. After a balmy fall, they lived through the worst winter in Belmond's history. There have been Jenisons on that 120 acres ever since. Chloe was born a half a mile from the farmhouse. She herself has farmed the land, and has at various times raised sheep and hogs. She can remember sleeping in the barn at lambing time, huddling under a coat with her white collie dog at her feet.

She remembers hard times in the depression when they burned hay twists for fuel, and even—when prices plummeted far enough—corn. Even in good times it was hard work. They didn't have electricity or much farm machinery. She recalled her mother "milkin' by lantern and I was a little shaver. I'd start the dinner, and Pa'd have to shovel off 50 bushels of corn in the dark." To keep the land in the family was a difficult, lifelong job and she's still proud of her parents. That's why she wants to give the land to someone else who respects it. Like other farmers, she has a possessive feeling about her "ground," and doesn't want to see it sold or broken up, even though she has no children to give it to. When her parents died, she bought off the other heiress, a sister-in-law, because of Chester Luick. He was a town father who is fondly remembered for building a modern auditorium for the prodigious high school drama productions and a heated pool to keep kids from swimming in the river. He told her, "You should keep the land, your father loved it so much. Buy that 40 [acres] south." And she managed to come up with the money.

"I had been quite a saver," she says. Someone said to her father, "That girl of yours beats all. The other girls spend their schoolteaching money on hats." She presses her lips together as only a schoolteacher can and nods to Ann Wilson. "You're getting Chloe's hats."●

WE NEED A TRUE POLICY FOR ENERGY INDEPENDENCE

HON. DON BONKER

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. BONKER. Mr. Speaker, recent disclosures have revealed the massive program cuts proposed by Mr. Stockman and the Office of Management and Budget for a wide range of Federal programs in fiscal year 1983. While a number of these proposed slashes are shocking in their proportions and several Department heads have already announced their intention of protesting the cuts to the White House, few of the proposals are as devastating as the OMB's plans for the Department of Energy.

In a sense, OMB's plans only confirm what many of us have argued all along. The Reagan administration is bent upon immediately undoing the years of progress toward lasting American energy independence based upon the development of our diverse array of energy sources and solid commitment to alternative and renewable energy.

These proposed cuts also underline the administration's double standard when it comes to Government involvement in the development and enhancement of our Nation's energy resources. Under the proposal, funding for conservation, solar research, and development, and fossil fuel research would be virtually eliminated, but more than a billion dollars would remain for nuclear energy research, including $250 million for continued work on the controversial and already-outmoded Clinch River fast breeder reactor in Tennessee.

This is the same administration double standard which rejects public support of alternative energy research, but advocates the intrusion of the Federal Government into the financing of the $54 billion Alaska natural gas pipeline project, calling for a statutory waiver which shifts the risks of the project off of the major corporations and onto ratepayers years before any gas is delivered.

This is the same administration double standard that leads the White House to impose itself into the evaluation of the northern tier pipeline project by Federal agencies and the State of Washington in an attempt to circumvent or manipulate the timely and appropriate established State-permitting procedures.

What Mr. Stockman has proposed is that the Department of Energy be given budget authority of $9.3 billion for fiscal year 1983, more than $5 billion less than the Department's original request of $14.4 billion, and a full $2 billion less than this year's DOE appropriation.

At a time when the development of secure, renewable, and clean energy resources should be a top national priority, the Reagan administration is hacking away at research and development funding, in search of short-term budgetary savings and political points.

Even more disturbing than this ill-timed retreat from our Nation's energy needs in terms of total funding, however, is the distribution of the remaining moneys.

Incredibly, DOE defense programs and the construction of nuclear warheads account for more than half of the $9.3 billion proposed by OMB. Another $2.3 billion is earmarked for filling the strategic petroleum reserve, leaving only about $2 billion for research, development, and demonstration projects, and other programs aimed at resolving our Nation's pressing energy problems.

Of that $2 billion, about half is consumed by nuclear energy research including, as I have mentioned, approximately $250 million for the Clinch River breeder reactor boondoggle.

In contrast, budget authority for all DOE conservation programs will fall to only $19 million in 1983 under the OMB proposal, compared to $712 million in 1981. In the past 4 years, the Congress has laid the foundation of a national energy program which gave highest priority to conservation. This includes the Northwest regional power bill, passed during the last session of Congress, which places conservation as the No. 1 energy priority for the Northwest. Studies conducted by private institutions and Congress have demonstrated that conservation is the cheapest quickest, and most environmentally sound method to reduce our dependence upon foreign oil. But these proposed OMB cuts, if enacted, would represent the virtual elimination of our most promising and immediate energy resource in little more than a year under the Reagan administration.

Solar research and demonstration programs, which got a half billion dollars in 1981, would receive only $70 million in 1983 under the OMB proposal.

Research on fossil fuels, including coal, oil, and natural gas, would plummet to $107 million, down from a full $1 billion in 1981.

According to information received by the House Subcommittee on Environment, Energy, and Natural Resources, OMB has also proposed the elimination of funding for low-income weatherization and the program providing matching grants to schools and hospitals for energy audits and the implementation of cost-effective renewable energy systems. The Subcommittee has also learned that despite congressional directives to the contrary, the OMB cutbacks would force DOE

to virtually abandon its enforcement effort against the major oil companies regarding past energy pricing violations, raising serious questions about the administration's commitment to equal application of the law and rigorous pursuit of statutory violations.

I can assure the White House that it will face strong bipartisan opposition if it chooses to accept OMB's proposals to essentially gut major DOE programs. Congress has already demonstrated its unwillingness to go along with even the less severe cuts to conservation, solar, and alternative energy programs proposed by the Reagan administration for the current fiscal year.

The funding cuts and spending priorities proposed by OMB place far too heavy an emphasis upon nuclear energy as the solution to our Nation's energy needs. As the residents of Washington State know only too well, this is not the answer. Our State is currently undergoing the painful process of mothballing two of the five nuclear plants of the Washington Public Power Supply System. The Northwest's utilities, major electric consumers, and the WPPSS board arrived at this situation after the estimated costs of completing the 5 plants skyrocketed from $4 billion in the early 1970's to more than $24 billion in the latest projections—severely outstripping the financing capacity of the region and the faith of Wall Street bondsellers—and projections of future electrical demand in our region fell, due to higher prices and increased conservation.

The Northwest's utility ratepayers now face truly enormous construction bills, money which could have been better spent on energy conservation programs, renewable energy resource development, and other more cost-effective actions.

It is time for the administration to adopt the path which Congress has started upon: A national energy policy which relies most heavily upon conservation, indigenous resources, and renewable resources, a path which will provide true energy independence for our children and grandchildren.●

COMMENDATION FOR CHICAGO'S DEARBORN PARK

HON. CARDISS COLLINS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mrs. COLLINS of Illinois. Mr. Speaker, it is with a great deal of pleasure and pride that I take this opportunity to share with my colleagues a progress report about a development in my district in Chicago that I think is an excellent example of what the spirit of voluntarism and private enterprise can accomplish. I refer to Dearborn Park, which I believe can serve as a prototype of what can be accomplished in restoring the health of our Nation's inner cities.

This $200 million community of townhomes, mid- and high-rise condominiums, garden homes and senior citizen apartments has become the spark for the renaissance of Chicago's South Loop. It has already lived up to its slogan as "Chicago's next great neighborhood."

Being developed on 51 acres of abandoned railroad yards three blocks south of Chicago's central business district, Dearborn Park is being financed entirely with private capital. The developer is the Dearborn Park Corp., a limited dividend corporation comprised of 32 civic-minded corporations and institutions that are committed to building a stronger and better Chicago.

The vision and confidence of the Dearborn Park developers in the health and future life of Chicago has wooed other builders and businesses.

Draper & Kramer is development manager and has formed a joint venture with Baird & Warner, another major real estate company, to handle sales and management for Dearborn Park Corp.

The opportunity for walking to work and being just steps away from Chicago's outstanding museums, theaters, universities and parks are features that have lured many residents to Dearborn Park, which is bounded by Polk Street on the north, State Street on the east, 15th Street on the south and Clark Street on the west. The site was formerly owned by seven railroads.

Another bonus accruing to those moving to Dearborn Park is the opportunity to be urban pioneers and partake in the revitalization of the city.

Already completed and substantially sold out or rented are 939 residences. When completed, Dearborn Park will contain 3,000 residential units, parks, and recreational amenities.

Good value and low-cost financing as well as location have sparked sales at Dearborn Park. Since July 1979, when sales began, nearly 700 contracts have been signed for housing. Given recent economic conditions and the prolonged slump in the housing market, even more severe in Chicago than most communities, Dearborn Park's record of approximately 25 sales per month has been phenomenal.

Dearborn Park, Mr. Speaker, represents an exceptional example of private enterprise working to satisfy a basic need—housing—and stimulating improvement of the surrounding community. Hopefully, this type of voluntary private enterprise activity can be duplicated by people and organizations in other cities.●

DEPOSITORY INSTITUTIONS DEREGULATION COMMITTEE MEETING

HON. DONALD J. PEASE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. PEASE. Mr. Speaker, I have been quite alarmed by recent reports from a constituent in my district that today's meeting of the Depository Institutions Deregulation Committee was scheduled to consider: First, a plan to deregulate interest rate limitations on time deposits, second, short-term deposit instrument proposals, and third, interest rate ceilings for savings deposits.

I made my concerns evident to Secretary Regan in his capacity as chairman of the committee in a letter dated December 14, and requested that the committee postpone any further action on these proposals until Congress has had the opportunity to complete its oversight hearings on the thrift industry.

As a result, I am very pleased to learn that the Secretary indeed has recommended to the other committee members action of precisely this nature. Although I regret to learn of the Secretary's hospitalization and hope that he will feel better in the very near future, I am gratified to learn that the committee members have seen the wisdom of approving the Secretary's postponement recommendation in his absence.

In the interim, I and other Members of Congress will have the opportunity to avail ourselves of the findings of the oversight hearings and to deliberate in a timely manner on the proper remedies to be applied to the disturbances now evident in the operations of this industry.●

AN APPEAL FOR THE RELEASE OF KIM DAE JUNG

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. OBERSTAR. Mr. Speaker, reports that the Government of the Republic of Korea may free jailed opposition political leader Kim Dae Jung in an end-of-year amnesty have encouraged those of us in the House concerned for the fate of Mr. Kim and his jailed codefendants. Their crime has been their refusal to abandon the commitment to democratic principles, including the right to criticize and oppose peacefully the government of Chun Doo Hwan.

Those of us in this House concerned about Mr. Kim's fate hold widely dif-

ferent views of the future of U.S. relations with the Republic of Korea. We share, however, the common goal of encouraging the Chun government to free Mr. Kim and his codefendants during the traditional end-of-year amnesty.

Yesterday, the gentleman from Iowa (Mr. LEACH) and I sent to President Chun a bipartisan appeal signed by 27 House Members urging the release of Kim Dae Jung. We hope that President Chun will heed our appeal and that of concerned people from throughout the world who are deeply disturbed by the suppression of democratic processes in the Republic of Korea.

I ask that our letter to President Chun be included in the RECORD.

CONGRESS OF THE UNITED STATES,
Washington, D.C., December 14, 1981.

HIS EXCELLENCY PRESIDENT CHUN DOO HWAN,
Presidential Office, Chong Wa Dae, The Blue House, 1. Sejong-ro, Chongno-gu, Seoul, Korea

DEAR MR. PRESIDENT: As Members of the United States Congress, with deep concern for continued warm relations between our two nations, we commend the action you took earlier this year in commuting Kim Dae Jung's death sentence.

The continued imprisonment of Mr. Kim and his co-defendants, however, is of grave concern to many of us. As the forthcoming year-end amnesty approaches, we would like to take this opportunity to respectfully urge the release of Mr. Kim and his co-defendants. Their release, we can assure you, would be widely viewed by the American people as an act of humanitarian compassion and would provide dramatic demonstration of your government's commitment to a free and democratic Republic of Korea.

We value the close relationship between our two countries and look forward to further strengthening our ties of friendship and cooperation in the future on the basis of our common commitment to the principles of freedom and democracy.

Sincerely,

James L. Oberstar, Walter E. Fauntroy, Don Edwards, Richard L. Ottinger, G. William Whitehurst, Shirley Chisholm, Jack Kemp, Tony Beilenson, David E. Bonior, Floyd J. Fithian, Millicent Fenwick, Arlen Erdahl, Don Bonker, Bob Edgar.

Jim Leach, Benjamin S. Rosenthal, Claude Pepper, Joel Pritchard, Norman Y. Mineta, Ronald V. Dellums, Edward Markey, Julian C. Dixon, Mike Lowry, Tony P. Hall, Tom Lantos, Timothy E. Wirth, John E. Porter.●

FREEDMEN'S TOWN

HON. MICKEY LELAND

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. LELAND. Mr. Speaker, I would like to share an interesting piece of history concerning part of my community with my colleagues in the House.

The part of my community of which I am speaking is commonly known as Fourth Ward. Fourth Ward was originally named the Freedmen's Town. It was named Freedmen's Town because immediately after the Civil War, many farmers gave or sold their truck farms and property to freed slaves.

It was in this same spirit of philanthropy that the Freedmen's Town Association, Inc. was founded. The purpose of the FTA is to assure the active and effective participation of Fourth Ward's current residents in the redevelopment and revitalization of this community.

The following article outlines the rich history of the Fourth Ward community and the current steps being taken to preserve the integrity of the past:

FREEDMEN'S TOWN

Immediately west of Downtown Houston, lies one of the city's most historical communities. This community is commonly known as Fourth Ward, but its original name was Freedmen's Town.

Freedmen's Town was established immediately after the Civil War when many farmers gave or sold their truck farms and property to freed slaves. Initially, Freedmen's Town was located where Allen Parkway Village now stands. Freedmen's Town prospered throughout the Reconstruction period and until the mid-1880's, this community was owned and controlled by Blacks.

During this time period, however, Houston's Mayor, W. M. Baker, purchased most of the land encompassing Houston's inner-city and divided it into political subdivisions known as "wards."

Antioch Missionary Baptist Church was, and is, a major focal point of Fourth Ward. The church was built on its current Robin Street site shortly following its original location on "Baptist Hill" in 1866, where the Music Hall and Coliseum presently stand. The first Pastor of Antioch, Rev. Jack Yates, was a dynamic and influential leader. Deeply committed to the education of Black youngsters, Rev. Yates often used his personal finances to send Fourth Ward children to school. Today, Jack Yates High School in the Third Ward stands in his honor.

Although the "ward" system was officially discontinued in 1906, Houstonians continued to identify the city's various communities by those political subdivisions. By the turn of the century, Fourth Ward had grown to represent one-third of Houston's population.

During World War I, Camp Logan was located just west of Fourth Ward. In August of 1917, the Fourth Ward witnessed Houston's worst race riot to date—"The Camp Logan War." In the 1920's, Fourth Ward was Houston's "Harlem." The ward was filled with many restaurants, jazz spots and night clubs. These establishments were frequently visited by Houston's White citizens as well. West Dallas was the ward's main commercial strip.

In 1929, a survey conducted by the National Urban League revealed that city services were not being extended to Houston's Black citizens. In addition, a pattern of segregation was preventing Fourth Ward residents from moving to better jobs. In that same year the official report of the City Planning Commission recommended strict segregational zoning of Blacks into the Second, Fourth and Fifth wards. While this proposal was not accepted, it was implemented on a de facto basis through deed and housing restrictions. With the coming of integration, many Fourth Ward residents began to move toward Texas Southern University, in Third Ward, and other areas of the city such as Studewood, South Park, Riverside Terrace, Kashmere Gardens and Acres Homes.

Fourth Ward continues to have rich historical significance. Handlaid brick streets, constructed by the founders of Freedmen's Town, still run through the ward. Houston's first cemetery, Founder's Cemetery, is located at Valentine and West Dallas. This cemetery contains the graves of many of Houston's founding citizens. Immediately adjacent to Founder's Cemetery stands the "Hanging Tree" where several Blacks were hanged. Behind Founder's lies Congregation Beth Israel, the oldest Jewish cemetery in Houston. This cemetery is beautifully maintained to this day. Two houses built by Rev. Jack Yates still stand at 1204 Wilson and 1318 Andrews. And Antioch Missionary Baptist Church has been designated as a National Historic Landmark.

The survival of the Fourth Ward community, however, is in great jeopardy. A significant segment of the ward was razed for the building of the Gulf Freeway. The freeway severed the ward almost in half and destroyed the intimate proximity of the residential community to Antioch Baptist Church. The church now stands in the shadows of Downtown Houston skyscrapers. City services extended to Fourth Ward are inadequate. A pattern of economic/political decisions by both the private and public sectors have resulted in a neighborhood community with an extremely limited capacity to meet the needs of its primarily low-income residents. The gradual expansion of Downtown Houston threatens to displace thousands of Fourth Ward residents, many of whom are elderly, in order to make room for commercial development and high-income residential units.

Freedmen's Town Association, Inc. (FTA) was founded for the purpose of assuring the active and effective participation of Fourth Ward's current residents in the redevelopment and revitalization of this community. Incorporated in March 1981, FTA adopted the name of the original Freedmen's Town. Some of FTA's objectives include: promoting the development of affordable quality housing for Fourth Ward's current residents; encouraging homeowners, landlords and tenants to repair existing structures; providing training programs to prepare the community's young adults for skilled occupations; securing a multi-service center, and generally providing technical assistance.

The goals are ambitious because the needs are great.

FTA is actively soliciting contributions to support its efforts. The corporation welcomes both monetary and nonmonetary assistance.

Freedmen's Town Association, Inc. has its office in Fourth Ward at 1605 Andrews.

LOOKING BACK, LOOKING FORWARD

HON. HOWARD WOLPE
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. WOLPE. Mr. Speaker, as the first session of the 97th Congress draws to a close, it seems an appropriate time for all of us to reflect on what we have done here in Congress this year, where we presently stand, and, most importantly, where we will be heading in 1982.

When this Congress and the new adminstration took office at the beginning of this year, it was indeed a unique historical moment. Among most Americans there was a recognition that a period of unlimited economic growth had ended and that the economic pie was shrinking. Americans everywhere had come to the realization that Federal spending and deficits were out of control, that inflation was spiraling, that the bureaucracy had become too big and too cumbersome, and that there was a need to reassess the proper role of the Government and its relationship to the American people. These feelings were compounded by a perception, based on reality, that public policy had come to be dominated by a few powerful special interests, and that too frequently the broader public interest had been sacrificed as a consequence. In short, it was a time when Americans were signaling the need for a change. Business as usual simply would not do.

This unique moment provided an unusual opportunity for the incoming administration. With Americans everywhere willing to make the necessary sacrifices, the administration was in a position to call upon the American people to accept the tough decisions that were required in order to put our economy on a sound road toward economic recovery and to restore public confidence in the National Government. All that the American people asked was that the necessary sacrifices and belt-tightening be borne equitably.

The concerns that our constituents were voicing were effectively articulated by the President when the administration presented its economic recovery program to Congress this past spring: The spending cuts to insure a balanced budget by 1984 would be made; the tax cuts needed to stimulate the economy and to give relief to taxpayers would be provided; the social safety net would be preserved; and both spending and tax cuts would be made in a fair and equitable manner.

Tragically, the actual policies that have evolved depart drastically from the rhetoric that generated widespread support for the President's program. While the various budget-cutting efforts have been described as an attempt to reduce the size of Government and to eliminate excessive Government spending, the developing budgetary realities have been quite different. This is laid out as explicitly as possible in the recent Atlantic Monthly article tracing David Stockman's participation in the program's development. Only by reprograming its computer—using untested, overly optimistic assumptions—could the Office of Management and Budget produce numbers to support the claim of supply siders that you could cut $750 billion in taxes and only $130 billion in spending and somehow end up with a balanced budget.

The fallacious assumptions underlying the President's economic program were openly questioned in congressional debate. Both conservative and liberal economists correctly forecast the negative economic consequences of continuing high deficits and high interest rates that would result from the passage of the President's program.

Now, in contrast to the administration's initial forecast of a $42 billion deficit this year, we are faced with a deficit exceeding $100 billion, and an administration acknowledgment that the deficit may reach $152 billion next year, and $162 billion in the 1984 fiscal year. It is because potential investors have recognized the long-term effect on credit markets of this kind of deficit spending that long-term interest rates have remained high, crippling key industries such as automobile and housing and throwing this country into a recession.

In recent days, the administration has been attempting to downplay the significance of the projected deficits. But unless we come to terms with the economic cost of consistently large deficits, we will continue to move from crisis to crisis. It is true that short-term interest rates have come down somewhat over the past few months, largely because the recession has temporarily decreased business and consumer demand for credit. But as the economic recovery begins, hopefully next spring or summer, we will find the huge Federal deficit increasing the Government demand for credit at the same time that tight money—the other cornerstone of the administration's economic strategy—is severely constraining the supply of credit. Economists fear that the resulting competition for credit will send interest rates through the roof again, stunting economic growth and inviting another—and deeper—recession.

What is equally troubling is that the spending and tax cuts that have incurred this record deficit have been pursued with little regard to equity. The administration's budget simply cut funding for domestic programs, such as education and job training, and used the savings to finance unjustified subsidies to energy interests, wasteful water projects, military aid to unstable countries, a blank check to the Pentagon, and tax breaks for particular corporations and the wealthiest in our society. Under the guise of balancing the budget and providing tax relief, we have witnessed this year a dramatic redistribution of the Nation's wealth from those who are already the most economically vulnerable—small businesses, senior citizens, middle- and lower-income families, family farmers, and the economically distressed areas of the Northeast and Midwest—to the most prosperous and least vulnerable sectors of our economy.

Mr. Speaker, there is not a Member of this body who does not want to see the President's program succeed, and there is probably no State that has a greater stake in the success of this program than my home State of Michigan, where the unemployment rate is currently running in excess of 12 percent. And I recognize that there is some feeling that more time should be allowed before revisions of the program are considered. But it needs to be emphasized that it was the administration that argued that the economically stimulating effects of the President's program would be realized immediately upon passage of the budget and tax legislation. And with the Federal deficit now at a record level, with over 9 million people looking for work, with American automobile and building industries devastated by high interest rates and recession, and with business and farm bankruptcies rising dramatically, it would be an abdication of our constitutional role if those of us in Congress who believe the President's program can and must be strengthened were to remain silent. It is worth noting in this regard that we are only following the lead of many members of the administration who have already publicly voiced their fears and are urging the President to consider major revisions in the administration's economic recovery program.

So where do we go from here? There are two elements of budgetary and tax policy that, in my view, should serve as the focus of congressional debate and action. Regarding taxes, there is a need to reconsider that portion of the administration's package that provided excessive tax breaks for special interests. New benefits to the oil industry should be repealed; legislation allowing extremely profitable corporations to purchase tax credits should be rescinded; and the Congress should undertake an indepth review of long-standing tax loopholes.

On the spending side of the Federal budget, our constituents will not, and should not, accept any further cuts in programs designed to protect those who are most economically vulnerable. Programs such as social security, job

training, and child nutrition must be protected from further attack. Nor can we afford to make further cuts in programs representing critical investments for our Nation's future—programs such as education, basic research and development, and alternative energy development. Consequently, if further essential spending reductions are to be accomplished, it will be necessary to look elsewhere—at a variety of budgetary "sacred cows." This year's budget contains, for example, wholly unjustified subsidies for the tobacco industry, and for vast energy and water projects such as the $3 billion Tennessee-Tombigbee Waterway and the $3 billion Clinch River breeder reactor, both of which have been characterized by astounding cost overruns and an absence of any economic justification. Moreover, the President has approved only minimal reductions from a 5-year $1.6 trillion defense budget, even though the General Accounting Office has identified more than $10 billion in annual savings that would be realized through the elimination of wasteful administrative and procurement practices in the Defense Department. Such sacred cows must be evaluated with the same criteria of real need and cost effectiveness that have been applied to every other area of Federal spending.

Mr. Speaker, there is one final point that needs to be made. We are facing a national emergency, and just as it is too late for business as usual, so it is too late for politics as usual. We simply must find a way to overcome the narrow partisanship that, too frequently, gets in the way of problem solving. The agenda facing the administration and the Congress in the months ahead will present exceedingly difficult issues and decisions, and they will demand creativity and courage on the part of all of us. But I am convinced that if we unite in this task, in a genuinely bipartisan manner, we can regenerate the national consensus needed to carry us through and beyond these troubled times. Our constitutents demand no less.●

SOVIETS POUR BILLIONS INTO ANTI-AMERICAN PROPAGANDA DRIVE—II

HON. JOHN EDWARD PORTER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. PORTER. Mr. Speaker, earlier this week I inserted in the RECORD the first installment of a USIA alert that discusses Soviet disinformation and external propaganda themes. Today I offer the second installment against the continuing background of the dark face of Soviet communism as it pulls the strings to crush the hopes of millions of Poles for basic human rights, personal dignity, and democratic institutions in their homeland.

Mr. Speaker, this second installment includes a discussion of how the United States is to be blamed for Poland's problems and, specifically for the Government's declaration of martial law. This "Project Truth" analysis details several of the themes and subthemes that Soviet propaganda technicians employ to cast principal blame for the world's problems on the United States.

This update on Soviet disinformation techniques should not escape the Members attention as we enter a new phase of political crisis in Europe and the Middle East.

SOVIETS POUR BILLIONS INTO ANTI-AMERICAN PROPAGANDA DRIVE—PART II

SUBTHEMES: II. CURRENT SOVIET EXTERNAL PROPAGANDA THEMES

1. The U.S. seeks military superiority over the Soviet Union. The U.S. has lost the military preeminence in the world it enjoyed after World War II when only it possessed nuclear weapons. The U.S. wishes to regain its former position in order to blackmail the Soviet Union and its allies, to force its will upon other countries, and to resist forces of change and progress, especially in the Third World.

2. The U.S. is not seriously interested in arms control negotiations. The U.S. strives to create an international atmosphere which is counterproductive to arms talks, it has failed to respond to any of the sincere Soviet initiatives in the sphere of arms control, and it has blocked ongoing efforts such as the MBFR talks. Although the American failure to ratify SALT II is no longer a major emphasis, it is still regularly referred to in the context of more general criticisms of U.S. arms behavior.

3. The U.S. is introducing sinister new weapons such as the neutron weapons, the Pershing II, the MX, chemical and biological weapons. In its drive to regain superiority, the U.S. is developing and deploying new weapons systems which endanger the alleged parity that Soviet propagandists maintain now exists between the two countries. The U.S. is willing to use any weapon, including chemical and biological devices which most other countries have outlawed. The U.S. is also developing the space shuttle mainly for military use and is working on killer satellites, particle-beam weapons, and laser applications.

4. The U.S. is forcing its allies to accept its weapons and to increase their own arms expenditures. The U.S. blackmails its allies into accepting the placement of weapons (e.g. Pershing II's). Its allies resist because they recognize that the U.S. is trying to export a future war, that is, to ensure that it is not fought on U.S. soil. There is a growing split between the U.S. and its allies.

5. The U.S. seeks to forge an anti-Soviet alliance with such countries as China, Japan, Pakistan, and Turkey. The U.S. wants bases for its troops or the right to stockpile military supplies on the soil of other countries. The U.S. uses economic aid, military assistance, weapons sales, or simple blackmail to gain concessions.

6. The U.S. engages in psychological warfare against the Soviet Union. It spreads untruths about the USSR through its propaganda activities—especially radio: VOA, RFE, and RL—and foments anti-Soviet hysteria and war mentality. These activities are in violation of basic international agreements such as CSCE.

7. The U.S. wages economic warfare against the USSR. The U.S. is trying to provoke a costly new round of the arms race that will strain, exhaust and ultimately destroy the Soviet economy. It also uses economic weapons such as the grain embargo to force the Soviet Union to accede to its will. Soviet propagandists always strongly emphasize that the Soviet economy will never be ruined by a forced arms race. Although the Soviet leadership would much prefer to use Soviet resources for improving the people's living conditions, the USSR is certainly capable of keeping pace with U.S. military strength and is determined to do this, even if sacrifices are necessary in other sectors of the economy.

8. The U.S. grossly interferes in the internal affairs of other countries. The U.S. seeks to manipulate the domestic political process of other countries, including its allies. It attempts to guarantee that these countries' domestic and foreign policies will be subordinate or at least complementary to its own. The U.S. is willing to use all methods to this end, including propaganda, blackmail, bribery, and assassination. In the case of countries that seek to free themselves of U.S. or colonial domination, the U.S. assists repressive regimes in putting these movements down or sponsors counterrevolutionary activities which will restore the status quo.

9. The U.S. faces vast resistance to its aggressive plans. The world public opposes the aggressive plans of the U.S. and its allies. Large-scale resistance is seen in almost all countries. Pacifism and neutralism are growing, especially in those countries most threatened by U.S. plans. Even within the U.S., there is a major split between the Government and the people over defense policy.

10. The U.S. and allies are responsible for international terrorism. The U.S., Israel and some of the NATO allies are behind terrorist activity in the world. There is a tradition of terrorism associated with right-wing extremists in the West and the U.S. is a violent, unstable society which spawns terrorist activity.

11. The CIA is behind much of the unrest in the world. In its efforts to carry out its policies, the U.S. resorts to all available means. Along with military, economic, and psychological weapons, the U.S. employs the CIA to subvert other countries and to bring their policies in line with its own. It attempts to control other governments through its agents or to destabilize those countries it cannot control. The CIA has unlimited funds and will employ any means to achieve its ends.

12. The Soviet Union seeks only peace and detente. Soviet policy is peace-loving and defensive. The USSR has often sought to reach agreement with the U.S. and its allies to reduce tensions, disarm, and engage in peaceful economic and social intercourse. The Soviet Union respects the independence and sovereignty of other countries and does not interfere in their internal affairs. The world public recognizes and appreciates this policy, and regards the Soviet Union as the greatest force for peace on the planet.

13. The Soviet Union arms only to defend itself and its allies. The USSR is forced to respond to U.S. and Western threats by building its own forces. These forces are purely defensive, but can be used to defend

the gains of socialism and national liberation movements such as in Afghanistan.

14. The U.S. cannot succeed in gaining military superiority. The Soviet people are willing to make whatever sacrifices are necessary to provide adequate defenses. In spite of the U.S.'s superior resources, it will never be allowed to regain military superiority.

B. GLOBAL THEMES: UNITED STATES AND RUSSIA AS COMPETING SOCIAL MODELS

The propaganda themes listed in this section are meant by the Soviets to show that the U.S. is an unattractive, vicious, exploitative society which has outlived its time. The Soviet Union is portrayed as the society which has found the answers to the challenges of modern society. While the Soviet Union is acknowledged to have some problems, these are of a temporary nature and will fade as the society develops.

The Soviets are especially defensive about social and economic comparisons with the U.S. and other Western countries. They react immediately to charges from Western oficials which call into question the quality of life in the Soviet Union or challenge the idea that the USSR constitutes a model for future society.

SUBTHEMES

1. The U.S. slanders the Soviet Union, U.S. policy is pervasively anti-Soviet. "Bourgeois falsifiers" in the West carry on a relentless campaign of anti-Soviet slander. They slur the Soviet way of life, Soviet reality, nationality relations, foreign policy, economic system, etc. Western "secret services" and their "mouthpieces" and "voices" are in the forefront of this campaign of anti-Sovietism.

2. The neocolonialist U.S. and its allies are not friends of the Third World. The U.S. holds up the American system as a model for Third World countries but in fact it is not a fit model. Imitating it means continuing in a mode of colonial- style oppression and injustice. The U.S. supports tyrannical regimes (e.g. Chile, South Africa) if they are pro-West and anti-Soviet, and it opposes national liberation movements. It has no genuine concern for the welfare of the Third World peoples; its main concern is access to resources. American exploitation of Third World takes many forms—economic, cultural, political. For example, U.S. corporations extract profit from the Third World while exploiting their resources; the CIA manipulates foreign regimes by "dirty tricks"; U.S. museums and private collectors steal Latin American artifacts.

3. The Soviet Union is the natural ally of Third World countries. Its dedication to the interests of the common people is manifested in its support of national liberation movements. The USSR generously extends opportunities to Third World students to study in the USSR. It unstintingly gives economic assistance for peaceful purposes and sends Soviet technicians and specialists of all kinds to Third World countries to work jointly with the indigenous population on construction and other projects.

4. The United States is an insecure, unstable, inhumane society in a permanent state of crisis. Its most striking features are:

High unemployment (especially among blacks).

Racial discrimination.

Abject poverty juxtaposed with excessive wealth concentrated in the top most elite.

Widespread demoralization as well as material deprivation among the poor, the unemployed, and the otherwise disadvantaged.

High cost of education, medical care, etc. (access and quality depend upon ability to pay).

Rampant crime and antisocial behavior (decadence, drugs, and pornography).

Neglect of and lack of respect for the elderly.

Widespread worker dissatisfaction (as evidenced by strikes).

Political prisoners.

Lack of genuine democracy.

Note: While usually less prominent and extensive than propaganda on international issues, propaganda on U.S. internal affairs is nonetheless a staple feature of the Soviet media. Themes are longstanding and change little over time, although treatment and tone vary. Commentary is usually tied to some news event or development in the U.S. which illustrates negative aspects of American society. Soviets do not need to make up stories or "disinformation" although they are not above it. All they must do is give one-side coverage of issues, drawing from Western press articles and data that show American society in an unfavorable light.

By contrast, Soviet propagandists portray the USSR as having solved or nearly solved most of its problems. Because economic rights (jobs, wages, pensions) are considered to be basic human rights in the Soviet Union, the system is shown to be more humane and dedicated to the welfare of the masses. Social relations are based on equality, antisocial behavior is an aberration, and the people regard the system as fair and just.

5. The U.S. violates fundamental human rights while accusing others of doing so. The U.S. hypocritically attacks the Soviet Union for alleged human rights violations, while it is the U.S. that is violating fundamental human rights. The U.S. is interested in human rights only as an issue with which to attack the Soviet Union.

6. Soviets who fall prey to Western propaganda tend to be unsuccessful and miserable when they emigrate. Soviet emigres miss their homeland intolerably, regret their decision to emigrate, and are desperate to return to USSR. Their reasons for being disenchanted with life in the West tend to be both economic and "spiritual": difficulty of getting a job commensurate with one's education and experience; unsatisfactory living conditions; feeling out of place in a cold, uncaring, dog-eat-dog, every-man-for-himself capitalist society.

C. REGIONAL AND COUNTRY THEMES

Many of the global themes previously described appear in Soviet propaganda directed at or concerning specific regions and countries. This section sets out the main lines of propaganda about a few countries and areas.

1. Poland. Soviet propaganda accuses outsiders—especially the West and particularly the U.S.—of interfering in internal Polish affairs, stirring up trouble through its radio propaganda (VOA and RFE), and supporting antisocialist elements. Various Polish organizations and individuals have been criticized, but favorite targets are Solidarity, the Committee for the Defense of the Workers (KOR), and groups which allegedly seek to separate Poland from the socialist community or restore capitalism. FRG interference and revanchism is also a recurrent theme.

2. Afghanistan. Major emphasis is on the humanitarian, economic, and otherwise peaceful aid rendered by the Soviet Union to Afghanistan. Outsiders, especially the U.S. together with the PRC and Pakistan, are charged with interfering in Afghan affairs and in the Persian Gulf, supporting and encouraging the "bandits" (insurgents) and generally provoking discord and chaos. The CIA is accused of being behind "bandit" activity.

3. Iran. The Iranian people are said to have overthrown the oppressive, U.S.-backed regime of the Shah. The U.S. is still trying to regain its previous dominance and is behind attempts to overthrow the revolutionary regime. The U.S. (through the CIA) is responsible for the rash of assassinations of Iranian leaders.

4. China. China is accused of taking an uncooperative and hostile stance toward the Soviet Union. It is depicted as conspiring with the U.S. on military and political adventures which threaten the USSR and its allies and endanger peace—for example, in Afghanistan. The point is made, however, that the USSR remains ready to have normal relations with the PRC.

5. Japan. Japan is ganging up with China and the U.S. against the Soviet Union. It is making outrageous claims on Soviet territory (the disputed Northern Territories).

6. Cuba. Cuba and the USSR are loyal allies. Cuba is the bastion of progressivism and freedom in Latin America. Latin Americans elsewhere seek to follow its example, but are often discouraged or prevented from this by the U.S. (through the CIA) together with its allies. Since Castro took power, the U.S. "special services" have been plotting and conniving against him. The U.S. constantly threatens and provokes Cuba.

7. El Salvador. The U.S. is propping up an oppressive, unpopular regime. It has promoted falsehoods about the situation there, bolstered with forged and falsified (by the CIA) documents. The U.S. has made false claims about Soviet clandestine involvement in El Salvador in order to distract attention from its own activities.

8. South Africa. South Africa is a racist renegade state which suppresses its national liberation movement with the support if not the assistance of the U.S. Its recent attack on Angola is evidence of its lawless, aggressive nature, and the UN veto is evidence of U.S. support.

9. Middle East. The main propaganda target is Israel, which is depicted as the prime military and political threat in the region. Zionism is condemned as a pernicious force and is equated with anti-imperialism. Egypt is another favorite target of Soviet propaganda, with personal attacks often made on President Sadat. The U.S. is criticized for efforts to reach a "separate deal" with Israel and Egypt which is doomed to fail. The U.S. is also charged with general aggressiveness in this area. This is contrasted to the "peace, friendship and cooperation" offered by Soviet Middle East policy. Steadfast Soviet support for the PLO's cause is reiterated.

10. Western Europe. NATO countries are often lumped in with the U.S. in propaganda on military-strategic themes. On TNF, the U.S. and "some NATO leaders" are the villains, while the European people are generally described as peace-loving. All manifestations of opposition to neutron weapon and other weapons receive heavy play. Disagreements or conflicts between the U.S. and its European allies receive heavy and unbalanced attention from Soviet propagandists. A constant theme is that the U.S. exploits Europe in its (U.S.) anti-Soviet policies and uses heavy pressure in countering European resistance to U.S. domination. Another theme, used mostly in connection with the

FRG is the "resurgent neo-Fascism, neo-Nazism" in the West.●

YOUNG EAGLES FLY AT THE PYMATUNING

HON. MARC L. MARKS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. MARKS. Mr. Speaker, I was recently informed by the Pennsylvania Game Commission, that all five eagles which were raised in the Pymatuning/Conneaut Marsh Area of Crawford County, Pa., are now flying. The five eaglets represent a modern-day record for production of the endangered birds in Pennsylvania. By way of history, prior to last year, only 28 offspring had been produced in 20 years in the Pymatuning.

I believe it especially appropriate to note the achievement of the Pennsylvania Game Commission and the citizens of Crawford County in light of the introduction of House Joint Resolution 352, designating 1982 as the Bicentennial Year of the American Bald Eagle. I was proud to become a cosponsor of this resolution in commemoration of the 200th anniversary of the adoption of the bald eagle as the symbol of our Nation.

The eagle has served as a proud symbol from the days that our country fought for independence. Today, the eagles raised in the Pymatuning/Conneaut Marsh Area will be living reminders of what the citizens of Pennsylvania, and indeed what all citizens of these United States, can do to preserve our wildlife heritage.●

EVANS NOMINEES TO SERVICE ACADEMIES

HON. THOMAS B. EVANS, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. EVANS of Delaware. Mr. Speaker, I have asked a distinguished group of Delawareans from all over the State to serve on my Academy Review Board in order to select the most qualified young people for nomination to the four U.S. service academies. The board has now narrowed down the 72 candidates to 42 outstanding young men and women who are to be my academy nominees.

One of the key elements of maintaining our national security is our ability to attract the most highly qualified high school graduates to our Nation's service academies. As Delaware's Congressman, it is especially gratifying that so many outstanding young people from my State desire to serve their country. I feel certain that from among my nominees will be some of our Nation's future military leaders.

It matters not that all of these fine young people cannot be chosen in the final selection process at the academies. I feel their talents and abilities—but most especially their desire to serve their country—is worthy of mention here.

EVANS NOMINEES TO SERVICE ACADEMIES—LISTED BY NAME, HOMETOWN, AND HIGH SCHOOL

U.S. AIR FORCE ACADEMY

James Baldino, Newark, Newark; John Bieber, Milford, Milford; Thomas Brittain, Dover, Ceasar Rodney; James J. Clay, Woodside, Ceasar Rodney; Kip K. Coco, Wilmington, Concord; Robert Cox, Wilmington, Mt. Pleasant; Craig Culver, Wilmington, Brandywine; Mary Delmonte, Wilmington, St. Marks; James P. Harvey, Dover, Ceasar Rodney; Christopher Hutson, Wilmington, Mercersburg Academy, University of Miami.

Joan M. Kinsey, Wilmington, Concord; Jeffrey Linskens, New Castle, William Penn; David Morgan, Newark, Newark; Martin Muendel, Wilmington, A. I. duPont; William Murphey III, Wilmington, Brandywine; Thomas W. Muehleisen, Newark, Christiana; Michael Premo, New Castle, Delcastle Tech; Jimmie D. Schuman, Felton, Lake Forest; Robert M. Underwood, Wilmington, Brandywine; Dimitri Yallourakis, Wilmington, Concord.

U.S. MERCHANT MARINE ACADEMY

Aileen Barton, New Castle, St. Marks; Stacey Benfer, Wilmington, Brandywine University of Delaware, Craig Culver, Wilmington, Brandywine; Donald Drew, Jr., Felton, Lake Forest; Eric McDonald, Wilmington, Brandywine; Nicholas Tsaldaris, Hockessin, Tower Hill; Patricia Tuggle, Milton, Cape Henlopen U.S. Military Academy Preparatory.

U.S. MILITARY ACADEMY

David C. Edwards, Wilmington, McKean; Joseph Garecht, Claymont, Salesianum; Jonathan Guy, Wilmington, Brandywine; William Murphy III, Wilmington, Brandywine; Michael Nelson, Smyrna, Smyrna; Gary E. Pearcy, Bear, William Penn; George Rosser, Wilmington, McKean; Shelley Smith, Dover, Ceasar Rodney; Patricia Tuggle, Milton, Cape Henlopen U.S. Military Academy Preparatory; Dimitri Yallourakis, Wilmington, Concord.

U.S. NAVAL ACADEMY

James Baldino, Newark, Newark; Lawrence Deist, New Castle, William Penn; Donald Drew, Jr., Felton, Lake Forest; Christopher Hutson, Wilmington, Mercersburg Academy, University of Miami; Gardner Jackson, Seaford, Seaford; Paul Joyce, Wilmington, Salesianum; Harrison Latimer, Wilmington, Tower Hill; Josh McDonald, Wilmington, Salesianum; James Ryder, Wilmington, Salesianum, Northwestern Preparatory; Edwin Stein, Wilmington, Archmere Academy.

ALTERNATES

John Bieber, Milford, Milford; Daniel Gilardi, Newark, Glasgow; Stephen Szymanski, Wilmington, Salesianum, U.S. Naval Academy Preparatory.●

OPPOSED TO INCREASED TAX BENEFITS FOR MEMBERS OF CONGRESS

HON. ALBERT LEE SMITH, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. SMITH of Alabama. Mr. Speaker, I want the CONGRESSIONAL RECORD to show I oppose yesterday's successful legislative maneuver that allows married Members of Congress who have homes in Washington and in their districts to take tax deductions for most of the cost of maintaining their homes in Washington, and doubles the amount Members of Congress may earn from speeches and other outside activities. Further, I am displeased with the back-door manner in which the increased benefits were engineered, having been rammed through Congress by voice vote without a recorded vote after Members likely to oppose were called from the floor on business.

This type of action does little to encourage trust in elected officials. It is unconscionable for Members to be voting themselves a pay increase at a time when they are asking every other American to sacrifice so that spending can be brought under control.

Since coming to Congress, I have not supported an increase in my salary and I did not support either proposal that was finagled through last night. In fact, I voted to disapprove the Journal today in an effort to force open reconsideration of yesterday's decision, because I do not think this pay raise would have been approved if there had been a recorded vote.

Legislation affecting congressional salaries should definitely be dealt with openly. That is why in February of this year one of my first acts after coming to Congress was to cosponsor H.R. 1200, the Congressional Pay Reform Act. This act defers pay raises until the beginning of the next Congress, prohibits Congress from passing a pay raise by attaching it as a rider to other legislation and requires a recorded vote on any legislation that increases the salaries of Members of Congress. It is unfortunate Congress has never taken any action on this bill. Had it been enacted already the outcome yesterday would probably have been different.

I urge my colleagues to consider supporting congressional pay reform legislation of this type and assure my constituents of my determination to continue seeking such reforms.●

LET'S INVEST INDIAN OPERATION AND MAINTENANCE FUNDS IN INTEREST-BEARING ACCOUNTS

HON. SID MORRISON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. MORRISON. Mr. Speaker, today I am introducing a bill which would amend the act of June 24, 1938, to allow the Secretary of the Interior to invest operation and maintenance funds, as well as other revenues, such as security deposits, collected by Indian irrigation and power projects.

Currently, funds collected from the users of reservation irrigation and power projects administered by the Bureau of Indian Affairs are deposited in Treasury accounts until they are needed to meet the project costs. These funds cannot be invested in interest-bearing accounts because they are not considered as individual or tribal funds, and under section 1 of the act of June 24, 1938, only individual and tribal funds may be invested by the Secretary of the Interior. My bill would extend the Secretary's power of investment to include operation and maintenance funds.

In 1981, approximately $12 million would have been available for investment under this bill. The Department of the Interior appropriation bill for 1982 reduced the amount of Federal funds available for operation and maintenance of Indian irrigation and power projects by $500,000. The interest that would accrue from funds invested under this legislation could be used to offset that reduction and prevent the need to authorize future Federal spending for repairs that could result from lack of proper maintenance.

This legislation would benefit both Indian and non-Indian users of Indian irrigation and power projects by reducing operation and maintenance costs to project users, and would enable projects to operate at an adequate level, despite Federal cutbacks.●

ODE TO THE DEMOCRATIC CONGRESSIONAL CAMPAIGN COMMITTEE

HON. GUY V. MOLINARI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. MOLINARI. Mr. Speaker—

Tony and Tip were heard to say
"There is only one way to save the day.
We tried it conventionally, that didn't work
So now fellow Democrats, let's dish the dirt.
Let's send out releases, cleverly disguised
With our names on the bottom, but tiny in size
The news people are dumb, they are easy to cheat
They'll print what we send 'em, and turn on the heat.
We'll get those seats back to where they belong
With the wonderful party that can do no wrong.
Then we'll start spending money, as we once did before
And boot those Republicans right off the Floor.
What a wonderful future we all have in view!
Even if it's immoral, and slanderous too!
Lie cheat and libel, speak untruths and such
The public won't mind it, they love us too much."●

NATIONAL EYE INSTITUTE—A WORTHY INVESTMENT FOR AMERICA'S FUTURE

HON. JOHN EDWARD PORTER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. PORTER. Mr. Speaker, I address the House today with respect to a specific budget item. But the Members will be pleased to note that it is a matter for fiscal year 1983 and not a request for any further changes for this year.

I rise to draw the attention of the House to research funding for NIH's National Eye Institute, because I know this is Government money spent efficiently, an investment in America's future with a significant return. I do this now because I believe it is important that we in the Congress as well as the administration budget planners take a cue from NEI: plan ahead and reward those in Government who help us do that.

Mr. Speaker, NEI currently receives about $117 million (fiscal year 1981) or about 3 percent of the NIH budget of $3.7 billion. In fiscal year 1982 NEI will get $127 million under the continuing resolution the House just passed and the President signed into law.

Currently, NEI employs about 160 people out of 12,000 at NIH, just a little over 1 percent of the total NIH work force. But these few have the responsibility of running a full range of programs at an NIH Institute. The impact of this relatively small investment over the years has been immense:

The Institute's diabetic retinopathy study has prevented thousands from going blind at a savings of over $4 billion to the economy.

NEI is developing a new drug treatment for uveitis, a devastating disease of the inner eye that is responsible for 10 percent of all visual impairment in the United States.

Recent NEI-supported research indicates that in the future it should be possible to develop drugs to slow down cataract formation enough to delay surgery by 10 years. This will result in a savings of about $3 billion over a 10-year period (180,000 fewer cataract operations per year).

In my view, the National Eye Institute is probably the best managed program at the NIH. The National Advisory Eye Council (NAEC) and the Director of the Institute, Dr. Carl Kupfer, have just completed three national plans for vision research which spell out in detail the types of projects to be supported, the relative priorities of these projects, and overall management and program policies to be followed by the Institute in the implementation of this plan.

The same Council estimates that a fiscal year 1983 budget of $190 million is required to carry out these priorities. This will provide for the support of 1,247 research projects (compared to 1,100 that were supported at the high-water mark of NEI funding in 1979). This reflects a 12-percent increase in the number of grants supported. In fact, the 1,247 projects is a reduction from the 1,516 projects recommended for vision research plan funding by the Council in 1978. This reduction was achieved through disciplined priority settings as well as planned cutbacks in target areas, such as basic psychophysics research.

Already the NEI has imaginatively tackled several key issues that confront biomedical research:

For example, there is a serious decline in the numbers of clinical researchers in biomedical research. Yet, the NEI has managed to attract and increase the number of clinicians in eye research—from 225 in 1977 to 330 in 1980—by emphasizing this issue in its funding decisions.

NIH has been criticized in some quarters for not sufficiently encouraging innovative research. The NEI is concerned about this problem for Pilot Projects and expects to receive over 500 applications for such grants this fiscal year. These grant applications will be reviewed and funded in half the time required for the processing of regular grants.

The Institute is able to maintain its funding flexibility because it does not fund large program project grants or other umbrella grants such as comprehensive centers, since these large grants seem to evolve into mandatory commitments for an Institute, and are almost impossible to turn off when new research priorities arise.

Indirect costs are beyond the control of NEI, and a fact of life when contracts are signed with researchers attached to universities and other institutions which charge overhead up 250 percent since 1966 in constant dollars, direct costs have risen only 35 percent.

The NEI and its Director, Dr. Carl Kupfer, have brought good management and planning to NIH research programs. The priority of eye research

to the future health of the American people is a high one. I would hope that the Members would give careful and favorable consideration to reward all of these positive attributes and NEI's outstanding record of achievement, while at once continuing to excise the many wasteful and less significant programs that our Treasury cannot afford.●

THE HUNGARIAN ELECTIONS OF 1945—AN EXAMPLE OF DEVOTION TO DEMOCRATIC IDEALS

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. LAGOMARSINO. Mr. Speaker, on November 4, 1945, in the midst of a ruined country occupied by savage Soviet soldiers and intimidated by a Communist Party enjoying the open support of the Allied Control Commission under Soviet Marshal Voroshilov, the Hungarian people went to the polls. Two parties were in electoral alliance, the Communists and the Social Democrats, but the major party of the center, the Smallholders Party which formed the backbone of the legal opposition under the Horthy era, refused an electoral alliance at the behest of Msgr. Bela Varga, the National vice chairman and Budapest district chairman of the party.

Monsignor Varga's success in winning the Budapest municipal elections by absolute majority against overwhelming odds on October 7, 1945, encouraged the party to field its own candidates and the party enjoyed the support of the absolute majority of the Hungarian voters despite the absence of the POW's and forced laborers in the Soviet Union and about 1 million people still in Germany and Austria.

This accomplishment purchased 18 months of free government in Hungary and a short-lived blossoming of democracy. However, the Communists gained by Soviet fiat key positions in the coalition government formed after the elections and through its adept uses weakened the Smallholders Party, until on May 30, 1947, they could execute a coup by persuading a small section of the Smallholders to enter into an electoral alliance with them and by holding new, rigged elections.

The lesson of the 1945 elections was, however, not lost on the Hungarian people. They remembered their democratic traditions and quest for national independence on October 23, 1956, when the Hungarian revolution commenced. They are still as devoted as ever to the cause of individual liberty and national sovereignty despite continued Soviet occupation. They even achieved a modest degree of compromise, enabling them to live economically better and politically slightly less oppressed than the other nations in the bloc except Poland.

At this juncture, we should pay tribute to the heroes of the 1945 elections, the valiant Hungarians and the leaders of the Smallholders Party. Many of them died as a result of prison sentences meted out by the Communists, other, like former Prime Minister Ferenc Nagy, died in exile. But the grand man of the party, Msgr. Bela Varga, is still with us as the chairman of the Hungarian Committee in New York. He continues to remind us in his messages of ultimate plight of the Hungarians devoid of true national independence and human rights and we congratulate him to a life devoted to Christian and democratic principles and to a struggle for the oppressed and persecuted whether escaped French POW's, Jews, and Poles during World War II or the anti-Communist democrats after the war.●

NATIONAL ENERGY EDUCATION DAY

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. DERWINSKI. Mr. Speaker, I rise in support of House Joint Resolution 293 designating March 19, 1982, as "National Energy Education Day."

This resolution calls upon the American people to observe and to participate in educating sectors of our society in our changing energy situation, specifically the youth of America. It will be the youth of our country who will be solving the energy problems of the future and I feel that by creating an awareness of our energy problems we will be preparing them for the challenges of the future that lie ahead.

I urge my colleagues to support this resolution.●

PUTTING THE SHOE INDUSTRY BACK ON ITS FEET

HON. JAMES L. NELLIGAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. NELLIGAN. Mr. Speaker, sometimes I fear the Federal Government is laying siege to the industries in my district.

The cigar industry employs well over 1,000 employees in my district. Therefore, it is distressing for me to hear talk of raising the Federal excise tax on cigars because it would guarantee that some of these employees would lose their jobs.

The apparel companies in my district employ thousands of workers, yet a weak and ineffective Multifiber Agreement (MFA) has devastated the industry by allowing large import surges. The Federal Government must negotiate a new and more effective MFA.

There is also discussion of eliminating industrial revenue bonds, which have proved invaluable to the small businesses of my area and have spurred economic development. It would be impossible to calculate the harm that would be done should these bonds be eliminated.

However, my main concern today is the shoe industry, another important provider of jobs in northeastern Pennsylvania. It has been badly hurt by imports, yet the Federal Government recently ended import protection. I firmly believe that voluntary restraints should be negotiated for the shoe industry, just as they were for the auto industry. Import penetration is almost twice as high for shoes as for automobiles, so I feel this administration should treat the shoe industry just as it has the auto industry.

The resolution below, passed by the Economic Development Council of Northeastern Pennsylvania's Executive Committee, is indicative of sentiment in my area regarding shoe imports and the need for relief. I would like to place it in the RECORD for the consideration of my colleagues.

Whereas the federal government has undertaken to continue to support the importation of shoes into the United States; and

Whereas the importation of foreign shoes provides an adverse, competitive disadvantage to American shoe manufacturers; and

Whereas the production of boots and shoes in Northeastern Pennsylvania has been historically a major industry sector; and

Whereas many firms producing shoes in Northeastern Pennsylvania have been forced out of business as a result of the importation of shoes into the United States; and

Whereas our Congressional delegation has supported the need for a change in the importation law to allow a more competitive advantage to American producers of shoes: Now, therefore, be it

Resolved, that the Executive Committee of the Economic Development Council supports:

1. Favorable treatment for American producers of shoes, in particular, those in Northeastern Pennsylvania.

2. Necessary changes in the current federal law and regulation which currently allows unfair competition from foreign manufacturers of shoes to the detriment of American manufacturers.

3. Copies of this resolution should be transmitted to appropriate federal, State, and local officials.●

JEFFRIES INTRODUCES EDUCATION LEGISLATION

HON. JIM JEFFRIES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. JEFFRIES. Mr. Speaker, I am introducing today two bills which will relieve the citizens of this country from regulations that have long since outlived their usefulness and are now putting an undue financial hardship on people who are least able to help themselves. The American people have been literally strangled to death by ill-conceived regulations which now serve only bureaucratic convenience.

My first bill would reduce the period—from 5 to 3 years—which records must be retained by recipients of funds under programs administered by the Rehabilitation Services Administration. This agency, when under Health Education and Welfare, was under a 3-year rule. When shifted to the Department of Education, however, it automatically became subject to a law requiring 5 years of record retention.

Within the State of Kansas the cost of complying with this requirement of additional recordkeeping is estimated to be $50,000 the first year alone. This money will be spent solely on recordkeeping activities and increased storage space. None of this money will go toward helping the disabled people of our State. If projected on a national scale, a minimum of $2.5 million would be diverted from helping these stricken citizens, only to go for more red-tape and paperwork.

The second bill I have introduced has taken this issue one step further. It would reduce, again from 5 to 3 years, the period for which records must be retained by recipients of funds under all Federal education programs. This effort will save additional funds and remove a regulation that has outlived its usefulness. Both the Department of Health and Human Services and the Department of Housing and Urban Development carry on their business with a 3-year record retention period for their grant recipients.

I would urge my colleagues, if they would like to strike a blow for the efficient use of our increasingly scarce Federal dollars, to cosponsor one or both of these bills.●

PUBLIC EDUCATION MUST UNDERGO CHANGE

HON. THOMAS F. HARTNETT

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. HARTNETT. Mr. Speaker, I would like to share with my colleagues an article which appeared in the Beaufort Gazette written by Beaufort County Councilman Pat Vanderhoof. Councilman Vanderhoof makes several interesting points on the need to return the responsibility of education back to our local officials:

PUBLIC EDUCATION MUST UNDERGO A CHANGE

(By Pat Vanderhoof)

In many areas of the country, including our nation's capitol, policymakers are in the throes (spasms, if you prefer) of writing budgets. It is beyond me how it gets done—and a miracle that anything remotely sensible emerges from the process.

As Beaufort County Council Education Committee chairman, it is my responsibility (with committee members) to maintain contact with the school board in its development of the school operations budget.

In my second year in this role, I have learned that the closer you are to their (school board's) problems, the more sympathetic you are to their needs. The schools do have problems. I am convinced their budget is tight, with very little fat. Many school board members are ex-teachers—educator oriented. I am not. However, I think I am a practical person. We don't see eye-to-eye on a lot. Many of the programs which I might see as questionable, they view as essential.

In my view, there are many things wrong with public education, many of them beyond the control of local officials, I don't want to dwell on this subject, but I'd like to discuss the problem in general.

First, public education is a monopoly—and most of us are its captive audience.

Second, a little old-fashioned competition would be healthy for us all.

You've heard of the voucher system and tuition tax credits! Say those words in a public school administrative office and watch the administrators cringe.

Have you heard about Marva Collins? Let me tell you about Marva. A ghetto brownstone on the west side of Chicago has become the focus of international media attention. There a courageous teacher is proving the bankruptcy of conventional education. There, about 34 children aged 13 and younger, once written off as "learning disabled," are proving that only the schools are disabled.

After 14 years of frustrated teaching in public schools, in 1975 Marva Collins founded Westside Preparatory School and put into practice beliefs despised by officialdom, namely: development of character is the purpose of education; literacy is paramount; children from one-parent, welfare homes like all children—love to learn. Students from Westside Prep are sought after by the most prestigious high schools in the nation.

To see "retarded" 7- and 12-year-olds expound on Thoreau, Dante, Aristotle and Chaucer is humbling. To know an ill-funded, one-room school has turned down a $16,000 federal grant, in order to maintain independence, is magnificent.

Last summer Westside Prep moved to larger quarters. Half its students cannot pay the $80-a-month tuition. 850 applicants wait and hope.

Listen to Marva—what does she say about public education?

"Children do not fail 'Educators' fail children. Our experience at Westside Prep reveals this awful truth. I tell each child, simply, 'I will not let you fail.' The child believes and succeeds. I tell him that 'I can't' is a lie. He tells me, 'I'll try.'

"During class, children are not left alone to become 'workbook idiots.' There are heaping doses of teacher-student dialogue, daily drill on vocabulary, on parts of speech and on comprehension. Each child must write something daily, read orally and develop his critical thinking. His abilities develop logically—by natural progression and hard work. Anything works if the teacher does.

"Millions of our children are dying mentally. Only we can stem the epidemic. We must take the task of education from government and see to it ourselves. We must hold educators accountable for results.

"I favor, instead of government-run schools, use of publicly-funded tuition vouchers that parents could 'spend' on teachers and schools of their choosing. I would limit government to overseeing a decentralized system for measuring learning progress. This progress alone would determine a school's eligibility for vouchers."

So, here we are, back in Beaufort County.

In fiscal year '79-'80, the School Board budgeted expenditures at $11.9 million. In fiscal '80-'81, expenditures were budgeted at $13.3 million, an 11.8 percent increase. This year, after "cuts" of $460,000 (traded for increases of $1.7 million) the budget request was $14.6 million, an increase of 9.8 percent (very reasonable).

Here's the rub—local support must increase by 22.8 percent in order to fund that reasonable 9.8 percent. The projected increase in state support (net 7.3 percent) is almost washed out by the projected decrease in federal support.

Ladies and gentlemen, I favor less federal and state support and more local support of education. Now, if only Washington and Columbia will return control of education to the local level, we might begin to untangle some of the mess they have made.

In discussing budgets, the question, "How much money is enough?" is bound to come up.

What does Marva say about dollars?

"My students learn that tax dollars will not solve their problems, that we together must do that. Ironically, the more dollars spent in a school system, especially in fancy 'teaching' technology, the less children will think."

"At Westside Prep, we retrieved books from the public school's trash, broke pencils in two and wrote entire texts for lack of funds. But it is children from well-funded school systems who have progressed here, for the first time in their young lives."

I am not suggesting we cut funds to the extent that we forage in the dumpsters at adjoining school districts, but Marva's success does raise the question (in my mind, at least) of "how much is enough?"

Here are a couple of numbers you can get your teeth into: 82 percent of Beaufort County School District's general fund expenditures are for salaries. A 1 percent pay increase requires more than $107,000. The school board approved a 12.1 percent increase. It doesn't take a calculator, even for me, to see that is more than a million dollars.

So! The feds and the state are cutting back spending, or reallocating priorities. But let us not be dazzled by the footwork! With inflation still running crazy and taxation rates virtually unchanged, there are still (at this time) no more dollars in my pocket to suddenly start paying more real estate taxes. If and when inflation is curbed, and federal and state taxes are truly reduced, we may indeed find ourselves more financially able to pick up a larger tab for

local programs, but not before. Given that, what is the solution?

For the long term, we must work for competition in education, be it tuition vouchers, tax credits, or some other idea yet to be expounded.

For the short term, and in the meantime, what can we do?

I believe it must come down to priorities, which is the way it used to be before the federal government usurped local decisionmaking by "giving" us strings-attached, specific grants. Local officials have no more say on how to spend those funds than the man in the moon.

Now we are seeing the end of some of these Washington "hand-outs" (they should be called refunds—after all, it's our money). Thank God, now, we are being freed to set our own priorities—make our own decisions. It will not be easy—we've grown accustomed to the freebies. But decide we must—set priorities we must.

Today is a day of less dollars to tax. It doesn't matter if it is federal, state or local taxes to the taxpayer—not unless, and not until, he can afford to pay the tax.

I happen to believe education is an important priority. Other programs will be cut, some eliminated. Education won't be, although * * * it most certainly will undergo change.

I also happen to support the Beaufort County Tax Limitation Ordinance as it stands. It is flexible enough to permit needed growth, as we shall see in this budget year.

In closing, I quote from a very high authority—Almighty God, Himself. And I do this with reverence, as well as humor.

In the Bible, in the first book of Samuel, after centuries of rule by God (through special leaders called judges) the children of Israel decided they needed a king, "like all the nations." Neither God nor Samuel liked the idea, but God gave the people what they wanted. However, before he gave them their king, he told Samuel to warn the children of Israel. In verses 14, 15 and 17 of Chapter 8, the New American Standard translation warns that "He" (a king) "will take the best of your fields and your vineyards and your olive groves, and give them to his servants. And he will take a tenth of your seed and of your vineyards, and give to his officers and to his servants. He will take a tenth of your flocks, and you yourselves will become his servants." The message is not lost on me—He's talking about taxation. I know of at least one other reference to God's conservatism. It can be found in Ecclesiastes, Chapter 10, verse 2. The New American Standard translation says, "A wise man's heart directs him toward the right, but the foolish man's heart directs him toward the left."●

TRIBUTE TO THE LATE SAM RAYBURN

HON. JAMIE L. WHITTEN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. WHITTEN. Mr. Speaker, I join with my colleagues in paying tribute to a great American, a great legislator, and Speaker of the House, the late Hon. Sam Rayburn.

I agree with their statements which I need not here repeat.

As for me, recently, I was asked who I considered the greatest Member of Congress with whom I had served.

Of course, I answered that no one could possibly do that. But I would say that none exceeded Sam Rayburn, for truly in my view he ranked with the greatest.

We still benefit from his service.●

HOUSE RESOLUTION 305 PASSES BY SUBTERFUGE

HON. CLARENCE E. MILLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. MILLER of Ohio. Mr. Speaker, in a thoroughly disreputable proceeding yesterday a small clique of Members of this body obtained for themselves an increase in the allowable outside earned income for Members of the House. I refuse to say that the House passed this measure. First of all, the House resoundingly defeated a similar proposal on October 28 by a vote of 147 ayes to 271 noes. The will of the House on this issue was made clear at that time, and those of us who opposed this proposal thought we had laid the matter to rest. However, not content with losing fair and square in a clear recorded vote, proponents of this measure decided that, since they could not win honestly, they would have to resort to subterfuge to get their way. Yesterday, in a proceeding that must have taken about 30 seconds, a measure identified only as House Resolution 305 was slipped through by unanimous consent. This measure had not been listed on the calendar of the day's business. In fact, this bill was not even yet printed. When my office tried to obtain a copy of the measure from the document room after this disgraceful floor proceeding, we were informed that they did not yet have a copy. Other inquiries were equally unsuccessful in turning up a copy of this measure that had passed the House by supposed unanimous consent.

Proponents of this measure argue that it will not cost the taxpayers anything. This is true. But should the high and honorable office of representative of the people be used to increase personal wealth? Is there not the possibility of conflict of interest in many outside earning arrangements? Should not Members be devoting their time and energy to their legislative duties rather than to extracurricular moneymaking activities? I think so, and I think the majority of the American people think so.

This entire proceeding makes a mockery of the legislative process. Has this venerable Chamber become some sort of "sneak show" in which open debate and recorded votes are replaced by sly proceedings that go against the recorded will of this House? Those in the leadership responsible for these actions have further sullied the reputation of this body, and deserve the everlasting wrath of the American people.●

PRO-ISRAELI LOBBY

HON. PAUL N. McCLOSKEY, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. McCLOSKEY. Mr. Speaker, Jack Germond and Jules Witcover have published a provocative article in last month's edition of the Washingtonian. I insert it in the RECORD at this point, hoping that it will assist the Congress in the difficult goals of achieving both an evenhanded policy in the Mideast and in finally ending anti-Semitism in the United States.

Messrs. Germond and Witcover refer to the pro-Israeli lobby in America, led by the American Israel Public Affairs Committee (AIPAC). In an AIPAC publication mailed to each Member of Congress prior to the AWACS vote, AIPAC described itself as "the most powerful, best run and effective foreign policy interest group in Washington" (citing a New York Times editorial).

"What are AIPAC's Present Objectives?" "In 1981 AIPAC is the only organization lobbying—night and day—against the Saudi arms package."

"Who Runs AIPAC?" AIPAC's executive committee is comprised of 100 distinguished citizens, one-third of who are presidents of the major American Jewish organizations.

Prime Minister Begin referred to this lobby in these words: "Their clout in Washington and their strength is such that Washington quails before them."

A Begin colleague stated: "We are confident that the Jewish community in America will stand out courageously in support of Begin and challenge the U.S. Government if it becomes necessary."

CRACKS IN THE JEWISH LOBBY?

(By Jack W. Germond and Jules Witcover)

Congressman Paul McCloskey of California has always been the kind of Republican liked by Jewish voters—he is issue-oriented and intelligent. Moreover, he has usually been "right" on such questions as the Equal Rights Amendment, gun control, abortion, and the war in Vietnam. But earlier this year, when McCloskey began to question publicly the influence of the Jewish lobby over Congress, all that history counted for nothing. Jewish leaders in California bitterly attacked him. The Jewish press there accused him of "declaring war" on the Israeli lobby. Old friends abandoned his campaign for the 1982 Republican Senate nomination. Within his office here, the son of a rabbi in his district quit his job as an intern, com-

plaining that McCloskey was encouraging anti-Semitism even if he wasn't anti-Semitic himself. "There's no way you can win," McCloskey says. "The word 'even-handed' has become a code word for Arabism."

McCloskey's experience has been a common one for anyone who dares to raise questions about Israel's power in Congress. J. William Fulbright, then chairman of the Senate Foreign Relations Committee, did so almost a decade ago and felt the wrath of the Jewish lobby. Earlier this summer, a Republican moderate, Senator Charles Mathias of Maryland, brought a similar storm down on his head when he published a thoughtful and carefully phrased article in Foreign Affairs magazine suggesting that "ethnic lobbies" can prove "harmful" to the national interest. Like McCloskey, Mathias did not limit himself to the Jewish lobby—or Israeli lobby, as its members prefer—but you would never have known that from the reaction that Mathias evoked.

Then there is Representative Paul Findley of Illinois, a high-ranking Republican on the House Foreign Affairs Committee. He has been the target of harsh attacks because he has advocated negotiations with the Palestine Liberation Organization as a practical necessity in reaching a solution in the Middle East. "You don't have to speak up very often or very prominently to get a lot of attention," Findley says wryly. He points out that he did not inspire a similar reaction when he suggested recognition of Communist China for the same practical reasons.

At one level, this kind of pro-Israeli response has been politically effective. McCloskey found when he returned to the House after the controversy erupted back home that many of his colleagues—"conservatively, thirty of them," he says—told him privately they shared his concern. But the operative word here is "privately." Similarly, we found that some of the most outspoken political figures in Washington would talk about the Israeli lobby only if they would not be quoted by name. Some wouldn't talk at all. Walter Fauntroy, D.C. delegate to the House and one of the black leaders sympathetic to the Palestine Liberation Organization during the Carter administration, is an example. He has never been accused of being shy with the press, but he rejected outright our request for an interview on this subject.

It's not just politicians who are sensitive on the subject. When Findley was running for reelection back in Illinois last year, both comedian Bob Hope and former President Gerald Ford canceled appearances at fundraisers scheduled in his behalf. Findley was particularly struck by the withdrawal of Ford, who has always been loyal to a fault in supporting his fellow Republicans from the House. "He called me and said he just couldn't do it," Findley says.

But these displays of pro-Israeli muscle are being seen increasingly, by friends of Israel as well as critics of the Jewish lobby, as excesses that may be politically counterproductive. Even liberal Democrats who disagree with Paul Findley don't question his motives. Nor do they believe Mac Mathias is a closet anti-Semite. What they see is overreaction.

Perhaps more important, some of those who have become targets of the Israeli lobby have shown themselves less quick to back away than has been traditional. "The problem is," says McCloskey, "that we have to stand up to the Jewish lobby to leave the President free to negotiate in the Middle East." And there are many who sense, with their peculiarly sensitive politicians' noses, that except on the question of Israel's security, about which there is solidarity, the political activists in the Israeli lobby do not represent all American Jews. Senator Mark Hatfield of Oregon, the chairman of the Senate Appropriations Committee and a sometime target himself, speaks for many politicians in both parties when he says: "I think people are increasingly aware that the American Jewish community is not a monolithic one."

The extremists, on both sides, see dark motives in any debate over the power of the Israeli lobby. A prominent Jewish political professional argues: "The lobby is powerful but it's never controlled Congress. The only people who allege it controls Congress are anti-Semites." An equally emotional pro-Arab activist says: "By crying anti-Semitism, that's how they get the liberals. If you supported the Arabs, you had to be bought off. If you supported Israel, you acted out of moral commitment."

Between these extremes there is recognition that the Jewish community is a strong voice in politics for the most valid reasons. Jews pay close attention to issues. They follow campaigns and candidates. They vote in disproportionate numbers; although they make up less than 3 percent of the population, they cast 4 percent of the vote and often are decisive in close contests in such important states as New York, California, Pennsylvania, Illinois, and Florida. Plus, they know how to use their money in politics.

For all of this recognition of the effectiveness of Jews in making their case in the most practical way, there are increasing signs of cracks in the foundation of non-Jewish support that is essential if Jewish political goals are to be realized.

The most obvious problem is Menachem Begin, whose aggressive personality and equally aggressive policies seem to set teeth on edge both within and outside the Jewish community. Privately, even some of Israel's leading supporters in Congress agree with Hatfield when he says that Begin's statements after the bombing raids last summer "underscored a basic arrogance" in the Israeli position that evoked a negative reaction here. Paul Findley says that the raid on Beirut, in which 300 civilians died, "took the edge off the picture of the PLO as terrorists" and "made it easier" for some Republicans to side with President Reagan in supporting the sale of Airborne Warning and Control System (AWACS) planes to Saudi Arabia. "There was," says another critic, "a certain loss of the virginity of Israel's standing."

Israel's critics were not the only ones to recognize the political damage from the raids. Both Howard Squadron, the chairman of the Conference of Presidents of Major American Jewish Organizations, and Hyman Bookbinder, executive director of the American Jewish Committee, expressed their concerns publicly. And Squadron called on Begin in Israel to warn him of the political fallout. Senator Bob Packwood, the Oregon Republican who led the opposition to the AWACS sale, concedes "the prestige of Israel has diminished a bit" because of the feeling the Begin government has been too often "intransigent."

The raids are not the only basis of uneasiness with Begin among American Jews; there are also cultural and political differences. Most of the prominent American Jewish leaders identify themselves far more closely with the opposition Labor Party than with Begin's Likud.

None of this should suggest that because of Menachem Begin there has been any dilution—at least among Jewish leaders—of the basic commitment on any issue affecting Israel's security. One of the leading figures in the Jewish community concedes that Begin is "not the world's greatest salesman" but adds: "With some exceptions, thoughtful Jews do make a distinction between Israel and Begin. They also realize that although Begin may not say and do things well, Israel does have a major security problem. When Jews are reminded that the Saudis, the Iraqis, and the PLO continue to work to destroy Israel, we can't allow our feelings on Begin to interfere with this basic idea."

"I'd rather have Paul Newman as prime minister of Israel," says another prominent leader. "We could show Exodus on the late, late show every week. But Begin was duly elected and if the people of Israel feel he's sacrificing their security, all they need is to switch one vote in the Knesset."

There are some Jews who see in the reaction to Begin among Americans a reflection of a deeper frustration about the Israeli question. Jacob Stein, the White House liaison with the Jewish leadership and himself a former chairman of the Conference of Presidents, puts it this way: "With the Jewish community, it's wishful thinking to think that the personality of Prime Minister Begin has any effect on the support for the security of Israel. Some who harbor ambivalent feelings toward Israel use the personality of Prime Minister Begin as a justification for their position."

What this suggests is that although Begin may not be "the world's greatest salesman," that issue of personality is irrelevant to larger issue of Israel's security—and equally irrelevant to questions about the long-term strength of the Jewish lobby. "Israel has continued its slide [in influence here] during Begin," says Bob Packwood, "but to attribute it to Begin would be wrong."

There isn't any reason to question the agreement of Jews, here or elsewhere, on the security issue. Political consultant David Garth, who was an adviser to Begin in his campaign early this year, says opinion polls in Israel found 75 to 80 percent of the voters hawkish, whether Labor or Likud. Moreover, that attitude was not compromised by internecine disputes over such things as religious fundamentalism.

Nathan Perlmutter, executive director of the Anti-Defamation League of B'nai B'rith, says: "There is continued solidarity relating to the PLO and military security of Israel. Reactions of even anger at religious zealotry are not in the order of size or imminence with problems of questions of life and death." Says another Jewish leader: "You put security before divinity."

Howard Squadron says that this applies, as well, to American Jews for whom the threat of aggression would seem to be remote. "There's an old joke," he says, "that the only thing two Jews agree on is what a third Jew should give to charity. There is only one thing all Jews are united on, and that is the security of the state of Israel. All Jews are still traumatized by the Holocaust. Jews today are extremely well integrated into the political, business, and every other phase of American life. They regard themselves as part of the American fabric, but they are still a little insecure. Every time Israel feels threatened, every Jew feels threatened."

But there are currents running in both societies that will put more distance, in political terms, between the United States and Israel. For one thing there has been a dramatic increase in the proportion of Sephardic Jews in Israel, to the point that they were 42 percent of the electorate there this year. (They split more than 4 to 1 Likud, according to Penn & Schoen, a New York, pollster.) American Jews are overwhelmingly European in heritage, so it would not be surprising if they felt some loosening of the connection as the population of Israel changes.

Beyond that, there is the reality of the passage of time, and the dwindling proportion of American voters, Jew and non-Jew, for whom the Holocaust was a contemporary event. "I think there's no question," says Hatfield, "that each generation is that far removed from the remembrance or reality of the great Holocaust." Although he recognizes that the analogy is far from precise, he points out that the same kind of thing has happened in the labor movement with the maturing of generations of workers who never worked in the era before unions.

The most important element of the special relationship between Israel and the United States has been the American perception of Israel as an essential element of the US design for confronting the Soviet Union in the Middle East. "That perception, more than anything else, has been the lobbying factor helpful to Israel," says Nathan Perlmutter. "The Israeli lobby has been successful essentially because the product they're selling has been one the foreign policy of the United States requires."

More recently, there have been some cases in which the self-interest of Israel and the United States are divergent, or appear to be. As our dependence on the Arab states for oil has grown, US policy has accommodated that reality. Few imagine that an American administration, Democrat or Republican, would have proposed selling AWACS to Saudi Arabia if it were not for oil.

Coincident with this new oil reality has been a growing weariness among American voters with the chronic headache of the Middle East. One prominent Jewish leader here describes it this way: "One of the problems facing Israel and its friends is that the American people are getting tired of the Middle East problem. I can hear people saying, 'Enough, enough already.' The day Israel is not on the front page is a great day for Israel's people. I'd like to give the American people a day off on Israel. Israel is a convenient whipping boy. Israel, too, is tired of being on the front page."

This weariness with the Middle East has coincided with still another phenomenon—the willingness of more Americans to think the unthinkable, accept the unacceptable, if it is presented to them persistently enough. Perlmutter sees just this kind of change in the softening of attitudes toward negotiations with the PLO. "It's 'reasonable' to talk to people," he says. "It has a 'reasonable' resonance. . . . Today, active terrorism is on page nineteen. We've gotten accustomed to its sound, to its blood. We've been worn down. It's required of Israel to be the reasonable one."

Within this context of change the Jewish lobby functions and, by most estimates, functions very effectively in Congress.

On paper, the key organization is the American Israel Public Affairs Committee (AIPAC), the only registered lobby of American Jews and one that, despite the last part of its acronym, limits itself to lobbying rather than direct political action. AIPAC has more than 12,000 members who pay $35 annual dues and receive a weekly newsletter and a publication called Near East Report. It has a budget of about $1.3 million and a staff of thirty that includes six or seven registered lobbyists.

This is by no means unusual for a major lobby in Washington, but, perhaps because of the emotional content of the issues on which it operates, AIPAC is somewhat defensive about its clout. Thus, Thomas Dine, the respected executive director, says: "I think of ourselves as American as apple pie. There is nothing Svengali about us. All the credit should be on the senators and congressmen. We are up front in everything we do. We see ourselves as a support system to these legislators who care about the security of Israel."

Like any major lobby here, AIPAC sends out "action alerts" to its constituent groups around the country. Like any major lobby here, it has "key contacts" in most congressional districts like any major lobby, it circulates voting records of congressmen on its issues.

But AIPAC is not just like any other major lobby. For one thing, it is augmented in an important way by those other groups—the Conference of Presidents, the American Jewish Committee, the Anti-Defamation League, and the like—with identical goals and considerable prestige. For another, it represents a constituency that has shown itself to be far more effective politically than, for example, the real estate industry or medical profession or, lately, many of the major labor unions.

"Our strength," says a Jewish leader, "is the Jewish community. We had to be, to fight the Ku Klux Klan, the anti-Semitism, the waves of immigrants. We have a lot of organizations and when a major piece of legislation comes along. we're mobilized anyway. The Jewish lobby is not in Washington; the Jewish lobby is the Jewish community."

That has always been the foundation of the lobby's clout. But what has also been essential to its success, beyond the Jewish community, has been the largely unquestioning support it has received from a substantial majority of non-Jews and an overwhelming majority of elected officials. The difference now is that there are questions.●

APPROVAL OF HOUSE RESOLUTION 304

HON. JAMES L. NELLIGAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. NELLIGAN. Mr. Speaker, yesterday, Representative MIKULSKI and I received unanimous consent to bring House Resolution 304 to the floor for immediate consideration. Through tremendous bipartisan support and the assistance of the leadership and the House Judiciary Committee, this resolution was quickly approved without dissent.

House Resolution 304 expresses the sense of the House that the President should immediately seek a halt to any proceedings initiated by the Attorney General which could result in the deportation of any Polish citizen to Poland. The resolution requests that deportation proceedings be suspended until such time as the President determines that the political situation in Poland is stable and that returning Poles will encounter no undue risk upon entering their country.

Representative MIKULSKI and I introduced this resolution in view of the turbulent political situation which now exists in Poland following the recent declaration of martial law in that country. We felt that there could be a significant risk to the lives and safety of any Polish citizens forcibly returned to their homeland.

However, since the legislative procedure used for consideration of House Resolution 304 did not allow time for the normal submission of cosponsors, we were not able to enter the names of all Members who wished to express their support for this resolution. We are deeply grateful for the bipartisan support that we received and, therefore, I wanted to enter into the RECORD the names of additional Members who contacted us regarding cosponsorship:

LIST OF COSPONSORS

Representative Hamilton Fish, Jr.
Representative Andrew Jacobs, Jr.
Delegate Walter E. Fauntroy.
Representative Mike Lowry.
Representative Marjorie S. Holt.
Representative Charles Wilson.
Representative Albert Gore, Jr.●

THE 100TH ANNIVERSARY OF BIRTH OF SPEAKER SAM RAYBURN

HON. SAM B. HALL, JR.

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. SAM B. HALL, JR. Mr. Speaker, Sam Rayburn was the House of Representatives and the House of Representatives was Sam Rayburn. His home was Bonham, Tex., which I am proud to say is in my congressional district. His home was also this House of Representatives, and no one who ever came into contact with him ever forgot it.

We have a Rayburn Building, a Rayburn room, a Rayburn statue, and other physical manifestations of his importance to Congress and the Nation, but were he alive today these monuments would scarcely gain a moment of his attention or pride. His pride was in accomplishment as a legislator. He got things done, and they were done right. He put freedom and this great country ahead of self, and no person who ever served in this body served his country better than Sam Rayburn.

He was a product of rural America and like so many Texans, he came to Texas from another State. His family

moved to Texas in 1887 from the great State of Tennessee. Some 51 years earlier another man of Tennessee came to Texas and died for freedom and independence—Davy Crockett. Ironically, Sam Rayburn's hometown was named for another transplanted Texan, Jim Bonham, a South Carolinian, who died with Crockett at the Alamo.

Sam Rayburn never forgot his roots. He was the consummate politician in the finest, classic sense of the word. He knew people. He understood people and was equally at ease with kings and commoners. He spoke straight and did not mince words. He inspired people. Often I have looked at that famous picture of Franklin D. Roosevelt addressing the Congress after Pearl Harbor and asking for a declaration of war. Behind the President was Sam Rayburn, our wartime Speaker, and the expression on his face showed demonstrably that we would avenge Pearl Harbor and teach the tyrants of the world a lesson.

Sam Rayburn became a legend in his time. As he was fond of saying, "I am a Free Man, an American, and a Democrat in that order." He pursued each of these enviable characteristics with unflinching loyalty and devotion. When one considers that he was a Member of this body continuously from 1913 to 1961, with tenure as Speaker that doubled the time of any other Speaker, it becomes evident to any student of American history and politics that he succeeded in this statement of purpose and philosophy immeasurably.

Fortunately the tradition of Sam Rayburn lives in Bonham, Tex. The Sam Rayburn Library is a noble structure which actually contains an exact duplicate of his office here in the Capitol. Thousands of visitors and students have an opportunity to marvel at the contributions that "Mister Sam" made to his State, Nation, and indeed, the world. Many dedicated people in Bonham have worked long and hard to maintain the Rayburn Home and Library. Every American should visit this shrine to greatness.

Frankly, I do not think we will see his likes again. Times have changed. The art of politics has changed. Unfortunately, elected office has become big business with some campaigns costing millions. This would have offended Sam Rayburn as would many of the other manifestations of modern politics such as computers and made for television, media-happy candidates who always seem to be running for the next highest office.

When the ultimate Pulitzer Prize book is written about Congress it will feature Speaker Sam Rayburn. He walked with Presidents and kings. He shaped laws and orchestrated national events that will be felt for years and years to come. It was Adm. Bull Halsey who said "there are no great men, only great events that require greatness from ordinary men." In the case of Sam Rayburn a refutation is in order. He was truly a great man, and he rose to great events with courage, dignity and inspired leadership. The 100th anniversary of his birth should be commemorated as a rededication to these attributes by all Americans.●

NUCLEAR WASTE DISPOSAL; A TIME FOR ACTION

HON. MARILYN LLOYD BOUQUARD

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mrs. BOUQUARD. Mr. Speaker, the Committee on Science and Technology recently reported to the full House, the bill, H.R. 5016, which sets up the institutional framework for the safe disposal of high-level radioactive waste. An important feature of this bill is that the entire program will be funded through a system of fees to the utilities who generate electricity from nuclear powerplants, and to others who may own or possess such wastes.

The fee system provided for in the bill is important for two primary policy reason: First, the current beneficiaries of nuclear technology will be providing the resources to dispose of the resulting wastes; and second, there can be no claim of an unfair Federal subsidy for nuclear energy. An additional benefit is the significant reduction of the Federal budget for nuclear waste repository research and development, which for the most part, will be funded through the fee system.

Other countries, like Sweden, have also established a policy of charging the current users of nuclear technology for the costs of waste disposal. The four utilities in Sweden, which operate eight nuclear powerplants, are required to make annual payments into a fund in the Bank of Sweden to cover the foreseeable costs of waste disposal. Nuclear power provides 36 percent of the Swedish electrical supply. The Swedish Government has, therefore, determined that waste disposal is, and will continue to be, an important element in the nuclear fuel cycle, which should be financed by the current beneficiaries of the technology.

H.R. 5016 is now pending before the Committees on Energy and Commerce, and Interior and Insular Affairs. I urge my colleagues on the committees to expeditiously act on this bill so that a reasonable and responsible program for nuclear waste disposal can be worked out with our committee for floor consideration early in the next session.

A summary of H.R. 5016 follows:

SUMMARY OF H.R. 5016

H.R. 5016, as reported by the Committee, authorizes the Secretary of Energy to provide for the construction, operation, and maintenance of permanent, deep geological disposal facilities, called repositories in the bill. The bill would also integrate the existing research, development and demonstration program conducted by the Secretary of Energy into a research, development and demonstration program focused on providing the necessary data to support the repository program through a Test and Evaluation Facility. The bill provides the Secretary with contracting authority to collect a fee in advance from the users of nuclear technology to cover the program costs. The bill further provides for a cooperative role between the Federal Government and the States, localities and Indian Tribes in the siting of repositories. The Secretary is authorized to fund the affected State and Tribes relative to their interactions with the Secretary.

The provisions of the Act are not intended to govern the siting, construction, or operation of waste repositories that are used exclusively for defense-related wastes. Nothing in the Act, however, is intended to limit the ability of the Secretary to dispose of defense waste in the civilian repository provided all requirements for such disposal are met. The Secretary is, therefore, given the option of developing a defense repository under existing law, or of disposing of defense related wastes in the civilian repository.

MISSION PLAN

The Secretary is directed to prepare a Mission Plan for the authorized activities under the Act so that a well defined and cost effective program can be undertaken pursuant to the Act. The Mission Plan includes an identification of the information needed to make determinations on the siting and construction of repositories and the Test and Evaluation facility. It includes an identification of information not available, a schedule for developing the required information, an evaluation of the problems which could impede implementation of the Act, a discussion of the need to build more Test and Evaluation facilities together with the Secretary's comments on the Test and Evaluation Facility authorized under the Act. The Mission Plan includes a discussion of the significant results of the research and development program, a description of the siting research activities that should be conducted prior to selecting a site, an identification of the waste solidification technologies planned to be used, an estimate of repository capacity needed through the year 2020 including the number of repositories needed, a schedule for constructing the repositories, an estimate of total program costs, and an identification of any adverse impacts.

The Mission Plan is to be drafted and sent to the appropriate agencies for comments within fifteen (15) months after passage of the Act. Notice of the completion of the draft plan is to be published in the Federal Register together with a request for public comments. A notice is also to be published in the Federal Register when the Secretary receives the comments of the Federal agencies.

If the Secretary does not comply with agency comments; then the Secretary must also publish a detailed statement outlining his reasons why he did not revise the plan pursuant to those comments.

The Mission Plan in final form must be submitted to Congress within seventeen (17) months after enactment where it shall lay for thirty (30) days before the appropriate Committees of Congress. The Plan is to be updated annually and amendments to the Plan must lay before Congress for a thirty (30) day period.

NEPA

The bill specifically states when and what reports pursuant to the National Environmental Policy Act are required during the period of time prior to site selection. Five of such reports are required. After site selection, the agencies must interpret when and what kind of NEPA reports are required.

The first NEPA statement will be a final programmatic environmental impact statement on the management of waste generated through civilian nuclear activities. This statement must be prepared within twelve (12) months following passage of the Act.

An environmental assessment is due prior to beginning siting research activities, scheduled to occur eighteen (18) months after enactment. This assessment would include an evaluation of the nonradiological impacts associated with the siting research to be conducted at each of the identified sites.

A second environmental assessment would be prepared by the Secretary prior to excavating major shafts for the Test and Evaluation Facility.

A second environmental impact statement would be prepared by the Secretary prior to making an actual selection of a repository site.

And finally, a third environmental impact statement would be prepared by the Secretary prior to emplacing any radioactive waste in the Test and Evaluation Facility.

Generally, the Government's responsibility for the preparation of NEPA statements relative to a repository and the T&E Facility would be satisfied by the Department of Energy. In this regard, the Nuclear Regulatory Commission would not be required to prepare duplicative Environmental Impact Statements relative to the licensing of the repository. Other agencies preparing National Environmental Policy Act statements would be required to minimize duplication of effort in the preparation of such statements.

REPOSITORY SITING GUIDELINES

Within six months after passage of the Act the Secretary is required to promulgate guidelines for the selection of sites for the Test and Evaluation Facility and for the repositories.

SITE IDENTIFICATION

Within one year after passage of the Act the Secretary must identify at least three sites in two geologic media, one of which is other than salt. Other sites may be identified after the first year. Each site identified must be supported by a detailed statement explaining why that site was identified. The Governors and appropriate Tribal Councils are to be notified as soon as possible of such identification. Identification is not final selection but is merely the Secretary's preliminary choice of where to begin the siting research process to determine the site's suitability for a repository.

PUBLIC MEETING ON SITE IDENTIFICATION

Within six months after site identification the Secretary is required to: (1) hold at least one public meeting to receive the views of the public, and (2) to prepare the necessary NEPA statements.

SITING RESEARCH AND RELATED ACTIVITIES

After such six month period the Secretary has three years to complete a siting research program and develop the necessary data to prepare NEPA statements and to make siting decisions. During this three year period, the Secretary can begin preconstruction activities on a T&E facility at the most promising site. However, no on-site T&E Facility construction is permitted until a decision is made on the selection of a site for the initial repository. In conducting the siting research, the Secretary is required to use the smallest quantity of radioactive materials necessary to achieve the research objectives. Such radioactive materials must be fully retrievable and must be removed at the completion of the siting research activities; these limitations do not apply to the RD&D program.

PUBLIC HEARING ON SITE SELECTION

After the siting research activities are completed and prior to making a site selection decision, the Secretary must hold at least one legislative-type public hearing in the vicinity of the site that the Secretary intends to select to receive the comments of the public. If the Secretary determines to select that site, he then notifies the Governor and others and submits a repository development report to the President for his decision.

REPORT TO THE PRESIDENT AND CONGRESS

The repository development report must be submitted to the President within six months after completing the hearing process. This report would contain an Environmental Impact Statement for the site prepared with the concurrence of the Commission on the scope, outlines and alternatives to be considered. It will also contain the views and comments of the Governor or Tribal Council, the views of the public, the views of other Federal agencies, and the Secretary's response to those views and comments. It would also contain the license application which the Secretary would submit to the Commission and a plan for the transport of waste to the repository.

PRESIDENTIAL AND CONGRESSIONAL SITING DECISION

If the President disapproves the site, then the Secretary must propose another site to the President within one year after such disapproval.

If the President approves the Secretary's site selection, he then forwards his decision to the Congress. If the State does not file a petition to disapprove the site selection within thirty days after the Presidential approval of the site selection, then the site selection becomes effective. If, however, the State files a petition for disapproval within that thirty day period, then the Congress has forty days to vote on the petition. The Congressional rules for consideration of the petition are specified in the Act, and insure consideration of the petition during this time period.

NRC INVOLVEMENT

The Secretary must submit a license application to the Commission within thirty days after site selection becomes effective. The Commission is required to decide on the construction authorization for the repository within two years after the application is submitted. A one year extension is permitted if the Secretary agrees to an extension, a favorable decision is likely in that period, and NRC reports to Congress on the reasons why it couldn't meet the twenty-four month period. NRC is also required to report to Congress two years after receiving the licensing application and annually thereafter on the status of the application. The NRC must keep itself fully and currently informed on the details of the Test and Evaluation facility and the repository prior to receiving the application so that it can minimize the time needed to consider the application. The Secretary is required to supply the Nuclear Regulatory Commission with information. If the license is denied by the Commission the Secretary must select another site as soon as possible under the procedures of the Act.

NRC HEARING PROCESS

A hybrid hearing process relative to the consideration of the license application before the Nuclear Regulatory Commission is specified in the Act. The parties are required to submit data, views and arguments as the hearing board may require.

Oral argument may be made at the request of any party. Discovery may be used. The parties must submit a summary of the known facts and arguments upon which they propose to rely, unless the hearing board finds that such submittal would unduly delay the proceeding.

Adjudicatory hearings may thereafter be scheduled only if there is a genuine and substantial dispute over technical matters upon which the decision of the Commission is likely to depend. The hearing board must document these facts.

The Commission's decisions regarding the type of hearings to be held is not reviewable by a court unless a timely objection was made before the Commission, and the Commission's decision regarding the type of hearing precluded a fair consideration of the issues.

The hearing board can consider only issues raised by the parties or the Commission except in operating license hearings when the board can raise issues sua sponte under extraordinary circumstances. Contentions of the parties must not be conclusory, but must be supported by substantial and specific facts.

The Commission is required to communicate with the Secretary at all times to the fullest extent of the law.

INTERIM LICENSE

The Commission is authorized to grant the Secretary's petition for an interim license while hearings are being conducted provided that in all other respects the law has been met and there is reasonable assurance that public health and safety is protected.

The Commission rules relative to reviewing applications for repositories must be promulgated within six months after passage of the Act.

The Secretary is required to complete repository construction within six years after receiving a construction authorization from the Commission. The Secretary is to then begin operation of the repository as soon as possible after receiving the license from the Commission.

TITLE TO WASTE

The Secretary is authorized to take title at the repository in the name of the government of the waste to be emplaced in the repository.

STATE ROLE

From the date that sites are identified and throughout the life of the repository the States and Tribes are entitled to participate in a process of consultation and concurrence. This process is defined in the Act to

be a methodology by which the Secretary keeps the Governor and/or the Tribes informed, solicits their views, resolves their concerns, and allows the State or Tribe to conduct monitoring and testing, provided it does not unreasonably interfere with federal on-sited activities. The State, Tribe and Secretary may enter into a written agreement to specify the procedures for implementing the consultation and concurrence process. Except as specifically identified, there are no rights granted to the States or Tribes.

PROJECT DECISION SCHEDULE

The Secretary is required to prepare and update a project decision schedule that delineates the optimum way to attain the operation of the repository within the time limits specified in the Act. All government agencies are required to comply with the deadlines in the decision schedule. Any government agency that cannot comply or fails to comply must submit a written report to the Congress explaining why it could not meet the deadline and how it can mitigate the delay.

T. & E. FACILITY PURPOSE

The bill specifies eight purposes for the Test and Evaluation Facility which include site specific research, media specific research, and generic research associated with all potential repositories. These purposes include a supplementation of the siting research process, integration of components into a system, settling licensing issues or questions, validating scientific models, defining and confirming engineering parameters and establishing operation capability at low radiation exposures.

T. & E. FACILITY DESIGN

The Test and Evaluation Facility shall be designed to receive from 40 to 300 canisters of solidified waste, or spent fuel if waste is not available. Radioactive material must be fully retrievable and is to be isolated from the biosphere using a system of engineered barriers and geology. The engineered barriers for isolating the wastes must be designed to last at least as long as the time period required by the regulations for repositories.

T. & E. FACILITY CONSTRUCTION

Onsite construction of the T. & E. Facility would begin within five years and four months after passage of the Act but only after the final decision is made on the initial repository site by the President and the Congress. Onsite construction of the Test and Evaluation Facility is scheduled to take two years.

T. & E. FACILITY OPERATION

The operation of the Test and Evaluation Facility would begin within seven years and four months after passage of the Act and would include a testing program on borehole sealing, radionuclide migration, water flow, engineered barriers, waste packages, various credible failure modes and such other R. & D. as is appropriate. The test and evaluation activities must be planned so as not to compromise the site for a repository.

LIMITATIONS ON T. & E. FACILITY

The Secretary must continue to use, while conducting the repository siting research program, existing DOE facilities for any generic R. & D. that may be conducted at those facilities.

The Test and Evaluation Facility may only be scaled up to a permanent disposal facility if the Commission authorizes it pursuant to the Act.

The Test and Evaluation Facility operation is to terminate within five years after the operation of the initial repository, or sooner if research and development is no longer necessary.

If the Test and Evaluation Facility is colocated with a repository, the Secretary is required to obtain the Commission's concurrence: (1) that the planned activities at the T. & E. Facility won't compromise the site for a repository, and (2) on the sufficiency of the Secretary's actions in decontaminating and decommissioning the T. & E. Facility.

NRC AND DOE ROLES IN T. & E. FACILITY

The Secretary and the Commission are required to enter into a memorandum of understanding establishing the arrangements for review, consultation and coordination.

No shafts may be excavated until such understanding is reached.

The Secretary is to cease to any activities and remove radioactive material if the site is determined unsuitable for a repository unless the Secretary, with the Commission's concurrence, finds that public health and safety will not be endangered by such R&D activities.

The Commission is to conduct analyses on the adequacy of the attention to public health and safety considerations. Reports may be submitted to the President, the Secretary, and the Congress on any such analyses.

SPENT FUEL R. & D.

The Secretary is required to establish a demonstration program for the dry storage of spent fuel at nuclear powerplants. Utilities desiring to participate in this program would enter into agreements with the Secretary. Any facilities to be operated at the nuclear powerplant would be licensed by the NRC, except that the on-site demos may be operated, with the Commission's concurrence, by DOE while unlicensed if the utility is diligently pursuing the license and the data on demonstration is needed to obtain the license. The utility must provide the site and the spent fuel, seek the license, construct the facility, operate the facility, and pay for construction, operation and maintenance costs.

The Secretary will provide consultative and technical assistance and generic R. & D., including an R. & D. program on dry storage at existing facilities with a maximum capacity of 300 metric tons of spent fuel. The Secretary's total contribution to the program shall not exceed 25 percent of the overall cost. The remaining costs are to be borne by the utility or covered by the fund created under the Act.

STATE, TRIBE, AND DOE ROLE IN T. & E. FACILITY

The Secretary is required to enter into a written agreement with the State or Tribe relative to their role consultation and cooperation in the program during the construction and operation of the T. & E. facility.

The Secretary is required to pay 75 percent of eligible State and Tribe expenses up to $3 million per year from the date that a site is identified to the date that a site is selected by the Secretary. After a site is selected the Secretary is required to pay $10 million per year to the State or Tribe where the site is located until the repository has reached capacity and is ready for decommissioning. The State or Indian Tribe may use the payments for whatever purpose they deem necessary provided that the State must agree to make at least 10 percent of the payments available to localities where the site is located.

COURT REVIEWS

The D.C. Circuit Court of Appeals is given exclusive jurisdiction over all civil actions regarding final agency decisions. No decision is considered final prior to effective repository site selection. Civil actions on constitutional grounds may be brought at any time.

The Supreme Court is given exclusive review authority over the Circut Court provided that appeals must be filed within 15 days of the Circuit Court decision. Both courts must exercise their power to expedite their judgments. The Circuit Court must rule within 90 days of the filing of the complaint unless the Constitution requires a longer period, or the agency is not enjoined from complying with the Project Decision Schedule. Actions in the Circuit Court must be brought within 30 days of the agency decision, except if the party didn't have knowledge of the decision or action.

CONTRACTS AND FEE COLLECTION

The Secretary is authorized to enter into contracts for disposal services with persons owning waste and persons licensed by the Nuclear Regulatory Commission. The fees charged to such persons shall provide the fund for the entire program in advance. Each person shall be charged no more than his anticipated pro rata share. The Secretary is to establish in writing the criteria for such contracts.

The Commission is precluded from issuing any licenses for a nuclear powerplant to any person that does not have a contract with the Secretary. However, such person may obtain a license from the Commission if the Secretary affirms that such person is negotiating with him for a contract. The Commission may also condition the issuance of other licenses on the existence of a contract with the Secretary.

The funds received by the Secretary must be deposited in the Treasury in a nuclear waste fund. Expenditures from the fund must be authorized and appropriated by Congress. Excess funds can be invested by the Secretary of the Treasury.●

TRIBUTE TO ARTHUR O. WELLMAN

HON. JOHN L. NAPIER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. NAPIER. Mr. Speaker, one of the greatest assets of our free Nation is its unlimited resource of men with vision, men with ideas, men who make the American dream a reality. Such men form the bedrock of our free enterprise system.

The Sixth Congressional District of South Carolina has long been blessed with an agricultural economy unrivaled anywhere in the Nation. However, when mechanization came to agri-

culture, many of our rural citizens were no longer able to remain on the farm. In the 1950's, the entire State of South Carolina faced a serious outmigration of its citizens who could not find employment near their homes.

When men of vision, ideas, and dreams get involved, the results are staggering.

When textile manufacturer Arthur O. Wellman discovered the great manpower potential of South Carolina and the Sixth Congressional District, he realized an opportunity to implement his entrepreneurial ideals and simultaneously advance his humanitarian concerns.

Mr. Wellman began his wool-combing family venture on the banks of Lynches River, near Johnsonville, S.C., 27 years ago with 136,000 square feet of operating space and 125 employees. Today, more than 1,300 Sixth District citizens, many of whom might have departed the State seeking employment had it not been for the Wellman effort, are members of the Wellman Industries, Inc., family there, working in a facility which now covers some 2 million square feet in size. And, in keeping with the Wellman leadership role in technology, the company recently dedicated a $3.5 million energy plant which uses municipal garbage as a fuel source.

The Wellman success secret is really no secret at all. It combines hard work, aggressive business management, and a concern for people. Arthur O. Wellman established these ideals; and his family, friends, business associates, and employees behold them as the symbols of a man who has tirelessly given of himself to the creation of a better way of life for all through free enterprise.

Born in Brookline, Mass., October 31, 1894, the son of Arthur G. and Celia Guiness Wellman, Arthur O. Wellman continues to contribute to the flourishing, family-oriented institutions he has created. His irrepressible management philosophy is more than a vision, more than an idea, more than a dream. It is a way of life, and economic opportunity for thousands of people, both in the United States and abroad.

Until 1975, Mr. Wellman served as chairman of Wellman Inc. of Boston, Mass., and Wellman Industries, Inc., of Johnsonville, S.C. Today, he is the director of Wellman India Limited of Bombay; chairman and treasurer of Southwell Combing Co. of North Chelmsford, Mass.; a director of Fieldcrest Mills, Inc. and Karastan Rug Mills, Inc. of New York, Ireland and Eden, North Carolina; and president of Wellman Oil Co. of North Chelmsford, Mass.

Through directorships, his philosophy has been a guiding force in such leading firms as Nichols & Co. Ltd. of London; American Zinc Co. of St. Louis; National Shawmut Bank of Boston; National Surety Co. of New York; The Fund American Companies of Newark, N.J.; Fanny Farmer Candy Shops; Acuity Systems Inc. and The National Association of Wool Manufacturers.

He has also served as a member of the National Association of Wool Manufacturers, the Cotton Exchange and the Commodity Exchange, all of New York.

For his countless contributions to the industry, Clemson University of South Carolina awarded him an honorary doctor of textiles degree.

Arthur O. Wellman's lifelong zeal will long stand as an example to others who seek to build a strong and free America through hard work, entrepreneurship and humanitarian ideals.●

AN EDITORIAL VIEW OF THE ECONOMY

HON. DOUGLAS K. BEREUTER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. BEREUTER. Mr. Speaker, from time to time, I like to bring to my colleagues' attention the editorial opinions of some of the newspapers in my congressional district.

Recently I was particularly interested in the comments on the economy that appeared in the West Point News. Sometimes when we become immersed in all of the problems facing our economy, we forget the fact that the fundamental changes we approved this year have only been in effect since October 1. It has taken years of inappropriate actions by the executive and legislative branches to bring our economy to its present bad condition. Our problems will simply not be solved overnight, and it is foolish to expect that they will.

Permit me to share the text of the editorial:

[From the West Point News, Dec. 10, 1981]

GREATLY EXAGGERATED

Many gloom-and-doom headlines are being printed these days about the administration's new economic program. The nightly news regularly features factory layoffs and hardship stories.

The reporters cite persuasive evidence. Stock and bond markets are down, social security is in trouble, capital investment is slack, tax revenues are expected to be lower.

Yet all this is being written barely 60 days after the first steps have been taken to carry out President Reagan's plan for economic recovery. There hasn't been time to collect solid evidence on its success or failure. It only went into effect October 1.

Those already reporting the death of Reagan's program are greatly exaggerating.

The fact is that fundamental changes in the economy are already visible. The inflation rate, at 12.6 percent when Reagan took office, is now below 10 percent for the first time in years. The dollar is stronger here and overseas. The prime rate is down. Budget cuts have already resulted in a 2 percent decrease in Government spending.

Why, then, all the cries of woe? There are several reasons.

First, the program contradicts the long unchallenged idea that better government requires bigger government.

Second, the Government has operated on completely different premises for the past half-century.

Third, it's just human nature to react negatively to change. "It ain't gonna work," we say. But it will.●

FOREIGN AID AUTHORIZATIONS—H.R. 4559

HON. GEO. W. CROCKETT, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. CROCKETT. Mr. Speaker, earlier this afternoon the House passed the conference reports on the foreign assistance authorizations and appropriations bills. I voted for these conference reports, but I did so with serious reservations about the assistance in those bills earmarked for Israel.

Mr. Speaker, just days ago, Israel violated international law, and further complicated the hopes for a peaceful settlement of the Middle East situation, by annexing the occupied Syrian Territory in the Golan Heights. In light of this precipitous action, I believe this Nation should reexamine its assistance to Israel, with the view toward making such assistance conditional on Israel's compliance with the precepts of international law and justice.●

BRING BACK THE SALMON AND STEELHEAD FISH IN THE YAKIMA RIVER

HON. SID MORRISON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. MORRISON. Mr. Speaker, in the early to mid-1900's a number of irrigation projects were constructed on the Yakima River under the 1902 Reclamation Act. When these low level dams were built, fish passage facilities were included so that fish flows on the river would not be interrupted. Over the years, these fish passages have been neglected and many of them are now inoperative, ineffective, and in some cases, nonexistent.

The decline in the fish population of the Yakima river is serious. It is estimated that in 1880 there were approximately 600,000 salmon and steelhead migrating annually into the Yakima River system. Today, they number less than 5,000. My bill, the Yakima River facilities improvement

project, will restore vital fish passages along the Yakima river, and reaffirm the Federal Government's longstanding commitment to preserve fisheries on the Yakima River.

This project would be integrated into the Yakima River basin water enhancement project in such a manner as to effect the fullest, most beneficial, and most economic utilization of the available water resources in the Yakima. It will greatly increase the fish runs on the river and would benefit all the citizens of the central Washington area.●

HOUSE CONCURRENT RESOLUTION 240

HON. CHRISTOPHER H. SMITH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. SMITH of New Jersey. Mr. Speaker, last night, we in this House passed House Concurrent Resolution 240, a resolution that reaffirmed at this most critical time our unqualified support for the suffering people of Poland.

Mr. Speaker, the people of Poland are in the midst of a bitter struggle to secure fundmental human rights and civil liberties—a struggle that finds its most effective expression in the exemplary work of the independent trade union, Solidarity.

Everyone in this Chamber, I am sure, Mr. Speaker, is well acquainted with Solidarity and its courageous leader Lech Walesa. Solidarity has been in the vanguard in Poland in the effort to significantly improve working conditions and elemental labor-management relationships. The Polish worker has demonstrated to all the world that he has the will, persistence, and courage to fight for his freedoms. The Polish worker has demonstrated beyond a shadow of a doubt that he will not allow himself to be oppressed. Mr. Speaker, that is as it should be, that is as it must be. And we advance and encourage our Polish brethren's cause when we stand with them, publicly and without reservation.

Mr. Speaker, when Prime Minister Wojciech Jaruzelski and his 21-member ruling military council imposed martial law effective midnight last Saturday, they began an apparent attempt to turn the clock back on the enormous gains in individual rights that have been realized since the birth of Solidarity in August of 1980.

As new and increasingly repressive measures are being implemented, and in the midst of widespread arrests of labor union leaders and activists, we hear that the Soviet Union has expressed its support for the tragic Jaruzelski crackdown.

Mr. Speaker, this Congress has not, and will not sit by on the sidelines and tolerate flagrant abuses and violations of fundamental human rights. We must resolve that Poland's future relations with the United States, and in fact, with the entire Western Alliance depends on the course of action pursued by the Jaruzelski regime. Let us also make it crystal clear that we will not tolerate Soviet intervention in Poland. As President Reagan has said, "Intervention by the Soviet Union would be taken most seriously by all the free world."

The Polish people have a proud history of popular efforts to reform, to improve, to change—from the struggle for the institution of free workers councils in 1956–58, to the argument over economic reform in 1970 which led to greater attention to the needs of Polish consumers to the flowering of the Solidarity organization and an undeniably democratic movement in Poland during the 16 months of Solidarity's existence.

Mr. Speaker, the achievements of Solidarity have brought new hope to the people of Poland and to all who cherish freedom throughout the world. Whatever developments may occur in the difficult days ahead, we know that the flame of liberty can never be extinguished—not in Poland, not in Eastern Europe, not even in the Soviet Union.

I am proud of the fact the House of Representatives has passed House Concurrent Resolution 240 and I was pleased to support this very worthwhile legislation. Our friends in Poland and throughout the world can rest assured that we will continue to speak out and act forcefully in support of human freedom and justice.●

SANTA CLAUS CAME TO THE HOUSE EARLY

HON. ED WEBER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. WEBER of Ohio. Mr. Speaker, yesterday, Christmas came early in the House of Representatives. Without warning Santa Claus, in the form of a Congressman from Pennsylvania, appeared and reached into his bag and pulled out a motion which increases the amount of outside income that Members may earn to 30 percent of our salary. On voice vote, faster than you can say "St. Nicholas," the motion was rammed past an unsuspecting Congress, without debate, without a reading of the motion, and without anyone but an apparent few of the Members, who had been brought in to the arrangement, even knowing what was going on.

This is not the way to conduct the business of the House. On October 28, 1981, the House voted down a similar measure on a recorded vote. I voted against lifting the ceiling in that recorded vote and I would have voted against yesterday's motion had I been given the opportunity.

If we are to address the question of congressional compensation, it should be done in regular order with a recorded vote.●

A BILL TO ENLARGE BUMPING LAKE

HON. SID MORRISON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. MORRISON. Mr. Speaker, today I am introducing a measure to enlarge Bumping Lake, a water storage reservoir in central Washington. My intent, at this time when no new water projects are being started, is to remind this Congress that the Yakima River system is critically short of water to fulfill the obligations which the Federal Government has to both irrigators and fish maintenance.●

JOHN WITTE BELIEVES IN FOUNDING FATHERS

HON. RON MARLENEE

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. MARLENEE. Mr. Speaker, I would like to call to the attention of my colleagues a speech given a number of years ago by an old friend of mine. The figures in the speech are dated, but I think the philosophy and the thoughts behind the speech still ring true—especially in these times of budget fights and weaning away from the Federal dole.

These are the thoughts of a Montanan who believes in the ideals of our Founding Fathers, and that we have strayed far from those constitutional ideas. I think John Witte's remarks speak for a majority of those American people who came through the Depression and who have seen the focus of government change through the years. The speech is reprinted from the October 19, 1962, edition of the Circle Banner.

The article follows:

STRESSES AMERICAN FREEDOM IN FARM BUREAU SPEECH

(By John Witte)

Mr. President, guests, fellow Americans, I consider it a great privilege to be asked here today to address the members and friends of the McCone County Farm Bureau. Yours is a great organization and your philosophy, "to make sure that our children and grandchildren inherit a free nation and not a slave state," is a great philosophy. But your organization will only be as great as you are individually great, and your philosophy—

only as great as you live it—otherwise it will be nothing but another organization and your philosophy nothing but a meaningless phrase.

When I was asked to come to Circle and speak to you today, I was in a little bit of a quandry as to what you good people would like to hear. I am not a Bob Hope who could give you a half hour of fast patter and jokes—I am not running for political office—I am a businessman on Main Street, dependent upon you the farmers and ranchers of Northeastern Montana for my bread and butter, and the privilege of working with you to raise my children in a free country.

Yours is a non-political organization pledging allegiance to no political party but allegiance only to the Great United States of America and to the ideals of our founding Fathers who pledged their lives, their fortunes, and their sacred honor that this country would be free and remain free for all future generations.

I do not intend to be politically partisan in what I have to say. I have been a Republican all my life, but as I have said often, that if I were to be living in the South today, I could easily be a good conservative Democrat following the leadership of Sen. Harry Byrd from Virginia, a ranking Democrat and one who has disagreed with the liberal philosophies of F.D.R., Harry Truman, Dwight Eisenhower and is today a thorn in the side of John F. Kennedy.

So I speak to you today as an American and businessman who fears for the future of my country.

When I make that statement to some of my more liberal thinking, near sighted friends, I am greeted with the answer. "What are you worrying about? You've never had it so good." And I must agree with the last part of that statement. We are living in the greatest country in the world. A country that has the highest standard of living, more physical comforts than any nation has ever had in the history of the world. We are living in an era that has seen more economic and scientific advances than any generation has ever been privileged to enjoy. And still, while enjoying this, I am afraid for the future of my country, and I think that you should be too. Because this high standard of living was made possible thru the free enterprise system, and not thru the liberal, socialistic schemers, welfare staters, and communistic minded who have held high influential offices in Washington, D.C. for the past two decades.

This year we celebrate the 175th anniversary of the Constitution of the United States. The greatest document ever drawn by man to govern himself in freedom. Drawn by men who were students of history and students of government. Men who knew that if this great country for which they had pledged their lives, their fortunes and their sacred honor, and for which they had just fought a great war, was to become great, it must do it under the free enterprise system and not as a Welfare State. Times have changed, ladies and gentlemen, but the principles upon which this country were founded and which made it the greatest nation in the world are still there. They are still there, but they are being smothered under an all enveloping, paternalistic Welfare State Government.

One generation cannot guarantee to another that it will live in freedom. It can pass a free nation on to its children, as our fathers passed a free nation on to us. One generation, as did our founding Fathers, may win their freedom on the battlefield, and another generation, as we are now doing, may allow our own government to take our freedom from us. There are men and women in this audience today who homesteaded here in McCone County. With a few horses, little machinery, hard work and a pride of independence and accomplishment you built up those homesteads, and you did it yourself. When drought, hoppers and hail came, you didn't turn to the Great White Father in Washington, D.C. and say "send me one of those green checks, I haven't got the guts to make it by myself." No, you tightened up your belts, your wife put some patches over the old patches on your pants—and you toughed it out. Next year! And next year finally came, and you were proud because with the help of the Good Lord with rain, no hail and hoppers, you had a crop and were getting ahead. And you did this as a free man by yourself, and you had a right to be proud.

But something happened. It started in the 30's with the great draught and great depression. We lost that pride of individualism which had made this country great. We decided that those patches on our pants were old fashioned. That to succeed by the sweat of our brow and the brains which the good Lord gave us was outmoded and that we had better rely upon the paternalism of the Great White Father in Washington, D.C.

In the past 30 years we have gone from the ideals of our founding fathers to the idea of the Welfare State—or as one speaker termed it—the illfare state, because it is based on the theory that we as a people are seriously ill and must have the government as a Doctor. Up until the great depression we had been protected from the evils of the Welfare Staters by a Supreme Court who interpreted the Constitution as our founding fathers meant it to be, and kept the government out of our social and economic life. But with the appointment of new Justices to the Supreme Court in the 30's, the power of the income tax which, had up until then been used sparingly, a new definition put upon the words "To provide for the Common Defense and Promote the General Welfare," election to office and appointment to important positions in Government of those who believed that there was nothing wrong with government going into debt. The Government borrows from the citizens, the debt is owned by the citizens, the citizens are the government and consequently we owe that debt to ourselves. And so we started down the road to the illfare state predicted for us by Karl Marx.

We have broadened the phrase "to Provide for the Common Defense" to embrace the whole world. We have spent some 90 billion dollars overseas trying to buy friends. We have sent electric blankets to the Negro in Equatorial Africa and refrigerators and iceboxes to the Eskimo in far off Greenland. And we have found as a Nation what we as individuals have always known—that you can't buy friendship.

In the past 30 years there have been 24 Federal deficits, there will be another this year, and another next year. In 1940 the Federal Government had a tax revenue of approximately 5 billion and in 1961 approximately 84 billion. And I want to ask you this—what is government doing for us today that it wasn't doing in 1940 that warrants this terrific increase? Think it over. The Federal debt when F.D.R. came into power was 22.5 billion and we are told that today it is 300 billion. This is a fallacy because when you add to the 300 billion past and present commitments our National debt is around 750 billion dollars—a total debt of around $4,000 for every man, woman and child in the United States. And you want to pass on to your children a free nation! This is serious, my friends.

And today, with the New Frontier, the Kennedy clan wants to burden us with more debt. Some great words were spoken when President Kennedy took office. "Ask not what your country can do for you, but what you can do for your country." I think there was a typographical error in that speech because judging by his legislative program, I think this is what he meant to say, "Ask not what you can do for your country, but ask what your country can do for you!"

Nikita Khrushchev said, "We cannot expect Americans to jump from Capitalism to communism but we can assist the elected leaders in giving Americans small doses of socialism, until they suddenly awake to find they have communism." Our elected leaders have not said what Khrushchev has openly said but their actions in the past 25–30 years, have certainly not contradicted his statement.

Today annual federal aid to states, cities and individuals which amounted to less than 150 million dollars in 1930 now exceeds over 10 billion. More than the total budget of the Federal Government in any one year prior to World War II. 31 cents of every dollar earned goes to the tax collector. One in every six Americans is on a government payroll. (National, State or local.) Two years ago there were 215,000 people on the Federal Payroll in Washington, D.C. alone, and today there are 235,000. Approximately 30 new Government jobs being created every day in Washington, D.C. alone. And paid for by your tax dollars and mine. Today social security payments exceed Social Security collections. And it will get worse. This will have to be paid by your children and grandchildren. And I could go on and on enumerating the thousands of ways in which we are giving up our liberty under the guise of security.

But what is the cure? I believe that first we must throw off the defeatist attitude. Some of my fellow businessmen say, "What's the use? This thing has gone so far now there is no stopping it." So many feel today that Government has gotten so big, so all powerful, so much a part of our everyday life, that we can no longer control it. And this is false because this is where Government starts—right here in this room. We are the people who decide who is going to be our elected representatives. If we believe in a free historical economy, then we must accept the statement of the President in his inaugural address, "Ask not what your country can do for you, but rather, what you can do for your country," and reject his legislative program by electing men who will fight him tooth and and nail every time he tries to encroach on our freedoms. We msut go back and reaquire the individualism and integrity of our founding fathers and the men and women who homesteaded N. E. Montana. We must abandon the false god of Government handout and paternalism and rely upon the sweat of our own brows, our own integrity, our own responsibility. I don't mean that we should go back to the 20's and 30's but back to those ideals. We must re-dedicate ourselves to the cause of freedom and the system of free enterprise. If we believe in it—we must practice it. There is too much hypocrisy and dishonesty in our country today. If it's bad for the other fellow to get those government

handouts, then we too had better get our greedy hands out of the public trough. If we are going to remain free, we must take an active interest in Government. We must remember that government in its own right has nothing to give. What it gives it must first take. We must be more interested in keeping our freedom than seeking security. We must be more interested in what Government is doing to us, than for us. We need to remember that government cannot, nor should it, guarantee us a price or give us anything without controls and without taking a little more freedom from us.

You cannot legislate the poor into freedom and wealth by legislating the rich out of it, and what one man receives and does not work for, another man must work for and not receive.

We must remember that government can never guarantee us a standard of living, but that big government spending, accompanied by inflation and deficit spending, has the power to destroy the standard of living which we now enjoy.

And finally, that the free-enterprise system and the profit motive has fostered the greatest progress in this nation the world has ever known while the record of socialism and communism has been one of mediocrity, corruption, poverty and terrorism.

In a few weeks you will be going to the polls to cast your vote as Americans. You can be thankful that you live in a country where you still have that privilege. You will be voting for men and women who will represent you in government, and who will exert a great influence on your lives and the lives of your children. You can vote for those who believe in the free enterprise, capitalistic system, or you can vote for those who favor more government handouts and loss of liberties under the false cloak of security.

What you have to gain by taking a vital interest in politics and government is the right to run your own affairs and the guarantee that your children and grandchildren can inherit a free nation. Failure to take action can only mean continued devaluation of our dollar, additional governmental domination, continued deficit spending and finally, state socialism.●

LIMIT PROLIFERATION OF NUCLEAR WEAPONS

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. LAGOMARSINO. Mr. Speaker, at a time when the United States is seeking progress to limit the proliferation of nuclear weapons, the recently concluded United States-Egypt agreement serves as a milestone in the Middle East. It represents a commitment by the Government of Egypt to forgo any development of nuclear weapons and sets an impressive example for the other nations in the region and the world.

As a cosponsor of the Nuclear Nonproliferation Act of 1978, I am pleased that the guidelines set forth in that act have been implemented in this agreement. Provisions of the agreement require safeguards and adequate physical protection on items supplied by the United States and nuclear material produced through their use.

The agreement provides very stringent controls on any nuclear technology transferred by the United States to Egypt. At this point, I would like to enumerate these controls and point out that certain elements of this agreement have not, generally, been included in other previous agreements on nuclear cooperation.

The general terms of the United States-Egypt agreement for cooperation on nuclear energy are as follows:

U.S. CONTROLS OVER ITS EXPORTS IN EGYPT

The following U.S. controls over its exports to Egypt appear in the agreement for cooperation.

1. *Alterations.*—Nuclear material covered by the agreement shall not be altered in form or content unless the parties agree. (Art. 6.2)

2. *Enrichment.*—Uranium transferred, or used in U.S. supplied equipment, shall not be enriched unless the parties agree. (Art. 6.3)

3. *Military or explosive use.*—No items covered shall be used for any nuclear explosive device, for their research on or development of any nuclear explosive device, or for any military purpose. (Art. 8)

4. *Quantity limits.*—The quantity of nuclear material transferred at no time shall exceed that which the parties agree is necessary for the loading of reactors or use in reactor experiments, the efficient and continuous operation of such reactors, or the conduct of such reactor experiments, and the accomplishment of other purposes as may be agreed. (Art. 4.3)

5. *Reprocessing.*—Nuclear material covered by the agreement shall not be reprocessed unless the parties agree. Any reprocessing shall be carried out only in facilities acceptable to both parties. (Art. 6.1)

6. *Restricted data.*—Restricted data shall not be transferred under this agreement. (Art. 3.3)

7. *Security.*—The levels for physical protection may be modified by mutual consent of the parties. (Art. 7.2) The adequacy of physical protection shall be reviewed by the parties periodically and whenever either is "of the view that revised measures may be required to maintain adequate physical protection." (Art. 7.3)

8. *Sensitive nuclear technology.*—Sensitive nuclear technology may be transferred if provided for by an amendment or by a separate agreement. (Art. 3.4)

9. *Sensitive facilities and critical components.*—Sensitive nuclear facilities and major critical components may be transferred if provided for by an amendment to this agreement or by a separate agreement. (Art. 4.1)

10. *Small transfers.*—Small amounts of special nuclear materials may be transferred for certain specified uses and for such other purposes as the parties may agree. (Art. 4.4)

11. *Right of return.*—If Egypt violates certain agreement provisions, or ends an IAEA safeguards agreement, or detonates a nuclear explosive device, the U.S. has the right to cease further cooperation and to require the return of export items and any special nuclear material produced through their use. (Art. 11)

12. *Storage.*—No special nuclear material (except for unirradiated low enriched uranium) shall be stored in any facility that has not been agreed to in advance by the parties. (Art. 5.1)

13. *Transfers.*—Any nuclear items covered shall not be transferred to unauthorized persons or, unless the parties agree, beyond its territorial jurisdiction. (Art. 5.2)

Those elements which have not generally been part of other agreements of cooperation include a provision that only low-enriched uranium fuel is authorized for transfer. That fuel is suitable only for use in power reactors. Also, spent fuel from the power reactors shall not be reprocessed in Egypt, and in the event of extraordinary circumstances, spent fuel may be removed from Egypt to protect proliferation objectives.

As my colleagues have noted, it is particularly significant that Egypt has ratified the nuclear nonproliferation treaty, and it is a tribute to the statesmanship President Sadat exhibited in promoting the cause of nuclear nonproliferation.

I strongly endorse this agreement and urge my colleagues to support it as well.●

POST OFFICE OPERATIONS

HON. JOHN H. ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. ROUSSELOT. Mr. Speaker, our Postal Service has a 200-year-old history of which it can be proud. The hundreds of thousands of fine Americans who work for that Service perform well the daily tasks that make it possible for our economy to function.

That Service now has an annual operating budget of $23 billion, and a commensurate power to cause damage if it functions outside the law. Last month it began charging the American public 20 cents for a first-class stamp. As recently as last March, the price was only 15 cents—that was two raises ago.

Since Congress passed the Post Office Reorganization Act of 1970, an act that I voted against, the price of a first-class stamp has risen 233 percent while another mail service, parcel post, has increased by only 95 percent. By contrast the Consumer Price Index has gone up by 139 percent. The great disparity in these percentages prompt some serious questions, and the public is entitled to answers.

In the last decade the cost of a first-class stamp has exceeded the cost of living by 94 percent, while rates of parcel post have trailed the cost of living by 44 percent. A little arithmetic reveals that the rate for a first-class stamp has gone up 138 percent more than the rate of parcel post.

Logically, one could ask why the obviously efficient parcel post managers are not put in charge of first-class

mail. Surely, they would not let rates for that service soar 33 percent in less than 1 year. But logic, unfortunately, does not get to the heart of the problem.

The problem seems to me to be one of policy more than performance.

There are, within the ranks of postal management, competent accountants, and auditors who can establish effective cost identification and control systems of the type routinely used by private corporations.

Yet in the 1980 rate application the Postal Service filed with the Postal Rate Commission, postal management said that it could link only 59 percent of its costs to the individual classes of mail service.

Postal management said, in effect, that it could not identify the cause of 41 percent of its costs, some $9.4 billion. No business could service if it was ignorant of the cause of 41 percent of its costs. Costs that cannot be identified obviously cannot be controlled. But more importantly for postal rates, costs that cannot be identified can be manipulated into the calculation that determines what rate shall be charged for a specific mail service.

Many of these unidentified costs have been loaded into first-class mail service at the whim of postal managers. This is the primary reason for our new 20 cents stamp.

The postal costing strategy has been to identify a minimal amount of operating cost as it is associated with any class of mail. This creates a large pool of unidentified cost which is, to a substantial extent, arbitrarily assigned to first-class mail. This has caused first-class rates to increase 2.5 times more than the rates of parcel post.

Postal management is using its monopoly control over first-class mail to exact a terrible price from the public. Revenue from first-class mail is being used to subsidize rates for classes of mail subject to private sector competition.

There is more competition with the Postal Service for the package delivery business than there is for any other class or subclass of mail service. The Postal Service has stated publicly that it intends to compete for this business with low rates, and it sets such low rates through subsidy from first-class revenue.

It is not a question of ineptitude in postal cost identification. It is the reality of postal policy, which strives to manipulate revenue so that the postal institution is protected from the fair competition of private companies.

So long as postal management is permitted to assign costs to mail classes on this basis instead of cost accounting principles, we shall continue to see abuse of first-class users who, under the law, can turn nowhere else for service.

When we consider such facts, the 20 cents first-class stamp begins to be more understandable.

Under the 1970 Reorganization Act, this should not occur. It gave the Postal Service the freedom to function like a corporation, with the right to make capital expenditures, negotiate working conditions and wages and generally manage mail services like a private corporation.

The law also imposed on the Postal Service a responsibility to charge users of the different classes of mail only such fees as would be required to recover costs. It was to be a break-even operation.

The first-class user was to pay the cost of that service and nothing more. And so it was to be for almost every mail service that the new agency was to supply. This requirement of the law is in direct opposition to the Postal Service policy of overcharging for a first-class stamp.

The 1970 Postal Reorganization Act established a Postal Rate Commission empowered to examine Postal Service costs and determine if proposed rates are in conformity with cost recovery provisions of the law.

This commission ruled three times that the price of a first-class stamp should be 18 cents and nothing more. Despite this triple rejection of Postal Service requests to charge 20 cents, the new rate was imposed unilaterally by the Postal Service.

The matter is still in the courts. Meanwhile, Americans are paying 20 cents for first-class stamps. They will never be able to recover the overcharges should the courts rule that the Post Office acted inconsistent with the law.

Such flaunting of the 1970 Reorganization Act does not serve the interest of the American public. The power to subsidize rates for competitive services is the power to destroy private companies. Such power has never been granted to the Postal Service.

The Congress exercised considerable wisdom when it established the Postal Rate Commission to oversee rates for postal services. The Congress was fully aware of the potential for abuses that existed if the post office were to exercise its monopoly over first-class mail unwisely. The new 20-cent stamp is evidence of such unwise use of monopoly.

Postal Service management has caused great mischief by its failure to obey the letter and spirit of the law. Evidently, some postal managers are attempting to perserve and enlarge an institution through use of rate stratagems that are inconsistent with the intent of Congress.

They appear to be unaware that no institution is worthy of preservation when it holds itself to be above the letter and spirit of the law.●

IN OPPOSITION TO CONGRESSIONAL INCOME HIKES

HON. DAVID F. EMERY

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. EMERY. Mr. Speaker, I would like to take this opportunity to go on record in strong opposition to both the increased business expenditure tax reduction figure and the liberalized allowable outside earnings level approved for Members of Congress during the final hours of the 97th Congress, first session. The American public has once again been treated to a display of congressional shenanigans reminiscent of previous maneuvers to increase Members' earnings without arousing public suspicions or triggering constituent protests. Although Members were not provided a direct pay raise in this instance, the recent round of adjustments could be worth as much as $15,000 to some Representatives.

Especially offensive is the manner in which the income liberalizing changes were accomplished. In an effort to grease the skids, Members' allowable outside earnings figure was quietly doubled under a unanimous consent provision with no forewarning and with less than 20 seconds of debate. The entire matter was resolved and the income limit raised from $9,099 to $18,198 before most Members could reach the floor.

It is true that many Members with young families do have higher than average living expenditures as a result of congressional service and their understandable desire to maintain homes both in Washington and in their districts. Proper examination of and debate on this problem could have resulted in adoption of a reasonable alternative to current policy. Instead, a Senate amendment instructing the IRS to devise a liberalized standard deduction figure for Members of Congress was folded into a Ways and Means Committee miscellaneous revenue bill with little fanfare or advance warning.

I supported the Miscellaneous Revenue Act in part because it amended a number of objectionable regulations dealing with unemployment compensation for honorably discharged military personnel. However, I can guarantee you I would have voted against the bill had the tax breaks for Members been brought to the full attention of the House.

At a time when we are asking the American public to tighten their belts and to make sacrifices in the name of national fiscal austerity, I find it intolerable that Congress has seen fit to raise its own spendable income level. Because back-door, backhanded ap-

proaches to income enhancement similar to those witnessed earlier this week may always be possible if the public is kept in the dark, in the past I have supported legislation requiring Members to vote on each and every pay raise.

To go one step further, I recently cosponsored legislation specifically stipulating that no sitting Congress may collect the benefits of a raise which they have voted on. By postponing payment of the salary increase until after the next congressional election, the American public will be provided an opportunity to pass a referendum on the merits of another congressional pay hike. Adoption of such legislation, I am certain, would put a halt to spiraling congressional payrolls and benefits once and for all.●

THE EFFECTS OF THE REAGAN ADMINISTRATION'S ECONOMIC RECOVERY PROGRAM ON NEW YORK CITY

HON. FREDERICK W. RICHMOND
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. RICHMOND. Mr. Speaker, recently, the Joint Economic Committee twice journeyed to New York City to conduct hearings into how President Reagan's economic program will affect the city's economy and fiscal condition. On Monday, November 9, 1981, we met at the New York Federal Reserve Bank where we heard from Mayor Ed Koch, City Council President Carol Bellamy, Brooklyn Borough President Howard Golden, and other knowledgeable State and local government officials. Then, on Friday, November 13, we went to Borough Hall in Brooklyn where we heard from local citizens who were concerned about the impact of the President's budget cuts on community development corporations, housing, small businesses, and higher education.

Among the more than two dozen witnesses who testified during these 2 days of hearings, there was virtually unanimous agreement that the President's program is hurting both the private and public sectors in New York City. The best any witness could say for the President's budget cuts was that they had not hurt as badly as they could have. In addition, there was widespread concern that the tax cuts and high interest rates which join with budget cutting to form the three pillars of Republican economic wisdom have severely harmed the ability of the city to raise the revenues needed to take up the slack caused by the Reagan spending cuts.

Because New York is often hit first and hardest by trends and actions that will affect every municipality across the country, the testimony presented at the Joint Economic Committee's hearings should be of particular interest for all those who are trying to evaluate the impact of the President's program on their own community. Today, I want to summarize the findings and concerns of the two top elected officials in our city, Mayor Ed Koch and City Council President Carol Bellamy. Periodically, I will report on the testimony of other city officials who appeared Monday, and on what the private citizens who testified Friday had to say.

Six years ago, New York City was on the verge of bankruptcy. Our budget was in deficit to the tune of hundreds of millions of dollars, we had lost our credit rating, and businesses were abandoning the city in droves. With the help of Federal and State aid under the direction of Mayor Koch, the city has since then pursued a policy of fiscal restraint, tax reform, and increased productivity that has resulted in a balanced budget for this fiscal year; 1 full year ahead of schedule. In addition, the private sector has been revitalized, with the number of jobs in the city now growing rather than declining.

Despite this progress, the Reagan administration's budget cuts are creating major obstacles to the ability of New York City to meet critical spending needs, both this year and through 1985.

Here are some of the bleak facts. According to figures developed by Mayor Koch, the Reconciliation Act reductions will cost New York City $698 million in Federal aid during 1982, including $273 million from the expense budget, $222 from the capital budget, and an additional $203 million in off-budget items and income transfer payments to the city's needy. By the end of fiscal 1983, these cuts will have cost the city more than $2 billion all together, according to the City Council President Carol Bellamy, including a 2-year total cut of $608 million from the expense budget, $997.5 from the capital budget, and $477.1 billion in off-budget aid.

New York City, of course, can make up for some of these cuts from its own resources. Mayor Koch testified that for fiscal 1982 the city was able to offset $193 million of the $273 million cut in the operating budget. But, as Carol Bellamy put it, these cuts will still have "a devastating effect on our City's infrastructure, services, and residents. We will * * * have to curtail a broad range of services for the needy—including day care, senior citizens' centers, AFDC, foodstamps, medicaid, and CETA—unless we can find new sources of revenue."

Here are some of the particulars from the testimony presented by Mayor Koch.

Funding for day care centers will be curtailed, potentially eliminating almost 100 day care centers serving 10,000 children in New York City.

More than 32,000 people will have their AFDC payments eliminated, including 12,000 of the working poor. Of the additional 93,900 recipients who will have their benefits reduced, 37,400 will be from families of the working poor.

The city will have to eliminate 3,200 classes serving disadvantaged students under title I of the Elementary and Secondary Education Act, a cut of more than 22 percent of the current number of such classes.

More than 31,000 job training positions for adults and youths under CETA will be cut.

Funding will be eliminated for 1,000 vocational educational classes.

Reductions in health care financing will force severe cuts in programs such as rodent control, lead poisoning prevention, immunization, prenatal care, and gonorrhea screening.

The change in eligibility requirements for the school lunch program will mean a reduction of about 1 million meals served in New York City schools this school year.

The elderly will face the potential closing of about 50 senior citizens' centers which now receive 1,700,000 visits per year.

Proposed cuts in the Older Americans Act funding could eliminate almost 600,000 meals served annually to senior citizens.

In the city's capital budget, the Reagan administration's budget cuts will be equally devastating. The physical plant in New York City is deteriorating badly: Roads with a 35-40-year life-span are being replaced at a 150-year rate, one out of four bridges requires rehabilitation, and subway train breakdowns are 30-percent higher than last year.

New York City's Office of Management and Budget says that an adequate program of bridge and road repair would require $800 million over the next 5 years. But the President has called for eliminating the Federal aid to urban systems program that provides New York with $39 million yearly to meet this need. In addition, the city needs to spend $14 billion during the next 10 years to rehabilitate the subway system, while the administration proposes to eliminate all support for mass transportation systems.

This administration's ridiculous emphasis on cutting everything in sight is going to come back to haunt this country a few years from now when our vital urban infrastructure finally collapses from the neglect by this President. This pennywise administration is being pound foolish. As Mayor Koch testified, "the unintended consequenc-

es of these 'savings' will likely be an increase in future costs."

Furthermore, the effects that these budget cuts are having on the economy and fiscal condition of New York City is, according to our witnesses, more likely to undermine the goals of this administration than to help.

First, as Mayor Koch so eloquently testified, a strong economic recovery cannot take place in the private sector in the face of a declining public infrastructure. Much of New York City's capital stock is aging and deteriorating. For example, 17 percent of our water mains and 23 percent of our sewer systems are over 75 years old, and more than 60 percent of each is over 50 years old. Much of this will have to be replaced, but unfortunately the Reagan administration has failed to recognize that a strong private sector requires a healthy public sector. As Carol Bellamy testified, the President "has yet to explain how economic recovery is to proceed if the Nation's roads, subways, and bridges are in ruins."

Second, the social service cuts will seriously jeopardize the continued participation of the working poor in the labor force. During the past few years, many income supplement programs have been reworked to provide an incentive for the poor to find jobs and improve their living standards. But this administration's social service cutbacks are pulling the rug from under those who want to escape a life on welfare, by removing the incentive to work, and are thus forcing them to abandon their dreams and return to a life of dependency on public assistance.

Third, to quote Mayor Koch:

> Numerous other programs intended to break the cycle of poverty will also be cut back or eliminated. Cuts in education and job training programs will eliminate opportunities for thousands of our citizens and place enormous obstacles in the path of the disadvantaged who wish to develop their potential. These cuts will affect both the young and the elderly.

While the budget cuts are having a serious impact on the economy and fiscal condition of New York City, so are the other two pillars of Reaganomics—the tax cuts and the high interest rate policy.

On the tax cuts, let me quote from the testimony of City Council President Carol Bellamy:

> Unfortunately, both the city's and State's revenue options have been severely limited by another of the President's cuts—the one on taxes. Because New York City's tax system is coupled to that of the Federal government, the Federal tax cuts will reduce our local business tax receipts by $85 million. In addition, New York State, which is also coupled to the Federal tax code, will lose some $30 million to $50 million in this fiscal year, $150 million in fiscal year 1983, and $225 million in fiscal year 1984.
>
> The City, then, is obviously caught in a bind. On the one hand, we can pass along the Federal spending cuts, thus accepting the President's regressive social priorities; or we can raise taxes to offset these spending cuts, thus risking an exodus of business.

The tax cuts are not only affecting the city's revenue base, they are also hampering the ability of New York City to raise funds in the bond markets. As Mayor Koch pointed out, the personal tax rate reductions are diluting the attractiveness of tax-exempt bonds, the All-Savers Certificates are competing with municipal issues, and investors are becoming warier of municipal bonds as they see the Federal Government shifting responsibilities onto local governments without making added revenues available.

While the tax cuts may be a bonanza for the wealthy, as David Stockman has pointed out, they are a disaster for the finances of our State and local governments.

Equally devastating are high interest rates. With municipal bond rates currently at 14 percent, many municipalities including New York City are having to scale back their borrowing and defer maintenance of their infrastructure. Mayor Koch testified that the city has plans to borrow $1 billion per year for the next 4 years for capital improvements. Yet, at a 14-percent interest rate, this will cost the city over $400 million more between now and 1985 than it would at the 8-percent rate that prevailed in 1975. New York City simply cannot afford to pay these higher interest costs. According to the mayor: "prohibitive borrowing costs will affect the maintenance schedules of existing infrastructure and delay new building plans."

And so, Mr. Speaker, the President's economic recovery program is, for New York City and for municipalities everywhere, not the path to growth and recovery but instead the road to ruins. David Stockman's trojan horse stands threateningly today at the gates of New York City.●

BLACK LUNG BENEFITS REVENUE ACT OF 1981

HON. CLAUDINE SCHNEIDER

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mrs. SCHNEIDER. Mr. Speaker, today, the House has once again mocked the ideals of open, representative democracy by approving an amendment to the black lung benefits bill, H.R. 5159, to liberalize tax benefits for Members of Congress. Approval of the amendment came by a vote of 363-47, since Members were led to believe that its contents involved only technical and conforming amendments to the Tax Code. In an effort to make badly needed improvements to the black lung fund, Members were unfortunately misled by perpetrators of this move.

Only a few weeks ago, this body rejected by a vote of 271-147 an increase to the outside earnings limitation for Members of the House. Therefore, supporters of today's travesty must have felt a compulsion to operate in secret. I once again strongly oppose any procedure in the House which deals with the question of compensation and taxation of Members without full and open debate. As an original cosponsor of legislation to reduce salaries of Members by 8 percent until Congress can balance the Federal budget, I call on my colleagues who must resort to under the table procedure to allow appropriate debate by those who do not share their point of view.●

CHAIRMAN OF THE HOUSE EXPORT TASK FORCE TESTIFIES ON THE FOREIGN CORRUPT PRACTICES ACT OF 1977

HON. DON BONKER

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. BONKER. Mr. Speaker, as Chairman of the House Export Task Force, I testified on Wednesday, December 16, before the House Energy and Commerce Subcommittee on Telecommunications, Consumer Protection and Finance. Chaired by my distinguished colleague, Congressman WIRTH, that oversight hearing was the third in a series which has focused on the Foreign Corrupt Practices Act (FCPA) of 1977 to determine what problems exist before looking at any new legislation.

Mr. Speaker, I commend Chairman WIRTH for initiating these timely hearings and urge consideration of new legislation amending the present act. Despite the law's good intentions, the ambiguity of the FCPA has cost this country legitimate foreign business which Congress never intended to curtail. Hence, the act, in its present form, has had a chilling effect on legitimate business opportunities overseas and a negative effect on U.S. exports.

Maintaining the U.S. position in international trade is a top priority as we depend more and more on exports to strengthen our economy. We must take steps to remove the disincentive to exports caused by the Foreign Corrupt Practices Act of 1977. Legislation is necessary to provide the needed precision, clarity, and simplicity. Our constituents have the right to know specifically what they can and cannot do in international business.

Mr. Speaker, the following is my testimony at the oversight hearing held December 16. I would like to commend

it to your attention and that of my distinguished colleagues:

STATEMENT OF CONGRESSMAN DON BONKER

Mr. Chairman, I am pleased to appear today before the Telecommunications, Consumer Protection and Finance Subcommittee on the House Energy and Commerce Committee. I appreciate the opportunity to testify, as Chairman of the House Export Task Force, on the negative effects the Foreign Corrupt Practices Act (FCPA) of 1977 has had on U.S. business and America's role in international trade.

Mr. Chairman and distinguished members of the Subcommittee, before I discuss specific problems with the FCPA, I would like to provide you with the background and climate under which the FCPA was enacted.

In 1973, with Watergate on the front pages in many newspapers and still a vivid memory, over 300 American corporations were discovered making payments to foreign officials, particularly in developing nations. One of the better known cases was the Lockheed Aircraft Corporation's dealings with certain Japanese officials, publicity and investigation about which ultimately led to the downfall of the Tanaka Government.

Subsequent investigations and revelations led to an incensed American public . . . incensed with the corruptability of corporate executives. Where was our sense of morality? Was there no longer ethical conduct in business? In Government?

An outraged public demanded change, and in response, former President Ford appointed a Task Force on Questionable Corporate Payments to assess the need for a new U.S. law to address business payments. The Task Force decided that existing U.S. laws were ineffective in deterring questionable payments by American businessmen and that a law was in fact needed to restore public confidence in the U.S. Government and in U.S. business conduct.

Congress, trying to appease the outraged public, hurriedly drafted legislation, the Foreign Corrupt Practices Act of 1977. I say hurriedly because very little consideration or thought was given to the potential consequences of the Act, in terms of its meaning, clarity, and applicability. As a result, we have today an Act which is one of the most poorly written pieces of legislation. Its lack of specificity and ambiguous wording have made it a major irritant and cost for U.S. businesses. Moreover, it is a disincentive to American export trade.

Since its enactment, the Act's provisions have been steeped in controversy and confusion over what constitutes compliance.

Mr. Chairman, a number of reports have been written on the effects of the FCPA on American business overseas. The State Department conducted a survey in May of 1981 in which 115 Foreign Service Posts abroad were asked to assess the effects of the FCPA on U.S. exports and foreign relations. By complying with the Act, according to the report, American firms face a number of problems, including those related to obtaining and dealing with agents, contracting problems, increased operating costs for accounting and reporting requirements, the lack of flexibility to provide legitimate gifts, and overcautousness in attempting to comply with the Act. The latter seems to confirm the frequently heard complaints by business that the Act is ambiguous and difficult to understand.

The result of these difficulties? U.S. firms have: foregone some apparently legitimate exports, avoided some markets, and opted to play subordinate contracting roles to foreign prime contractors.

The FCPA has a more wide-ranging negative effect in terms of an American firm's legitimate program through acquisition of a foreign firm. Let me give you a recent example.

An American firm was prohibited from buying out a British firm in part because of the latter's potential loss of business resulting from its compliance with the FCPA—an American law. If I may be permitted, Mr. Chairman, I would like to read from the report on the proposed merger of Ensearch Corporation and the Davy Corporation Limited, submitted by the British Monopolies and Mergers Commission.

"Davy believed that the Foreign Corrupt Practices Act was so formulated that it would also have an adverse effect on Davy's legitimate transactions in a number of important overseas markets, even when there was no nexus with United States commerce, in view of the liabilities on the officers and employees of United States parent companies for the acts of foreign subsidiaries or business partners when they know or "have reason to know" of the latter's activities and of the need to ensure that detailed record-keeping and control systems were adopted. Davy had been advised that the language of the Act was very general and comprehensive while the potential penalties, even for technical and insignificant errors, were severe. Davy pointed out that much confusion and uncertainty surrounded this whole area of the law (including such issues as what constitutes a "corrupt" payment, particularly in countries where gifts were normal and permissible under local law, or what constitutes a "foreign official", particularly where the line between permitted public and private activities was unclear and where individuals were free to engage in public and private activities at the same time). Davy made extensive use of agents in underdeveloped or developing countries but there was little doubt that Ensearch would be bound to insist on the strictest compliance and, at the very least, would be compelled to exercise close control over the way in which Davy managed its overseas marketing operations."

Mr. Chairman, the Monopolies Commission rejected Ensearch Corporation's bid for acquisition of Davy in August of this year, hinting that the U.S. Foreign Corrupt Practices Act leaves U.S.-owned companies with one hand tied behind their backs when trying to win orders.

I have testified that the FCPA is ambiguous and unclear, and I would like to tell you why. The antibribery provisions forbid payments to agents or intermediaries or to any person when the paying company or individual "knows or has reason to know" that all or part of such payment will be offered to a foreign official or party to influence his decisions or use his influence over others. The "reason to know" standard holds U.S. firms responsible for the actions of any intermediary or agent it uses to facilitate overseas business. Regardless of the steps taken by the company to confirm the trustworthiness of an agent, when the agent commits an impropriety the U.S. corporation is, unfairly, held answerable under the FCPA. Moreover, the antibribery provisions are unclear in terms of what constitutes a bribe and what is acceptable as a grease payment or gift. In most developing countries, grease payments are perfectly acceptable and often used to expedite the work of lower officials, and gifts are a perfectly legitimate business courtesy.

Another major problem lies within the accounting provisions which apply only to companies registered with the SEC. These companies must keep detailed books and accounts which accurately reflect all transactions and the disposition of assets. Firms are required to devise and maintain a system of internal accounting controls sufficient to provide "reasonable assurances" that transactions are executed in accordance with management's general or specific authorization.

Mr. Chairman, the "reasonable assurance" test is vague and is too disposed to subjective interpretation. Business managers cannot tell what is reasonable in the eyes of the SEC. Consequently, they tend to err on the side of "excess" when interpreting reasonableness. The cost of an internal accounting control system under this test is in some cases exorbitant, running into thousands of dollars.

Mr. Chairman, the Foreign Corrupt Practices Act of 1977 is considered a major disincentive to exports because of uncertainty within the business community about the meaning and application of some of its key provisions. Conduct prohibited and conduct permitted is unclear. The problem of uncertainty is compounded by a lack of guidance from the enforcement agencies as to proper interpretation of the Act's provisions. This problem, in turn, is exacerbated by the dual enforcement authority of the Justice Department and the Securities and Exchange Commission over the Act's payments provisions.

Mr. Chairman, we must take steps to remove those disincentives to exports caused by the Foreign Corrupt Practices Act of 1977. The American businessman has the right to know specifically what he can and cannot do in international business.

Thank you, Mr. Chairman, for the opportunity to testify before you and your Subcommittee on this important issue.●

PERSONAL EXPLANATION

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. McDONALD. Mr. Speaker, due to a previous commitment I unavoidably missed various votes on December 11, 14, 15, and 16. While I was paired on each vote missed, I failed to receive a live pair on each vote. Therefore, I would like to take this opportunity to explain how I would have voted had I been present.

"No" on rollcall No. 356, passage of H.R. 4559, foreign assistance and related programs appropriations for fiscal 1982.

"Yes" on rollcall No. 357, a motion that the conference committee meetings on H.R. 4559, Department of Defense appropriations, be closed to the public at such times as classified national security information is under consideration.

"Yes" on rollcall No. 358, passage of H.R. 4910, District of Columbia Bond Amendments of 1981.

"No" on rollcall No. 359, an amendment to the previous amendment to

H.R. 2559, Coast Guard authorization, fiscal year 1982, that sought to prohibit use of funds to operate certain specified Coast Guard facilities.

"Yes" on rollcall No. 360, passage of H.R. 2559, Coast Guard authorization, fiscal year 1982.

"No" on rollcall No. 361, the rule under which H.R. 4700, the Standby Petroleum Emergency Authorization Act, was considered.

"No" on rollcall No. 362, passage of H.R. 4700, the Standby Petroleum Emergency Authorization Act. A live pair was received.

"Yes" on rollcall No. 363, passage of the conference report to H.R. 4995, Department of Defense appropriations for fiscal year 1982. A live pair was received.

"No" on rollcall No. 365, passage of the conference report to H.R. 4331, to amend the Omnibus Reconciliation Act of 1981 to restore minimum benefits under the Social Security Act.

"No" on rollcall No. 366, passage of the conference report to H.R. 4559, foreign assistance appropriations for fiscal year 1982. A live pair was received.

"No" on rollcall No. 367, agreeing to a Senate amendment to H.R. 5159, the Black Lung Benefits Revenue Act of 1981.

"No" on rollcall No. 368, waiving certain points of order (H. Res. 303) against the conference report to S. 884, the Agriculture and Food Act.

"No" on rollcall No. 369, passage of the conference report to S. 884, the Agriculture and Food Act.

"No" on rollcall No. 371, passage of H.R. 5274, to provide for congressional evaluation of energy policy by imposing a moratorium on certain acquisitions involving major energy concerns and domestic petroleum companies until June 30, 1982.●

ETHIOPIAN JUNTA CLOSES CHRISTIAN CHURCHES

HON. JOHN H. ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. ROUSSELOT. Mr. Speaker, for more than a year ominous news has been coming out of Ethiopia with regard to the harassment and persecution of Christians and Jews by the Marxist government of Colonel Meningitsu—which is kept in power by Cuban, East German, and Soviet military advisers and police.

Recently the Washington Post published an excellent article on the closing of the last Protestant church in Ethiopia. I ask for unanimous consent to insert it into the RECORD.

The harassment and persecution of Christians is not the only example of religious persecution in a country with an ancient Christian community. The Jewish community has been in hiding for several years, its synagogues closed and traditions sacrificed.

In the meantime, as Ethiopians fight starvation and famine the Soviets pour in billions of dollars in arms and ammunition to their puppet government. There are currently 17,000 Cuban troops in Ethiopia with 4,000 Soviet and 2,000 East German advisers. Despite these forces, resistance is continuing within the country. Mr. Speaker, Ethiopia has the largest and oldest Christian and Jewish communities in black Africa. I would urge my colleagues to take note of this terrible situation.

The Washington Post article follows:

[From the Washington Post, Tuesday, Nov. 17, 1981]

ETHIOPIA SEIZES HEADQUARTERS OF MAJOR PROTESTANT CHURCH

(By Jay Ross)

ADDIS ABABA, ETHIOPIA, Nov. 16.—Ethiopia officials backed by armed soldiers today took over the headquarters of the country's major Protestant denomination in a move that could have far-reaching impact on the Marxist government's tentative efforts to improve relations with the West.

The seizure is likely to revive charges abroad that the pro-Soviet government is persecuting Christians despite Ethiopia's history of being a bastion of Christianity in Africa for 16 centuries.

The Ethiopian Evangelical Church, whose building was seized, unites the various Scandinavian and German Lutheran denominations and groups most of the half-million Protestants in the country. About 40 percent of Ethiopia's 31 million people are members of the Ethiopian Orthodox church and about 45 percent are Moslems.

Over the weekend the Swedish government sent a message to the Ethiopian Foreign Ministry demanding reconsideration of the decision, citing the impact it could have on Sweden's $20 million annual aid to Ethiopia, the largest amount of bilateral assistance this country receives.

It is far from clear, however, that the takeover of the eight-story office building of the church is simply an antireligius move. Some Western diplomats and church leaders think that the government's need for office space and the country's tribal problems could be more significant reasons for the action.

The government of Lt. Col. Mengistu Haile Mariam has given no reason and officials have declined repeated requests for comment.

"You cannot ask questions" about the seizure of the church property, an official said.

Although some churches in the countryside were closed earlier this year, the current move is limited to the headquarters of the church, known as Mehane Yesus in Ethiopia's Amharic language.

Church officials were given 24 hours to vacate the property last Wednesday, but they stalled until today seeking a letter of explanation. A church source said the keys were finally turned over to an official who came with five armed soldiers on his third attempt to take possession.

The present Marxist government of Ethiopia separates church and state and proclaims religious freedom as long as churches do not oppose the government.

In addition to Sweden's $20 million in annual aid, Swedish churches donate about $1 million to Mehane Yesus as part of about $4 million in overseas private aid the church receives for development projects, such as schools, clinics and road building.

Diplomatic sources said Sweden's message was carefully phrased so as not to contest Ethiopia's right to take property, but asked that the process be slowed down to allow for further consideration. Foreign Minister Col. Feleke Gedle-Giorgis, who was educated at a Lutheran mission school, said he would study the matter but there is no indication that the decision will be reversed.

Strapped for foreign currency and unhappy with the amount of Soviet aid, Mengistu made tentative approaches to Western Europe this year, although the United States, Ethiopia's key supporter during the reign of Emperor Haile Selassie, was left out of the process.

A revival of antireligious charges, which first cropped up in 1979, could derail the fledgling steps.

Warning of repercussions, another Western diplomat said, "They don't know what stupidity they've done yet, but they'll find out soon."

The incident is an example of how the government's often arbitrary actions, carried out by murky levels of the ruling military Dergue, can work at cross purposes with broader government policy.

The seizure was ordered as a group of 12 American Lutheran officials and lay persons was visiting the country to examine church aid projects. In a similar incident earlier this year an official in the northern city of Asmara ordered the seizure of the Italian consulate while delicate negotiations were under way in Addis Ababa, the capital, with Italian officials.

Property seizures have been common under the Marxist government and it is possible that the state security official who ordered the takeover last Wednesday did not attach any great significance to the move.

Even under the emperor when the Ethiopian Orthodox church was the state religion, antimissionary feeling was widespread in Ethiopia.

Traditionally, Protestant missions have been restricted to the south and west, areas inhabited by the Oromos, Ethiopia's largest tribe. The ruling Amharas have long suspected the Protestants of stirring up tribal feeling among the Oromos despite denials by the missionaries.

An organization known as the Oromo Liberation Front has carried out sporadic guerrilla warfare in the area in the last couple of years. The executive secretary of Mehane Yesus, Gudina Tunsa, is the brother of a Front leader. The church official disappeared two years ago and according to some reports is in prison.

"Since Ethiopian Protestants are all Oromos and the government's difficulties with the Oromos are growing," one source said, "difficulties for the Protestants are also increasing."

Despite the other potential motives, however, Ethiopia has taken a number of anti-church actions recently. In western Welega region, 160 pastors and church leaders, all Ethiopians, were arrested in the last six months. Most reportedly have been released but the pastors' movements are limited, preventing them from serving several congregations as they have traditionally done.

Some churches have been closed and mass media equipment has also been seized. Movements of the 200 foreign missionaries,

mostly Scandinavian, are also limited although none has been detained.

The headquarters of a small Baptist denomination with fewer than 1,000 members was also seized last week.

Some of the Dergue leaders are thought to be atheists, but antireligious sentiments are probably the result of Marxist ideology which does not allow room for any competing organization.

One Western diplomat summed up the takeover in this manner: "They found they needed premises for the anticorruption authority. They found the Mehane Yesus headquarters suitable.

"They also found it suitable to reduce the influence of the Mehane Yesus church because the government feels it is a platform for the Oromo Liberation Front. Looking for a scapegoat for their problems, they can thus blame foreigners."

Despite harassment of the church, Christian leaders say church participation has risen significantly since the revolution.●

ELMER HENDERSON RETIRING

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. HORTON. Mr. Speaker, I would like to associate myself with your fine remarks and state that I too am sorry that Elmer Henderson is retiring from service to the Congress.

Elmer joined the staff of the Government Operations Committee in February 1955. Since that time he has been providing Republican and Democratic Members alike with sound judgment and advice concerning the matters over which this committee has jurisdiction.

Every committee, to be successful, must have staff members with exceptional understanding of the laws within the committee's jurisdiction, and that staff must also have knowledge of the committee's history. Elmer Henderson has been that repository of legal understanding and historical knowledge. He will leave a void very difficult to fill.

I can say on behalf of all Republican Members that his presence will be sorely missed and that we wish him well.●

CPI TESTIMONY

HON. WILLIS D. GRADISON, Jr.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. GRADISON. Mr. Speaker, I would like to submit for the record the testimony on the Consumer Price Index (CPI), given by Representative JEFFORDS and myself before the Education and Labor Subcommittee on Labor-Management Relations, December 8, 1981. In this testimony we support the recently announced BLS changes in the housing component of the CPI and suggest further refinements in the CPI.

TESTIMONY OF JAMES M. JEFFORDS

Mr. Chairman: I want you to know that Mr. Gradison, my colleague from the Ways and Means Committee, and myself are very appreciative for the opportunity to present testimony to the Subcommittee today. We are certainly delighted to be in the distinguished company of Dr. Norwood, the Commissioner of Labor Statistics.

I understand that you will be discussing a number of recent decisions made by the Bureau of Labor Statistics (BLS), including survey curtailments necessitated by the budget cuts. Mr. Gradison and I are particularly interested in one decision, the scheduled revision in the housing component of the Consumer Price Index (CPI), and will confine our remarks to this issue. I will provide a little background, and then with your permission will turn the show over to Bill, who has developed a great deal of expertise in the indexing area, especially with regard to the tax code.

As you know, on October 27 of this year, BLS announced that it planned to change the homeownership component of the CPI to a rental equivalency measure. The CPI-U, for All Urban Consumers, would be changed with publication of data for January, 1983, the Bureau said, and the CPI-W, for Wage Earners and Clerical Workers, would be changed with data for January, 1985.

Mr. Gradison and I have introduced a bill, H. Res. 263, which expresses the sense of the House that this BLS decision is deserving of our full support. The legislation is currently pending before the Education and Labor Committee, and has ten cosponsors. It is from this perspective then, one of strong support for the revision in the housing feature of the index, that we come before you.

Basically, we wish to make a case for accuracy, or, to make it sound a bit grander, for truth. Inflation is one of this country's most serious problems, and the CPI is the most commonly used measure of this problem. It is utilized to analyze and develop economic policy, to deflate other economic data, and to serve as an escalator for wage payments, contracts and government expenditures. As of January, 1980, escalator clauses covered roughly 58 percent of all workers in major bargaining units. Today, more than half of all federal expenditures are adjusted for inflation directly or indirectly by the CPI. And this summer, in the Economic Recovery Tax, we provided for indexing of the individual tax brackets, the personal exemption and the zero bracket rate to the CPI after 1984. This last initiative, I might add, was successful largely due to the efforts of Mr. Gradison, who led the charge for an end to pernicious bracket creep. The point is, though, that if there are inaccuracies in the index, they are passed along in a sort of Rube Goldberg fashion from program to program until it becomes something quite alarming. To pursue the metaphor, I think the Goldberg contraption has been triggered, and we have been woken up with a douse from a bucket of cold water over out heads. There may be some, Mr. Chairman, who do not wish to be rousted, but I for one think we have been unconscious as far as this problem goes for too long.

And make no mistake, there are problems with the CPI, problems which have been documented for years. The time is ripe for improvements. For example, the index may not be properly accounting for the quality changes associated with certain price changes, and its treatment of taxes may be causing distortions. Moreover, whereas BLS has established the data base needed to periodically update the market basket on which the CPI is predicated, it has not yet established a policy on the desirable frequency of updating; it was last updated in 1972-73.

Finally, and I will defer to the gentleman from Ohio in just a moment here, the CPI has overstated housing costs when mortgage interest rates have gone up. This is the problem BLS has zeroed in on in its recent decision.

This is an important step forward, and I think it would be unfortunate in the exteme if Congress attempted to intervene and reverse the BLS decision. There will be attempts to make the proposed change look political rather than substantive. There are those who are concerned that the revision will reduce their cost-of-living adjustments, but I don't think anyone among us, even the most clairvoyant, can predict with any real assurance that a rental equivalency measure will drive the index up or down in the future; there are just too many economic variables at work here.

Ladies and gentlemen, we are in the process of attempting to bring federal spending under control, inflation under control.

It is ironic that the index we use to measure inflation so that we can control it is actually contributing to inflationary pressures by overstating increases in the cost of living. By one estimate, the CPI has cost the federal government $21 billion in excessive spending since 1978. The BLS revision will do much to correct this wasteful spending, and will do so according to a modest schedule. If we are going to gauge inflation, and indeed we should, we should do it as precisely as possible.

Thank you, Mr. Chairman, Members of the Subcommittee.

TESTIMONY OF WILLIS D. GRADISON, JR.

Mr. Chairman, thank you for allowing Representative Jeffords and myself to present testimony on the Consumer Price Index. I will focus specifically on the recent change in the housing component of the CPI, and why we think that change is an important step toward improving the accuracy of the CPI.

The CPI is the most widely used price index for adjusting federal benefits and private wages for inflation. And, beginning in 1985, the CPI will be used in the indexing of income taxes. Consequently it is vitally important that the CPI accurately measure inflation.

Most of the recent criticism of the CPI has focused on the housing component of the index, which has clearly overstated the cost of shelter in recent years. In a recent announcement, however, the BLS indicated that it will switch to a rental equivalent measure of the cost of shelter. I would like now to explain why I feel the rental equivalent measure is superior.

The basic problem with the current method is that it gives overly large weight to the purchase price of a new home and financing costs. This occurs because of the method used to determine the weights for the various components of the cost of homeownership does not distinguish between the value of a house as an investment and its value as shelter.

One way to separate the shelter cost from the investment cost is to estimate what it would cost a homeowner to rent his house. The rent implicitly embodies the current cost of purchasing and financing a home, but only to the extent that those costs affect the current price of shelter. Consequently, the rental equivalent gives a lower weight to the purchase price and financing costs because it places less emphasis on the investment value of the house. This makes a rental equivalent a more accurate and more appropriate measure than the current homeownership component.

Let me emphasize that the rental equivalent is not a new or untested idea. It was first proposed by George Stigler in 1960. Since then a change to a rental equivalent has been discussed extensively in academic and government circles, and has the strong support of many economists. Moreover, the BLS has been working on the rental equivalent for some time, and currently calculates an experimental CPI that uses such a measure of housing costs.

Why then has the rental equivalent not been inserted previously in place of the present measure? Until the past few years, the homeownership component, because of relatively stable interest rates and housing prices, was accurate enough so that the benefits from changing to the rental equivalent did not outweight the institutional costs of researching and refining that measure. However, because the homeownership component weights mortgage interest rates so heavily, their record rises in the past three years have caused the accuracy of the index to diminish greatly. In 1979, for example, the CPI for urban consumers increased by 12.8 percent, while the CPI with the rental equivalent increased by only 10.7 percent. The differences in the two measures resulted almost solely because mortgage interest rates rose to an historic high of 13 percent. In late 1980, interest rates again took off, and a similar overstatement of inflation ocurred.

The fact that the rental equivalence would have resulted in lower rates of increase in the CPI in the past few years has led to criticism that the change is being made in order to reduce CPI-indexed federal outlays or to aid business by decreasing CPI-indexed wages. In light of the long history of discussions about the rental equivalence, and the clear inaccuracy caused by highly fluctuating interest rates, I find such criticism quite unjustified. In fact, in times of falling interest rates, the CPI as currently calculated is likely to understate inflation.

I am glad that the BLS has acted at last to improve the housing component; it has acted responsibly in doing so. But I believe that it can act even more responsibly by hastening its implementation of the rental equivalence. Currently the CPI-U will switch to the rental equivalent in 1983 and the CPI-W will switch in 1985. I believe that such a long wait, in light of the BLS's previous work on the rental equivalent, is unwarranted.

In the resolution which Mr. Jeffords and I have introduced, H.J. Res. 263, we support the rental equivalence change, and urge expedited implementation of the reform. The resolution also points out that while the adoption of the rental equivalence removes much of the biases in the CPI, there are further refinements that the BLS must make.

First among these changes is a correction for the "substitution" bias of the index. Currently, the market basket of goods for which the BLS collects prices is updated only at sporadic, infrequent intervals. Thus, the market basket does not reflect adequately the tendency of consumers to substitute lower priced goods for those whose prices rise. The BLS already had gathered the preliminary data base to be used for periodic, frequent updating of the market basket, but it has not yet instituted a policy detailing when revisions will be made. Mr. Jeffords and I agree that the BLS should develop such a policy soon.

The other major changes that the BLS should make in the CPI are in the way the index incorporates quality and tax changes. The BLS should develop a better method for adjusting for price changes that occur because of the changes in the quality of goods. Regarding taxes, the BLS should find a better way to take into account changes in taxes, perhaps by developing a tax and price index similar to that recently instituted in Great Britain. I know that the BLS already has devoted significant resources to those two problems, but it must step up efforts in both of these areas.

In conclusion, Mr. chairman, I emphasize that the change in the housing component to a rental equivalent makes the CPI a much more accurate price index, and probably the best we have. Finally, BLS should continue to refine the CPI by moving towards further changes in the directions we have indicated.●

THE 100TH ANNIVERSARY OF THE BIRTHDATE OF THE LATE SAM RAYBURN

SPEECH OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. RHODES. Mr. Speaker, it is a pleasure and a privilege to join with the many friends and admirers of Sam Rayburn in remembrance of the 100th anniversary of his birth.

Sam was a truly nice person and a respected colleague. He also could be tough when the situation demanded it. He sincerely believed in the institutions of this House. And, as we know, by participating in something bigger than ourselves, we have an opportunity to provide real meaning for our lives. As Speaker of the House for 17 years, Sam Rayburn enriched his own life, as well as those who served with him. I am honored to have had that opportunity.

Sam was a delight to know. He was someone you could respect and, at the same time, have a feeling of emotion about him. I would like to thank the majority leader, Congressman JIM WRIGHT, for his thoughtfulness in arranging for this special order on behalf of Sam Rayburn.●

SPEAKER SAM RAYBURN

HON. DAN ROSTENKOWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. ROSTENKOWSKI. Mr. Speaker, I revere the institution where it has been my pleasure to serve 23 years, the U.S. House of Representatives.

When I came to this body, there was another institution within the institution I also revered. I am referring to Speaker Sam Rayburn to whom I am paying tribute on the centennial anniversary of his birth.

There is no question but that Mr. Sam left his indelible mark on the House of Representatives. His legislative skills are legend, and as is the man who donated nearly one-half a century to service of his beloved Texas. I think the House of Representatives was fortunate to have a leader of Sam Rayburn's caliber as the Speaker for most of two decades. Even today, 100 years after his birth, the influence of Sam Rayburn is clearly in evidence in this Chamber.

Only history will prove whether Mr. Sam's accomplishments and skills will be equaled.●

"DOBBIE" BURTON: AN EXTRAORDINARY COACHING CAREER

HON. JOHN EDWARD PORTER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. PORTER. Mr. Speaker, we hear a great deal today about excellence in education; about the need to instill the highest values in our young people to equip them to take their place in leadership roles in our country. I am pleased to tell you of a man from my district who devoted his life's work to such a high goal.

William "Dobbie" Dobson Burton is in his 35th season as head swimming coach at Evanston Township High School, Evanston, Ill. Mr. Burton graduated from the University of Michigan where he was himself an all-American swimmer. He used his personal experience to great advantage during his distinguished coaching career.

While Dobbie Burton stressed that the growth of the individual is more important than winning any specific race or meet, his teams nonetheless compiled an outstanding record. Under Dobbie's tutelage, the Evanston Township High School swim team won the national championship three times; placed second nationally three times; and third three times. Further,

they won the State championship 15 times; and the league championship 20 times. Dobbie Burton's teams have a dual meet record of 377 wins and 43 losses—a superb winning record of over 90 percent.

Dobbie taught his swimmers the importance of character and persistence which enabled them to excell as athletes; 154 of his swimmers were all-American, 40 were State champions, and 11 of his relay teams won the State championship. Dobbie's swimmers have broken or tied 37 national records.

In recognition of a great coaching career, Dobbie was chosen National High School Coach of the Year in 1978.

He has earned the gratitude of parents who recognized his important contribution, and the lasting friendship of his former students. The fact that swimmers of 25 years ago still keep in touch with Dobbie, attests to the influential role he played in their lives.

I feel especially privileged to salute Dobbie Burton, for I was a student at Evanston Township High School during the early years of his coaching career. He was then, and he is now, a great credit to his high school and to his community.●

A RESPONSIBLE CONGRESS

HON. OLYMPIA J. SNOWE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mrs. SNOWE. Mr. Speaker, now that we have passed the Black Lung Benefits Revenue Act of 1981, an important bill designed to improve the solvency of the black lung disability fund, I want to state my strong distaste over the irresponsible backdoor approach used to include in the bill a number of unrelated tax law changes, some of which affect Members of Congress.

Certainly no one would want to deny benefits to coal miners who are disabled by black lung disease. The black lung trust fund is in serious financial condition, and prompt action is needed to restore the fund to solvency. I support the fund and that is why I voted for the bill when it came before us.

I must point out, however, that I find it unconscionable that unrelated tax measures were added to the bill on the Senate side, and included in the measure presented to the House. The black lung measure should have been presented and passed without added provisions. But among amendments attached to the bill were a change in the tax code that limits deductions taxpayers can take on second homes if their families live with them more than 14 days per year, and instructions for the Treasury Department to issue guidelines to Members of Congress which spell out the amount of deductions they can take without having to substantiate them.

These are measures which should be addressed separately. If Congress wants to make tax changes, Members should be able to be on record in support or opposition. The method employed in the black lung bill, however, precluded such a choice. A vote against the bill because of its tax provisions would have been a vote against the fund itself and the more than 100,000 people who depend on the fund for benefits.

Since my election to Congress, I have consistently opposed every attempt to raise congressional pay when it has come to the floor on a separate vote, and I will continue to do so. The black lung bill, and the methods used to attach other provisions to it, can only be construed by constituents as an effort by Congress to avoid responsibility. I would hope that similar methods are not used in the future.●

U.N. AND OAS RESOLUTIONS ON EL SALVADOR

HON. MICHAEL D. BARNES

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. BARNES. Mr. Speaker, the Third Committee of the United Nations, and the Organization of American States, recently adopted resolutions urging a political settlement of the conflict in El Salvador. I must say that I am surprised that the administration opposed the U.N. resolution while supporting the OAS resolution, since I think both resolutions express views that we can all agree with; namely, that a democratic solution to the conflict is necessary. I include both resolutions for the information of my colleagues.

[This Resolution was passed by the U.N. Social, Humanitarian, and Cultural Committee on 3 December 1981 by 65-21, with 54 abstentions.]

UNITED NATIONS—GENERAL ASSEMBLY

REPORT OF THE ECONOMIC AND SOCIAL COUNCIL ON THE SITUATION OF HUMAN RIGHTS AND FUNDAMENTAL FREEDOM IN EL SALVADOR, ALGERIA, DENMARK, FRANCE, GREECE, IRELAND, MEXICO, NETHERLANDS, SWEDEN AND YUGOSLAVIA: DRAFT RESOLUTION

The General Assembly:

Recognizing the permanent validity of the principles enshrined in the United Nations Charter and in the Universal Declaration of Human Rights,

Conscious of its responsibility to promote and guarantee the maintenance of those principles and to contribute to ensure respect for human rights and fundamental freedoms for all,

Reiterating once more that all Member States have an obligation to protect human rights and fundamental freedoms and to fulfill in this respect the obligations they have undertaken through the various international instruments in this field,

Recalling resolution 35/192 approved by the General Assembly at its thirty-fifth session, which, among other things, expresses deep concern for violations of human rights and fundamental freedoms in El Salvador, especially in view of the death of thousands of people and the climate of repression and insecurity which prevails in that country and deplores the assassinations, disappearances and other serious violations of human rights in El Salvador,

Reiterating the appeal made by the General Assembly in said resolution 35/192 for the cessation of violence and the re-establishment of full respect for human rights in El Salvador and for Governments of all States to refrain from supplying arms and lending other forms of military assistance in the current circumstances,

Bearing also in mind resolution 32 (XXXVII) of the Commission on Human Rights, approved by the Economic and Social Council in May 1981, which notes the persistence of the climate of violence and insecurity which prevails in El Salvador,

Endorsing the appeal to the Salvadorean parties involved, made by the Commission on Human Rights in the said resolution 32 (XXXVII), to arrive at a peaceful settlement and put an end to violence in order to prevent further loss of lives and alleviate the suffering of the people of El Salvador,

Taking note of resolution 10 (XXXIV) adopted by the Subcommission on the Prevention of Discrimination and the Protection of Minorities, which states that only respect for article 25 of the International covenant on Civil and Political Rights, will assure to the Salvadorean nation, through the participation of all its political forces, the full exercise of its fundamental rights in establishing a democratically elected government, but also notes that at the present time these conditions do not exist in El Salvador,

Having studied the Interim Report of the Special Representative for El Salvador, appointed by the Commission on Human Rights, contained in document A/36/608, which confirms the seriousness of the situation prevailing in El Salvador and, among other things, provides evidence on the general attitude of passivensess and inactivity of the present Salvadorean authorities with respect to the constant human rights violations in that country,

Noting that the situation in El Salvador, as clearly shown in the Interim Report of the Special Representative, has its root causes in internal political, economic and social factors;

1. Reiterates its deep concern for the situation prevailing in El Salvador and the suffering of the Salvadorean people;

2. Requests once more the Salvadorean parties involved to arrive at a negotiatied political solution in order to establish, in an atmosphere free from intimidation and terror, a democratically elected government;

3. Deeply deplores all acts of violence and all grave violations of human rights and fundamental freedoms, and regrets in particular the persistence of a situation in which governmental paramilitary organizations and other armed groups continue to act with total contempt for the life, security and tranquillity of the civilian population;

4. Draws the attention of all parties concerned to the fact that the rules of international law, as contained in common article three of the Geneva Conventions of 12

August 1949, are applicable to armed conflicts not of an international character and requests the parties involved to apply a minimum standard of protection to the affected population;

5. Reiterates its appeal to all States to abstain from intervening in the internal situation in El Salvador and suspend all supplies of arms and any type of military support, so as to allow the political forces in that country to restore peace and security;

6. Affirms once more that it corresponds only to the Salvadoran people, to exercise its right to determine freely its political status and freely pursue its economic, social and cultural development and to establish the conditions and undertake the changes most adequate to its aspirations as a people and as a nation without external interference of any kind;

7. Urges the Government of El Salvador to adopt the necessary measures to ensure full respect of the human rights of its population in all their expressions, primarily by creating conditions which could lead to a political solution to the present crisis through the full participation of all representative political forces in that country;

8. Urges the parties involved to give their cooperation and to not interfere with the activities of humanitarian organizations dedicated to relieve the suffering of the civilian population of El Salvador. (Unofficial translation.)

9. Requests the Commission on Human Rights to thoroughly examine the situation in El Salvador in its thirty-eight session, on the basis of the final report of the Special Representative;

10. Decides to maintain under consideration, during its thirty-seventh session, the situation of human rights and fundamental freedoms in El Salvador, in order to examine anew this situation in the light of additional elements provided by the Commission on Human Rights and the Economic and Social Council.

OAS GENERAL ASSEMBLY RESOLUTION ON EL SALVADOR

The General Assembly:

Having seen the provisions of Articles 3 and 16 of the Charter of the OAS, which refer to the principle of solidarity of the American States with a political organization based on the real exercise of a representative democracy, to respect for the fundamental rights of the individual, and to the principle of free determination of the peoples;

Resolution AG/RES.510 (X-0/80), which provides that the democratic system is the basis for the establishment of a political society where human values can be fully realized, and

Having heard the statements by the chiefs of delegations during the proceedings of the General Assembly, and

Considering that the Government of El Salvador has expressed its intention to find, through the democratic process, the political solution to the violence affecting its country and, to that end, it has scheduled the election of a National Constituent Assembly for March 1982;

That the Government of El Salvador has announced that the political electoral process of El Salvador is in progress, and

That the Government of El Salvador has invited other Governments to observe the holding of elections,

Resolves, To express the wish that the people of El Salvador attain peace, social justice, and democracy within a pluralist system that enables its citizens to exercise their inalienable rights.

To express the hope that all Salvadorans will attain an atmosphere of peace and harmony through an authentically democratic electoral process.

To suggest to the Governments that wish to do so that they consider the possibility of accepting the invitation extended by the Government of El Salvador to observe its election proceedings.

To repudiate violence and terrorism and any act that constitutes a violation of the principle of non-intervention.

To reiterate that, in accordance with the principle of non-intervention, it is up to the Salvadoran people alone to settle their internal affairs.●

FIRST YEAR DEVELOPMENTS OF THE REAGAN ADMINISTRATION

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. DERWINSKI. Mr. Speaker, I insert into the RECORD a very pertinent editorial commentary which appeared in the December edition of the Christian Citizen, published in Lansing, Ill. Ann Bradley, the editor of this well-respected publication, gives her review of some of the developments that occured in the first year of the Reagan administration. As I believe that the Members will find this commentary of special interest and perhaps even enlightening, I wish to request that it be reprinted at this point.

PERSPECTIVE

Thomas Paine may have said it first, but it is doubtful that he could have said it with more conviction than today's legislators. For them, the past few weeks have indeed, been ". . . the times that try men's souls." More than one highly-placed "authority" wrongly predicted defeat of the AWACS proposal.

The media have had some uncomfortable moments as well. More than one television news analyst was at a loss to explain why a sophisticated network of sources had miscalculated people and votes.

All of this maneuvering points to the political astuteness of Ronald Reagan. His tenacious determination to steer his programs through Congress appears tempered by reason and sound judgment, without which no leader can be successful.

Reagan was born into a middle-class, Middle West, Irish-American family. Early on, he developed a strong interest in politics and an appreciation of the work ethic. He has run the gamut from New Deal proponent to conservative. He campaigned for Truman in 1948, but by 1952 had assumed a more conservative stance, supporting Dwight Eisenhower for the Presidency. The actor-turned-politician gained national attention in 1964 when he made a rousing speech in behalf of Barry M. Goldwater, criticizing excessive government, spiraling welfare costs and high taxes. A re-run of that speech put Reagan in the California governor's mansion in 1967.

Reagan has adopted a political posture that parallels the mood of the country. At a time when Americans are preoccupied with nostalgia, Reagan's relaxed, folksy approach to problem-solving inspires confidence. During his campaign, he spoke the language the American people wanted to hear: less government regulation of business, the transfer of many federal welfare programs to state and local governments, balancing the federal budget. He stressed traditional values such as work, the family, love of God and country. Many conservatives see Reagan as the leader who can restore confidence in government and who has the will and inclination to reinforce a traditional Judeo-Christian value system in our country.

Part of restoring confidence in government will depend upon Mr. Reagan's ability to curb inflation. How well is he doing? Economist, Dr. Louis C. Gasper addresses the economic situation; his informative article begins on page 6 of this issue. Charles W. Colson, founder and President of Prison Fellowship, adds an interesting commentary on Mr. Reagan's speech encouraging individual involvement with people and programs, noting that "volunteerism" discussed by the President was largely ignored by the press. Rounding out CCN's look at the Administration, news analyst Michael Patrick raises some questions regarding the federal judiciary. He cautions that the "conservative victory" won through Reagan's election and Republican gains in Congress is countered by liberals who control the third branch of government.

Ideally, government works the same way now that it did when Jefferson wrote, "The will of the people is the only legitimate foundation of any government." How well is he doing? More appropriately, how well are we doing?●

EMINENCE H.S. REDWINGS WIN VOLLEYBALL CHAMPIONSHIP

HON. WENDELL BAILEY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. BAILEY of Missouri. Mr. Speaker, today it is my pleasure to pay tribute to the Eminence High School Redwings who recently won the Missouri Class 1A State Volleyball Championship.

Coached by Jim Keeling, a 1969 graduate of Eminence, the Redwings combined natural talent and hard work in route to a 23 and 2 record and a State title. The team rallied from behind many times during the season—the mark of a true champion.

I know my colleagues in the House join me in offering our heartiest congratulations to the Eminence High School Redwings and their coach Jim Keeling. Team members include: Chris Griffith, Jackie Sandlin, Dena Cox, Amy Dixon, Jeanine Chilton, Vicki Corbin, Lisa Sutton, Teresa Sutton, Lane Utterback, Kim Mooney, Lisa Conway, Carolyn Smith, Jennifer Ard, and team manager Tina Wiedoewer.●

AID FOR CONGRESSIONAL CASEWORKERS AND VIETNAM VETERANS—AGENT ORANGE AND THE VIETNAM MAP BOOK

HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. STARK. Mr. Speaker, we continue to reap the horrors of the Vietnam war. Among those horrors are the danger to those veterans who were contaminated—often unknowingly—by agent orange sprays and residues and who are now beginning to suffer the ill effects of that exposure.

It is important for veterans who may be suffering some of the many symptoms of agent orange poisoning that they be able to know whether they were indeed exposed to an area which had been sprayed. In the past, this has been a difficult—almost impossible task—for individual veterans to determine.

But now, there is a new book out which provides detailed military unit positions and terrain maps showing where and when areas were sprayed. This map book will enable a veteran to determine whether he was in a particular time and place where he was exposed to agent orange. This information is important in helping with medical diagnoses, in seeking help from the VA, and in protecting the veteran's long-term rights. The book is also helpful in providing information on possible symptoms and how to get help.

I believe that this book is invaluable to medical libraries and groups dealing with veterans. It is something which congressional caseworkers should be aware of. Because of the enormous amount of work which went into compiling this complicated data, there is a charge for the book—but it can be a lifesaver for thousands of people in the years to come.

To obtain a copy of the book, write to: Vietnam Map Book, Winter Soldier Archives, 2000 Center Street, No. 1251, Berkeley, Calif. 94704.

The authors, Don Watkins and Clark Smith, both native Californians, have had longstanding involvement in, and concern about, the issue of agent orange contamination of U.S. soldiers in Vietnam. Mr. Watkins served in Vietnam in the late 1960's, and Mr. Smith founded the Winter Soldiers Archives to publish histories of the Vietnam war. Their expertise is evident in this thorough work.

I am pleased that my office was able to help obtain information from the Department of Defense necessary for the drafting of the book. I appreciate the kind references to my office in the book, and want to join in thanking my Oakland staff for their extra hours of effort on this project.●

MANUAL ON HOW TO ELIMINATE ELDER ABUSE

HON. JOHN L. BURTON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. JOHN L. BURTON. Mr. Speaker, I would like to call my colleagues' attention to a valuable resource book dealing with the serious problem of elder abuse. This book, "Elder Abuse and Neglect: A Guide for Practitioners and Policy Makers," came to my attention as a result of the hearing, "Physical and Financial Abuse of the Elderly." Its many authors—Susan Bloom, Carolyn Farren, and Edwin Villmoare of the National Paralegal Institute in San Francisco; David Carlson, Laura Peck, and Vince Salvi, consultants; James Bergman, Karen J. Meyers, Helen O'Malley, Margaret O'Rourke, and Howard Segars of the Legal Research and Services for the Elderly in Boston—should be congratulated for their efforts to end this tragic crime against vulnerable older people.

The manual provides an overview of elder abuse, suggests strategies for preventing or stopping it within families, examines current legislation and programs for combatting abuse, and offers information and materials to educate practitioners and the general public. This is an invaluable service because, despite the severity of the problem, still to little is known of the causes and nature of elder abuse. It is only now emerging into public awareness as child abuse did in the 1960's and spouse abuse in the 1970's.

We do know that the abused elder is most often a woman and most often very elderly. Often the abused individual has severe mental or physical impairments which make her more dependent on a caregiver and more vulnerable to abusive treatment. Sometimes the caregiver has an impairment such as mental illness, retardation, or drug or alcohol dependence, which makes him or her unable to make proper judgments about the care of an older relative. And, most tragically, we know family violence may repeat itself from generation to generation: An adult who abuses an aged parent may have learned as a child that violence was an acceptable reaction to stress.

The manual outlines six general principles which should govern the handling of elder abuse cases to best serve the needs of the victim. These are: First, the client's right to self-determination; second, the use of the least restrictive alternative in treatment and placements; third, maintenance of the family unit wherever possible; fourth, the use of community-based services rather than institutionalization wherever possible; fifth, the avoidance of blame; and sixth, awareness that inadequate or inappropriate intervention may be worse than none at all.

One chapter details provisions which the authors believe should be included in legislation designed for reporting and handling elder abuse cases. It is suggested that any law which requires adult protective services in abuse cases should be backed up by appropriate supportive services to insure that no inappropriate action—such as unnecessary institutionalization—is taken. Other provisions which were suggested are:

The law should apply to persons who are age 60 or older who are abused, neglected, exploited, or abandoned;

One State agency should be charged with the responsibility of establishing an adult protective services program and for providing or contracting out the needed services;

Those who fail to report suspected cases of abuse should be fined;

If the affected individual agrees, support services should be made available; and

The abused individual should be assured the right to legal counsel.

According to the manual, training and public education are also essential in the fight against elder abuse. Those who work with the elderly must learn how to identify cases and develop methods for dealing with emergency and chronic elder abuse cases. Likewise, the authors suggest this education process could help lawmakers respond to elder abuse in a more comprehensive and coordinated manner.

I commend the authors for their thorough review of the issue of elder abuse and for their comprehensive suggestions on how to eliminate it. I am confident that this manual will be of great assistance to those working with or on behalf of the elderly and that it will help to erase this tragedy which so many vulnerable older people experience.●

ISRAEL'S ANNEXATION OF GOLAN HEIGHTS AREA

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. ZABLOCKI. Mr. Speaker, Israel's decision to formally annex the Golan Heights area is sadly shortsighted. It will almost assuredly do more harm than good to Israel's best interests. It will surely not advance the national security interests of the United States.

One clear and assured effect is that the action will set back the Mideast peace process by undermining the spirit of trust and confidence aspired to in Camp David. On that count the American public has reason to doubt

the integrity of the commitment necessary to bring about a truly just and lasting peace.

Not only does the decision by the Israeli Knesset violate international law regarding belligerent occupation of occupied territories but is also contrary to U.N. Resolutions 242 and 338—the foundation of Camp David and all Mideast peace efforts.

Finally, but importantly, the annexation decision also impairs Egypt and the fledging government of President Hosni Mubarak by placing on Egypt a threatening burden at this delicate time.●

THE ANNIVERSARY OF THE 1945 ELECTIONS IN HUNGARY AND MONSIGNOR BELA VARGA

HON. JAMES J. HOWARD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. HOWARD. Mr. Speaker, today we remember the courageous voters and their leaders in Hungary who have wrested an outstanding victory in relatively free elections in Hungary despite Communist propaganda and economic favors and Soviet interference.

The victory of the Smallholders Party, a collection of liberal, reformist, and conservative voters in Hungary, and the utter defeat of the Communists who had received only 17 percent to the Smallholders 56 percent remains a historic example for man's quest for freedom and the determination of the Hungarian people to live under a Western-type democracy. Today when we had recently commemorated the memory of the brave Hungarian freedom fighters of 1956, we feel that the two events were closely interrelated and that in 1945 the seeds for the brave revolution of 1956 were sown. It is also a tribute to the Hungarian people that despite the loss of freedom after the free elections in 1945 and the loss of the revolution of 1956, they still prevailed by passive resistance to achieve an uneasy and incomplete compromise with their Soviet occupiers and the Kadar regime and regained at least some economic and political flexibility under a Communist dictatorship.

It would be ungenerous to remember the 1945 elections without remembering its surviving political hero, Monsignor Bela Varga.

Both as a member of the Hungarian Parliament before and during the war, and afterwards as the Speaker of the Parliament Monsignor Varga was a fearless fighter for individual rights and a protector of the oppressed and persecuted. He saved many Polish refugees and escaped French POW's, stood up against the Government's persecution of the Jews in 1944 and saved many of them from deportation to the death camps in Germany.

Under Soviet occupation, he was first arrested by the Russians, but upon his release, he had continued to fight for a democratic Hungary. He was in charge of the Budapest division of the Smallholders Party and served as its national vice chairman. In this capacities he had rejected the electoral alliance with the Communists in Budapest and persuaded the national party president to do likewise in the national elections. His organizing talents, devotion to principles and untiring efforts resulted in the 50.1 percent victory of the party at red Budapest, with the Communists attaining less than 20 percent. In the national elections, the Smallholders Party even increased its lead to 57 percent but was forced by the Allied Commandatura to agree to a coalition government. Yet, the courageous stand of Monsignor Varga and the Hungarian people bought 18 months of democracy and the memory of a democratic government in Hungary which did not fade during the repressive Rakosi years until 1956.

Today, Monsignor Bela Varga continues his fight against totalitarianism from New York where he serves as the chairman of the Hungarian Committee and has recently commented on the Polish events and on the 25th anniversary of the Hungarian revolution. We now salute the brave Hungarian people who would like so much to return to Western democracy and the intrepid fighter, Monsignor Bela Varga.●

LONG ISLAND'S NEWEST HALL OF FAMER: JOHN C. "JACK" BIERWIRTH

HON. JOHN LeBOUTILLIER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. LEBOUTILLIER. Mr. Speaker, each year Long Island's Sky Island Club hosts a series of luncheons and special events to honor special achievers.

On Friday, January 22, 1982, the Sky Island Club will induct the newest member of the Long Island Hall of Fame in ceremonies noting the many accomplishments of Mr. John C. "Jack" Bierwirth, chief executive officer of the Grumman Corp.

In July 1972, Jack Bierwirth joined the Grumman Corp. as VP-finance. In November of the same year he was named president, in November 1974 chief executive officer, and in January 1976, chairman.

As a native Long Islander, former Navy officer, and current member of the New York State Bar, Jack Bierwirth exemplifies the dynamic leadership and creativity that has become the trademark of Long Island commerce and industry.

Submitting these remarks into the CONGRESSIONAL RECORD extends official recognition to Jack Bierwirth for his many contributions to Long Island. And while those accomplishments are numerous, in the years to come, his efforts to keep the Grumman Corp. a Long Island owned and supported enterprise, will be most appreciated and acclaimed.

Heretofore, John C. Bierwirth shall be known as Jack the giant killer by thousands of grateful Long Islanders.

I bid best wishes and sincere tribute to a top-flight administrator, loyal Long Islander, and fine American. Congratulations to Mr. John C. "Jack" Bierwirth, member of the Long Island Hall of Fame of the Sky Island Club.●

THE ETOWAH ENTERPRISE IS 75

HON. JOHN J. DUNCAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. DUNCAN. Mr. Speaker, the Etowah Enterprise will observe its diamond jubilee this month, 75 years after it was founded by Capt. Thomas F. Peck. The paper is McMinn County's oldest continuous newspaper, having lasted three-quarters of a century in the same building, and without changing its name.

As a subscriber and reader of the Enterprise and can vouch for its quality and influence on the people of McMinn County. It upholds and represents those first amendment rights we all hold so dear. Through its timely stories and incisive editorials, it keeps its readers abreast of local matters and the impact of national events.

In its 75th year, the Etowah Enterprise will be headed by Mr. Jack Slayton, a former sports editor with a neighboring daily. Mr. Slayton's tenure as editor promises continued progress in maintaining the fine tradition of the paper.

This tradition is one of community interest. The Etowah Enterprise epitomizes the local newspaper which has suffered a decline in recent years. It is a paper which cares about its readers and their local needs. It is refreshing to find a paper which recognizes its responsibilities to the local reader in this age of national mass media. For the Etowah Enterprise to have survived 75 years is indeed an accomplishment.

During January, one of the newspaper's major forces will also celebrate an anniversary. Mr. Frank McKinney, editor emeritus, will have spent 58 years associated with the Enterprise. He served as editor of the newspaper for 21 years, and though he is listed as

editor emeritus, he has never been away from the Enterprise. Mr. McKinney has maintained the continuity and heritage of the paper for most of its history. He must be congratulated for his dedication to the tradition of local journalism and his role as defender of freedom of the press.

The local newspaper is an important part of American history. It provides a vital tie between the members of a community. The Etowah Enterprise has fulfilled this role in the past 75 years, and I believe will continue its proud tradition long after many more prosperous and larger newspapers have vanished from the scene. It is the quality and ideals of the Etowah Enterprise which make it a unique and valuable journal of our times.●

COURT UPHOLDS CONGRESS POWER TO PROTECT WILDERNESS LANDS

HON. JOHN F. SEIBERLING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. SEIBERLING. Mr. Speaker, on December 16, Montana Federal District Court Judge William J. Jameson issued a decision in the consolidated cases of Mountain States Legal Foundation against Watt and Pacific Legal Foundation against Watt. The cases arose from the House Interior Committee's May 21, 1981, resolution directing Secretary Watt to make a withdrawal of three wilderness areas in Montana. The judge's decision upholds the constitutionality of section 204(e) of the Federal Land Policy and Management Act of 1976; under this section, either the House Committee on Interior and Insular Affairs or the Senate Committee on Energy and Natural Resources is empowered to determine if an emergency situation exists and direct the Secretary of the Interior to make a temporary withdrawal of Federal lands from mineral leasing, mining or other forms of disposition for up to 3 years. However, the judge ruled that the committees cannot dictate the scope and duration of a withdrawal, as such terms fall within the discretion of the Secretary of the Interior. It is also clear from the judge's decision that if Congress wishes to act to prevent or limit new mining claims and mineral leasing in wilderness areas prior to January 1, 1984—when all wilderness will be withdrawn pursuant to the provisions of the Wilderness Act—legislation is an appropriate means of achieving such a withdrawal.

Mr. Speaker, there is a growing consensus that such legislation should be considered early in the coming session of Congress. Until May of this year, it had been the policy of the Forest Service under all previous administrations to recommend against mineral leasing in wilderness areas, except in the very rarest of circumstances. However, on May 5, 1981, Secretary Watt ordered his solicitor to reverse this policy and "open wilderness areas." The Forest Service followed suit on May 14 by changing its regulations and policies to provide that wilderness designation of an area could no longer be used as a reason for rejecting mineral lease applications.

The Subcommittee on Public Lands and National Parks has examined the potential impacts of this policy change in hearings and visits to several wilderness areas. On the basis of the information available thus far, it would appear that such a change is completely unwarranted and represents an unjustified assault on the integrity of the National Wilderness Preservation System. The salient fact is that there are currently some 105 million acres of Federal land under oil and gas lease in the lower 48 States, and that the Department of Interior estimates (confirmed by a GAO study) that some 75-80 percent of these leases will expire without any exploratory drilling or other development, largely because many leases are held for speculation only.

Further, I would note that designated wilderness comprises a mere 1.2 percent of the land in the lower 48 States. It is hard to understand why the current administration wishes to open this small percentage of land representing the crown jewels of our national conservation treasury, when most of the public land already under lease is not being explored and developed. Given these astounding figures, I am sure most people would agree that wilderness areas should be the last, not the first, places to be opened to mineral leasing and mining.

Accordingly, I intend to work with other members of the Interior Committee and the House to develop legislation promptly after our return in January to provide statutory protection for the wilderness system to replace the longstanding administrative protections that the incumbent administration has abandoned. As chairman of the Subcommittee on Public Lands and National Parks, it will be my intention to schedule hearings on the issue at the earliest feasible date.

Pursuant to an agreement reached with Secretary Watt in November, the Department of the Interior will not issue mineral leases in wilderness areas until at least June 1, 1982. If this deadline does not give Congress much time to enact legislation, we will ask for an extension. For my part, I intend to do all I can to see that appropriate withdrawal legislation clears Congress and is presented to the President for signature prior to June 1, if at all possible. I urge my colleagues in the House to join me and other Members in protecting the integrity of the National Wilderness Preservation System from an unprecedented and unnecessary assault.

The Washington Post published an excellent editorial on this issue, and I herewith offer the full text of the editorial for inclusion in the RECORD following these remarks:

ENERGY AND/OR WILDERNESS

The struggle between Interior Secretary James Watt and members of Congress over whether to encourage energy development in wilderness areas has advanced a step with a decision by U.S. District Court Judge W. J. Jameson. The case stemmed from the House interior committee's declaration of a state of emergency in the Bob Marshall Wilderness in Montana, in order to stop Mr. Watt from issuing oil and gas leases there.

The judge did not dispute the validity of the law's emergency provision, but he ruled that it is the secretary of the interior who has the right to determine the scope and duration of any such ban on leasing of public lands. However, the decision also specifically took note of an agreement that had been reached between the interior committee and Mr. Watt for a six-month moratorium on leasing in the wilderness, so the decision should have no immediate effect on further wilderness leases either way.

Congress therefore has until next July to take a more careful look at the broader questions of wilderness leasing. It needs to find reliable answers to two questions. First, approximately how much of the country's oil, gas, oil shale and coal reserves lie in wilderness areas? Second, how great is the need to develop those resources now?

Although it might seem that the answers must already exist, the extent of wilderness energy resources and of those available for development outside the wilderness has not been systematically addressed. For example, The Wilderness Society, a group with an obvious special interest, recently released a study concluding that only about 2 percent of oil and gas reserves lie in the wilderness. The study used oil and gas estimates made by the U.S. Geological Survey. The Department of the Interior strongly disputes the results but has offered no specific criticisms. The differences need to be thrashed out and a consensus reached.

The Senate energy committee has been debating whether to expand leasing rights for oil shale development, on grounds that shortages of land are holding back the growth of this new industry. Yet the available evidence indicates that it is not land restrictions but a matter of cost, technology and environmental impacts that is delaying oil shale development.

Like the oil industry, coal companies regularly decry the "lock-up" of energy and other mineral reserves on public lands. A study issued last week by the Congressional Office of Technology Assessment found that in the next decade the "extent of increased market demand, not the availability of additional Federal leases, is expected to determine the amount of coal that will be produced." The study identifies billions of tons of coal reserves that have been leased but not yet mined.

The fragmentary evidence now available hardly seems to justify disturbing the wilderness areas when apparently large reserves are available for development elsewhere. But the evidence needs to be much better than fragmentary, and the debate

needs a more objective forum than the conflicting and often inflated claims of energy developers, environmentalists and Mr. Watt. Congress would perform a real service by finding the answers.●

RISING FROM THE WRECKAGE: CHARLES GARGANO LOOKS AHEAD

HON. JOHN LeBOUTILLIER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. LeBOUTILLIER. Mr. Speaker, over 1 year ago, a devastating earthquake razed scores of villages and killed hundreds of people in Italy. This tragic event was immediately met with concerned and pragmatic responses from numerous organizations and individuals in this country.

One such group that performed exemplary relief service was the Bay Shore, Long Island-based Italian Earthquake Relief Fund, which raised $90,000 for the construction of a new school in the village of Sant'Angelo de'Lombardi. One individual who gave greatly to the Italian relief effort is Charles Gargano of Dix Hills, N.Y.

Gargano came to America at the age of 4. Now he is returning to his still partially devastated village of Sant'-Angelo de'Lombardi in order to witness the opening of the new school, funded through his leadership. Gargano is also a recently appointed director of the Urban Mass Transit Agency, and brings personal empathy and professional knowledge in the fields of management and construction to the relief efforts in his native village.

Further rehabilitation of Sant'Angelo de'Lombardi needs to be undertaken, and with Charles Gargano heading up further relief efforts, there is no doubt that this will be soon accomplished.

I wish to note for the record that I salute Charles Gargano for his humane and generous work.●

GIVE THE PLAN A TRY

HON. JOHN J. DUNCAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. DUNCAN. Mr. Speaker, "No plan will work if not tried." This is common knowledge. Yet, with the increasing cynicism of our age we find bold concepts abandoned because the cynics say they will not work. If the economic situation of this country is to improve we must have new ideas, but, as the article below points out, there will be no improvement if the plan is not tried.

(By Chuck Redfern, the Daily Post Athenian)

A lot of politicians and special interest groups say that the Reagan "Save the Nation Plan" will fail. I tend to agree with the others who say "The Reagan Plan won't fail, because it will never even be tried."

One economist puts it this way, "Reagan was elected as captain of the Titanic, a sinking ship."

Have you ever set out to do something and before you hardly get started someone tells you, "It won't work"? It sure can make your teeth grind and you have to bite your tongue to keep from replying, "How do you know it won't work? I haven't even got it started."

I'm about as handy with tools as a cub bear with gloves, but one time I had clothesline problems. The durn clothesline kept falling down every time the wife hung out a clean wash. Needless to say, I was not very popular with my clothesline, but after agonizing over it for days, I set out with my super plan to put up a clothesline that would cure my troubles and get me out of the doghouse.

I had no more than started to dig the post holes (for the third time) when a neighbor came by and said, "Chuck, that ain't gonna work." It wasn't long until the wife came out and she told me, "It won't work." By then the kids had heard all the votes of confidence I had received and they echoed the unpleasant song, "Daddy, it just won't work." They sang it.

Everyone was yelling that it wouldn't work and I began to believe it. It is an interesting thing how you can influence the mind by mass psychology. The Reagan Plan isn't going to work, just as the man said. It will never be tried.

Oh sure, there have been some piecemeal attempts by Congress to act like they were following the president's plan to reduce the annual increase in government spending, and allow us to keep more of the money we earn, but they aren't going to do away with the Pork Barrel giveaways in their home districts. There is that lack of concern by Congress to cut out waste, run down cheating, and cut down finding more ways to run up our national debt.

It is a case of survival. Survival for staying in Washington, not survival of our economy, that too many of our representatives are interested in. Of course you can't blame those fellas too much. They are encouraged to keep spending more than is taken in through taxes by all of us. We all seem to have our private interest groups and projects that we feel must be saved. It's like the old story of putting out food for the wild birds. Pretty soon they expect it and forget how to forage for themselves.

Even the city, county and state governments were lulled into the federal handouts. It was beautiful to receive those "free" grants from Uncle Sam. Few can say they have never enjoyed some benefits from that so-called "Washington Winter Wonderland." We just didn't understand that Uncle Sam was borrowing a large chunk of that money and that someday we would have to pay high interest rates for the federal government to be able to borrow more to pay interest on what was already borrowed.

I don't subscribe to the "Doomsday" crowd philosophy, that says, "Every silver lining has a dark cloud," rather than the optimist who claims that "Every dark cloud has a silver lining." However, I'm not going to hold my breath until the federal budget is balanced. I've got a feeling that I'll be pushing up daisies before that trillion dollar debt comes down to a nickel.

Who was the little boy who stuck his finger in the hole of the dam and saved the town? He sure couldn't do much with our national treasury as there are so many holes where the money trickles out, that it looks like even President Reagan won't be able to stop the flow. Sorry Pres. It looks like you got to Washington too late.

Most everyone has already yelled that your plan won't work and so that is all we see and read. I know how you feel, as I just gave up on my clothesline and bought an electric clothes dryer. I thought I'd never get it paid for, but it worked. To this day I still don't know if my Clothesline Super Plan would have worked, as I never tried it.●

THE NEED TO STICK WITH REAGANOMICS

HON. GREGORY W. CARMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. CARMAN. Mr. Speaker, I believe that in view of some of the questions which have been raised about the President's economic recovery program, the op-ed piece from the November 21 New York Times by Donald Kendall provides a good summary of why we should give the program a chance to work before criticizing it. Mr. Kendall is chairman of the board of the Chamber of Commerce of the United States.

The article follows:

REAGANOMICS, YES

PURCHASE, N.Y.—After just 10 months as steward of the American economy, Ronald Reagan has come under sharp attack for the bold budgetary and tax policies that he has designed to correct decades of economic mismanagement in Washington.

These attacks have been marked by wild exaggerations of the reach of the budget cuts, neglect of the beneficial aspects of the tax cuts, and failure to report the encouraging signs that we have already seen since the advent of Reaganomics.

Often overlooked is the fact that Congress did not actually cut the fiscal 1982 budget but only reduced the increases planned by the previous Administration.

The 1982 budget will still be the largest in our history—more than $71 billion larger than the fiscal 1981 budget. Even taking into account the 6.2 percent increase in inflation forecast by the Administration for fiscal 1982, the budget will still grow in real terms. Thus, increases in Government spending will once again outstrip inflation, which is more than we can say for the wages of the average American worker and taxpayer.

Nevertheless, we are told that Ronald Reagan has become the "Great Dismantler" of 50 years of social progress. Yet, if Lyndon B. Johnson was a hero in 1965 with a Great Society budget of $118 billion, of which 40 percent was spent on defense, why is Ronald Reagan a villain for spending $732 billion, of which just 27 percent has been earmarked for defense?

Let's take a specific look at the fate of several social programs in this first year of Reaganomics.

School lunches. Subsidies for families with incomes over $16,000 have been reduced, but students from families earning less than $11,000 continue to receive free lunches. In fact, the per meal subsidy paid by the Federal Government to school districts for these free lunches has been increased, from $1.13 to $1.20.

Food stamps. Some 22.5 million Americans received them during the last fiscal year. This year, 21.6 million will receive them, with striking workers now excluded.

Medicaid and Medicare. In the last fiscal year, $57 billion was spent on these programs. As such, a reduction of $500 million this year can hardly be described as Draconian.

All told in his first fiscal year as President, Ronald Reagan will preside over the largest yearly increase in entitlement social programs in history—from $295 billion last year to $345 billion this year—again, far exceeding the anticipated rate of inflation.

While attention has been lavished on the supposed effects of the budget cuts (effects seen largely through the eyes of job-conscious Federal program administrators), the promise of the Reagan tax cuts has been all but ignored by critics. How many headlines have reported that, according to the Treasury Department, an estimated $2.18 billion will be pumped into New York State's economy as a result of cuts in individual tax rates during the current fiscal year? This figure does not begin to measure the total boon to the state because it does not take into account the state's sizable share of the many tax incentives enacted for businesses and savers.

Recent history shows that these dollars will not be stuffed into mattresses, but will be saved, invested, and used to pay off debts—which will lead to lower interest rates, capital formation, economic growth, jobs, and expansion of the tax base.

When John F. Kennedy's supplyside tax cut took effect in 1964, the rate of disposable income saved by Americans increased from 5.4 percent in 1963, the year before the cut, to 6.7 percent in 1964 and 7.1 percent in 1965. In 1964, an estimated 45 percent of dollars left in workers' pockets as a result of the Kennedy cuts was saved. In 1965, 58 percent was saved.

Finally, while each downward blip on the economic radar screen is reported, the encouraging signs of recent months have been all but ignored.

Inflation has dropped 25 percent since Mr. Reagan took office; interest rates have dropped to their lowest levels in a year; All-Savers certificates generated about $18.7 billion in deposits during October; and the rate of savings—the key to long-range economic health—has begun an impressive climb, from 4.3 percent in January to an estimated 6.5 percent today.

President Reagan's economic-recovery program was never intended to provide a quick fix. Yet, relatively minor reductions in the growth of Federal spending, coupled with major tax incentives for every worker and business in America, have already begun to produce positive results in the rates of savings, interest, and inflation.

The current economic downturn is all the more reason to stick to the course the President has charted, and to seriously consider speeding up the effective date of the next round of tax cuts.●

ROBERT K. HEATHMAN, VETERANS' ADMINISTRATION, RETIRES

HON. BILL CHAPPELL, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. CHAPPELL. Mr. Speaker, it is with both a sense of loss and feeling of appreciation that I recognize the upcoming retirement of Robert K. Heathman, Special Assistant to the Director of the Veterans' Administration Regional Office in St. Petersburg, Fla. Loss in the sense that the VA will be losing a very valuable asset and appreciation for the contributions of his long dedicated career.

After 5 years of service in the U.S. Army during World War II, Bob started working with the VA on April 8, 1946. During his many years with the VA, he was given a special VA Central Office assignment with the Department of State at the American Embassy in Rome, Italy, as the Veterans' Affairs Attaché. After completing 6 years of continuous service overseas, he was reassigned to the St. Petersburg VA Regional Office on May 12, 1969, where he has continued his efforts on behalf of this Nation's veterans population.

Clearly, a man with Bob's background and sense of duty will be hard to replace. However, the Veterans' Administration is a better organization today because of his contributions. I know, all of us, wish Bob a happy retirement and thank him for his years of service.●

ACCOMPLISHMENTS OF THE 97TH CONGRESS, 1ST SESSION, REPORT TO THE PEOPLE OF THE FOURTH DISTRICT OF WISCONSIN

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. ZABLOCKI. Mr. Speaker, at the end of every session of Congress I traditionally submit for the record a summary of accomplishments which is shared with my constituents in the Fourth District of Wisconsin. At the closing of the 1st session of the 97th Congress I am pleased once again to provide this "Report To The People" which I hope my constituents in Wisconsin, who I have the honor of representing, will review.

As you know, Mr. Speaker, the closing of the 1st session of Congress brings some of the most dramatic and far-reaching changes in the nature and extent of Government since the 1940's. With the election of President Ronald Reagan and the subsequent legislative proposals to curtail the Federal Government, reduce taxes and eliminate programs, we have seen widespread changes which are now beginning to show their effects on the lives of individuals throughout the country. In Milwaukee County alone, we are witnessing skyrocketing local taxes, an unemployment rate that for the first time in years exceeds the national average, and possible increases in public transportation fares.

In all fairness, Mr. Speaker, this administration was well intentioned in its commitment to reduce Government spending, and curtail out-of-control Government programs. I, for one, fully agreed with the philosophy that spending should be reduced and taxes cut. But the method of reducing or eliminating programs like trade adjustment assistance and school lunches, which affect the poor people, were certainly questionable. Similarly, the President's tax bill which cut taxes for the rich and large corporations did not give the average American a fair deal.

While the President's program, for the most part, prevailed, it is significant that many of the Reagan predictions have not come true. Many people do not realize the concern brought out time and time again on the House floor—that the administration incorrectly predicted quick results to its program for economic recovery.

In fact, in his March 6 press conference the President predicted a drastic reduction in the fiscal year 1982 deficit. This month, however, the Office of Management and Budget (OMB) stated that the fiscal year 1982 deficit would be $109.1 billion. The 3 year budget outlook has exploded from $139.4 to $423.4 billion! At the same time we have 9 million Americans out of work—the most since the Depression, and we are facing a serious recession.

In the 1st session of the 97th Congress we responded to the administration's demands in a cautious fashion. While the Congress provided the bulk of what the President wanted, what remains to be done will be dependent on the future course of the economy.

The Congress cleared a budget reduction bill of $35.2 billion in July and later saved an estimated $6.5 to $7 billion in funding bills. In August, the Congress enacted the tax cut bill which was intended to spur savings and investment. In addition, we restored benefits for certain social security recipients and authorized interfund borrowing among all social security trust funds through fiscal 1982. While a number of programs were cut, my colleagues and I did manage to contain the size of the reductions in certain programs like student aid, unemployment compensation, and health planning.

Mr. Speaker, we have tried to enact policies that seemed to be called for by a constituency supportive of the current administration. As those policies are implemented, it remains to be seen what the 2d session of the 97th Congress will be required to do. I myself had misgivings about the impact of the legislation requested by the President. Nevertheless, for the sake of our country, and our people, I hope the Reagan program works.

ECONOMY AND THE BUDGET

Mr. Speaker, as I have already indicated, the economy of our country was first on the list of legislative priorities taken up by the Congress.

The bulk of the sweeping budget cuts were contained in the Budget Reconciliation Act which cut nearly $35.2 billion from the Federal budget. This bill, which was passed in the form of a substitute to the Budget Committee's version, contained spending reductions in the entire spectrum of Federal programs except defense. Had the Budget Committee's version been taken up, budget cuts would have been distributed in a more orderly and equitable fashion.

Instead, the Reagan substitute was presented to us in a draft version, with numerous handwritten revisions, scribbling and deletions. That bill abdicated much of the authority of the Congress to the Budget Director and included Federal cuts in programs benefiting State and local governments, like public transportation and human services aid. In addition, massive cuts in education and school aid, unemployment compensation, school lunches, and senior citizens programs were enacted.

In the area of taxes, the Congress cleared, at the President's urging, a tax cut bill expected to reduce revenues by $750 billion over fiscal 1982-86. The bill reduces individual income tax rates across the board by 25 percent over 3 years, lowers the maximum rate on capital gains, and lowers the corporate tax rate. In addition that bill allows faster depreciation of capital investments, provides tax relief to oil producers, and reforms the marriage penalty tax treatment.

Again, my Democratic colleagues and I would have preferred a tax bill that distributed cuts more equitably to those making less than $50,000 annually. However, a Democratic sponsored tax alternative which would have allowed for a balanced budget in fiscal year 1982 while providing tax cuts to middle and lower income taxpayers was defeated; and an opportunity to vote on the Ways and Means Committee version did not arise prior to passage of the administration's substitute.

The administration clearly believes these measures will ultimately lessen inflation and shore up the economy. While as yet the predictions for an immediate recovery have proven false, it is evident that the President plans to take responsibility for the long-range results of his program for economic recovery.

NATIONAL SECURITY AND DEFENSE

The 1st session of the 97th Congress saw several key votes in the area of national security and defense. The Congress approved a $200 billion appropriations bill for defense for fiscal year 1982 which was substantially higher than last year's level. The Congress also rejected amendments to delete funds for the B-1 bomber and the MX missile.

In the House of Representatives, key votes on the MX and B-1 came just after the President announced a nuclear arms control proposal to Moscow. Many opponents of the amendments to reduce funds felt the amendments would reduce the President's bargaining position with the Soviet Union.

It was evident that the Congress agreed that the preservation of a strong national defense is vital to the security of the United States and the world. My position is supportive of that concept, however, I believe we must also have the political foresight to use nonmilitary means like arms control to keep weapons stockpiles from becoming an end in themselves. And we must attract responsible, dedicted men and women to the Armed Forces, training them expertly and paying them adequately. I was pleased that the Congress was able to clear a pay raise for military personnel ranging from 10 to 17 percent.

HEALTH AND THE ENVIRONMENT

During consideration of the budget reconciliation measure, serious debate came on President Reagan's proposal to end 25 categorical health programs and channel their funds into two block grants to the States—with a 25-percent cut. While Congress went along with the reduction in funding for a savings of about $1 billion a year in fiscal year 1982-84, it balked at the block grant proposal. Ultimately, we cleared a bill that combined 19 programs into four block grants but imposed a number of conditions on how the money was to be spent.

One of the most unfortunate results of the budget cuts were the reductions in medicaid and medicare. Despite the objections of the States that health care costs were soaring, the President's program resulted in spending cuts of about $1 billion a year in medicaid, the health care program for the poor and disabled. In addition, in direct conflict with the President's original promise to exempt medicare as part of the "social safety net," this session of Congress saw changes which will result in another $1 billion in reductions in that program.

In the area of environment, Milwaukee County taxpayers will be interested to hear that the Clean Water Act which directly affects the Metropolitan Sewerage District was reauthorized. All plants and equipment now eligible for 75 percent Federal funding would remain so until fiscal 1985. The Congress also remains committed to the park acquisition and the land and water conservation fund.

EDUCATION AND SOCIAL SERVICES

Members of Congress considered a number of proposals affecting students ranging from elementary school to college. While the administration supported lumping 44 education programs into two block grants, the Congress ultimately retained the separate status of programs for the disadvantaged and handicapped, while establishing one block grant out of a variety of smaller programs. In the area of student aid, the Congress made changes in the Pell grant programs and the guaranteed student loan (GSL) program to reduce Federal expenditures.

Because education is one of the most important elements of our Federal budget, I was disappointed in reductions in this field, but at the same time relieved that programs were not totally nullified as originally proposed. The Congress also made cuts in impact aid which goes to school districts with children whose parents either live or work on Federal property. Impact aid funding was cut to $475 million in fiscal year 1982 from about $725 million.

Reflecting President Reagan's philosophy that welfare payments should only go to people who have no other source of income, the "work incentive" provisions in the previous law were eliminated. Interestingly, the policy is one of making it, in many cases, more rewarding to stay at home rather than to work. Many AFDC recipients who held part-time jobs now find it more profitable to stay at home, in view of these reductions as well as reductions in day care.

While I have long supported reform of the welfare system where abuse is evident, the total elimination of benefits for one who is trying to work is, in my opinion, questionable. It remains my position that we should be encouraging individuals to become contributing, productive members of our society.

In its efforts to continue curtailing Federal spending, the Congress also eliminated the Community Services Administration (CSA), and reduced the child nutrition and food stamp programs. Only Head Start, the program for low-income, preschool children, fared better. It received an authorization of $950 million for fiscal 1982.

SENIOR CITIZENS AND VETERANS

Mr. Speaker, social security benefits are the only income for 7 million older Americans and the primary source of income for 15 million out of 25 million

older Americans. It is my belief that revisions in the system must be done in a calm, cautious, and fair manner.

Unfortunately, the Reagan administration led millions of people to believe that the Congress would allow the system to go broke unless drastic changes were made in retirement benefits. Congress took steps toward restoring the solvency of the system and my colleagues and I will continue this work well into the next session of Congress.

The Congress succeeded in restoring the $122 montly minimum social security benefit which had been earlier eliminated at the request of the President. Congress also cleared a measure that would allow the old age and survivors' insurance (OASI) trust fund to borrow from the healthier hospital insurance and disability trust fund until further, more permanent solutions are found.

In the area of veterans care, a major veterans health care bill was enacted. The legislation addressed the needs of many veterans including the Vietnam veteran. It provided for treatment for ailments attributed to agent orange and extended a program of "storefront" readjustment counseling centers. It also required maintaining sufficient hospital and nursing home beds; extended the time period for certain educational benefits; and established a small business loan program for veterans.

Mr. Speaker, as chairman of the House Foreign Affairs Committee, I take a specal interest in highlighting some of the major accomplishments of the committee in promoting funds and programs to uphold the U.S. foreign affairs objectives while containing spending within reasonable budget ceilings.

During the first session of Congress, the Foreign Affairs Committee and its subcommittees held 266 official meetings which included hearings, markups, and briefings.

Our foreign assistance authorizing legislation for development and security programs is on its way to the President. In addition, the authorizations for State, and related agencies, Arms Control and Disarmament Agency, Export Administration, Overseas Private Investment Corporation, International Investment Survey, have all been approved by the House. With the exception of the State and ACDA authorizations, all have been, or shortly will be, signed into law.

The Subcommittee on International Security and Scientific Affairs, which I also chair, has contributed to the preservation of United States and world peace by promoting an array of diplomatic and foreign policy tools as opposed to a total reliance on military means/power.

For example, the subcommittee adopted legislation establishing a multinational peacekeeping force in the Sinai that supports the Camp David accord initiated by President Carter, and reinforces the peace treaty between Egypt and Israel and the peace process in the Mideast.

In response to severe economic problems encountered by many peoples of the less developed countries of the world, the subcommittee reduced amounts requested by the executive branch to be spent on military assistance and increased funding levels for health and refugee programs, the Peace Corps, and other U.S. voluntary development programs.

While it is difficult to measure the exact benefits of such programs, we should remind ourselves that the defense of our country and the preservation of world peace is dependent not only upon the adequacy of our nuclear and military defense programs—to which I remain committed—but also on the belief that knowledge is better than ignorance, that human conflicts are often caused or magnified by poor communication and lack of contact, and that people-to-people contacts and assistance have a direct and positive impact on preserving a peaceful world. It is this same attitude and approach that we must take vis-a-vis our brothers and sisters in Poland. Just as communism is not possible without tanks, democracy is not possible without human freedom.

Finally, in the area of nuclear arms control, I have supported President Reagan's recently announced commitment to seek strategic nuclear arms reductions with the Soviets and have impressed upon the new administration to more actively pursue a coherent and comprehensive nuclear arms control policy that enhances U.S. national security and world peace in 1982 and beyond.

Mr. Speaker, I would like to express my sincere appreciation to you for your cooperation during the 1st session of the 97th Congress. While it has been a difficult session, I believe we have worked to represent our constituents and I look forward to continuing to work with you next year. Our task for the future will be to continue to fight for realistic economic measures to halt inflation; to put our people back to work; to maintain our world position of leadership; and to continue to fight for the rights of all men and women including the unborn.●

REFUSENIK PAVEL ABRAMOVICH

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. PHILIP M. CRANE. Mr. Speaker, as we embark upon this holiday season, many in this Chamber and throughout America have much for which they can be thankful. Although we are in a period of economic stress, all of us can look forward with hope and confidence to the future and to the future prosperity of our children. We Americans can harbor such expectations, Mr. Speaker, because our freedom, under God, is secured by a common commitment to the proposition that ours is a government of the people, by the people and for the people. Such is our destiny.

But Mr. Speaker, at this time of year it is incumbent upon us as we rejoice in our political and religious freedom, to be mindful of others who are denied the liberties which we cherish. As the lights begin to flicker and dim for yet a third time in this century in Poland, as the Gulag's iceflow closes over the heads of the people in Afghanistan, and as the forces of darkness begin to expand and congeal in the Caribbean, we should reflect for a moment on the source of this discontent, and feel compassion for those who have fallen under this pall.

Mr. Speaker, in the Soviet Union today there are many who yearn for freedom and yet are denied even elementary human rights. In particular, I have in mind the Soviet Jews who are being persecuted for no reason other than they wish to live and worship according to the dictates of their own consciences, not the dictates of the Soviet state. Especially noteworthy are those brave souls who, unable or unwilling to actively resist the awesome power of the State, have been unjustly refused permission to leave it, and have instead been subjected to all manner of indignity and hardship.

Mr. Speaker, some time ago I adopted a Soviet Refusenik, Pavel Abramovich, a Hebrew teacher in Moscow, for I feel it is incumbent on all of us, particularly those who hold the public trust, to speak out against injustice wherever it may occur, and to remind ourselves that we may not permit, ever, mankind to experience another holocaust. For many months I have heard nothing about Pavel, but just yesterday I received a letter from his aunt, Lea Bondarenko, and I would like to share it with my colleagues.

Without objection, the letter was ordered printed.

CORAZIM 13/12, NEVE SHARETT,
TEL-AVIV, ISRAEL,
December 6, 1981.

Congressman PHILIP CRANE,
Longworth Building, Room 1035,
Washington D.C., USA

DEAR SIR; It came to my knowledge that you have adopted my nephew, Pavel Abramovich, a longtime refusenik and teacher of Hebrew in Moscow, and I would like you to know that I am most grateful to you for this. I learned of this through a letter from Mrs. Pamela Cohen of Chicago.

Pavel Abramovich suffers a difficult fate. Ten years ago he applied for the first time

for permission to leave the USSR for Israel. Pavel wrote in a recent letter: "Ten years of waiting is a period in one's life during which he undergoes severe persecutions can change a man more than one would have changed in half a lifetime of ordinary living. One must live in 'refusal' and make the best of it".

The "best of it" and the "creative life" of Pavel is his teaching of Hebrew and articles on his reflections on the development of the Hebrew language and the teaching of Hebrew in the Soviet Union. All the materials included in his articles were items which appeared in official Soviet press publications—but—this writing is considered illegal in the USSR.

During the past ten years, Pavel had been subjected to different kinds of persecutions: interrogations, imprisonment for 15 days on charges of "hooliganism", threats of long-term imprisonment, etc. During the past four years, three attempts have been made to bring Pavel to trial on fabricated charges. The first attempt was a charge of theft of books in Hebrew during the International Book Fair in Moscow—although the books had been sent to him as a present. An inquiry from Israel addressed to the Soviet powers stopped the danger of that trial.

The second attempt to bring Abramovich to trial was on accusation of "parasitism", although he had papers to prove that he was indeed working. An intellectual, educated young man inclined to very creative life by his very nature, a man who did work he was labelled a "parasite"—a drone, a man who eats bread that he has not earned, put on the same level as drunkards and tramps. Western lawyers intervened by sending appeals to the Procurator-General of the USSR and this obviously helped to cancel the trial for which a date had already been fixed.

At present, the situation of refuseniks has taken a change for the worse. Greater force is being used against them, against teachers of Hebrew, to put an end to their activity. In the Soviet Union, one is free to study any language—Spanish, Korean, Swahili—any language but Hebrew. If the authorities know that one has a book in Hebrew or on the Hebrew language, or a book about Israel—one is thought to be conducting "anti-Soviet activity".

In October of this year, a group of KGB men forced open the door of Pavel's apartment (Pavel had not been able to open the door immediately as he was in the bath). The men showed an order for a search (the equivalent of a search warrant, but the warrant had been issued one and a half months previously) and proceeded to search the apartment. Items confiscated were some seventy books in Hebrew, private notebooks, a typewriter, a tape recorder, cassettes and a Bible in Russian. No itemized list was made of the items confiscated. This of course left scope for accusing Pavel of some illegal activity in the future, and was done in such a way with forethought—such is the Soviet power.

Pavel was then summoned to the KGB for interrogation and threatened that he could be detained in the USSR for another 25 years and accused of inciting his Hebrew pupils to leave for Israel.

Pavel does not want any demonstrations in the West on his behalf just now, for he fears this would only make the authorities intensify their acts of repression against Jewish refuseniks. It is quite possible that certain KGB "promises" might be realized even though this might involve breach of law.

In connection with this, I am of the opinion that the most effective way of helping Pavel now would be to organize a Committee of Lawyers in the USA to assist refuseniks in the USSR, which we would be able to help here from Israel with necessary documents. If this Committee were to oppose or expose breach of Soviet law in the USSR, this might help refuseniks to stand up against arbitrary lawlessness and the tyranny of the Soviet power.

I am deeply grateful to you Mr. Crane for your help and sympathy.

I wish you and your family a Happy New Year and Season's Greetings.

Sincerely,

LEA BONDARENKO,
The aunt of Pavel Abramovich.●

SECRETARY OF THE INTERIOR JAMES WATT SHOULD BE REMOVED FROM HIS POST

HON. TED WEISS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. WEISS. Mr. Speaker, the preservation, protection, and prudent use of our natural resources and environment is one of the most important functions of the Federal Government, and one that has been maintained for more than 200 years. Unfortunately, the current Secretary of the Interior, James Watt, is dismantling the Government's ability to carry out this responsibility and could well end our Nation's historical commitment to a balanced interior lands and resources policy. For this reason, James Watt should be removed from his post.

In 1779, the Continental Congress resolved that lands owned by the United States should be used for the benefit of all Americans. This initiative gave shape to our Nation's policy of public land and natural resource use and has guided us to a point where I believe the quality of our Nation's lands is unmatched by any other nation. Much of our success is due to the "multiple use" concept integrated into our policies. This concept requires that lands in the public domain be used in a way that allows simultaneous or future use or other purposes. For example, land that is used to search for oil or coal must, under Federal law, be made usable for farming and other purposes.

Our national park system, created in 1916 by the National Park System Organic Act, offers recreation, history, and environmental studies, as well as the always vital preservation of limited resources. The United States was the first nation to create such a national park system.

Since that time, more than 330 national park areas have been designated, preserving 81.5 million acres of parkland. Still, only a little more than 1 percent of the land in the contiguous 48 States is used for this purpose.

The Federal Land Policy and Management Act of 1976 balanced, for the first time in history, resource protection and preservation with resource extraction and use. This act streamlined management of public lands to prevent careless use and unnecessary protection. It authorized a nationwide inventory of federally owned lands and established the Bureau of Land Management within the Interior Department. This Bureau clearly empowered the Department to put a stop to what, in the past, had been one of the most damaging of single-use environmental abuses, strip mining.

And just slightly more than 1 year ago, the Alaska National Interest Lands Conservation Act was signed into law to preserve certain lands for the benefit, use, education, and inspiration of present and future generations. The importance of this law includes the recognized need to preserve unrivaled scenic and geological values of natural landscapes; provide for the maintenance of sound populations of, and habitat for, wildlife species of inestimable value to Alaskans and all Americans; protect and preserve historic and archeological sites, rivers, and lands; and maintain opportunities for scientific research and undisturbed ecosystems.

This act, which was enacted after nearly a full decade of debate, virtually doubled the amount of publicly held lands. It also set out a study to consider the potential for mineral resource extraction from the Alaskan North Slope. This study offered insulation between rapid exploitation of possible energy resources—oil and natural gas—and environmental protection. This act, the most recent major piece of land use legislation, remained true to the Nation's historic commitment to balanced land use. As one editor commented earlier this year, "The concept of public domain is as old as America."

The implementation of a sound public lands and natural resource policy has enjoyed the support of virtually all sectors of American society over the years. In Congress and the White House, support has come from both Republicans and Democrats, and popular support remains consistently strong. Several nationwide polls taken in 1981 relect this support:

Fifty-eight percent of Americans favored Federal laws to protect the environment even if the laws might create additional costs; 36 percent opposed such laws, according to a Gallup poll.

Strong support across the political spectrum for these laws was revealed by a New York Times-CBS poll which found that upward of 65 percent of those who identify themselves as liberals, moderates, and conservatives believe these laws should be maintained.

Decisions made in the past two decades have rightly been seen as national choices, and so action has consistently and appropriately occurred on the Federal level. The ability to make policy in the best interest of all Americans depends on a breadth of vision that simply cannot exist on a State-to-State, or even a regional, basis. Our limited resources—including breathable air, drinkable water, farmable soil, inhabitable wilderness lands, and swimmable lakes and oceans—must be managed in consideration of the needs of our Nation as a whole. Balancing preservation and use of our natural resources should not be made either a regional or a partisan issue, and responsibility for public lands and natural resources should not be allowed to slip through the fingers of the Federal Government.

The so-called Sagebrush Rebellion has sought to take this responsibility from the Federal Government so that businesses might be unleashed to exploit, has attempted to bring this dangerous approach to the Federal Government. Those who have termed Watt in his post as "the fox guarding the chicken coop" really have understated how ridiculous it is to empower an opponent of many environmental laws with responsibility for enforcing them.

Still, the controversy around Watt is not really a result of his admitted belief that business interests are more important than environmental and preservation concerns. The dual nature of the Interior Department's charter—to promote both development and preservation of publicly held lands—seems to invite conflicting viewpoints.

The problem with Watt is that he has abandoned his duty to preserve resources, and in so doing, really has left behind the multiple use concept. His controversial decision soon after his appointment to permit the sale of oil drilling leases off the coast of California seems to have been made in disregard for the environmental damage which might be done by oil exploration. The Interior Department had previously declared that these sites could pose grave environmental risks to the California coastline, were drilling allowed.

Watt's order to the Fish and Wildlife Service that a list be drawn up of wildlife refuges that might be "disestablished" resulted in the selection of 21 areas for possible extinction. These refuge areas preserve and enhance endangered and possibly endangered species of animals and plants, as provided by the 1937 reorganization of the Interior Department which created the Fish and Wildlife Service. At the same time, Watt favors oil and gas exploration in many refuges, particularly those in Alaska, despite the fact that the Alaska Lands Act of 1980 set out restrictions on this type of exploration which several legal groups charge Watt has ignored.

His methods in doing this reflect, at the very least, abuse of the authority of his office and disdain for the multifaceted needs of the American people. An outspoken opponent of strip mining protections, he fired nearly 400 employees of the office watching over strip mining and eliminated the division's five regional offices, leaving virtually no one to regulate an industry that is known for its disregard for accepted standards of land use policy. This cut included a 57-percent reduction in staff responsible for enforcing existing regulations.

He tried to use the past year's budget frenzy to slip through policy-making decisions that are the proper duty of Congress. He unsuccessfully tried to all but eliminate the Parkland Acquisition fund, which would have ended procurement of additional public lands.

This fund, which contained $250 million in fiscal 1981 appropriations when Watt announced his planned purchasing moratorium on February 19, 1981, is money intended by Congress to maintain steady growth in available public lands. Watt proposed slashing the appropriation for this fund for fiscal 1982 from Carter's recommended $520 million to $45 million. Congress agreed to cut only $90 million, far short of Watt's desired $475 million chop.

Watt's attempt to end this type of public lands acquisition is shortsighted and foolish. Land use experts explain that the need for additional public parklands will continue to grow as American population continues its growth. As land costs invariably rise over time, acquiring the needed lands will be increasingly costly.

These examples point to the fundamental question raised by Watt's policies—should the Federal Government, in making public lands policy, give equal weight on a nationwide basis to the numerous potential uses provided by our vast natural resources and public lands? Previous Interior Secretaries have sparked controversies due to the degrees of emphasis they have placed on one side or the other of this issue. Watt, however, seeks to turn the concept on its head and to disrupt a policy achieved through more than 200 years of give-and-take and reasonable compromise. Like most policies forged by our system of government, this one is fundamentally sound and based on equality of access and just use of available resources.

I fear that Watt's policies and irresponsible approach will do tremendous damage to our vital and irreplaceable natural resources and a grave disservice to the American people of this and future generations. To limit that possibility, James Watt should be removed from his post as Secretary of the Interior.●

THE POLISH CRISIS

HON. EUGENE V. ATKINSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. ATKINSON. Mr. Speaker, we were all stunned this past weekend by the news of martial law being established in Poland, the imposition of the death penalty for strikers, and the complete crackdown on worker rights by the Communist regime in Poland.

In the past 2 years we in the Western world have watched cautiously and hopefully as Polish men and women put together Solidarity—their union and the basis for a brighter future. We have seen what a real union of workers, farmers, and patriots can bring to bear in a peaceful process against an antiquated, broken-down dictatorship that has repressed the Polish people for decades.

No longer were the Polish people going to allow corruption in their government and their marketplace, and be manipulated by "Communist Party henchmen." Strikes for bread and meat and milk—everyday rations—were established throughout the country, grinding industry to a halt. A 5-day workweek was negotiated for the first time in Poland and strict cutbacks in consumer goods ordered by the Communist government were canceled.

"Solidarity" is not a thing of the past 2 years. It is the spirit of brotherhood and sisterhood, an ages-old process of reaching accord with management and government through negotiations and compromise. It is something so precious, yet taken so much for granted in America and the West that we find it hard to realize that our Polish brothers and sisters live without this very basic right to withhold their labor in a search for better living and working conditions.

We all know what the alternative is. It is slavery. That is what the Communist government in Poland is trying to impose today.

As the Pope stated on Sunday, "Polish blood must not be spilled. Too much of it has already been spilled, especially in World War II." How can we forget that the Second World War began on those same streets 42 years ago as the Nazis began their attack on the sovereign Polish nation.

Our hearts go out to the Polish people. We fervently hope that these difficulties will be peacefully resolved. Certainly the world has learned much since 1939. I believe our foreign policy should reflect our hope and our concern. We must insist—through diplomatic channels and otherwise—that

the Soviet Union remain physically removed from the Polish situation. And this Congress should serve notice that further aid to Poland in the form of economic and other material assistance will be conditioned on how the situation is resolved.

America's moral leadership on behalf of a nonviolent resolution should be the strongest voice heard throughout the world today. If America stands for anything positive within the world community of nations, it must be firm on behalf of a policy of nonviolence and nonintervention by the Soviet Union in Poland's affairs.

The contributions of millions of Poles and Polish-Americans to the quest for freedom throughout history is monumental. Our own Revolutionary heroes include Generals Kosciusko and Pulaski who fought for American separation from a tyrannical superpower in 1776.

Now in a different time and a different setting, we recall their ideals and courage. We know the Polish people have an historical role to play; and we want them to know that all Americans will support them in every way possible. It is a time for careful and balanced decisionmaking and a peaceful accommodation to the legitimate concerns of the Polish people.●

OFFICIAL RECORD OF CLEMENT J. ZABLOCKI

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. ZABLOCKI. Mr. Speaker, the following is a summary of my attendance record, position, and voting record on the major issues considered during the 97th Congress, 1st session:

	Yeas/ Nays	Quorum calls	Recorded votes	Grand total
Number of calls or votes	224	18	129	371
Present responses	207	16	123	346
Yea, Nay, Present, Present-Paired For or Against				
Absences	17	2	6	25
Absent, Not Voting, Not Voting-Paired For or Against				
Voting percentage (presence)	92.4	88.8	95.3	93.2

VOTING POSITION AND STATUS OF ISSUE

NATIONAL ECONOMY AND LABOR

Voted against budget reconciliation to eliminate or reduce programs for middle and lower income taxpayers—became law.

Voted for amendment to balance the Federal budget and target tax break to those making under $50,000 annually—defeated.

Voted for tax package to spur savings and investment—became law.

Voted for legislation to shore up thrift institutions and allow merging of savings and loans—passed House.

Voted against reductions of $2.6 billion in trade adjustment assistance for fiscal year 1982-84—became law.

Voted against unemployment compensation cuts of $3.1 billion and elimination of extended benefits program—became law.

ENERGY AND ENVIRONMENT

Voted for legislation to provide Presidential authority to allocate oil supplies and set prices in the event of future oil crisis—pending conference.

Voted for waivers to build Alaskan natural gas pipeline to alleviate dependency on foreign sources—cleared.

Cosponsored resolution urging continuation of tax incentives for energy conservation and renewable energy sources—pending.

Cosponsored legislation to restrict excessive state severance taxes on coal to provide fair treatment to energy consuming States including Wisconsin—pending.

Voted for legislation to extend daylight savings time for 2 months to conserve electricity—passed House.

Voted against amendment to expedite costly Garrison diversion water project without proper congressional consideration—defeated.

Voted for reauthorization of Clean Water Act to provide Federal assistance to sewage districts including Milwaukee County—cleared.

CONSUMERS, SOCIAL SERVICES, AND EDUCATION

Voted against bill that would result in increased cost of sugar and peanuts—cleared.

Cosponsored resolution to allow period of silent prayer in public schools—pending.

Voted for rule to allow separate consideration of budget cuts in social services and education by program—defeated.

Voted against reductions in elementary and secondary school aid—became law.

Voted against measure to adversely impact student financial aid—became law.

Voted against legislation to eliminate "work incentive" provisions in welfare law—became law.

SENIOR CITIZENS AND HEALTH

Voted for restoration of social security minimum benefit—cleared.

Voted for legislation to shore up the social security system—cleared.

Cosponsored legislation to provide nursing care in private homes—pending.

Voted against major reductions in medicare and medicaid—became law.

Voted for measure to provide individual consideration of health programs based on merit—defeated.

VETERANS AND NATIONAL DEFENSE

Voted for major health care bill for veterans—became law.

Voted for medical treatment for ailments attributed to agent orange—became law.

Voted for language to prevent "contracting out" services at VA hospitals—became law.

Cosponsored pensions for World War I veterans—pending.

Voted against amendments to weaken U.S. national security—defeated.

Voted against resolution to disapprove sale of AWACS to Saudi Arabia—passed House.

Voted for bill to attract high quality military personnel—became law.

GENERAL GOVERNMENT AND TRANSPORTATION

Voted for legislation to promote fair elections and voting rights—passed House.

Voted for legislation to provide adequate legal representation for the poor—passed House.

Introduced right-to-life resolution to protect the rights of the unborn—pending.

Cosponsored legislation to make Government regulations more cost effective—pending.

Voted for bus deregulation to allow companies freedom in eliminating unprofitable lines—passed House.

Voted for Major Highway Reform Act—pending conference.

FOREIGN AFFAIRS

Introduced legislation providing food and economic assistance to help poor countries help themselves—cleared.

Introduced legislation to make the Peace Corps an independent agency—cleared.

Cosponsored major export control bill—cleared.

Cosponsored resolution to commend the negotiators for securing the release of the American hostages in Iran—passed House.

Cosponsored resolution honoring armed service personnel who died in the Iranian rescue attempt—passed House.

Introduced resolution expressing regret over the assassination of President Anwar El-Sadat—passed House.

Introduced resolution to promote safe health standards for use of infant formula overseas—passed House.

Introduced resolution reaffirming support of the Congress for the people of Poland—passed House.

AN AMERICAN DREAM

HON. JOHN J. DUNCAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. DUNCAN. Mr. Speaker, the American dream was an incentive to the immigrants of foreign nations to come to the New World. It is an inspiration to those who struggle to make ends meet with a belief in hard work and determination. Simply stated, it is the dream that one can rise above humble beginnings to achieve prominence, despite race, class or religious affiliation.

The story of the Regas family of Knoxville exemplifies this American dream. From an 18-stool lunch counter, near the city's Southern Railroad station, the establishment has blossomed into Knoxville's finest restaurant. Regas Restaurant has received the Travel/Holiday Award, the top award of Travel Holiday magazine this year.

I would like to commend to my colleagues an article from the Knoxville News-Sentinel which details this classic American success story.

[From the Knoxville News-Sentinel, Dec. 11, 1981]

REGAS GAINS TOP IN TRAVEL MAGAZINE AWARD

Regas Restaurant, recommended as one of North America's finest restaurants by Travel Holiday magazine every year since 1972, has this year received for the first time the magazine's top award: The Travel/Holiday Award—given only to some of the recommended restaurants.

The complete 1982 Travel/Holiday Guide to Fine Dining in North American Restau-

rants, by Robert Lawrence Balzer, the magazine's food and beverage editor, appears in the December 1981 issue.

Balzer visited Knoxville last June and was honored at a private dinner given by William Regas, chairman of the board of Regas Brothers Inc., which operates the restaurant, and his partners and cousins, Frank Regas, vice chairman, and Gus Regas, president. Balzer also dined in the restaurant from the menu one night.

About Regas the magazine says:

"Frank and George Regas came to America, the land of opportunity—built their restaurant, an 18-stool lunch counter, at the hub of the railway station and the hotels and stayed open 24 hours a day. Children of the founders can say with pride today that from this humble beginning, they've built 'Knoxville's Finest Restaurant,' with no fear of contradiction. Here is the finest Prime Rib, outstanding Boston Scrod flown in fresh and prepared with a wondrous shrimp sauce and equally wonderful French, Honey Wheat and Coconut breads—baked daily in their own ovens, along with a spectacular cheesecake. The whole menu of good wine and food comes together in the greatly expanded facility of multiple dining rooms filled with warmth, comfort, service and total dedication. Bill Regas and the family have made this 'The Gathering Place' everyone admires."

"We appreciate the fine recognition," said Bill Regas, who as of yesterday had not seen a copy of the magazine. After listening over the phone to the magazine's glowing account, Regas commented, "I couldn't have written it better myself. But there is one change. We no longer serve the coconut bread; we now serve croissants instead. Some of the customers thought the coconut was a little too sweet, so we're trying a little something different. In this business, you have to dare to take chances, you know."

Two other restaurants in Tennessee are included in the magazine's recommendations: Four Flames and Sciara's Palazzino, both have previously been listed in the magazine.

Winners of the magazine's special award, which Sciara's Palazzino, as well as Regas, received, are marked in the magazine with a special "T/H Award" insignia.●

A SALUTE TO HERMAN J. SMITH

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. WRIGHT. Mr. Speaker, the Roman statesman and philosopher Seneca observed: "Fire is the test of gold; adversity, of strong men."

As in Seneca's time nearly 2,000 years ago, trouble is still the truest test of strength in an individual.

And seldom have I seen a better example of a person's demonstrating strength, wisdom and courage in the face of adversity than in the case of my constituent and longtime friend, Herman J. Smith of Hurst, Tex.

On January 21, only a few weeks from now, Herman Smith will complete his tenure as president of the National Association of Home Builders. To gage the severity of the test to which he has been subjected, one needs only to look at the plight of the housing industry in America today.

Skyrocketing interest rates, tight money, unemployment, bankruptcies, looming record Federal budget deficits—all these and countless other problems have faced Herman Smith in his job as national strategist and spokesman for America's homebuilders.

Yet Herman Smith faced these economic challenges in a way that has earned him the praise of his colleagues in the industry and many of us on the outside who are proud to know him as a friend.

Last month the Fort Worth Star-Telegram, in a penetrating profile written by Mike Norman, did a superb job of summarizing the troubles that Herman has faced in his important position, and how he has gone about dealing with them. Herman did his job well.

As one associate remarked admiringly: "We probably could not have had a better president for the kind of year our industry has faced."

So Mr. Speaker, as Herman Smith prepares to culminate a year of signal service to the homebuilding industry and to the American citizens it serves, let me join his countless friends in Texas and elsewhere in offering sincere congratulations for a job well done.

Here, for the RECORD, are excerpts from the Star-Telegram profile:

HERMAN SMITH: BRIGHT LIGHT IN AILING INDUSTRY

(By Mike Norman)

Herman Smith, the builder from Hurst, hit the top of the ladder at the National Association of Home Builders just as the United States housing industry's economic floor fell in.

Smith has been president of the 123,000 member national association during one of those "worst since . . ." years, the worst for housing starts since 1966 and the worst for home sales since the government started keeping records in 1963.

By the end of Smith's year as NAHB president, unemployment in the construction industry reached 18 percent and builder bankruptcies became almost an everyday occurrence. Smith himself says 1981 will end up being the worst year for housing since 1946.

It has been a year in which Smith has had to fight for every opportunity to help the nation's builders. He's been a combination cheerleader and head coach, spiritual leader and political lobbyist for one of the nation's largest trade associations. Other NAHB leaders say he's been good at the job.

"We probably could not have had a better president for the kind of year our industry has faced," said Louis M. Thompson, NAHB senior staff vice president for public affairs.

Three things made Herman Smith a bright light for his ailing industry this year. First, behind a good-ole-boy Texas drawl, he's smart, "sharp as a two-headed-tack," according to one acquaintence.

Second, he knows the building industry. He has 30 years under his belt as a developer and builder of housing subdivisions, shopping centers and office buildings, mainly in Fort Worth and surrounding cities.

And third, Herman Smith has something that even many other smart people don't have, political savvy and political contacts. Himself a long-time Democrat and a close friend of House Majority Leader Jim Wright of Fort Worth, Smith saw when the Ronald Reagan's Republicans assumed power this year that the future of his association and his industry depended to a great extent on how well he could gain contacts and influence in the Reagan administration.

He set out to gain that influence and has met several times with Reagan cabinet members, twice with Presidential Counselor Edwin Meese, twice with Vice President George Bush and once with President Reagan. He stays in frequent contact with NAHB lobbyists and has testified before several congressional committees. He keeps up with the latest rumors about what's happening behind the scenes at the White House and on Capitol Hill.

Himself a former mayor of Hurst, Smith is the type of man who disclaims all interest in politics. Others who know him well say that's not the full story.

"If he's not a politician, neither was Lyndon Johnson," says fellow Hurst builder and former business associate John Barfield.

But he's not the run-for-office type of politician. He's the type who treats the right people in the right way to get things done, always with the cultivated knack of knowing when to prod and when to praise. He approaches issues the way a legislator would approach introduction of a favored bill, step by measured step.

There has been much concern in the savings and loan industry and some segments of the housing industry in recent months that there might be a federal move to limit the amount of mortgage interest which homeowners can claim as a deduction on their income tax. It's a suggestion that rolls around every few years when the government is searching for money, and it's receiving some talk again in Washington. Smith settled that one to his satisfaction early in the year.

NAHB invited Reagan confidante Meese to a meeting last spring and gave him a list of written questions, which the organization said were of top concern to the nation's 123,000 home builders. Meese was asked to respond to those questions in a later meeting with Smith, with the knowledge that his answers would be published in the organization's Builder magazine, which circulates to all those members. Meese's response on limiting mortgage interest deductions: Reagan won't go for it.

"It'll be killed when it gets to the White House," says Smith. "Now I'm not going to spend a lot of time worrying about it. We have it in writing in no uncertain language."

Others in the real estate industry have seen record high interest rates cripple their business this year and have cried out against the tight money policies of the Federal Reserve Board and its chairman, Paul Volker. Smith has met six times with Volker and has come to respect his views. More importantly, he has become convinced that Volker and the Fed policies are not going to change.

"Why butt your head up against a brick wall?" Smith asks. "What we have to do is go back to Congress and show them how a high deficit clashes with the procedures of the Federal Reserve."

Before interest rates will come down, the White House and Congress must hold the line on federal deficits, Smith says. All year long, he has made that a theme of NAHB efforts. He has kept up that theme as a steady pressure, and the problem of growing deficits is becoming the bane of the Reagan administration.

Herman Smith was born and raised near Greenville, a small Hunt County town northeast of Dallas. He worked briefly for General Dynamics in Fort Worth and was a reservist at the Dallas Naval Air Station before being called to active duty in the Korean War.

He came back to Fort Worth after the war, just at the time when Bell Helicopter was setting up its headquarters here. When he tells the story now, he's not too clear on which happened first, but all pretty much at the same time he went to work for Bell as an aircraft inspector, married Patsy—then a Baylor University coed but now his wife of 29 years—and bought his first house in Richland Hills.

He is clear on one thing: while working for Bell he set up a real estate agency on the side, selling homes to Bell executives who were moving into the new corporate headquarters. Within 20 months he quit his job at Bell and went to work building homes.

Most of his building has been in Fort Worth and nearby communities, with the huge Candleridge subdivision on the city's far southwest side as one example. He also has developed a 700-acre subdivision in Longview and a townhouse project in Santa Fe, N.M.

When the market for new homes began to slow down, Smith shifted the emphasis of his business from residential construction to development of small shopping centers and other commercial buildings. That's his main line of work now, and his project of the moment is Mayfair Village, a 200,000-square-foot shopping center near his home in Hurst.

Mannig's President Gene Adelson, who recently opened a new store in Mayfair Village, said retailers know Smith as "a hard-nosed businessman."

"But he's the most intelligent developer I've run into," said Adelson. "He's a nice guy, and he understands his business from your point of view."

Smith is the typical real estate developer who takes pride in knowing who owns what land, who is building and who is not, who has plans to build and who would be willing to sell for what price. His own growth and success is some measure of how well he has learned the patterns and projections of his city's growth.

Along the line, he got interested in politics and was elected city councilman and then mayor of Hurst. He also joined the Builders Association of Forth Worth and Tarrant County and rose to become its president. Trade associations are important, he says, because people and businesses have to look out for themselves.

"It's important to rally behind a position," Smith says. "Frankly, survival may depend on it."

But getting involved is one thing. Working at it so hard that you become national president and end up devoting most of your time to your association rather than your own business is quite another. Why do it?

"I really don't have a good answer for that," says Smith. "The more you talk to all these builders and hear their comments, the more you want to get involved. Having job opportunities and the right to own a home are two of the basic principles which have built our country. If that changes, the whole social fabric of our country changes."

So Herman Smith rose in the ranks of his trade association and became president of the Texas Association of Builders. Then in 1978, the peak year for housing sales and construction in this country, he took on the job of vice president and secretary of NAHB. The post entered him in the association's four-year executive growth track, leading him to two other vice presidential jobs and then to the presidency this year.

While he was rising through those ranks, his industry began running into trouble. Home sales were still hot but rising interest rates were beginning to cool things down. Smith became NAHB's chief spokesman before Congress, testifying "50 or 60 times" before committees which could help or hurt his trade.

By the time he became NAHB president, he was spending 90 percent of his time traveling on behalf of the association. He ended up visiting all 50 states and many of the 730 local organizations which make up the national group.

Two weeks ago he came home, determined to stay at least through Christmas. He took time for a speech to local builders, to look over his new shopping center and to work on a possible sale of 400 acres in which he has part interest north of Fort Worth.

He had an appointment with the executives of a Dallas retail chain who were interested in building a new store, and took time to discuss construction plans for a four-story office building he will build at the shopping center. He met the Loren Hawerton, a former General Dynamics accounting executive who now serves as Smith's local right-hand man, running the business while the boss is out running around the country.

And he talked over the building plans with his 27-year-old daughter Vicki, who after three years with the huge Coldwell Banker real estate firm came back to join her father's business and take on the task of leasing space to retailers in the shopping center and tenants in the new office building. His younger daughter, 24-year-old Karla, recently left a job on Jim Wright's staff in Washington to come back and join the family business.

He uses an office in the Fort Worth Bank & Trust Building to conduct NAHB affairs while he's in town. He helped found the bank and build the building, but disassociated himself from bank operations when he was named chairman of the Federal Home Loan Bank of the Ninth District, a federal institution which supervises and assists savings and loan associations.

Settling into a chair at that office, he took time between calls from NAHB's Washington headquarters to review his year as the association's president. It has been a year aimed mainly at attempts to increase the supply of money available for home mortgages.

Congress authorized sale of All Savers certificates with tax-free benefits, giving only limited help to the mortgage problem but giving a boost to financially troubled savings and loan institutions, the nation's thrift industry.

"We were for anything which would help the thrifts," said Smith.

NAHB conducted a year-long push to get the Reagan administration to relax regulatory barriers which have prevented wealthy pension funds from investing in home mortgages. Last month the administration took down some of those barriers, and legislation is working its way through Congress to give the pension funds more investment freedom.

"Pension funds will grow as a source of mortgage money," said Smith. "It won't make interest rates any cheaper, but it makes money available."

The issue of the moment at NAHB is a battle against federal Budget Director David Stockman proposal to shut down the Government National Mortgage Association, widely known as "Ginnie Mae." Lenders who make FHA and VA loans to home buyers often replenish their own funds by selling their interest in those loans to Ginnie Mae.

FHA and VA loans are now one of the last sources of long-term, fixed-rate mortgages, and the low down payments required for those loans make them one of the last avenues still open for first-time home buyers. The Stockman proposal, while not aimed directly at FHA and VA loans, will drastically curtail their use, Smith said.

"What Ginnie Mae does is allow the first-time home buyer to compete with the big boys," he said. If the Stockman proposal goes through, "we will have seen the end of the 30-year, fixed-rate mortgage."

And Smith is continuing NAHB's pressure on the Reagan administration to reduce its budget deficits. He's not above taking a slap at Reagan in one of his speeches.

"Even presidents of the United States after they get into office seem to change their attitude toward budget deficits," he told local builders.

The builders will convene in Las Vegas next month at about the same time Reagan will be sending his annual economic message to Congress. Smith said the builders are "anxious to see what the administration is going to propose."

But once that convention arrives, Smith will be bowing out of most of NAHB's work. Frederick J. Napolitano, a builder-developer from Virginia Beach, Va., will take over as the association's president.

Smith will remain on the NAHB board, and he still expects to spend about 25 percent of his time on the road doing NAHB business. But he also expects to spend more time in Fort Worth and to relax.●

ACTIVITIES OF THE SUBCOMMITTEE ON ADMINISTRATIVE LAW AND GOVERNMENTAL RELATIONS, COMMITTEE ON THE JUDICIARY

HON. GEORGE E. DANIELSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. DANIELSON. Mr. Speaker, during the 1st session of the 97th Congress, the Subcommittee on Administrative Law and Governmental Relations, which it is my privilege to chair, considered several bills of major significance including the subject of reform of the regulatory process, a major revision of the Federal Tort Claims Act, and basic statutory improvements to deal with air disaster litigation.

In the course of its 31 meetings during this Congress, this subcommit-

tee of the Judiciary Committee held 21 hearings at which witnesses were heard, and 9 markup sessions for the amendment of public bills.

REGULATORY REFORM LEGISLATION—H.R. 746

During the past two Congresses the subcommittee held extensive hearings on the regulatory process and the need for improvements in agency procedures for issuing rules through amendments to the Administrative Procedure Act. The focus of consideration during the 97th Congress was H.R. 746, the Regulatory Procedure Act of 1981, a bill sponsored by Representative GEORGE E. DANIELSON, the chairman of the subcommittee.

The basic approach of H.R. 746 is to expand the Administrative Procedure Act to emphasize management tools and techniques as a means of solving the twin problems of administrative delay and overregulation.

H.R. 746 improves the regulatory process by requiring all agencies to follow certain procedures in making decisions. The bill does this in seven main ways. First, the bill increases the fairness and effectiveness of the regulatory process by requiring agencies to examine carefully the economic and noneconomic effects of all proposed major rules. Second, in order to facilitate public participation in agency decisionmaking and to prevent duplicative and conflicting rules, agencies are required to issue agendas of all rulemaking activities and the President is required to publish a Government-wide calendar of all major rulemaking activities. Third, the bill requires agencies to review within 10 years all existing major rules, so that an agency can update or rescind such rules where it is necessary or appropriate to do so. Fourth, the bill amends the current Administrative Procedure Act to encourage effective public participation in administrative proceedings, to improve the quality of agency decisionmaking, and to provide for legislative veto of agency regulations. Fifth, the bill standardizes the procedures followed by agencies for issuing subpenas in adjudications. Sixth, the bill clarifies the duties of the courts in reviewing agency action and resolves the problem of determining proper venue when more than one court challenge to agency action is filed. Finally, the bill provides for a more diversified selection of members to the Administrative Conference of the United States.

Regulatory reform has been a top priority of at least the last three administrations, as demonstrated by a series of Executive orders on the subject: Executive Order 11821 (Ford), Executive Order 12044 (Carter), and Executive Order 12291 (Reagan). During the 96th Congress, the House Committee on the Judiciary reported H.R. 3263, the bill which was the immediate predecessor to H.R. 746. Prior to acting on H.R. 3263, the committee had considered bills on regulatory reform in both the 94th and 95th Congresses.

The subcommittee conducted 10 days of hearings on H.R. 746 during the 97th Congress. The witnesses representing the Reagan administration were James C. Miller III, then executive director of the President's task force on regulatory relief, and C. Boyden Gray, counsel to the President's task force on regulatory relief. Other departments and agencies testified on various aspects of the subject, including the Departments of Justice and Treasury, the Securities and Exchange Commission, the Interstate Commerce Commission, the Federal Communications Commission, and the Administrative Conference of the United States. The Judicial Conference of the United States testified on behalf of the Federal judiciary. The private sector was represented by such diverse groups as the American Bar Association, Business Roundtable, Chamber of Commerce, AFL-CIO, Interstate Natural Gas Association of America, Public Citizen, and the Natural Resources Defense Council.

The subcommittee held 5 days of markup on H.R. 746, and reported the bill to the full committee on October 1, 1981. The vote to report the subcommittee's version of H.R. 746 was by unanimous voice vote. All members of the subcommittee are cosponsors of the bill.

On December 8, 1981, following 4 days of general debate and markup, the full committee favorably reported H.R. 746 to the House by voice vote.

AIR DISASTER LITIGATION LEGISLATION

On December 10, 1981, the subcommittee held the first of a planned series of hearings on H.R. 1027, a bill to deal with air disaster litigation. The witness was Prof. Daniel J. Meador of the University of Viriginia, the former Assistant Attorney General for Improvements in the Administration of Justice.

The purposes of H.R. 1027 are to create a Federal cause of action for air disaster litigation and to provide for a less cumbersome means of litigating cases arising out of air disasters.

Although these wrongful-death and personal-injury suits bear some similarity to other tort cases, the problems and legal issues involved tend to be much more complex. First, there usually are a large number of cases arising out of the same event pending in State or Federal courts or both. The cases resulting from each disaster typically involve multiple parties and claims: Claims by the injured and by the representatives of those killed in the accident against not only the carrier but also the airframe and component manufacturers and frequently the United States; cross-claims between defendants; and third-party claims based on indemnity and/or subrogation. Because of the number of parties and claims, discovery is generally very time consuming and expensive.

H.R. 1027 would establish the procedures necessary to deal with the limitations of the present system which is administered under the Multidistrict Litigation Act. In addition, by creating Federal common law for air disaster litigation, it resolves the conflicts created by the existence of different State choice of law rules.

COMMISSION ON WARTIME RELOCATION

The Commission on Wartime Relocation and Interment of Civilians was established pursuant to Public Law 96-317 which originated as a bill considered by the subcommittee during the 96th Congress. The bill, H.R. 5021, was introduced on November 18, 1981, to provide for an extension in the date for the submission to Congress of the final report of the Commission. The Commission has now completed its schedule of hearings and has assembled an extensive record involving the history of the evacuation and relocation of persons of Japanese ancestry during World War II and the relocation of Aleuts from the Pribilof Islands and some of the Aleutian Islands during that period. The time limited in the original act for the filing of the report would have expired early in 1982. Additional time is necessary for completing several important aspects of the work of the Commission including the analysis of information gathered by it and beginning the careful discussion and argument necessary to formulating the Commission's report and recommendations to the Congress.

The subcommittee held a hearing on the bill on November 20, 1981, and subsequently ordered it reported to the full Committee on the Judiciary. The bill was approved by the full committee and ordered reported to the House on December 8, 1981. H.R. 5021 passed the House on December 15, 1981.

PUBLIC CLAIMS LEGISLATION

FEDERAL TORT CLAIMS ACT AMENDMENTS

The bill H.R. 24, introduced by Mr. DANIELSON, is based upon information presented to the subcommittee in the course of its consideration of similar bills in the 95th and 96th Congresses. The bill amends the Federal tort claims provisions of title 28, United States Code, to make the remedy against the United States provided therein the exclusive remedy for injuries or damages due to acts or omissions of Federal employees within the scope of their employment and for tort claims arising from violations of the Constitution of the United States. Thus, the bill provides that the United States would be sole defendant in cases arising under the Constitution and cases arising out of acts or omissions of Federal employees.

The subcommittee held hearings on this bill on October 13, 1981, and November 5, 1981. Testimony was received from Mr. Edward C. Schmults, Deputy Attorney General, Mr. Joseph A. Morris, General Counsel for the Office of Personnel Management, Mr. Peter J. Wallison, General Counsel for the Department of the Treasury, and Mr. Mark H. Lynch, national staff counsel for the American Civil Liberties Union. Further hearings are anticipated in the second session.

NATIONAL GUARD TORT CLAIMS ACT

The bill, H.R. 3799, introduced by Mr. KASTENMEIER and Mr. MONTGOMERY, extends the Federal tort claims provisions of title 28, United States Code, to acts or omissions of members of the National Guard during Federal training and provides that the remedy under those provisions shall be exclusive in medical malpractice actions involving members of the National Guard. Under the bill, National Guard personnel are covered under the Federal tort claims provisions of title 28 while they are engaged in Federal training or duty to the same extent as their counterparts in the Army Reserve and the Air Force Reserve.

The subcommittee held hearings on H.R. 3799 on October 13, and October 29, 1981. Witnesses appearing at the hearing included Edward C. Schmults, Deputy Attorney General, Brig. Gen. Herbert R. Temple, Jr., Deputy Director, Army National Guard, Maj. Gen. Francis Greenlief (retired), executive vice president, National Guard Association of the United States, and a panel of witnesses from the Pennsylvania National Guard. The subcommittee also received testimony from Col. James A. Mounts, Jr., Chief of Army Claims Service and Col. Ramutis R. Semeta, Chief of Air Force Claims and Tort Litigation, Office of the Judge Advocate General.

On October 29, 1981, the subcommittee favorably reported H.R. 3799 to the full Judiciary Committee with amendments. All but one of the subcommittee amendments were technical in nature. The Judiciary Committee favorably reported the bill H.R. 3799, as amended, to the House on December 8, 1981, by unanimous voice vote. The House passed H.R. 3799, as amended, on December 15, 1981, and sent it to the Senate. The Senate passed the House bill on December 16, 1981. The bill was approved as Public Law No. 97-124 on December 29, 1981.

PROTECTION AGAINST PERSONAL LIABILITY FOR EMPLOYEES OF DEFENDER ORGANIZATIONS

The bill, H.R. 3060, would amend section 3006A of title 18 of the United States Code to provide protection against personal liability to the officers and employees of the Federal public defender offices and community defender organizations. These employees provide representation to indigent criminal defendants under the Criminal Justice Act.

The subcommittee held 1 day of hearings on the bill on October 13, 1981, and received testimony from Mr. Edward C. Schmults, Deputy Attorney General. The subcommittee plans further hearings on the measure in the next session.

AMENDMENT TO THE MILITARY AND CIVILIAN EMPLOYEES CLAIMS ACT OF 1964

The bill, H.R. 4688, as amended by the subcommittee, amends the Military Personnel and Civilian Employees Claims Act of 1964 to increase from $15,000 to $25,000 the maximum amount that the United States may pay in settlement of a claim under that act. This bill would increase the amount payable by the United States for losses incurred during moves between duty stations by military and civilian personnel from $15,000 to $25,000.

The subcommittee heard testimony on a similar measure in the 96th Congress and has held 2 days of hearings on the matter in the 97th Congress. On March 5, 1981, the subcommittee held oversight hearings on moving losses and received testimony from Maj. Gen. James Taylor, Jr., Deputy Judge Advocate General, U.S. Air Force. The subcommittee held further hearings on October 29, 1981, and received testimony from Maj. Gen. Thomas B. Bruton, Judge Advocate General of the U.S. Air Force.

The subcommittee adopted an amendment which raised the maximum amount payable from $20,000 to $25,000 and favorably reported the bill as amended to the full Judiciary Committee on October 29, 1981. The bill is currently pending before the full Judiciary Committee.

CHEROKEE CLAIMS

The bill, H.R. 2329, confers jurisdiction on certain courts of the United States to hear and render judgment in connection with certain claims by the Cherokee Nation of Oklahoma. The bill would empower the Federal courts to adjudicate the claims of the Cherokee Nation against the Federal Government for loss or damage to Cherokee lands resulting from the construction of the Arkansas River navigation system and as a result of the transfer by the Federal Government of certain Cherokee lands known as station grounds to third parties.

The subcommittee held hearings on the bill on December 9, 1981, and received testimony from Hon. MIKE SYNAR, sponsor of the bill and a Member of Congress from Oklahoma, Mr. Ross O. Swimmer, principal chief of the Cherokee Nation, and Mr. Anthony Liotta, Deputy Assistant Attorney General.

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION CLAIMS

The subcommittee considered the bill, H.R. 1029, providing for increased authority to the Secretary of Commerce to settle claims for damages arising by reason of acts of the National Oceanic and Atmospheric Administration. This bill would amend the current authority for settlement of claims up to $500 arising from the acts of the National Ocean Survey by increasing the amount to $2,500 and making it applicable to all of the components of the National Oceanic and Atmospheric Administration.

The bill, H.R. 1029, was favorably recommended by the subcommittee to the full committee and was ordered reported to the House on September 15, 1981. It passed the House on October 5, 1981.

SECRET SERVICE ZONES OF PROTECTION

On September 17, 1981, the subcommittee held a hearing on the bill, H.R. 4468, which provides for an amendment to section 1752 of title 18, United States Code, relating to the establishment of zones of protection for persons protected by the U.S. Secret Service. The subcommittee received testimony from J. Robert McBrien, special assistant to the Assistant Secretary of the Treasury for Enforcement and Operations, accompanied by Gerald Bechtle, Deputy Assistant Director, of the Secret Service.

On October 6, 1981, the subcommittee ordered the bill favorably reported to the full committee.

GOVERNMENT CONTRACTS

MILLER ACT

The subcommittee considered the bill, H.R. 1026, providing for an amendment to section 3 of the Miller Act (40 U.S.C. 270c) to provide that the head of a contracting agency is to have the responsibility for providing certified copies of payment bonds required under the act. The subcommittee ordered the bill favorably reported to the full committee which approved the recommendations of the subcommittee and ordered the bill reported to the House. The bill passed the House on October 5, 1981.

THE CONTRACT DISPUTES ACT

The bill, H.R. 1371, was introduced in accordance with the recommendations of the Comptroller General of the United States and provided for an amendment to section 12 of the Contract Disputes Act of 1978, to require that the Secretary of the Treasury is to fix at 6-month intervals interest rates applicable to contract claims. Under the bill, the Secretary of the Treasury would be required to take into consideration the current private commercial rates of interest. Interest with respect to each particular claim is to be paid at the rate fixed by the Secretary for the period during which the contracting officer first receives the claim and then at the rate applicable for each subsequent 6-month period as fixed by the Secretary during the

pendency of that claim. After consideration, the subcommittee ordered the bill favorably reported to the full committee on February 24, 1981. The full committee considered the bill on May 13, 1981, and ordered it reported to the House. The bill passed the House on June 1, 1981.

GOVERNMENT CONTRACTORS' PRODUCT LIABILITY ACT OF 1981

The bill, H.R. 1504, was introduced to provide for Government indemnification in instances where, after a contractor provided a product or service in compliance with a Government contract, that compliance results in a defective product or service for which the contractor is held liable.

Government contractors furnish products or services to the Federal Government under contracts which require the contractor to adhere strictly to detailed Government requirements not developed or recommended by the contractor. Often contracts give the contractor no voice as to the design of the item to be furnished, its manufacture, or the inspection or tests of the item. The contractor may not have the opportunity to furnish warnings or instructions concerning the product. In sum, the Government contractor is seldom in control of the way his products or services are designed or used.

These contracts usually do not include any provisions for the indemnification of the contractor, so that if he is sued by a third party for any cause arising out of the performance of the contract, he may be held liable even when performance has been in full compliance with the contract.

The adoption of the principle of "strict liability" as to defective products in most of the States causes serious problems for Government contractors. This liability may well exist even though the defendant contractor has exercised all possible care in the manufacture or sale of the product.

During the 96th Congress the subcommittee held a hearing on a similar bill. In the current Congress a hearing was held on the bill, H.R. 1504, on March 19, 1981.

INTERSTATE COMPACTS

GRANTING THE CONSENT OF CONGRESS TO AGREEMENT BETWEEN THE STATES OF NORTH CAROLINA AND SOUTH CAROLINA ESTABLISHING THEIR LATERAL SEAWARD BOUNDARY

The bill, H.R. 2896, provides for congressional consent to the compact between the States of North Carolina and South Carolina which establishes their lateral seaward boundary. This compact was initiated in response to a need to deliniate offshore jurisdiction between the two States. It was developed in cooperation with officials of the National Oceanic and Atmospheric Administration of the Department of Commerce. The text of the compact has been adopted by the legislatures of both States.

The subcommittee held hearings on H.R. 2896 on July 14, 1981, and heard testimony from the Members of Congress representing the districts adjacent to the proposed boundary, Hon. CHARLES ROSE, seventh Congressional District of North Carolina and Hon. JOHN L. NAPIER, sixth District of South Carolina. The subcommittee favorably reported the bill, H.R. 2896, to the full Judiciary Committee on July 29, 1981. The full committee favorably reported the bill to the House on September 15, 1981, and filed Report No. 97-238 on September 22, 1981. The House passed S. 1033, an identical Senate bill on September 29, 1981. The bill was approved as Public Law 97-59 on October 9, 1981.

GRANTING THE CONSENT OF CONGRESS TO THE AGREEMENT BETWEEN THE STATES OF KANSAS AND MISSOURI ESTABLISHING THEIR MUTUAL BOUNDARY IN THE VICINITY OF THE FRENCH BOTTOMS NEAR ST. JOSEPH, MO. AND ELWOOD, KANS.

The bill, H.R. 4048, provides for congressional consent to the compact between the States of Kansas and Missouri establishing their mutual boundary in the vicinity of the French Bottoms near St. Joseph, Mo., and Elwood, Kans. In April 1952 the channel of the Missouri River in the area known as the French Bottoms was abondoned by avulsion. That portion of the river had not been surveyed prior to the avulsion, thus the precise boundary between the States in this vicinity was unclear. In 1977, committees appointed by the legislatures of each State met and determined that the thalweg—deep water line—of the channel would constitute the boundary. Following a survey, the legislatures of both States approved the boundary as it is set forth in this compact.

The subcommittee held hearings on July 14, 1981, and received testimony from Hon. E. THOMAS COLEMAN, of Missouri and Hon. JIM JEFFRIES, of Kansas, Members of Congress representing the areas adjacent to the boundary. The Subcommittee on Administrative Law and Governmental Relations favorably reported H.R. 4048 to the full Judiciary Committee on July 29, 1981. The full Judiciary Committee favorably reported the bill to the House on September 15, 1981, and filed Report No. 97-239 on September 22, 1981. The bill was passed by the House September 29, 1981. The Senate passed H.R. 4048 on October 1, 1981, and it was approved as Public Law 97-64 on October 16, 1981.

FEDERALLY RECOGNIZED NONPROFIT CORPORATIONS

ITALIAN AMERICAN WAR VETERANS

The Subcommittee on Administrative Law and Governmental Relations held a hearing on H.R. 33, a bill to recognize the organization known as the Italian American War Veterans on June 11, 1981. The subcommittee received testimony or statements from the following persons at that hearing: Hon. FRANK ANNUNZIO, Member of Congresss from Illinois; Hon. JOHN CHAFEE, U.S. Senator from Rhode Island; Mr. Edward F. Rose, Director of Voluntary Service of the Veterans' Administration; Mr. John Nave, past national commander, Italian American War Veterans; Mr. Robert N. Dardano, Sr., National Veterans Administration voluntary service director.

The Italian American War Veterans of the United States is an organization for honorably discharged veterans of World War I, World War II, the Korean conflict and the Vietnam conflict and for recipients of congressional medals for other U.S. expeditions or campaigns. Though any veteran may join, most members are of Italian descent. The organization was founded in 1932 and has maintained a State charter since that date.

On October 6, 1981, the Subcommittee on Administrative Law and Governmental Relations adopted an amendment in the nature of a substitute for H.R. 33, ordered it reported as a clean bill which was introduced as H.R. 4734. That bill was favorably reported to the full Judiciary Committee. The full committee favorably reported the clean bill, H.R. 4734, to the House on October 20, 1981. The committee report was filed on October 22, 1981, and its number is 97-287. The House passed H.R. 4734 on October 26, 1981. The Senate passed it on November 10, 1981, and the bill was approved as Public Law 97-82 on November 20, 1981.

AMERICAN COUNCIL OF LEARNED SOCIETIES

The subcommittee held hearings in the 96th Congress on H.R. 3212, to recognize the organization as the American Council of Learned Societies (ACLS). In the 97th Congress, on June 11, 1981, the subcommittee held a hearing on H.R. 3232 and received testimony from Mr. W. McNiel Lowry, former vice president of the Ford Foundation and the Honorable PAUL SIMON, Member of Congress from the State of Illinois.

The ACLS was established originally in response to the need of the United States for a spokesman within the International Union of Academies, and it has represented the Nation in that body for 60 years. The ACLS is a federation of professional and honorary associations with a constituency of 43 learned societies having an aggregate membership of approximately 250,000 scholars. The purpose of this organization is the advancement of humanistic studies in all fields of learning, and the maintenance and strengthening of relations among all national societies devoted to such studies.

On October 6, 1981, the Subcommittee on Administrative Law and Governmental Relations adopted an amendment in the nature of a substi-

tute for H.R. 3232, ordered it reported as a clean bill and reported the clean bill favorably to the full Judiciary Committee. The full Judiciary Committee favorably reported the clean bill, H.R. 4769, to the House on October 20, 1981. The committee report was filed on October 22, 1981, as House Report No. 97-285. The House passed H.R. 4769 on October 26, 1981. The bill is currently pending in the Senate Judiciary Committee.

UNITED STATES SUBMARINE VETERANS OF WORLD WAR II

On June 11, 1981, the Subcommittee on Administrative Law and Governmental Relations held a hearing on H.R. 894, a bill to recognize the organization known as the United States Submarine Veterans of World War II. At that hearing the subcommittee received testimony from Mr. E. J. Newbould, member of the United States Submarine Veterans of World War II.

The United States Submarine Veterans of World War II was founded in August 1955 as a patriotic association of veterans of the submarine service during the Second World War. It has operated under a charter granted by the State of New Jersey since 1956. There are currently 5,000 active and associate members of the organization with additional integrated organizations for wives, sons, and daughters.

On October 6, 1981, the Subcommittee on Administrative Law and Governmental Relations adopted an amendment in the nature of a substitute for H.R. 894, ordered it reported as a clean bill and reported the clean bill favorably to the full Judiciary Committee. The subcommittee amendment substituted standardized charter language developed by the committee for that of H.R. 894. The full Judiciary Committee favorably reported the clean bill, H.R. 4766 to the House on October 20, 1981. The committee report was filed on October 22, 1981, and its number is 97-284. The House amended and passed S. 195 on October 26, 1981, and laid H.R. 4766 on the table. The Senate agreed to the House amendments on November 9, 1981. The bill was approved as Public Law 97-83 on November 20, 1981.

FORMER MEMBERS OF CONGRESS

The Subcommittee on Administrative Law and Governmental Relations held hearings on H.R. 3837, a bill to recognize the organization known as the Former Members of Congress on June 11, 1981. The subcommittee received testimony from Hon. William S. Maillard, former Member of Congress from the State of California.

The Former Members of Congress was founded in 1970 with 10 Members and was incorporated as a nonprofit corporation in the District of Columbia on June 18,1970. The organization now has 580 members representing both the House of Representatives and the Senate. All former Members of the U.S. Congress are eligible to join regardless of race, sex, creed or color. Of former Members, only candidates for or Members of Congress are excluded from membership. Its stated purpose is to "promote the cause of good government at the national level by strengthening and improving the U.S. Congress as an institution." The Former Members of Congress is a national nonprofit, educational, civic, historical, and research corporation. It does not engage in partisan politics and has tax exempt status.

On October 6, 1981, the Subcommittee on Administrative Law and Governmental Relations adopted an amendment in the nature of a substitute for H.R. 3837, ordered it reported as a clean bill and reported the clean bill favorably to the full Judiciary Committee. The subcommittee amendment substituted standardized charter language developed by the committee for that of H.R. 3837. The full Judiciary Committee favorably reported the clean bill, H.R. 4755 to the House on October 20, 1981. The committee report was filed on October 22, 1981, and its number is 97-286. The House passed H.R. 4755 on October 26, 1981. The Senate amended H.R. 4755 and passed the bill as amended on December 16, 1981. The amended bill is currently pending in the House.

OVERSIGHT HEARINGS

On March 5, 1981, the subcommittee conducted an oversight hearing relating to the administration and settlement of claims for personal property losses within the Department of Defense and the military departments. Claims of this type are settled under the authority of the Military Personnel and Civilian Employees Claims Act of 1964.

In the 96th Congress, the subcommittee recommended legislation providing increased authority for claims for personal property losses incident to evacuation such as occurred in Iran in 1979, and also for personal property losses of U.S. personnel overseas which resulted from mob violence, terrorist attacks or other hostile acts directed against the U.S. Government or its officers or employees. The bill considered by the committee in that Congress was enacted as Public Law 96-519. Information submitted to the subcommittee in the course of the consideration of that legislation raised the question of the desirability of an amendment of the amounts relating to the payment of personal property claims generally as they apply to all other military and civilian employees of the Federal Government. Accordingly, the oversight hearing in the 97th Congress was scheduled to provide for an indepth examination of the administration of the claim provisions of the act. Based on the information received at the hearing on March 5, 1981, and a subsequent hearing on the same subject scheduled on the bill, H.R. 4688, on October 29, 1981, the subcommittee took favorable action on an amendment to the act, as has been previously outlined in this report.

OVERSIGHT HEARINGS ON THE FUNCTIONING OF THE CIVIL DIVISION OF THE DEPARTMENT OF JUSTICE AND THE FOREIGN CLAIMS SETTLEMENT COMMISSION

On Thursday, March 26, 1981, the subcommittee conducted an oversight hearing relating to the Civil Division of the Department of Justice. Testimony was received from Thomas Martin, Acting Assistant Attorney General of the Civil Division, and John Poore, Tricia King, and Stewart Schiffer also appeared before the committee representing the Department of Justice. The witnesses appearing at the hearing advised the committee of the numbers of people engaged in the work of the Civil Division and the needs of the Department relating to the representation of the United States in civil litigation. The subcommittee also received information concerning the efforts on the part of the Civil Division to collect moneys owing the United States as the result of the activities of the various departments and agencies. Information was also received concerning the specific types of litigation in which the subcommittee is particularly interested, such as litigation involving tort claims against the United States and the judicial review of agency action.

On March 26, 1981, the subcommittee also received testimony from Richard W. Yarborough, Chairman of the Foreign Claims Settlement Commission, concerning the operation of that independent Commission. Francis Masterson, the Executive Director of the Commission, and David Rogers, director, German Democratic Republic claims program, also appeared before the subcommittee. The witnesses before the subcommittee outlined the current status of claims programs before the Commission and reported that the Commission contemplated the completion of the programs relating to European countries, except for the East German program which was the next program projected to be completed by the Commission. Following these subjects, the Commission intended to process the claims against Vietnam, a program which was authorized by the Congress in 1980.●

THE ACTIVITIES OF THE SUBCOMMITTEE ON HEALTH AND SAFETY OF THE COMMITTEE ON EDUCATION AND LABOR DURING THE 1ST SESSION OF THE 97TH CONGRESS

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. GAYDOS. Mr. Speaker, the Subcommittee on Health and Safety, on which I am privileged to serve as chairman, conducted oversight hearings during the 1st session of the 97th Congress on three matters subject to the jurisdiction of the subcommittee. They were: I. Occupational safety and health of the Federal employee; II. The proposed OSHA rules on hazards identification; III. The proposed transfer of the Rockville, Md., operations of the National Institute for Occupational Safety and Health.

I. OCCUPATIONAL SAFETY AND HEALTH OF THE FEDERAL EMPLOYEE

In the 96th Congress, the Subcommittee on Health and Safety initiated comprehensive oversight hearings into the safety and health programs of several Federal agencies. These hearings continued in the 97th Congress, and representatives of the Department of Energy and the Veterans' Administration testified before the subcommittee as follows:

A. THE DEPARTMENT OF ENERGY

First: The employee safety management function in DOE is located in the Office of Personnel. Each DOE field establishment has full-time occupational safety and health personnel.

Second: Department of Energy employees receive general training in occupational safety and health, as well as specific training relating to the function of their field establishment.

Third: DOE has 20,000 Federal sector employees and 120,000 contract employees. The contract employees are at higher risk than the Federal employees. Their greatest risks involve explosives, radiation exposure, and electric transmission.

Fourth: DOE's lost workdays per 200,000 hours is 1.07; the average for the Federal Government as a whole is 3.39. Their reportable injuries and illnesses per 200,000 hours work is declining but lost workday cases per 200,000 is increasing.

FIfth: DOE elected not to set up the safety committee authorized under the recent Executive order, because of the prior existence of safety and health committees in many of their field locations which were established under their labor contracts. Forty to forty-five percent of DOE employees are covered by collective bargaining agreements.

Sixth: In DOE facilities that are Government-owned but contracted out, OSHA does not inspect; DOE is responsible for safety and health. This is under section 4(b)(1) of the act providing for exemption of certain Federal activities where other Federal legislation authorizes that Federal agency to undertake and maintain a health and safety program. This would cover those 120,000 contract employees.

Seventh: DOE has adopted all occupational safety and health standards for Federal employees legislated by law and has included them in their occupational safety and health orders.

B. VETERAN'S ADMINISTRATION

First: The VA, through the Department of Medicine and Surgery, operates the largest centrally managed health care system in the Nation. This system is comprised of 172 medical centers, 1 independent domiciliary, and 49 satellite or independent outpatient clinics.

Second: The objectives of the VA safety and health program are: The safety of patients, beneficiaries, and the public; safety and occupational health of employees; conservation of records and property.

Third: Each VA field facility director is directly responsible for the safety and health program at his or her facility. The director is fully responsible for conducting programs of inspection, employee training, hazard abatement, as well as preparing an annual self-evaluation of field facility activities in these areas.

Fourth: The VA requires that each employee be trained to perform assigned duties in a safe manner. Each supervisor must identify safety training needs and monitor job performance. VA supervisors are given an 8-hour supervisory safety training course in which the agency's safety program is described, the supervisor's role and responsibilities are explained, and educational materials to be distributed to subordinate employees are discussed.

Fifth: The VA has an intermediate level safety and health inspector to evaluate and report on the facility safety and health programs. These officials are known as district safety and fire protection engineers. Their primary emphasis is in carrying out the requirements of 29 CFR 1960 regarding the inspection of employee workplaces. They work independently of any facility director and report directly to the VA Central Office for technical guidance and program direction.

Sixth: The VA Central Office acts as the coordinator of the employee safety program. It also acts as the agency's final arbitrator on areas of disagreement between the district safety and fire protection engineers and the facility directors.

Seventh: Directors of VA field units are assisted in implementing and monitoring their safety programs by 754 full-time safety personnel.

Eighth: All VA workplaces are required to be inspected on an annual basis by the district safety and fire protection engineers. More frequent inspections are provided as needed. This inspection visit is normally announced to the facility director 2 to 3 weeks in advance. An employee representative is invited to accompany the district safety and fire protection engineer. The inspection includes an opening conference, a review of the facility safety and health program, a walkthrough of workspaces, and a closing conference. An inspection report is then prepared by the district safety and fire protection engineer and forwarded to the facility director for comments. These comments are returned to the district safety and fire protection engineer who then forwards the complete package to Central Office.

Ninth: Facility directors also conduct inspection programs to identify and correct hazardous working conditions. Inspections are promptly initiated in response to employee reports and appropriate corrective actions are taken.

Tenth: The VA and the Office of Federal Agency Programs at OSHA have had frequent contact and the VA finds it to be an excellent working relationship. However, VA believes that their own safety inspections, their annual inspections, the inspections that they make for specific purposes, and the response they give to the employees who make complaints, is far better than OSHA could do for them.

II. THE PROPOSED OSHA RULES ON HAZARDS IDENTIFICATION

Section 6(b)(7) of the Occupational Safety and Health Act of 1970 (Public Law 91-596) provides in pertinent part:

> (7) Any standard promulgated under this subsection shall prescribe the use of labels or other appropriate forms of warning as are necessary to insure that employees are apprised of all hazards to which they are exposed, relevant symptoms and appropriate emergency treatment, and proper conditions and precautions of safe use or exposure . . .

The matter involving an employee's right to know the identification of hazardous substances that he or she may be exposed to has been under consideration at the Occupational Safety and Health Administration for several years.

On January 16, 1981, the Occupational Safety and Health Administration published in the Federal Register, "OSHA Proposed Rules on Hazards Identification; Notice of Public Hearings on Proposal."

The proposed rules and notice of hearing were withdrawn on February 13, 1981.

In response to the withdrawal of the proposed rule and cancellation of the projected public hearings, the subcom-

mittee conducted a series of oversight hearings to review the proposed rule.

Appearing before the subcommittee were representatives of: AFL-CIO, United Steelworkers of America (AFL-CIO), Oil, Chemical & Atomic Workers International Union (AFL-CIO), Chemical Manufacturers Association, Shell Oil Co., Monsanto Co., Exxon Chemical Americas, E. I. du Pont de Nemours & Co, Mooney Chemicals, Inc., Motor Vehicle Manufacturers Association, International Chemical Workers Union, International Union—United Auto Workers Master Chemical Corp.

During the course of the hearings it was very clear that there was no disagreement over an employee's right to know the identity of the hazardous substances to which he or she may be exposed.

Rather, the disagreement was directed to the specific manner set forth in the proposed rule for identifying hazardous substances and conveying this information to employees.

More particularly, the employer representatives criticized:

First: The procedure to be followed in making a risk assessment.

Second: The specific requirements as to scope and extent of labeling hazardous substances and materials.

Third: The provisions with respect to safeguarding trade secrets.

Fourth: The provisions pertaining to the identification of substances and mixtures with chronic adverse health effects.

In May 1981, Assistant Secretary for Occupational Safety and Health Thorne G. Auchter announced that,

Since the withdrawal, the agency has established an internal task force to review the labeling proposal. Based on the work of this group, the agency intends to publish a new labeling proposal by September 1, and to begin public hearings in the fall.

As of the date of this report no new proposal has been published.

III. THE PROPOSED TRANSFER OF THE ROCKVILLE, MD., OPERATIONS OF THE NATIONAL INSTITUTE FOR OCCUPATIONAL SAFETY AND HEALTH.

The National Institute for Occupational Safety and Health (NIOSH) was created by section 22 of the Occupational Safety and Health Act of 1970. It was established in the Department of Health, Education, and Welfare (HEW) and its main administrative operations were housed at Rockville, Md. Subsequently, it was located within the table of organization at HEW so that it reported to the Center for Disease Control (CDC) whose administration is located at Atlanta, Ga.

In June 1981, HEW announced that it proposed to close out the NIOSH facilities at Rockville, Md., and transfer those operations to Atlanta, Ga., and Cincinnati, Ohio.

This proposed move caused serious concern on the part of many supporters of an effective NIOSH, in that it could result in NIOSH's interests and objectives being submerged in CDC, whose basic philosophy and goals were not necessarily the same as those of NIOSH.

Accordingly, the subcommittee held 2 days of oversight hearings, at which the following individuals testified:

Hon. Paul S. Sarbanes, U.S. Senator, Maryland.

Hon. Charles McC. Mathias, Jr., U.S. Senator, Maryland.

Hon. Sam Nunn, U.S. Senator, Georgia.

Hon. Michael D. Barnes, U.S. Representative, Eighth Congressional District, Maryland.

Hon. Steny Hoyer, U.S. Representative, Fifth Congressional District, Maryland.

Hon. Elliott H. Levitas, U.S. Representative, Fourth Congressional District, Georgia.

Dr. Edward N. Brandt, Jr., Assistant Secretary for Health, Department of Health and Human Services.

Dr. William Foege, Director, Center for Disease Control.

Mr. William Watson, Deputy Director, Center for Disease Control.

Mr. Kenneth T. Blaylock, national president, AFGE.

Mr. Joseph E. Cook, Jr., president, Local 41, AFGE.

Ms. Darlene Christian, vice president, Local 41, AFGE.

Mr. George Taylor, director of occupational safety and health, AFL-CIO.

Mr. Jack Sheehan, director, legislative department, United Steelworkers of America, AFL-CIO.

Dr. Lorin Kerr, occupational health department, International Union of Mine Workers of America.

Dr. John Finklea, former Director, NIOSH.

Dr. Marcus M. Key, former Director, NIOSH.

Dr. Anthony Robbins, former Director, NIOSH.

Dr. Morton Corn, former Assistant Secretary of Labor for Occupational Safety and Health.

Dr. William N. Rom, Rocky Mountain Center for Occupational and Environmental Health, University of Utah Medical Center.

Dr. Raymond R. Suskind, department of environmental health, University of Cincinnati.

Dr. Gareth M. Green, School of Hygiene and Public Health, Johns Hopkins University.

Dr. Merle Bundy, director of industrial medicine, United States Steel Corp.

Dr. Lloyd B. Tepper, corporate medical director, Air Products & Chemicals, Inc.

Dr. H. Dean Belk, corporate medical director, Aluminum Co. of America.

Opponents of the proposed transfer contended, inter alia:

"The proposed move was 'precipitous'", a move "based on philosophical changes in fundamental health and safety policy, and a move designed for ease of management."

There is no evidence of any detailed study of the move by HHS.

"The CDC ignored long-established standards and criteria in formulating its decentralization decision."

The change in bringing NIOSH "into the mainstream of preventive medicine really amounts to a dramatic modification of NIOSH's legislative mandate."

NIOSH cost figures are incomplete. The move would cause the loss of many capable and dedicated professionals in NIOSH who have stated they will not move. The move will disrupt the daily contacts with EPA, OSHA, MSHA, CPSC, and HIH.

The proposal was developed in a shroud of secrecy with only a few people involved and most of the rationale developed since the decisions have been made.

According to law, the Executive Branch should have submitted a reorganization plan to the Congress.

It should be pointed out that CDC as an agency chiefly relates to state and local public health agencies, to a small extent with international government health entities, and that its relationship with academic institutions and independent research organizations is relatively inconsequential.

In contrast, NIOSH contacts with the scientific community are broad. Its system of peer review of research projects and ongoing criteria documents on toxic materials was developed with little assistance from CDC, which offers nothing equivalent in that area, simply because it lacks the scientific expertise and the working relationships to make a peer review system.

Through the years organized labor has had the opportunity to observe CDC and the manner in which it deals with NIOSH. To begin with, it is our opinion that CDC does not have the scientific credibility and reputation to provide first-rate professional direction of NIOSH, nor to give it proper policy guidance and strong support.

All three former NIOSH Directors, Drs. Key, Finklea, and Robbins, stated they did not support the proposed move.

The administration witnesses stated:

The proposed transfer "was made solely on programmatic grounds." These are "(1) strengthening the scientific/technical base of the Institute and; (2) strengthening its administrative and program management functions."

The principal management staff of NIOSH, with responsibility for research targeted at defining occupational safety and health problems and developing solutions to prevent or control these problems, has been isolated physically from the epidemiologic and technical leadership of the Center for Disease Control.

We are convinced that the scientific and technical base of NIOSH will be strengthened by locating the headquarters where there can be greater policy coordination between the leadership and programs of CDC and NIOSH.

CDC is the nation's principal repository for disease surveillance systems. NIOSH headquarters in Rockville, which manages nationwide surveillance activites, is separated now from that expertise. This transfer will correct that problem and enhance NIOSH and CDC surveillance activities.

By locating the NIOSH headquarters in Atlanta we will be able to consolidate certain administrative activities with the rest of CDC. It will strengthen the Institute's administrative management by integration with the strong administrative services which have characterized CDC over the years.

By placing NIOSH headquarters with its parent agency's headquarters we expect even greater support for NIOSH programing, resulting from the direct, day-to-day interaction with CDC leadership.

Through the elimination of duplicative functions now performed separately by management, administrative, and technical staff in Atlanta and Rockville, by consolidating the staff of the Division of Criteria Documentation and Standards Development, and by streamlining the conduct of administrative functions, we estimate that we will be able to save upwards of $1.5 million annually in the performance of these headquarters functions.

During the second day of hearings several occupational physicians provided a critical analysis of the accomplishments of NIOSH to date.

They stated, inter alia:

NIOSH has performed very little research that is innovative and it has sponsored little in the way of demonstration projects that would prove the feasibility of research findings. . . . NIOSH has tended to focus on bits and pieces of research which will facilitate implementation of current, recognized problems in the field. There has been no long view in the program of NIOSH research, presumably stemming from both NIOSH and CDC management of the agency research program.

NIOSH has put an inordinate amount of money into criteria-documents development, supposedly to support OSHA standards-setting. (These documents) are citational reviews; that is, reviews of who did what and when, but they are not critical reviews.

I have been critical of the research activities of the agency; however, one must not forget that the funds allocated to carry out these functions have been small when viewed against the magnitude of the problems. One should certainly be compelled to use what is available in the most efficient manner; but even if that had been done, the research problems in occupational safety and health in this country would not have been dented by the funds allocated for NIOSH research to date.

. . . NIOSH has supported training programs in four key professional areas related to occupational safety and health, namely, occupational medicine, industrial hygiene, safety sciences and nursing. It has also sponsored some training support for allied disciplines such as toxicology, epidemiology and biostatistics. In 1977, NIOSH initiated 12 Educational Resource Centers (ERC's) which were awarded to universities for training in the four core areas cited above. . . . The ERC's are without question the most innovative and major contribution made by NIOSH since its inception.

The current Administration is opposed to educational training grants. In the field of occupational safety and health, it should be recognized that without assistance to the universities—and roughly two-thirds of the current NIOSH assistance is for student support—we will simply not have the educated and training professionals needed to move this field forward.

I believe that NIOSH's missions, functions and scope of activity are clearly stated in the Occupational Safety and Health Act of 1970. . . . Unfortunately, since its inception, its leadership and policy direction have been subject to change with shifts in political administration. Its administrative and scientific independence have been limited. I would strongly recommend this very important scientific agency be allowed to assume its proper role as a national center for basic and clinical research in occupational health problems, that it be allowed to fully assume its responsibility for fostering and supporting the education and training of scientists and professionals for investigation and service to the national community.

Level of productivity is intimately related and indeed dependent upon the effectiveness and efficiency of the American workforce. Work hazards result in illness and injury, leading to disability and in many instances demoralization and damaged relations between affected employees and the employer. The training programs supported by NIOSH, especially those in the Educational Resource Centers, are producing large numbers of highly qualified, specially trained professional and scientific personnel who can help reduce and eliminate hazards, educate the workforce to recognize their responsibility for utilizing corrective measures, monitor the environment and the employees at risk, so that safe levels of exposure can be maintained.

NIOSH has, I believe, very sincerely attempted to fulfill the mandate which it has under the Act. I think because of other factors—factors of stability, factors of jobs, factors of resources, factors of being able to determine themselves what they should be doing on a long-term basis—NIOSH has not been able to maintain the scientific and professional leadership or recruit the necessary scientific personnel to carry out the research programs, including its own internal research efforts effectively.

One of the most important steps—and it was a real breakthrough—occurred in 1977 when the Educational Resource Centers were created. This had an enormous impact on the manpower problem, which is not new. As long as I have been in the field, there has been a shortage of occupational health physicians, nurses, hygienists, toxicologists; but in 1977, with the help of the Act, NIOSH was able to do something about it effectively, and it has.

The crises in the American workplace which led to an excessive burden of disease, injury and decreased productivity are highlighted by two major deficiencies—lack of knowledge on the health effects of many substances and the processes being developed in industry, and a shortage of professional manpower to address these questions. These two issues are intertwined. The mission of NIOSH is to produce and disseminate this information and to train professionals to carry it out. The reason that research has not been of the utmost quality in occupational health is that we have not had the trained professionals within NIOSH and the academic community to do this type of work.

NIOSH needs to continue the ERC's as their prime solution toward the manpower shortage, to increase occupational health's presence in the academic community by supporting teaching faculty and faculty academic awards, and to expand the ERC role to reach medical students and primary-care residents.

. . . NIOSH is clearly not as strong and effective as it once was, or as it could be, or should be. We can conclude only that someone's stewardship left much to be desired.

The Subcommittee should be aware of the vast reservoir of goodwill toward NIOSH that exists among persons now in various phases of occupational health practice. Many of us . . . would be eager to respond to calls for assistance or collaboration.

They need an adequate budget and they have not had it. They have not had an adequate research budget. They have not had an adequate budget for the full Institute as well; never have.

I am concerned about where NIOSH is located in the CDC heirarchy. I think if this move should occur, if it is to be successful in Atlanta, there should be reorganization of NIOSH within CDC. I do think if it continues at the same level in Atlanta outside the arena of public scrutiny, its needs could be shortchanged if it is not reorganized within CDC in the Atlanta move.

The SPEAKER. I would like to take this opportunity to thank the Members of Congress and the other individuals who have appeared as witnesses before the subcommittee. I particularly want to thank all the members of the subcommittee who have cooperated and participated in the activities of the subcommittee.●

CREDIT UNIONS PROMOTE SAVINGS

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Ms. OAKAR. Mr. Speaker, on August 13 of last year, President Reagan signed into law Public Law 97-34, the Economic Recovery Tax Act of 1981. While many provisions of the Tax Act were hotly contested by Members of this body prior to their adoption, there was universal agreement in the Congress that steps had to be taken to reverse inflation and encourage consumer savings.

Title III of the Economic Recovery Tax Act contains two primary provisions which were included in order to promote personal savings. Subtitle A of title III created the much publicized All-Savers Certificates; subtitle B expanded the eligibility requirements for individual retirement accounts (IRA's) to make them available to all wage earners and increased the annual contribution limit for such accounts from $1,500 to $2,000.

The National Association of Federal Credit Unions (NAFCU)—which is the only national organization exclusively representing the interests of credit unions chartered by the Federal Government—last Autumn conducted a survey to determine how credit unions

were utilizing the new All-Savers Certificate and expanded IRA account authority. NAFCU's survey results showed that 52 percent of funds invested in All-Savers Certificates were conversions from regular shares; 35 percent of the funds came from higher yielding certificates; and 13 percent of the funds represented new money. Regarding individual retirement accounts, the NAFCU survey indicated that while 36.5 percent of their member credit unions already offered IRA's, 96 percent plan to initiate IRA programs during 1982.

Since approximately 54 percent of our Nation's regulated depository institutions are credit unions, the vigorous commitment of Federal credit unions to the encouragement of consumer savings bodes well not only for the continued health and vitality of credit unions, but also for our Nation's small savers generally.

Mr. Speaker, I include the text of NAFCU Executive Vice President Mal Nestlerode's letter communicating the association's survey results as well as the enclosed tables summarizing the results of their survey in the CONGRESSIONAL RECORD at this point.

NATIONAL ASSOCIATION OF
FEDERAL CREDIT UNIONS,
Arlington, Va., December 16, 1981.

Hon. MARY ROSE OAKAR,
House of Representatives,
Washington, D.C.

DEAR REPRESENTATIVE OAKAR: As the First Session of the 97th Congress draws to a close, I would like to share with you the results of a survey NAFCU conducted in late October to determine precisely how federally chartered credit unions were responding to two significant provisions of the Economic Recovery Tax Act of 1981: the authority to offer All Savers Certificates and the authority to offer Individual Retirement Accounts to all wage earners. Enclosed for your information is a summary of the results of that survey which was answered by 244 Federal credit unions across the country. Incidentally, our survey results also indicate the rate Federal credit unions are paying their members on regular share accounts, which are the functional equivalent of passbook accounts offered by other types of financial institutions.

ALL-SAVERS CERTIFICATES

The figures on the enclosed summary sheet represent funds taken in by Federal credit unions during the first two weeks of the All-Savers Certificates program (October 1-16, 1981). The NAFCU survey indicates that: (1) 52 percent of the funds channeled into the tax-exempt certificates were conversions from regular shares already held by the credit union and paying a rate of return lower than the All Savers Certificate rate; (2) approximately 35 percent of the funds came from higher yielding certificates; and (3) 13 percent of the funds represented new money.

INDIVIDUAL RETIREMENT ACCOUNTS

While 36.5 percent of the respondents to our survey indicated that they already offered Individual Retirement Accounts (IRAs) to their members, we are particularly pleased to note that more than 96 percent plan to do so in 1982 and that 95 percent of those plan to offer IRAs through payroll deduction plans. It must be remembered, however, that all credit unions do not have the convenience of payroll deductions.

Credit unions throughout the country are working diligently to develop and market IRAs, which are expected to be a major source of new funds for credit unions and other depositories. To help Federal credit unions participate in this very competitive market, the National Association of Federal Credit Unions has distributed to each of its members an in-depth research report explaining the recently enacted changes affecting retirement accounts and how these changes can affect and benefit Federal credit unions and their members.

REGULAR SHARE ACCOUNTS

Our survey results also show that credit unions are prudently using their additional flexibility in establishing regular share account rates. Of those responding, 61.5 percent say they are now paying more than 7 percent on regular shares while 43 percent plan to increase their rates in the near future. While many, of course, cannot yet say what they will be increasing the rate to, most cited increases to 8 percent or 9 percent; only a few said they plan to pay the maximum permissible rate of 12 percent on regular shares at this time.

I hope you find this information useful. Be assured of the continuing commitment of the National Association of Federal Credit Unions to work with you and your colleagues in the Congress as you pursue efforts to promote consumer savings. Please feel free to contact me or our director of government affairs, Bill Donovan, if you would like to discuss further these or any other matters affecting your credit union constituents.

Sincerely,

MAL NESTLERODE,
Executive Vice President.

Enclosure.

NAFCU SURVEY OF MEMBERSHIP—RESULTS AS OF NOVEMBER 20, 1981

THE SOVIETS' INHUMAN "RAIN"

HON. WILLIAM J. HUGHES

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1981

● Mr. HUGHES. Mr. Speaker, in the First World War, the nations of the world learned the horrifying effectiveness and brutality of chemical warfare. It was a tragic and wasteful lesson, but leaders of civilized nations at least emerged from the conflict prepared to ban this horrible means of conducting warfare by agreeing to a 1925 Geneva protocol on chemical weapons. Although war itself is terrible, world leaders agreed that its brutality could be reduced by banning chemical warfare.

In recent years, there has been renewed attention to the possible uses of chemical warfare, spawned by mounting evidence that the Soviet Union is prepared to use toxic weaponry in conventional armed conflicts. Now, serious evidence has emerged that the Soviets are not only willing to use such weaponry, but also have used it against the people of Southeast Asia and, according to some reports, citizens of Afghanistan.

Reports of a "yellow rain" which caused sickness and death have emerged from witnesses in Southeast Asia and Afghanistan first focused world attention on this horrifying possibility. More recently, the State Department announced that it believes there to be strong scientific evidence from samples taken from areas of witnessed attacks that poison known as trichothecene toxins have been used against armed opponents of Soviet-backed forces and civilian populations, including children.

The Soviet Union has shown through systematic violation of human rights in Eastern Europe and within its own boundaries that its leaders have little regard for the sanctity of human life or political freedom. Now there is evidence that this disregard has extended to the international norms of decency.

The evidence demands investigation—objective and honest investigation—by international bodies. The United Nations must continue to examine all evidence of chemical warfare presented to it, and follow its investigation with appropriate action. If it can be shown that the Soviet Union has used chemical weapons, then the civilized nations of the world must condemn this awful act. Decency demands it.●

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of the meetings, when scheduled, and any cancellations or changes in the meetings as they occur.

As an additional procedure along with the computerization of this information, the Office of the Senate Daily Digest will prepare this information for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Thursday, December 17, 1981, may be found in the Daily Digest of today's RECORD.

MEETINGS SCHEDULED

JANUARY 11, 1982

9:30 a.m.
Labor and Human Resources
Employment and Productivity Subcommittee
To hold hearings on unemployment problems in the automobile industry, focusing on the need for job opportunities and training assistance programs.
